The degree of discrimination against a needy school district varies in proportion to the level of assessments in each county. A substantial discrimination is made against districts in a majority of the 102 counties of the state.

The Illinois Agricultural Association in cooperation with other interested groups is working out a plan whereby these injustices will be eliminated. Under the new plan the distribution of state aid will be based upon the actual value of property in the district and will not be affected by the assessment practice in each county. Each district will be treated the same as other districts in similar circumstances. Schools which really need more state assistance will be able to get it.

The Illinois Agricultural Association and other interested groups will urge the General Assembly to adopt this new and more equitable plan for distributing state aid to needy schools. It is important that farm people, school administrators and other interested persons explain to their duly elected representatives the need for this legislation.

Farm-to-Market Roads

A COMPLETE system of farm-to-market roads has been one of the objectives of Illinois farmers and their organization for many years. Since only limited progress has been realized toward this objective, it is small wonder that one of the resolutions of the 1944 annual meeting of the Illinois Agricultural Association demanded every consideration of this problem.

The resolution pointed out that "in many counties the road situation is extremely bad. In numerous counties, especially in the southern part of the state, more than one-half of the farmers are served only by dirt roads which are impassable during a substantial portion of the year.

"This deplorable road condition exists notwithstanding the fact that farm people have paid, in property and gasoline taxes, vast sums of money for road improvement. Plans are now being made for further large expenditures of both state and federal funds for a system of super-highways to connect the large cities."

The resolution further demands "that low-cost secondary roads receive proportionate and proper attention in the postwar period," and that "programs should be planned and put into operation for the building in the early postwar years of a practical all-weather road to serve every farm home."

Legislative action is needed. Present formulas for the expenditures of state and federal highway funds and the usual specifications for the construction of state aid roads do not meet the needs of farm people, as the resolution points out.

The resolution further urges the officers and directors of the Association to request the University of Illinois and the State Highway Department to institute an adequate program of research on the problem of materials, construction, and maintenance of secondary farm-to-market roads.

There can be no more vital postwar plan than to make it possible to secure "an adequate system of low-cost all-weather roads to serve all the farm homes in the rural areas of Illinois."

Thrift Among Farmers

A RECENT University of Illinois College of Agriculture study indicates that Illinois farm families who have kept home accounts for 10 years are not only doing their full share in the war effort on the production front, but are following the soundest method of keeping down inflation. That is, instead of greatly increasing their expenditures, they are saving their money.

Even before the war, this traditional attitude of thrift was apparent, when farm families covered in the study were saving one-third of their disposable incomes.

Paying off debts, building a surplus against postwar needs, avoiding speculative land purchases, and helping in the war effort by putting as much as possible into bonds — that is the course of sound planning and true patriotism.

Maybe not quite *that* quick, but we do pride ourselves on speedy, fair claim payments.

With the blustery days just around the corner and with them thousands of dollars damage to Illinois farmsteads, it is time to call in your Farm Bureau insurance agent. He will show how to protect your savings against loss due to windstorm damage, at cost. Preferred rates for preferred risks.

The more I am acquainted with agricultural affairs, the better I am pleased with them; insomuch, that I can no where find so great satisfaction as in those innocent and useful pursuits. In indulging these feelings, I am led to reflect how much more delightful to an undebauched mind is the task of making improvements on the earth, than all the vain glory which can be acquired from ravaging it, by the most uninterrupted career of conquests. The design of this observation, is only to show how much, as a member of human society, I feel myself obliged, by your labours to render respectable and advantageous, an employment which is more congenial to the natural dispositions of mankind than any other. — Excerpt from Letters on Agriculture from His Excellency George Washington.

"'Income tax?' says I to Jones . . .

'Sure, I know something about income tax.' Then right off he invites me into the house and gets out his tax blank and shoots this at me: 'Remember last year when that new hired hand of mine had that accident and I got stuck with a $2,500 judgment?' 'Yeh, I remember,' I said. 'Well,' says he, 'what I want to know is, can I deduct some of that from my income tax as a business expense or something?' 'Golly,' says I, 'I don't know anything about **that** — better see your lawyer or a tax expert.' 'But,' he says, '**you** had about the same experience a few years back with that fellow Miller; did you deduct **that** judgment from your tax?' 'Nope,' says I, 'you see I don't worry about judgments of that kind on account of I have Farm Bureau Employers' Liability Insurance and they do my worrying for me.' 'Oh,' says he, like he was caught burning his own barn, 'guess I better wake up and get some of that before this busy season starts and I have some more new help.' 'Yep,' says I, 'guess you better.' "

See your IA Mutual insurance agent at the Farm Bureau about Employers' Liability insurance before your busy season starts. If you hire help you need this protection. Your own company offers it to you at cost.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

MARCH, 1945 **VOLUME 23 - NUMBER 3**

STATEMENT ON PARITY REVISION

MEMBERS of the executive committee of the American Farm Bureau Federation early in February issued a statement voicing opposition to revision of the parity formula at this time.

The statement issued Feb. 8 is as follows:

On several occasions during the war period the American Farm Bureau Federation has been solicited by various groups representing agriculture to cooperate in seeking revision of the parity formula in the Agricultural Adjustment Act.

This matter has received serious consideration by the American Farm Bureau Federation. Certain proposals are again being made for the revision of this formula. After again reviewing all the factors and interests involved, the Federation believes it would be inadvisable, at least for the period of the emergency, to seek any change in this formula.

The Federation recognizes varying degrees of merit in certain of the proposals being offered, but is convinced that should the subject matter be opened up for legislative review and consideration, it would result in:

1. Public reaction which, regardless of soundness of any change, would be that this was an effort of farmers to take advantage of wartime conditions to secure a raise in price levels of farm commodities.
2. In some quarters it would be interpreted as opening the way for justifying a revision in the so-called "Little Steel Formula", which formula farmers believe should be maintained. We believe the revision of the parity formula and the "Little Steel Formula" at this time would lead into an inflationary spiral which would not be in the best interest of farmers, workers, or the Nation as a whole.

The Federation, however, recommends and will support efforts to have the proper agency of government compute parity or comparable prices for the nonbasic commodities such as dairy products, livestock, wool, citrus fruits, and other products in accordance with the intent of existing agricultural legislation. Among this legislation are included Section 301 of the Agricultural Adjustment Act of 1938, as amended; Section 2 and 8(e) of the Agricultural Marketing Agreement Act of 1937; the provisions of the so-called "Steagall Amendment" or Section 4(a) and 4(b) of Public Law No. 147, 77th Congress; and the provisions of the Emergency Price Control Act. We insisted upon making the laws effective.

Harry Bryson of Iowa Named to Staff of AFBF

Harry Bryson, since 1941 organization director for the Iowa Farm Bureau Federation, has been hired as an organization director and consultant with the American Farm Bureau Federation. Bryson's immediate responsibility will be to build membership in the western region, but he will be available as consultant for the other regions to a limited extent.

A native of Missouri, Harry was graduated from Iowa State College in 1931, and spent 10 years in vocational teaching and county agent work before going to work for the Farm Bureau. He played a big part in building Farm Bureau membership in Iowa from 50,000 to more than 75,000 in three years. His outstanding work in Iowa, reflecting a broad grasp of constructive principles of membership building, led to his promotion to a larger field.

How big is your War Bond investment? Remember that it's going to take a lot of bonds to win this war. Remember too that the more bonds you own, the better off you'll be in the post-war period.

HENRY H. PARKE RECEIVES AWARD

HENRY H. PARKE, Genoa, DeKalb county, a pioneer in the Farm Bureau movement in Illinois and president of the Chicago Producers Livestock Commission Association since 1927, is the winner of the 1945 achievement award of the Illinois Farm Managers Association.

Presentation of the award was made at the February meeting of the Farm Managers' Association at Urbana by Dean H. P. Rusk of the U. of I. College of Agriculture.

Said Dean Rusk: "I am delighted and honored to have this opportunity to assist in the presentation of the Illinois Farm Managers Association annual achievement award. I am honored, for I know of no one more deserving of this signal recognition than the man selected this year. I am delighted because for more than 35 years I have enjoyed the friendship of this man, and therefore with a feeling of reflected glory I share the pleasure and satisfaction that I know this recognition brings to him."

Quoting from a booklet published in June, 1922, on the occasion of the celebration of the 10th anniversary of the Farm Bureau movement in Illinois, Dean Rusk read, " 'The birth of the Farm Bureau was not an accident. We now know that as early as 1902 the mind of a certain young college trained farmer was inoculated with the germ of improved agriculture. This young man's father before him was an exponent of improved breeding, better feeding, and a more or less regular crop rotation. It was this father who influenced his son, Henry Parke of Genoa, DeKalb county, to go to college to study agricultural science. It was he who gave Henry the responsibilities which directly led him to attend the Agricultural Short Course at Urbana in 1903 and 1904.

" 'From that time on Henry Parke was a leader.'

"He is named as the man largely responsible for an important series of events that finally culminated in the organization on March 27, 1912, of the DeKalb County Soil Improvement Association, the forerunner of County Farm Bureau in Illinois," Dean Rusk pointed out.

News-Gazette Photo

Henry H. Parke, DeKalb County Farm Bureau pioneer, receives the 1945 agricultural award of the Illinois Farm Manager's Association from Dean H. P. Rusk, U. of I. College of Agriculture.

"This made DeKalb the first county in the United States to build a definite farmers' organization to carry local responsibility for extension work in agriculture. It was the pattern set in DeKalb county and followed throughout the state that gave the Agricultural Extension Service a firmer anchorage with the people of Illinois than it enjoys in any other state I know.

"But you men know H. H. Parke better for his activities outside his home county. He was assistant director of agriculture in Illinois from 1917 to 1921, has been a director of the Chicago Producers Commission Association since 1924, and president of that association since 1927. He was vice-president of the National Livestock Association for two years and since 1930 has been treasurer of the National Livestock Marketing Association. He has been president of the Producers Livestock Credit Association since 1926.

"For many years he has served on advisory committees of the College of Agriculture, first for the department of animal husbandry, and in recent years for the department of agricultural economics. But those who know him best think of him as an outstanding citizen and farmer operating 410 acres of good Illinois land, on which large numbers of cattle, hogs, and sheep are finished for market annually.

"Yes, Mr. Parke, your signature is written large across the pages that record 40 years of progress in American agriculture. . ."

Announce Cash Prizes For Ideas On Postwar Policies

According to an announcement received from Dr. L. J. Norton, president of the American Farm Economic Association, a series of cash awards for suggestions on constructive postwar price policies for agriculture is being sponsored by that association.

The awards, which total $12,500, will be made from a special fund made available to the association for this purpose. In addition to three major awards of $5000, $2500, and $1250, there are 15 awards of $250 each.

Any citizen of the United States is eligible to compete for the awards, which will be made on the basis of practical contribution to the solution of agricultural price problems.

A committee of outstanding authorities will judge the entries. The committee will include: Chester Davis, president, Federal Reserve Bank of St. Louis, chairman; Prof. Alvin H. Hansen, Harvard University; Dean W. I. Myers, New York State College of Agriculture, Cornell University; Dr. Henry C. Taylor, managing director, The Farm Foundation, Chicago, and W. W. Waymack, editor, the Register and Tribune, Des Moines, Ia.

Information about the awards, entries for which must be in July 15, 1945, can be secured from Dr. Asher Hobson, secretary-treasurer of the American Farm Economic Association, College of Agriculture, University of Wisconsin, Madison, Wis.

Possibly there is no more important question before the American people as we approach the postwar period, than that of determining upon a clean cut price policy that is fair to all groups in our economic society.

For many months, the press has been carrying stories of the various suggestions on price policies. Of particular importance in this announcement of awards by the Farm Economic Association, is the roster of able and thinking men who have been selected as judges to evaluate the proposals submitted in the association's competition.

Financing this war is such a big job that we must all do our share. Our march to victory is costing about 90 billion dollars a year. That's over 700 dollars for every man, woman, and child in the United States. Slightly over half this amount must be raised from selling bonds. The rest we get from taxes. Now of course some can buy more bonds than others — but have you and your family done their share? The only way any of us can do our share is to buy every bond we can possibly afford.

Shown here with the DeWitt County Farm Bureau war service flag representing 280 members' sons in service, and three who have given their lives, are officers recently re-elected: Frank L. Simpson, president; H. Ray Buck, vice-president; and Farm Adviser H. N. Myers.
(Pantagraph Photo)

McLEAN COUNTY FARMER NAMED CORN CHAMPION

CORN planted in a field that had been in blue grass pasture for 20 to 30 years won the corn king crown for Forrest Woods, Bellflower, McLean county, in the Illinois 10-acre corn growing contest, according to a report made by the Illinois Crop Improvement Association and the U. of I. College of Agriculture.

Woods' yield was 182.05 bushels per acre, basis No. 2 corn, 15.5 per cent moisture. Champion last year was Carl M. Howard, Tazewell county, with 136.21 bushels.

Lester E. Leigh, Sparland, Marshall county, topped contestants in the 10-acre soybean growing contest with a yield of 47.78 bushels per acre, basis No. 2 beans.

The average yield of all corn contestants was 109.89 bushels, while the average yield of all soybean contestants was 38.18 bushels per acre.

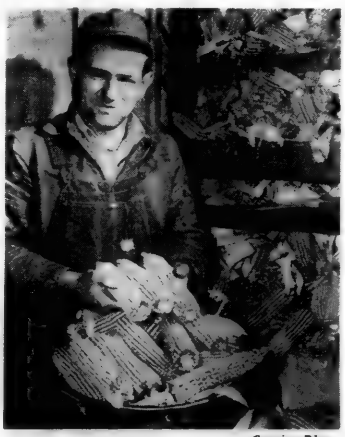
Woods held a high score of 79.96 per cent out of a possible 100 per cent based on high yields, low cost and high quality. His cost of production was $412.74 for 10 acres with a 17.97 per cent out of 20 for corn quality.

Woods planted his contest acreage in standard 40-inch rows with the hills only 28 inches apart and used seed at the rate of one bushel to three acres. On other fields, not for contest purposes, he used one bushel to 7 or 8 acres.

William Woods, McLean county, a brother of the champion, had high yield in the 1942 contest with 174.32 bushels, but Paul H. Peabody, Edinburg, Christian county, had a higher combined score for all judging points.

C. F. Davis, Sullivan, Moultrie county, produced 44.92 bushels per acre and had the high soybean growing score with 93.13 per cent. He has been growing soybeans for 20 years and this year had the high soybean growing score with 93.13 per cent. During the past year he produced 122 acres of the Illini variety. Since 1929 no other variety has been grown on his farm. As a result of a field inspection of his beans last year his crop was given a rating of 99.8 per cent purity.

Leigh with the high yield in the state showed a cost production of $275.87 for 10 acres, a quality grade of 80 per cent, oil 22 per cent, for a total score of 90.69 per cent out of a possible 100.



Courier Photo

Forrest Woods, McLean county, shows a sample of the corn that won him the 1944 state title of corn king.

Lt. Col. Dave Henry Back From South Pacific Duty

Take it from a soldier who has been in the South Pacific for more than 34 months — it's good to be home, but it's hard to leave the men you've been working with through many long campaigns.

Lt. Col. Dave Henry, from the Illinois Producers Creameries office in Chicago, just back from overseas found himself the center of attention among IAA staff members when he dropped in for a brief visit early in February.

Dave entered the service March 18, 1941, as a second lieutenant and was first stationed at the subsistence research laboratory of the U. S. Army Quartermaster depot, Chicago. In March, 1942, he went to Australia and later to New Guinea where in his spare time he started a vegetable garden. He later returned to Australia for a short period and then moved on with the U. S. forces in their campaigns to recapture the Philippines. One of the last campaigns he was in was at Leyte. During a good share of his duty in the Pacific, Dave was working with food supplies, and had a good opportunity to find out what the men liked and didn't like. One of the popular items of tinned food, he reports, is ham and eggs. He also reported that the butter industry in Australia is far ahead of the United States.

One of the happy incidents that Dave had to tell about was that of meeting his "kid brother," Maj. Arthur Henry, commander of a bomber squadron in the South Pacific, whom he encountered in October of 1943.

Lt. Col. Dave Henry wanted to know all the news about what the Producer Creameries had been doing since he donned the uniform of the U. S. Army. J. B. Countiss, IPC sales manager, tried to bring him up to date on all the happenings.

★

Officers and directors of the Grundy Grain and Supply Company are: J. F. Holderman, president; N. R. Brown, vice-president; George E. Trotter, secretary; Leo Guardia, treasurer; directors, J. W. Bookwalter, Alexander Yeno, W. B. Rothlisberger, J. H. Gilchrist, and Frank Wesoloski.

★

GRUNDY CO-OP ORGANIZED

BOARD NAMES L. W. WOMACKS AS MANAGER

GRUNDY Grain and Supply Company, a new Grundy County Farm Bureau cooperative, purchased the elevator properties of J. W. Bookwalter at Coal City, Feb. 1, to carry on a grain marketing, feed manufacturing and feed distribution program.

The new cooperative also has been authorized as a plant food distributor, jointly sharing this function with the Grundy Service Company.

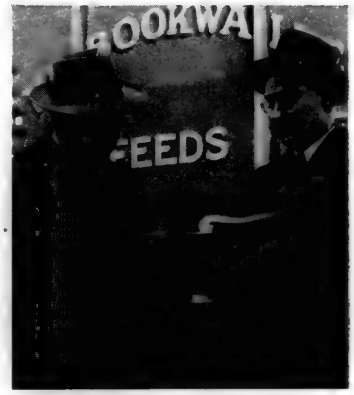
Grundy Grain and Supply Company's board of directors plans to set up facilities for the manufacture of Service Brand feeds as soon as details of reorganization can be completed and some needed equipment obtained.

The Service Brand Feed program is a cooperative statewide program sponsored by the Illinois Agricultural Association. The program makes it possible through local distributors, such as the Grundy Grain and Supply Company, to grind and mix home-grown grains in the localities where the feed grain is raised. It permits taking advantage of the purchase of protein ingredients under volume contracts and provides for the manufacture and distribution of precision pre-mixes containing vitamin carriers and other essential ingredients and guarantees to the purchaser a quality product at a considerable saving in price.

The savings to be made are largely savings in transportation which the farmer would ordinarily pay shipping his grain into the market and shipping the mixed feeds back. Certain premixes involving possibly 250 to 400 pounds in each ton of complete feed is prepared by the Illinois Farm Supply Company in its central mills.

The local distributor provides the locally grown grain where possible, purchases his protein ingredients to the best advantage, purchases the pre-mix from the Illinois Farm Supply Company and mixes the feed under quality control supervision and sells the feed to the farmer in bags carrying the Service Brand label. The Service Brand feed program in no way interferes with the Blue Seal Feed program carried on for several years by the Illinois Farm Supply Company. The formulae of Service Brand feeds have been prepared by the formulation committee of the Illinois Farm Supply Company in consultation with recognized nutritional authorities.

The Plant Food program in which the Grundy cooperative also will participate as a local distributor is another statewide cooperative program. The IAA has designated the Illinois Farm



J. F. Holderman, left, is the new president of the Grundy cooperative, and J. W. Bookwalter, from whom the elevator properties were purchased, is on the board of directors.

The elevator taken over by the new Grundy cooperative did an annual business of 400,000 bushels of grain and 1500 tons of feed.

Supply Company to take charge of, make the necessary investments and process and distribute the mixed fertilizers and the fertilizer ingredients in this program. The control of quality in the Plant Food program is under a committee set up in exactly the same way as described under Service Brand feeds.

The elevator which the Grundy cooperative purchased at Coal City was built during World War I by John Trotter, father of George Trotter, secretary of the new cooperative. Twenty-four years ago, Bookwalter took over the facilities and has operated it successfully during that period. He estimates that the grain business approximates 400,000 bushels per year while the feed business totals around 1500 tons a year. Bookwalter will continue on the board of directors of the new cooperative.

L. W. Womacks, Villa Grove, Douglas county, has been employed as manager of the Grundy cooperative. He has been manager of the Villa Grove elevator for the past four years. Prior to that he was employed by the Savoy Grain and Coal Company, Champaign county.

The new board of directors of the Grundy Grain and Supply Company is as follows: J. F. Holderman, Morris, president; N. R. Brown, Coal City, vice-president; George E. Trotter, Coal City, secretary; Leo Guardia, Braceville, treasurer; directors, J. W. Bookwalter, Coal City; Alexander Yeno, Braceville; W. V. Rothlisberger, Coal City; J. H. Gilchrist, Mazon, and Frank Wesoloski, Wilmington.

BURN MORTGAGE ON CREAMERY

WHEN the Bloomington creamery folks put on a meeting they really do it right!

If there ever was any question about the above statement, the recent annual meeting of the Farmers Creamery Company of Bloomington and the McLean County Milk Association settled it.

Highlight of this program was the ceremony in which the mortgage on the $125,000 creamery building and equipment was burned. It was less than four years ago that the cooperatives moved into their new home which today is free of debt.

Here is a brief summary of the ceremony. Preceding the actual burning of the mortgage, 4-H club girls representing each county in the creamery district placed eight yellow candles in a candelabra. Then a producer member from each county advanced and lighted a candle for his area. Then Manager Forrest Fairchild stepped forward and burned the mortgage over the candles. As the mortgage burned, a replica of the creamery building, carved in butter by Harry Lash and Ike Salch, buttermakers, was unveiled.

The applause of the 1200 patrons and their families in attendance expressed not only the appreciation of the cooperators for the colorful presentation, but their pride and joy at having completely paid for their modern building, the finest in Illinois, in so short a period of years.

Producer members who lit candles were: V. G. Tambling, Grundy; L. C. Rinker, LaSalle; Carl Barton, Livingston; F. D. Mason, Milk Producers Association; Harold Keys, Logan; William Wilson, McLean; Welby Webb, DeWitt, and Sherman Gall, Macon.

The creamery cooperative paid $15,593 in dividends to its 1820 stockholder-patrons, and the Milk Producers Association paid $5000 in dividends. In 12 years of operation the Farmers Creamery has paid dividends in the total amount of $139,056.

H. W. Enns, president of the Farmers Creamery Company, related the history of organized cooperative cream marketing in the state during the past two decades and also told of the early struggles of the Bloomington creamery. He reported that the creamery manufactured 1,173,442 pounds of butter valued at $579,055 during the past year, and that the creamery's total net worth was $160,924.

The Milk Producers Association, handling whole milk, reported 24,501,062 pounds of milk valued at $775,923 handled during 1944. Total assets of $34,843 were reported. More than 500 patrons delivered milk through the cooperative during 1944.

Other speakers of the day were Farm Adviser N. H. Anderson, Logan county, who congratulated producers and management on their accomplishments; Harry Gehring, vice-president of the Illinois Producers Creameries, who outlined the relationship between the state organization and the 10 cooperative member plants in the state, of which Farmers Creamery is the largest in the point of butter manufactured; Owen Richards, general manager of the American Dairy Association, who discussed the future of the dairy business; J. B. Countiss, IPC sales manager, and Wilfred Shaw, secretary of the Illinois Milk Producers Association and IAA director of milk marketing, talked at the business sessions of the two cooperatives.

All members of the creamery board were re-elected: Joe Harris, Dewitt; Reno Barton, Livingston; J. B. Kidd, LaSalle; Henry Marten, Logan; E. H. Orendorff, McLean; Silas Hagen, Grundy; F. D. Mason, McLean; William L. Mays, McLean, and A. L. Leinhart, Macon.

Members of the Milk Producers Association board who were re-elected were: Louis Schultz, Elmer Orendorff and Frank Mason, all of McLean county. Officers re-elected were: William L. Mays, president; George Pitts, vice-president; Elmer Orendorff, secretary, and Frank Mason, treasurer.

(*Pantagraph Photo*)

Manager Forrest Fairchild burns the mortgage on the Farmers Creamery Company of Bloomington. 4-H girls participating in the ceremony are: left to right, Marian Ganzert, Grundy; Meta Keller, LaSalle; Delores Gaspardo, Livingston; Marjorie Bielfeldt, McLean; Norma Jean Hannel, Milk Producers Association; Doris Mae Semple, Logan. Donna Griffin, DeWitt, and Arabelle Ferrill, Macon, do not appear in the picture. In the foreground at the left is a butter replica of the Creamery.

GRUNDY CO-OP ORGANIZED

BOARD NAMES L. W. WOMACKS AS MANAGER

GRUNDY Grain and Supply Company, a new Grundy County Farm Bureau cooperative, purchased the elevator properties of J. W. Bookwalter at Coal City, Feb. 1, to carry on a grain marketing, feed manufacturing and feed distribution program.

The new cooperative also has been authorized as a plant food distributor, jointly sharing this function with the Grundy Service Company.

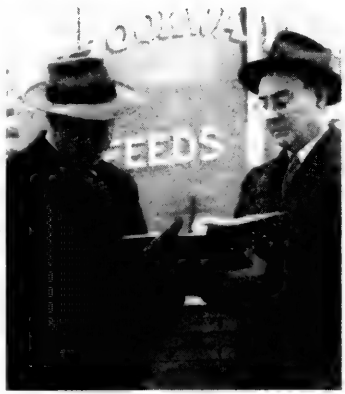
Grundy Grain and Supply Company's board of directors plans to set up facilities for the manufacture of Service Brand feeds as soon as details of reorganization can be completed and some needed equipment obtained.

The Service Brand Feed program is a cooperative statewide program sponsored by the Illinois Agricultural Association. The program makes it possible through local distributors, such as the Grundy Grain and Supply Company, to grind and mix home-grown grains in the localities where the feed grain is raised. It permits taking advantage of the purchase of protein ingredients under volume contracts and provides for the manufacture and distribution of precision pre-mixes containing vitamin carriers and other essential ingredients and guarantees to the purchaser a quality product at a considerable saving in price.

The savings to be made are largely savings in transportation which the farmer would ordinarily pay shipping his grain into the market and shipping the mixed feeds back. Certain pre-mixes involving possibly 250 to 400 pounds in each ton of complete feed is prepared by the Illinois Farm Supply Company in its central mills.

The local distributor provides the locally grown grain where possible, purchases his protein ingredients to the best advantage, purchases the pre-mix from the Illinois Farm Supply Company and mixes the feed under quality control supervision and sells the feed to the farmer in bags carrying the Service Brand label. The Service Brand feed program in no way interferes with the Blue Seal Feed program carried on for several years by the Illinois Farm Supply Company. The formulae of Service Brand feeds have been prepared by the formulation committee of the Illinois Farm Supply Company in consultation with recognized nutritional authorities.

The Plant Food program in which the Grundy cooperative also will participate as a local distributor is another statewide cooperative program. The IAA has designated the Illinois Farm



J. F. Holderman, left, is the new president of the Grundy cooperative, and J. W. Bookwalter, from whom the elevator properties were purchased, is on the board of directors.

The elevator taken over by the new Grundy cooperative did an annual business of 400,000 bushels of grain and 1500 tons of feed.

Supply Company to take charge of, make the necessary investments and process and distribute the mixed fertilizers and the fertilizer ingredients in this program. The control of quality in the Plant Food program is under a committee set up in exactly the same way as described under Service Brand feeds.

The elevator which the Grundy cooperative purchased at Coal City was built during World War I by John Trotter, father of George Trotter, secretary of the new cooperative. Twenty-four years ago, Bookwalter took over the facilities and has operated it successfully during that period. He estimates that the grain business approximates 400,000 bushels per year while the feed business totals around 1500 tons a year. Bookwalter will continue on the board of directors of the new cooperative.

L. W. Womacks, Villa Grove, Douglas county, has been employed as manager of the Grundy cooperative. He has been manager of the Villa Grove elevator for the past four years. Prior to that he was employed by the Savoy Grain and Coal Company, Champaign county.

The new board of directors of the Grundy Grain and Supply Company is as follows: J. F. Holderman, Morris, president; N. R. Brown, Coal City, vice-president; George E. Trotter, Coal City, secretary; Leo Guardia, Braceville, treasurer; directors, J. W. Bookwalter, Coal City; Alexander Yeno, Braceville; W. V. Rothlisberger, Coal City; J. H. Gilchrist, Mazon, and Frank Wesoloski, Wilmington.

BURN MORTGAGE ON CREAMERY

WHEN the Bloomington creamery folks put on a meeting they really do it right!

If there ever was any question about the above statement, the recent annual meeting of the Farmers Creamery Company of Bloomington and the McLean County Milk Association settled it.

Highlight of this program was the ceremony in which the mortgage on the $125,000 creamery building and equipment was burned. It was less than four years ago that the cooperatives moved into their new home which today is free of debt.

Here is a brief summary of the ceremony. Preceding the actual burning of the mortgage, 4-H club girls representing each county in the creamery district placed eight yellow candles in a candelabra. Then a producer member from each county advanced and lighted a candle for his area. Then Manager Forrest Fairchild stepped forward and burned the mortgage over the candles. As the mortgage burned, a replica of the creamery building, carved in butter by Harry Lash and Ike Salch, buttermakers, was unveiled.

The applause of the 1200 patrons and their families in attendance expressed not only the appreciation of the cooperators for the colorful presentation, but their pride and joy at having completely paid for their modern building, the finest in Illinois, in so short a period of years.

Producer members who lit candles were: V. G. Tambling, Grundy; L. C. Rinker, LaSalle; Carl Barton, Livingston; F. D. Mason, Milk Producers Association; Harold Keys, Logan; William Wilson, McLean; Welby Webb, DeWitt, and Sherman Gall, Macon.

The creamery cooperative paid $15,593 in dividends to its 1820 stockholder-patrons, and the Milk Producers Association paid $5000 in dividends. In 12 years of operation the Farmers Creamery has paid dividends in the total amount of $139,056.

H. W. Enns, president of the Farmers Creamery Company, related the history of organized cooperative cream marketing in the state during the past two decades and also told of the early struggles of the Bloomington creamery. He reported that the creamery manufactured 1,173,442 pounds of butter valued at $579,055 during the past year, and that the creamery's total net worth was $160,924.

The Milk Producers Association, handling whole milk, reported 24,501,062 pounds of milk valued at $775,923 handled during 1944. Total assets of $84,845 were reported. More than 500 patrons delivered milk through the cooperative during 1944.

Other speakers of the day were Farm Adviser N. H. Anderson, Logan county, who congratulated producers and management on their accomplishments; Harry Gehring, vice-president of the Illinois Producers Creameries, who outlined the relationship between the state organization and the 10 cooperative member plants in the state, of which Farmers Creamery is the largest in the point of butter manufactured; Owen Richards, general manager of the American Dairy Association, who discussed the future of the dairy business; J. B. Countiss, IPC sales manager, and Wilfred Shaw, secretary of the Illinois Milk Producers Association and IAA director of milk marketing, talked at the business sessions of the two cooperatives.

All members of the creamery board were re-elected: Joe Harris, Dewitt; Reno Barton, Livingston; J. B. Kidd, La Salle; Henry Marten, Logan; I. H. Orendorff, McLean; Silas Hagen, Grundy; F. D. Mason, McLean; William L. Mays, McLean, and A. L. Lenhart, Macon.

Members of the Milk Producers Association board who were re-elected were Louis Schultz, Elmer Orendorff and Frank Mason, all of McLean county. Officers re-elected were William L. Mays, president; George Pitts, vice-president; Elmer Orendorff, secretary and Frank Mason, treasurer.

(Pantagraph Photo)

Manager Forrest Fairchild burns the mortgage on the Farmers Creamery Company of Bloomington. 4-H girls participating in the ceremony are: left to right, Marian Ganzert, Grundy; Meta Keller, LaSalle; Delores Gaspardo, Livingston; Marjorie Bielfeldt, McLean; Norma Jean Hannel, Milk Producers Association; Doris Mae Semple, Logan. Donna Griffin, DeWitt, and Arabelle Ferrill, Macon, do not appear in the picture. In the foreground at the left is a butter replica of the Creamery.

THE EXPERIENCES OF A MAN WHO HAS BEEN A SCHOOL DIRECTOR FOR 25 YEARS

"I LOVE OUR

By LEO M. KNOX, Whiteside County

EVEN though I have been school director for more than 25 years, I am not too proud of the things that I have done to improve our educational system. I am not ashamed of what I have done or perhaps I should say what *we* have done, but I am a little bit ashamed of what we *have not done.*

It is true that several years ago the folks in our district worked together in putting a basement under the old school building, now over 80 years old, and in installing a furnace. A few years later we had a well drilled so as to do away with the necessity of the pupils carrying drinking water from the neighbors in an open pail. We also purchased some new desks and wired the old school building for electricity. Oh, yes! We purchased at one time a nice set of encyclopedia which seldom if ever is used and now and then a high powered salesman has impressed upon us the fact that our maps were sadly out of date and so we invested a few dollars there. Most of the improvements, however, have been made because of our desire to be rated as a "Standard School" and we tried to meet the requirements. These requirements, however, have not been very high.

Parents having children in our school have usually turned out pretty well for Chirstmas programs, but when it comes to the annual elections, the folks in our district have been very passive; in fact, sometimes we have had barely enough voters present to conduct the business at hand.

Let us briefly examine some of these things. Why is it that rural people have not displayed more interest in the annual elections? In my opinion, the poor attendance at the annual school elections, is not due entirely to the lack of interest. Our school elections are held in April when farm people are extraordinarily busy in the fields and the meetings are usually held in the evening, when everyone is tired. Futhermore, unless there is a controversy about some matter or some person running for office, these elections are very dry affairs. A short financial report — the balloting for the office of director, which usually nobody wants — the meeting adjourns and we go home. That is the way things have worked in our district. Probably some of you have carried on your elections by giving reports and having discussions that indicate that you have really tried to determine how your school conditions might be improved.

I think that I can also give some reasons for so many farm people "seeing red" when someone mentions the word, "consolidation", or suggests changes in our schools. In the first place, many of us have known of so-called consolidated districts in other states where the school taxes are reported outrageously high and where the rural pupils have been transported to urban centers. We have a fear of the control in our schools being taken away from us. This fear is somewhat justified because many times over the years, certain groups and special interests have tried to reorganize rural schools from the top down.

In Illinois, our own Illinois Agricultural Association has many times thrown its weight against enforced consolidation and the transfer of control from the people to some centralized authority. The time is here, however, when a goodly number of rural people, in every part of the state, have come to realize that our rural schools have not progressed as fast as have some of our urban schools or kept pace with progress along other lines. They feel that rural boys and girls have a perfect right to have the best education possible. It appears that in some states, such as New York, Wisconsin and Indiana, the reorganization of rural schools has come from the top.

It is my firm belief that whatever changes are made in rural schools should be done *with the consent of the farm people.*

To be fair to our boys and girls so as to be sure that they secure educational opportunities equal to that of others, we should not postpone making a serious study of our present school conditions. I am sure that changes are going to come. I would like to have these changes directed by farm people. I am sure that if farm people study all sides of this question they will not come out with a stupid answer. I am sure also that any study of schools by farm people should be mixed with the advice and counsel of our educators. I have noticed a tendency of farm people to be-little the advice of those who have been closest to the problems. I think that we must listen to all sides of the questions and then make our own decisions. We shouldn't let selfishness or false pride or prejudice warp our thinking.

During the last several years I have been doing considerable work on school matters with the public relations committee of the Illinois Agricultural Association and on a state-wide Farm Bureau committee, and I have learned why the situations in some of the rural districts in Illinois have become quite serious.

The most important of these is the fact that our school population has decreased tremendously. For instance, in my own school district there were from 50 to 60 pupils attending school during the winter months when my father went to school. When I was attending school in our district, there were from 20 to 30 pupils. When my wife taught school in our district, she had 22 pupils during the first year. For the last several years, we have had an average of about 10 or 11. Next year, there will be six, and unless some

OLD SCHOOL, However"

one moves into the district with a large family the enrollment will, in a couple years, be decreased to three or four.

This same thing is happening all over Illinois, not in all districts however, because some communities have unusual situations, but the trend is for a decreased enrollment. For instance, the average daily attendance in the eight rural districts of Mount Pleasant township in 1934 was 132. Five years later in 1939 the average daily attendance was 110. Ten years later, or in 1944, the average daily attendance of these eight districts in Mount Pleasant township was 94. This was a decrease of over 28% in ten years. There was a reduction of approximately 50% in the enrollment in Mount Pleasant township from 1900 to 1944. In 1891 there were 4,016 pupils enrolled in the one-room schools of Whiteside county — in 1943 there were only 1,664. The average daily attendance in almost 50% of the rural schools in the county is nine or less.

Although not always true, there is a general tendency for districts with a small enrollment to hire cheaper teachers. I am sure that all of us will agree that the teacher is the most important element in any school. One of the principal reasons why I feel that we should consider taking steps to enlarge our districts and improve our facilities is so that we will be in a position to require fewer teachers, *but better ones.*

There are many good rural school teachers at the present time but I am very suspicious that the urban schools are making their selection first. I perhaps can show this picture by telling you that in 1941, before the war had begun to create an emergency and a shortage of teachers, the average salary of rural teachers in Whiteside county was approximately $845. During this same period the average salary of teachers of urban elementary grades was approximately $1,232.

Does it not stand to reason that the city schools who have better buildings, better equipment, no janitor work, no transportation problems for the teachers, and who are paying higher salaries are able to attract the "cream of the crop"?

Do you know what I would like to see tried in my own township? Since there are only approximately 90 pupils attending the eight rural schools in my township, it seems to me that our people might at least think about building one good three or four room school in the township and hiring three or four of the most capable teachers available. I believe that some teachers can do a very good job of handling all eight grades, but I believe that most teachers who concentrate their training on a few grades, generally speaking, do a better job. I think such a school could have a much broader course of study, have better equipment, have inside toilet facilities, furnish excellent transportation and have a better school spirit at no greater cost than under the present arrangement.

I really believe that four teachers in a four-room school with approximately 100 students will do a much better job than eight teachers working in eight one-room schools. I realize that there is no cut and dried plan that will work in all communities. There are many factors to take into consideration. One of these being the condition of the roads. I realize that the suggestions I have made will be quite a shock to many of you and I do not expect many of the people in my district to at first agree.

I do not want you to get the idea that I am recommending these changes in order to save taxes, because any plan of work probably will not reduce the cost, but I do believe that it is possible to buy more education than we are now doing for the same amount of money.

I do not agree with the statement of an educator who said, "There is no justification for the one-room rural schools, that they never have been good

(*Continued on page* 24)

THE AUTHOR:

Leo M. Knox

LEO M. KNOX, Morrison, Whiteside county farmer, is a former IAA board member. He secured his elementary education in the same one-room rural school attended by his father and which his grandfather helped organize in 1862. Mr. Knox's father also served on this school board and Mr. Knox has served as a director for 25 years. Mrs. Knox also taught in the school for three years before her marriage. "So," he says, "I love our old school, but it takes more than sentiment, however to educate our children." This is the talk he made at the annual meeting of the Whiteside County Farm Bureau. The opinions expressed here are his own, he points out.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Brissenden

THE flood-tide of new Farm Bureau memberships continues in every county where drives are or have recently been held, in every section of Illinois. Membership which was at 109,023 February 1, had apparently passed the 110,000 mark by the middle of the month, when this was compiled, and it was still going strong.

Achievement of the long-range goals totalling 117,000 in the state by September 30 of this year seems entirely possible if every county will set up a program designed for this purpose. The earlier the better!

John C. Spencer, right, hands 46 new Farm Bureau membership contracts to White County Farm Bureau Organization Director J. C. Campbell. A total of 142 were signed in the recent drive.

Membership maintenance meetings continue, with a total of 35 meetings, including the employed personnel of 48 county Farm Bureaus, reached by the end of February, reports W. P. Sandford, IAA director of sales service, who is working in collaboration with H. B. Claar, L. B. Hornbeck, and John C. Moore on this program. March and a large part of April are already well scheduled.

Reaffirmation of long-range goals, and, in a few cases, increases in them, have been the order of the day in the afternoon conferences with directors and executives. Employee attendance at the evening meetings has surpassed that of last year, when the "M-M" meetings were first held. Enthusiasm for Farm Bureau on the part of those who work for it and its subsidiaries is at a high point, and all realize the primary importance of membership acquisition and especially of membership maintenance through good service to members.

Harry Claar, left, IAA organization field man, and John C. Bigelow, Marion Farm Bureau COD, right, pay a wager they lost to C. Glenn Jones, Marion vice-president, in a recent organization drive. Claar and Bigelow agreed to parade around the Marion County Courthouse square in bathrobes if the 20th Century team of organization workers defeated the 19th Century team. The 20th Century won by a score of 23 in the drive that produced 134 new members.

Iroquois county set a record for new memberships in this year's drives, when a contest between young and old workers in the county brought in a total of 242 contracts. J. S. Dorward and L. T. Bergstrom captained the teams. C. J. Johnston is COD.

DeKalb went into second place in this respect when its workers turned in 175 contracts in their recent drive.

Bureau county, whose mark of 165 was high for quite a while, is putting on a determined cleanup effort, and C. A. Markman, COD, reports, "we are now past 200 and there is more to do."

Left to right are Eldon Branch, Earl Loomis and Hershel Campbell, three Marion County Farm Bureau members who worked as a team in a recent campaign and signed 31 new members. They live in Tonti township.

Menard county brought total membership to 833, one short of its long-range goal, by signing 80 members in this already highly-organized county.

Dick O'Dell, COD of Piatt county, has not had the terrific drive figures reported by some others, but in the past three months his regular reports show no less than 210 new members!

LaSalle county workers went on a rampage in their drive and signed 116 new members, COD Earl Hayes reports.

Kenneth Flake, Fulton COD, reports the grand total of 129 for the drive there.

John Spencer, a volunteer worker in White county, signed what is believed to be the individual high total so far, when he brought in 46 contracts personally. The total for the drive was a thumping 142. White county now has 880 members, 50 beyond the long range goal set last year.

Marion county's drive, climaxed by Harry Claar's parade around the courthouse attired in dressing gown and straw hat, brought in 134 new members. . .a great achievement in a month of great achievements.

Bond county let the contest motif work fully in its drive, which reached the splendid total of 100 new contracts.

George Dirreen, COD in Cass county, reports that an intensive drive brought in 51.

Emmett Keim, COD of St. Clair county, was pleased when the volunteer workers rang up a total of 82.

Henderson county workers believed "it can be done," and proved it when they signed 69 new members.

Steve Sofranka, new Wayne county COD, had the experience of hearing his volunteers report a total of 61 at the end of the first drive directed by him.

Edgar county's best drive, in the opinion of H. Zeis Gumm, COD, was a dandy, with 84 new contracts resulting.

Jasper county workers went up and down the roads there, and the harvest was no less than 81 new members.

On toward the long-range goals — now!

Coles county reported 120 new members signed in a recent drive, and its goal is now raised to 1400.

Macoupin county reported 80 new members signed in the drive which terminated Feb. 15.

H. T. Swigart, county organization director for the DeWitt County Farm Bureau since 1937, is retiring from his position because of ill health. Mr. Swigart has performed an outstanding job in his county, and has been very active in community affairs, serving as president of the High School board, and on many other civic boards.

"And, say George, after you get that new generator in, you better put new tires and tubes on those front wheels — we're planning on a little trip to Hot Springs."

● Yes, time changes all things. Even your insurance needs. For instance, the policy you bought ten years ago may be something quite different from the type of policy you need today. Perhaps the children are married or set up business for themselves. Maybe, since you've paid off your mortgage the insurance you took out for that purpose should be changed to another form of protection. Not generally known, but a matter worth investigating is the fact that insurance obtained some years ago for the purpose of settling and administering your estate may today be totally inadequate for this purpose.

Have your trained Country Life agent analyze your insurance program in terms of your present day needs. He will be glad to do this — with no obligation on your part.

CHICAGO 5, ILLINOIS

REPORT FROM THE

STATE LEGISLATIVE FRONT

* * * *

AIRPORT AUTHORITY BILL CONCERNS FARMERS. PROPOSE YEAR-ROUND OPEN SEASON ON FOXES. OPPOSITION TO CONSTITUTIONAL CONVENTION.

By PAUL MATHIAS

THE first two months of the present session of the Illinois legislature have been largely devoted to organization of the legislative bodies and to a few emergency matters. Highly controversial issues have not been considered.

Airport Authority Act

However, one bill, the airport authority act, which is being pressed for early passage, is of particular importance to farmers. This bill is intended to meet objections raised by the Illinois Supreme Court in holding unconstitutional the 1943 Act permitting cities to set up airport districts.

The new bill would permit the creation of airport authority districts in areas having 5,000 or more inhabitants. The territory of the airport authority district may include both incorporated cities and rural territory. The creation of the district would be submitted to a referendum in the proposed district and if the proposal carried the airport district would be created.

A majority of the commissioners appointed to govern the district would be appointed by the city council if there was a city in the area. This airport district would acquire and provide airport facilities and would be authorized to levy a tax of 15c on the $100 valuation and also issue bonds without referendum up to 1% of the assessed valuation of the property in the district. The airport authority, in addition to jurisdiction over the airport itself may regulate the approaches to the airport in the surrounding area.

There is a provision in the bill which would permit the disconnection of unsubdivided tracts of 20 acres or more if these lands are not part of the airport and are more than a certain distance from the airport. However, under the bill, as originally introduced, while rural property not needed for the airport itself or for regulation of the approaches might be disconnected it could have been liable for payment of a proportionate part of the bonds issued prior to disconnection.

Under the bill passed two years ago, a number of cities proposed to set up airport districts and several of them included substantial amounts of rural territory. Upon referendum, the people in the cities greatly outnumbered and outvoted the people in the rural areas. The Illinois Agricultural Association proposed first that the minimum population of these districts be increased to 15,000, and secondly, that a separate vote be taken in the urban territory and rural territory and that the proposal must receive a majority of the votes cast in each in order to carry. Both these amendments were defeated.

While it is stated that Federal funds will be available for only a few airports in the state, the higher population limitation was opposed by Chamber of Commerce and municipal officials who seemed to feel that many of the smaller cities would want to take advantage of this legislation. There is, of course, legislation now on the books under which cities, counties and park districts may provide public airports. However, in order to secure added taxing and bonding power, many people seem to feel that the present legislation is necessary.

While the IAA amendments were defeated, other amendments have been adopted which reduce the area of rural territory to be retained in the district to the airport itself and an adjoining area of one-half to two miles, depending upon the length of the runways, and a strip of land connecting the airport to the city.

Other amendments give residents of rural territory 60 days in which to file a petition for disconnection and provide that when the disconnection is granted it shall relate back to the date of the petition. This will enable the area which is disconnected to be relieved of taxes for the payment of bonds for the airport authority district. If the provision for disconnection is valid, then these amendments go a long ways toward protecting the interests of rural people.

Open Season On Foxes

Another bill of interest to a number of farmers in the central section of the state provides a year-round open season on foxes in the central zone. Many persons report that foxes have become so numerous that they are killing many chickens and even very young pigs in addition to doing a great deal of other damage. It is thought that the enactment of legislation providing a year-round open season on foxes in the central zone will result in a considerable reduction in the fox population. A number of them can be killed before they leave their dens. The IAA is supporting this legislation.

Animal Disease Control

There is a great deal of interest in animal disease control legislation particularly as it affects the Bang's disease elimination program. A legislative commission has held hearings in a number of places in the state in an attempt to determine the thought and wishes of livestock breeders. While no legislation has been introduced as yet, it is apparent that there will be legislative action on these matters.

Constitutional Convention

Many groups are urging that the question of calling a constitutional convention to consider a revision or amendment of our state constitution be submitted to the voters. The Governor has recommended this proposal. While the legislation has not been introduced, it is much discussed.

If the recommendation were to be followed, the General Assembly, by a two-thirds vote in each House would submit the proposal for calling a constitutional convention to a referendum at the election in November, 1946.

The favorable vote of a majority of all votes cast in the election would be necessary for the proposal to carry. If the proposal carried, then the General Assembly in 1947 would enact legislation providing for the convention. Two delegates would be elected from each senatorial district. This would involve a primary election and also a special

election. The convention would then convene and proceed to prepare its report and recommendations. The report of the convention would be submitted to the electors, probably at a special statewide election. A majority of all of the votes cast at the election would be necessary in order for the proposals to carry.

The IAA is opposed to submitting the proposal for calling a constitutional convention at this time. The Association recognizes, of course, that certain provisions of our state constitution require amendment. It believes that this can be accomplished through the adoption of a Gateway amendment which would make it possible to submit amendments to three articles of the constitution instead of one, as at present, at the same election and would permit an amendment to be adopted by the favorable vote of two-thirds of those voting on the proposition instead of requiring a majority of all votes cast at the election.

It has seemed to the Association that a constitutional convention at this time would not accomplish anything constructive. It is certain that the convention would consider reapportionment, changes in the revenue article and possibly changes in the minority representation provisions of our present constitution. These are highly controversial and any report approved by the convention probably would be the result of compromise. In order to make certain that one compromise proposal did not carry while another carried, the report of the convention probably would be submitted as a single proposal.

It is the opinion of the Association that the cumulative opposition to the different proposals would be such as to defeat the entire report. In 1922 the constitutional convention proposal received only 17% of the votes cast. The expense involved in the holding of a constitutional convention with three statewide special elections, in addition to the expense of the convention itself, is estimated to run anywhere from two and one-half to four million dollars.

Then, too, there is the question of whether it is advisable to attempt to rewrite the basic law of the state under present unsettled conditions. It would seem to be very difficult to obtain serious public consideration of constitutional proposals. It has seemed to the Association that more consideration would be given to a proposal if only two or three matters were submitted at one time instead of an entire new constitution or many different proposals. For these reasons the Association has opposed the calling of a constitutional convention and favors a Gateway amendment.

WFA Announces Tentative Rates of Dairy Payment

The War Food Administration announced on Feb. 15 tentative plans for the continuance of dairy production payments through the last nine months of 1945. Continuation of the program after June 30, 1945, it was announced by WFA, would be contingent upon approval by Congress and the rates of payment remain subject to later revision dependent upon war conditions.

Under the new schedule, milk production payments per hundred pounds will be 25 cents lower in April, 1945, than in April, 1944; 10 cents lower in May and June; the same as last year in July and August; 25 cents down in September; and the same as last year in October, November and December.

The butterfat payment will remain at 10 cents per pound until October, when it will be increased to 16 cents per pound for the last three months of the year.

In Illinois the rates per hundredweight for all counties, as announced by WFA, are as follows: January through March, 60 cents; April through June, 25 cents; July through September, 45 cents; and October through December, 70 cents.

However, in addition to the payments specified above, a supplemental drought payment of 10 cents per hundredweight of whole milk and 1 cent per pound of butterfat is effective for the period January through March, 1945, in the following Illinois counties: Adams, Brown, Schuyler, Bond, Calhoun, Cass, Christian, Greene, Jersey, Macoupin, Madison, Montgomery, Morgan, Pike, Sangamon, Scott, DeWitt, Logan, McLean, Macon, Mason, Menard, Tazewell, Champaign, Ford, Iroquois, Piatt, Vermilion, Clark, Coles, Cumberland, Douglas, Edgar, Effingham, Fayette, Jasper, Moultrie, Shelby, Clinton, Monroe, Randolph, St. Clair, Washington, Johnson, Williamson, Edwards, Gallatin, Hamilton, Hardin, Massac, Pope, Saline, Wabash, Wayne, White, Clay, Crawford, Lawrence, Marion, Richland, Alexander, Jackson, Perry, Pulaski, Union, Franklin, and Jefferson.

Lt. Col. John E. Boland, medical director for Country Life Insurance Company who is on leave of absence serving in the Army, sent this picture of himself from Verdun, France. He has been in action with the first, third and ninth American armies and the British second. He was sent into the St. Vith sector at the time of the German break through in December.

(Champaign Courier Photo)

Country Life Insurance written in Champaign county exceeded five million dollars with the issuance of a policy to Mrs. Roy Savage in February. Special Agent Ed Schrodt presents the policy to Mrs. Savage as Jerry Trimble, general agent, left, looks on. Others shown are Mr. Savage, their sons, Leonard, left, and Donald. The Savage family has farmed in Champaign county 18 years.

Have you classified your woods and protected it against livestock grazing?

The FARM FRONT ROUNDUP

VEGETABLE SUPPORT PRICES — Because of increased military requirements, the national goal for processing vegetables in 1945 has been increased. Goals for the individual crops vary by states and areas, but nationally, for the four major vegetables, they are these percentages of 1944 planted acreages: snap beans, 98 per cent; green peas, 108 per cent; sweet corn, 105 per cent, and tomatoes, 110 per cent. As in past years, growers may be assured of the minimum support prices on one or more of the 4 vegetables only by entering into contract agreements with canners. Canners participating in the program will be certified by state AAA committees. Grower support prices for Illinois are as follows: tomatoes for canning, $24 per ton; sweet corn for canning, $19 per ton; snap beans for canning, (schedule recommended) range from $105 to $60 per ton for four varieties: green peas, $85 per ton.

FINAL CROP FIGURES — Farmers turned out total crops last year 24 per cent above the ten year 1923-32 or pre-drought average, 6 per cent larger than 1943, and 11 per cent more than in any other year save that peak in 1942.

FARM PRODUCTS DEMAND — In its latest price and demand situation report, BAE says that demand for farm products is likely to continue at present wartime levels throughout most of 1945. Regardless of the course of the war the demand for farm products, at ceiling prices, may continue to exceed supplies in 1945.

WHEAT INSURANCE — Crop insurance, assuring production returns up to 75 per cent of average yields will be available on 1945 spring wheat crops through county AAA offices. Two contracts will be available — one covering up to 75 per cent of average yields and the other up to 50 per cent. Both contracts will be for three years, with premium payments on an annual basis through cash or premium notes. In order for crop insurance to be available in a county, applications must be made covering 50 farms in the county or one-third of the farmers producing insured crops in the county, whichever is less.

FLAX INSURANCE — Crop insurance on flax, which is being offered in 1945 for the first time, will enable producers to assure production returns from their 1945 flaxseed crops up to 75 per cent of average yields.

FARM DEBTS — Farm mortgage debt of the country is the lowest in 30 years. Much of the reduction is due to repayments on loans made through the Federal land bank system. The volume of land bank and Commissioner loans made in 1944 was the largest since 1936, totalling $105,292,000, but for every dollar borrowed more than 3½ dollars was repaid on loans made in prior years.

SOYBEANS FOR OIL — Soybean processors can pay producers up to $2.10 a bushel for U.S. No. 2 green and yellow soybeans of 14 per cent moisture content, under a new OPA regulation. This ceiling, which applies to 1944-crop soybeans marketed after Jan. 27, is 6 cents above the support price. The new regulation allows country elevators a mark-up of 5 cents a bushel for handling. It allows merchandisers a mark-up of 2½ cents a bushel if they unload at a terminal market and 1 cent in all other cases, according to the state AAA committee.

SHIPPING CONTAINERS — Shippers and growers of fresh fruits and vegetables are warned by the WFA that if production of these agricultural commodities is as large as expected this year, they again will have to take special measures to assure themselves of adequate container supplies. Looking at the wooden container picture as a whole, officials say these items will be considerably short of new container requirements for 1945. The situation on fiber boxes and packages is somewhat the same. WFA recommends placing orders as far as possible in advance and the salvaging of containers for re-use.

SUGAR SUPPLIES — According to present estimates, OPA says there won't be as much sugar to meet 1945 civilian needs as was used in 1944. Present stocks are low. Government needs will be higher, and shipping and man power limit an increase in supply. OPA announces that ration coupons for no more than 700,000 tons can be issued for home canning in the 1945 season. OPA feels that with this amount housewives will be able to can as much as they did in 1944.

LABOR SUPPLY — Five hundred Mexican nationals and 1000 Jamaicans will help harvest Illinois food crops this year, according to plans revealed by P. E. Johnston, in charge of the agricultural extension service farm labor program for Illinois.

LEND-LEASE — WFA has announced that deliveries of food and other agricultural products for shipment to the Allies under lend-lease during 1944 totaled 7 billion 272 million pounds compared with 1943 deliveries of 11 billion 488 million pounds. Meat and meat products led deliveries for the year with 2 billion 268 million pounds, followed by dairy products totalling 1 billion 371 million pounds and grains and cereals totaling 1 billion 324 million pounds.

The European war is expensive, but everything in the Pacific war will cost more. To support the same sized task force, it will take twice as many ships. We'll need more Superfortresses that cost $600,000 each — more tanks with bulldozer blades that cost $67,417 each — more of everything. This amphibious war in the Pacific takes tremendous amounts of equipment. To supply our fighting men with these weapons, we must buy more War Bonds than ever before.

Terraces can be successfully constructed with an ordinary two or three bottom tractor plow.

KEEP FILLED

-TO KEEP FARMING!

with one of these

QUALITY FUELS

- **MAGIC ALADDIN GASOLINE**

  This high quality gasoline meets the war-time standards for anti-knock and other war specifications as established by the petroleum industry. This fuel is the first choice of many farmers including those operating high compression tractors.

- **KLEER MOTOR**

  This is a clear, unleaded, well refined gasoline that is used widely by farmers in their tractors and stationary gasoline engines. It is also used by many for cooking and lighting purposes.

- **T-40 TRACTOR FUEL**

  This is a high octane tractor fuel built to perform and give outstanding results in tractors designed for heavy fuels. Great care goes into the refining of this fuel and its exceptional performance has justified its wide acceptance among tractor operators. T-40 is exempt from the state motor fuel tax.

- **NEW FS/50 TRACTOR FUEL**

  FS/50 is the NEW and volatile tractor fuel which combines some of the characteristics of gasoline with other qualities of heavier fuels due to its higher octane and volatility. It responds more quickly to the governor and doesn't "load up" when idling. As is the case with heavier fuels, FS/50 requires high manifold and water jacket temperatures to prevent dilution. The state motor fuel tax is required on this fuel, but applications for refund are accepted as in the case of gasolines used in field work.

"How to keep from running out of fuel in the midst of spring plowing and planting."

Your Blue Seal salesman will make regular calls to keep your farm fuel storage filled.

BLUE SEAL

ILLINOIS FARM SUPPLY CO.

608 SOUTH DEARBORN ST., CHICAGO 5, ILL.

By H. G. Iftner

New memberships in Illinois Grain Corporation during the past year are: Henry Stark Service Company, Cambridge, Henry county, A. O. Grossmann, manager; Penfield Grain and Coal Company, Penfield, Champaign county, Lee Nelson, manager; Farmers' Grain Company of Palmer, Palmer, Christian county, Howard McWard, manager; Dillsburg Cooperative Grain Company, Rantoul, Champaign county, John Ehman, manager; Orleans Farmers Grain Company, Alexander, Morgan county, Francis Kaiser, manager; McDonough Grain Milling Company, Bushnell, McDonough county, W. A. Elam, manager; and Grundy Grain and Supply company, Coal City, Grundy county, L. W. Womacks, manager.

The first shipment of corn by the McDonough Grain and Milling Company at Bushnell was marketed through the Jacksonville office of Illinois Grain Corporation of which J. O. Cain is manager.

The Jacksonville and St. Louis offices of Illinois Grain Corporation have enjoyed a good patronage from C. P. Griffiths who owns the elevator at Colusa, Missouri. Griffiths once served on the board of directors of Illinois Grain Corporation.

W. A. Davenport, grain merchant at Jacksonville, died in January. Mr. Davenport was a patron of Illinois Grain Corporation, although he operated a private business.

Martin Hugo, Ferrin, Clinton county, is new manager of the Cooperative Equity Exchange. He succeeds his father Fred Hugo who served the company for 22 years. The Ferrin Cooperative Equity Exchange, under Fred Hugo's management, became one of the outstanding cooperatives in southern Illinois. Operating on a strictly cooperative basis, the number of stockholders increased yearly. When patronage credits totalled $100, a share of stock was issued to the patron. Ten new stockholders were added at the annual meeting on Jan. 31.

The Equity Union Exchange, official organ of the National Organization, reports that Fred Hugo's last year with the Ferrin Cooperative was the best in its history.

Mr. and Mrs. Hugo moved to St. Louis, leaving their son Martin in full charge of the organization.

The Columbia Farmers' Cooperative Grain Company, Monroe county, merits recognition. This company enjoys the distinction of becoming the first in the state in 1944 to re-organize on a county wide basis, becoming a Farm Bureau type cooperative. It will serve Monroe county farmers in the marketing of their grain and in supplying Blue Seal and Service Brand Feeds. The Columbia Farmers' Cooperative Grain Company is a member of Illinois Grain Corporation and of Illinois Farm Supply Company. Walter Reichart is manager.

Prior to 1944 county grain companies had been organized in four Illinois counties. They were: Lee County Grain Association, Champaign County Grain Association, Jersey County Grain Company, and Moultrie Grain Association. Since May 1944 county grain and feed programs have been assured in nine counties: Henry, Grundy, McDonough, Schuyler, Coles, Cass, Bond, Montgomery, and Monroe.

Progress is under way in at least 25 other Illinois counties in the grain producing area.

Lee Nelson, manager of the Penfield Grain and Coal Company, Champaign county, has been employed to manage the Farmers Elevator Company at Villa Grove, Douglas county. Nelson succeeds L. W. Womacks, who goes to Coal City, Grundy county.

Stock and patronage dividends totalling $20,328.53 were distributed by the Ludlow Cooperative elevator, Champaign county, to stockholders and patrons at a recent annual meeting.

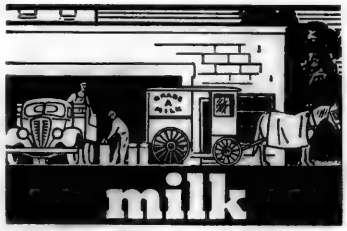
Dividends of 2¼ cents on grain, 6 per cent on merchandise and 5 per cent on preferred stock were reported by President Warren H. Watson.

Three directors whose terms expired were re-elected: Byron Walker, Ed Quinlan and M. P. Quinlan. At the organization meeting, directors re-elected all officers as follows: Mr. Watson, president; John F. McCabe, treasurer, and W. O. Smith, secretary. Eugene C. Hoerner is manager. Prof. A. T. Anderson, U. of I. department of agricultural economics, was the speaker. Dinners were served to 203 persons, including representatives from the Paxton and Gifford elevators.

Cooperative grain marketing lost a good friend in the death in January of Thomas D. Karnes, 79, who served as manager of the Farmers Grain Company, Fairbury, Livingston county, for 39 years. Born Dec. 19, 1865, in Eagle township, La Salle county, he moved to Fairbury with his family when he was a small boy. During his lifetime he was active in community affairs, serving as president and director of the Fairbury First National Bank, and as Fairbury postmaster under Grover Cleveland. He was a member of the Presbyterian church, the Masons, and Fairbury Rotary club. For several years he was a delegate to the Democratic national conventions. He leaves his wife and one son, Cmdr. Thomas Donald Karnes of Lake Forest, now aboard the destroyer, Frank Knox. He also leaves one brother and a sister.

Thomas D. Karnes

Williard Barclay, former manager of an elevator at Wing in Livingston county, was selected by the board of directors of the Farmers Grain Company at Fairbury to succeed T. D. Karnes. While Barclay has had many years experience in elevator management, he said, "Mr. Karnes will be a hard man to follow". Barclay began his duties at Fairbury Feb. 19.



By Wilfred Shaw

Meet the new president of Illinois Milk Producers Association. He's Edwin Gumm of Galesburg. A veteran of World War I, he has been on a dairy farm since 1919, and is owner-operator of a 250-acre farm in Knox county and also operates his father's farm of 650 acres, 400 acres of which is pasture land. He maintains a dairy herd of 30 milking cows, and feeds from 125 to 150 steers and 150 to 175 hogs annually. Ed helped organize the Galesburg Pure Milk Association, and has been president since it was organized in 1932. He also is vice-president of the Knox County Farm Bureau, and has been a Farm Bureau director for 16 years. He is president of the Knox-Warren Livestock Association. Ed is chairman of trustees for the First Universalist Church, Galesburg, and is a member of the American Legion, Veterans of Foreign Wars, Exchange and Galesburg Club. Mr. and Mrs. Gumm have two children, Dorothy and John.

The annual meeting of Mid-West Dairymen's Company of Rockford will be held the evening of March 27 by action of the directors.

H. W. Mainland, manager of Mid-West Dairymen's Company, reported recently that their members delivered 46,455,709 pounds of milk to their buyers in 1944, or 9.6% more milk than in 1943. Their average member produced 321 pounds of milk per day, or 5% more than in 1943. The average price of 3.5% milk in Rockford was $3.07 per cwt. in 1944. Class I sales to dealers, or bottled milk sales increased 11.8% in 1944. 67% of all milk sold was sold in Class I and 13½% in Class II.

Plans for the 20th annual meeting of Pure Milk Association, scheduled for March 13 in Chicago, have been canceled. In order to transact the necessary and essential business a skeleton meeting of one representative from each of their 16 districts will meet at the Pure Milk Association offices on March 13, according to A. H. Lauterbach, manager.

The 15th annual meeting of Quality Milk Association was held Feb. 15 in the Consistory building, Moline, and was attended by 415 members and their wives.

Manager C. G. Huppert reported 4.5% more shipper members in 1944 than in 1943; 6.1% more milk delivered in 1944 than in 1943; an average weighted price of $3.00 per cwt. for 3.5% milk marketed in 1944.

Membership approval was voted of the Quality Milk Association purchase of the

plant and facilities formerly operated by the Producers Creamery of Moline.

Directors re-elected were: Arthur E. Meyer, Albert T. Johnson, Walter Mose, Robert McKnight, Harold Peterson, Carl Geiger, Vernon Tyler. L. A. Schnekloth was elected director to fill the vacancy of Elmer Kuhl, who resigned. James Holtz was elected director at large, replacing Hollis Boardman.

Wilfred Shaw, IAA director of milk marketing, was the principal speaker. Reports were given by Julia Dearch, of the Quad City Dairy Council, and E. H. McGuire, Quad City market administrator, on the federal milk marketing order.

The following are the blended prices received by producers supplying the respective Illinois markets. All are January prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.48
Canton	2.75
Champaign	2.75
Chicago	3.10
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.75
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	2.96
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.07
Springfield	2.85
St. Louis	3.40
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for December, unless otherwise noted:

Boston (191-200 mile zone)		$3.82
Chicago (70 mile zone)	(Jan.)	3.10
Cleveland		3.51
Dayton	(Jan.)	3.06
Denver	(Jan.)	2.87
Detroit		3.57
Evansville		2.94
Indianapolis	(Jan.)	3.44
Kansas City	(Jan.)	3.52
Milwaukee		3.00
New York City (201-210 mile zone)		4.08
Omaha		3.00
Seattle	(Jan.)	3.10
St. Louis	(Jan.)	3.44
St. Paul and Minneapolis	(Jan.)	3.00
Washington, D. C.		3.99

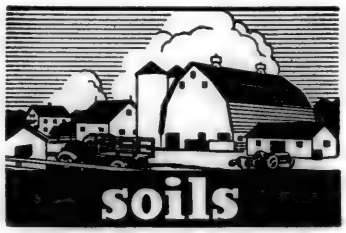
The Producers Co-Op Dairy of Quincy held their 22nd annual meeting in Quincy Feb. 12.

The reports of management disclosed this past year to have been the largest year of business and of earnings since they started operations in 1922. Total sales for the year were $450,117, or 12% above the year previous. A return of stock investments to producers of $14,900 was made in 1944, in addition to dividends upon patronage and stock of $4,399, or a total of $19,299 returned to patrons and stockholders. All capital stock has now been returned and the dairy is operating upon a revolving fund basis. The net worth of the dairy on December 31, 1944 was $131,412.74.

All directors were re-elected for the coming year. The directors all have Quincy addresses, and are Anthony Grawe, Lawrence Brinkman, R. B. Putnam, Wilbur Coe, Fred Lewis, Eldon Knobloch, Alfred Dedert, Henry Summers and Wilmer Cornwell.

Mrs. Laura Johnson is office manager and M. B. Crocker is plant manager.

Ed Gumm of Galesburg, president of Illinois Milk Producers' Association, and Wilfred Shaw, IAA director of milk marketing, addressed the meeting, which was held in the Adams County Livestock Shippers building.



By John R. Spencer

According to Farm Adviser F. H. Shuman, Whiteside county applied 85,000 tons of agricultural limestone in 1944 and this is an increase of approximately 10,000 tons over the previous year. About half of the samples thus far tested in the Whiteside county soil laboratory shows a definite need for limestone and thus it would appear the liming job is a long way from complete.

The counties of the 21st congressional district (Christian, Macoupin, Montgomery and Sangamon) used more than 165,000 tons of limestone last year, which came from eleven different quarries outside of the area. There are no producing quarries in the four counties.

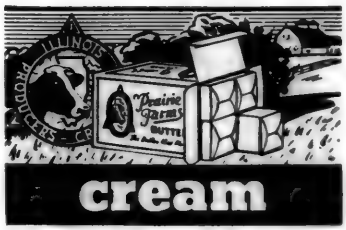
On most cultivated land nitrogen scarcity is a bottleneck in the production of high yields of corn and grain, states L. B. Miller, assistant chief, soil experiment fields, U. of I. College of Agriculture.

Alfalfa is especially efficient as a host plant because, in addition to producing a nitrogen-rich top growth which can be plowed under, it also fills the soil to a considerable depth with roots which are high in nitrogen. The growing of alfalfa, even when large crops of hay are removed, usually leaves a favorable nitrogen balance in the soil, Miller added.

Disappointing yields of corn or other crops following several years of alfalfa may be due to potash deficiency and can be overcome by using barnyard manure or other potash-rich fertilizers.

The sales manager of a company having five producing quarries said recently "We are behind on orders over 500 car loads of agricultural limestone and have turned down twice that much business."

If corn is checked on sloping land and cultivated both ways, try to "lay it by" across the slope to reduce erosion.



By Frank Gougler

In normal times, average annual per capita butter consumption in the U. S. is about 17 lbs. This year it will not exceed 10 lbs. Butter production during 1944 was 10% under 1943. It is estimated that 1945 production will be 10% under last year. Draining more farm labor from our dairy farms may result in a much greater reduction.

If a farmer who operates a rather large farm and milks many cows has his help taken from him, and other help cannot be employed, about all he can do is to dispose of his herd. Weather conditions may be another very important factor that will have a bearing on 1945 butter production.

Military and lend-lease needs for butter appear to be much greater this year than formerly. Last year the early spring butter production up to April 1 was left free for civilian use. This year lend-lease is taking 20% of the make in February and 25% in March.

Late last year, it was expected that 1945 would begin with much smaller needs of food products to meet military and lend-lease requirements. Instead, we are starting out with the most stringent rationing of the war years.

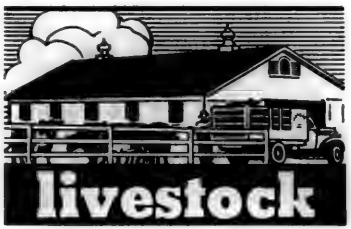
Manager F. A. Gourley of Producers Creamery of Carlinville asks the question, "When is a truck worn out?" Then he reports this interesting experience with trucks. Before the war he followed the practice of trading in trucks annually. Now he has trucks on the road that were bought in 1941. The mileage on them ranges from 175,000 to 200,000 miles and they are still going strong.

The 200,000 mile truck has been driven by Olen Crayne for the past year. It was considered ready for the junk heap when he took it over, yet during the past year it has had the lowest operating mileage of all trucks. Gourley gives Olen a lot of credit for the longevity of this truck.

Equally good results have been secured with a truck which has been driven 175,000 miles by James England. This truck is bringing in the largest load of milk coming to the plant.

Russell Meyers, butter salesman, has driven his truck more than 150,000 miles and its appearance and performance would lead one to believe that it has not gone more than 40,000 miles. Manager Gourley concludes, "It appears to us that with the best drivers behind the wheel, you can expect long and continuous service from many trucks regardless of make. Conscientious, careful and considerate drivers are a valuable asset to the creamery.

Watering cows twice daily providing water heated from 50 to 55 degrees will increase milk production five per cent to 10 per cent.



By S. F. Russell

Indianapolis Producers handled more than 3 million dollars worth of live stock in January, according to a report just issued by the officers. The Producers received 27.8 per cent of the salable live stock on the market with the volume well above a year ago. January was the biggest month on record in cattle for the Producers with an increase of 1207 head over January of 1944, and the largest January since 1935 was reported for calves with an increase of 589 head over a year ago. The largest January in hogs since 1934 was also reported with an increase of 5647 head, and the smallest sheep and lamb total since January, 1939, with a decrease of 9794 head from the first month of 1944.

Chicago Produers' 23rd annual meeting scheduled for March 8, has been cancelled by the board of directors. The action was taken to comply with the recent order of Mobilization Director Byrnes. In accordance with the by-laws of the association, the present directors will continue to serve in office until such time as a membership meeting can be held.

Here's a tip from the Chicago Producers' newsletter: "Did you know that paint on hogs for identification purposes is not satisfactory, as it often blends with the hog's color and cannot be seen. It is advisable to have your hogs marked with shears before leaving the farm, if it is convenient."

Organization of a new subsidiary of the Bloomington Producers to be known as "Producers Stockyards Supplies," was announced at the recent annual meeting of the Bloomington cooperative. The new subsidiary will handle mixed fertilizers manufactured by the Illinois Farm Supply Company plant.

According to the reports presented at the Bloomington Producers annual meeting, the cooperative handled livestock valued at $2,085,502 during 1944. Feed sales amounted to $102,000 for the year. Net income was reported at $17,513, and net worth at $54,947. Average weight of hogs handled in 1944 was 253 pounds compared with 262 pounds for 1943.

Directors elected were Carl Lage, Walter Risser, Charles Disher, Byron Kline, Chris Warsaw, Frank R. Hubert, Alden Sutter, W. F. Satterfield and Lowell Kraft.

That the breeding of yearling heifers fed for about five months is a sound practice is suggested by results of experiments on the effect of pregnancy on quality of beef at the University of Illinois College of Agriculture. Pregnant heifers take on a higher degree of finish during this time than do open heifers in the same period.

Copies of Bulletin 508, "Effect of Pregnancy on Quality of Beef" are available upon request to the University of Illinois College of Agriculture, Urbana.

Former Logan COD Hired As Livestock Field Man

Lee Roy Hays, former assistant farm adviser and organization director in Logan county, has been hired as field man for district four on the staff of the livestock marketing department of the Illinois Agricultural Association, according to an announcement by S. F. Russell, director.

Lee Roy Hays

Counties included in the district in which Hays will work are: Kankakee, Livingston, Ford, Iroquois, McLean, DeWitt, Piatt, Vermilion, Champaign, Macon, Moultrie, Douglas, Edgar, Coles, Shelby, Cumberland, Clark, Jasper, and Crawford.

Hays, who recently received an honorable discharge from the U. S. Army, began work on his new job Feb. 15. He had been employed in Logan county from Sept. 1, 1940, until he entered the Army, May 15, 1944. He received his discharge Dec. 14, 1944.

A graduate of the U. of I. College of Agriculture in January, 1939, Hays was employed on the university staff after graduation in Farm Bureau-Farm Management work. On Jan. 1, 1940, he was hired as debt adjustor for the Farm Security Administration in west central Illinois, and then was employed as assistant farm adviser and organization director in Logan county in September, 1940.

Hays was born and reared on a livestock farm near Normal, McLean county, and participated in 4-H club work for nine years. While engaged in 4-H club work he started in the purebred hog business and also had a number of baby beef projects. Hays' father, C. R. Hays, is a special agent for Country Life Insurance Company in McLean county. He also has been a leader in the state in writing Farm Bureau fire insurance business.

Hays is married and has one daughter, Patricia Ann, 7. His wife is the former Marian Von Fossen of Bloomington.

Of 374 swine herds tested for brucellosis in Illinois last year involving 5,082 animals, 181 infected herds were cleaned up, states a report from the department of animal pathology and hygiene at the University of Illinois College of Agriculture.

Membership of the IAA livestock marketing committee is composed of two representatives from each of the 15 congressional districts, representatives from the cooperative marketing agencies at Chicago, St. Louis, Peoria, Springfield, Indianapolis, Evansville, and the Illinois Livestock Marketing Association, and the IAA marketing committee. The committee has had several meetings.

Members of a five-man special committee named to study the coordination and availability of cooperative livestock marketing agencies in the state began work Feb. 8. Left to right are: J. P. Redman, Pulaski county; Byron Kline, McLean; Carl M. Johnson, DeKalb; Lawrence Todt, Montgomery, and Edwin Gumm, Knox. The committee was named by the IAA livestock marketing committee.

And Porkus Soothsayer knows his Brutus Cholera!

★ ★ ★

Of course he needn't have selected any one time for his warning because cholera may strike whenever the opportunity presents itself. That's why it's wise to safeguard each litter of pigs against this scourge as early as possible. Fresh, potent Farm Bureau serum and virus used in time protects your hog investment for you.

A FARM BUREAU PIONEER

GEORGE L. POTTER, Pontiac, a pioneer in county and statewide Farm Bureau cooperative work, was honored by 400 stockholder-patrons of the Graymont Cooperative Association, Livingston county, with a lifetime membership as an ex officio board member at the 41st annual meeting of the cooperative Feb. 7 in Rooks Creek town hall in Graymont. Mr. Potter has served as a board member of the Graymont Cooperative for 40 years. During that period he served as secretary for 12 years and for a number of years as president.

Mr. Potter joined the Livingston County Farm Bureau when it was organized in 1913 as the Livingston County Soil & Crop Improvement Association. It was the fourth Farm Bureau formed in Illinois. Mr. Potter has served on the Livingston County Farm Bureau board of directors and as its president.

Mr. Potter has been equally active on the boards of two IAA statewide cooperatives, the Illinois Grain Corporation, and the Illinois Agricultural Auditing Association.

He was one of the incorporating directors of the Auditing Association when it was formed June 5, 1924 as the Illinois Agricultural Cooperative Association, and was elected temporary secretary at the incorporating meeting. He was re-elected a director at the first annual meeting Jan. 14, 1925 at Urbana, and later was named vice-president. He continued as vice-president until June 22, 1927 when he was named president and continued in that office until 1931 when cooperative was reorganized.

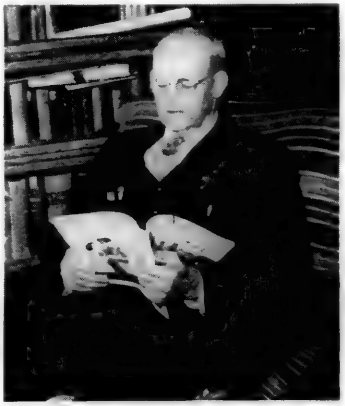
Mr. Potter's service on the Illinois Grain board started on Feb. 22, 1933 when he was elected a director-at-large. On Feb. 12, 1937, he was elected president of Illinois Grain and served one year, at which time the cooperative was reorganized. Mr. Potter continued to serve on the board of directors of Illinois Grain until the 1944 annual meeting. This gives him a record of 11 years of service on the board of the statewide cooperative.

A real pioneer in Farm Bureau work, Mr. Potter will celebrate his 75th birthday on March 18. He was born in Chenoa, McLean county, and has spent most of his life in Livingston county.

According to the annual reports given at the annual meeting of the Graymont Cooperative, three-quarters of a million bushels of grain were marketed through its facilities during 1944. Sales included $641,175 for corn, $68,639 for oats, $184,263 for soybeans, and $253 for wheat.

Feed sales totalled $156,838; seed sales, $61,051; lumber sales, $46,247; fencing, $65,720, and coal sales, $14,914.

A big business was reported for the association's hatchery, with chick sales boosted 35 per cent over 1943. Total sales in this department amount to $15,000 showing a net income of more than $3700.



George L. Potter

The feed mill department reported a 75 per cent increase in tonnage over 1940, with a total of 4107 tons of grain milled. There were also 40,000 bushels of seed oats cleaned and treated, more than 15,000 bushels of seed beans cleaned, and approximately 200 tons of country run clover seed cleaned.

Total sales amounted to $1,239,102. Net income was reported at $50,036. Dividends including 6 per cent on capital stock, 2½ cents a bushel on grain, and 5 cents per dozen on eggs, amounted to $44,550. The capital and net worth of the company was reported to be $154,076.

Officers and members of the board, other than Mr. Potter who will continue as an ex officio member, are John Algeo, treasurer; Arthur Bertsche, president; Harry Carstens, L. I. Harris, secretary; Max Winters, C. A. Harris, vice-president, and J. H. Unzicker. A. B. Scheeler is the manager. Clinton L. Reedy is manager of the mill and feed department, and G. C. Gundy is manager of the hatchery department.

Brown, Morgan Counties Name New Farm Advisers

Edward Garlich, farm adviser in Brown county for nearly 10 years, will succeed W. F. Coolidge as adviser in Morgan county March 20. Coolidge is starting as farm adviser in Livingston county March 1 to take the place of R. C. Smith who has accepted a position with the Ford-Ferguson company in Michigan.

The new farm adviser in Brown county will be Eldon Powell, formerly assistant farm adviser and organization director in Warren county.

Powell, a native of Jersey county, was graduated from the University of Illinois College of Agriculture in 1931, and prior to his work in Warren county was vocational agricultural teacher at Elkhart, Logan county.

Garlich, a graduate of the College of Agriculture in 1928, has served as farm adviser in Brown county since July 1, 1935. Prior to that time he was a vocational agricultural teacher at Nashville, Washington county, and served as 4-H leader at Clinton and Washington while teaching school at Breeze, Clinton county. Mr. and Mrs. Garlich and their two children, Patricia, 10, and Marica, 8, will make their home in Jacksonville.

Edwin W. Jones of Alpha, Henry county, has been hired as assistant farm adviser in that county, according to a report of the Henry County Farm Bureau board of directors. Jones will assist Farm Adviser H. K. Danforth with 4-H club and Rural Youth work and other activities.

Jones attended Iowa State College at Ames and Knox College at Galesburg after which he was in soil erosion control work as a surveyor with the CCC at Eldora, Ia.

Nine years ago he went to Henry county where he was first a farm hand and later operated his own farm. It was while operating his farm that his interest in soil building practices was expanded to cover swine sanitation, poultry flock improvement and farm management. He is married and has two sons.

R. D. Pennewell of Palmyra, Mo., was elected president of Sanitary Milk Producers at the organization meeting of the board of directors of that organization held at the association offices on Feb. 20, states A. D. Lynch, secretary-manager of the association.

Pennewell has been vice-president of the organization and succeeds J. King Eaton of Edwardsville, Illinois, who has held that office for the past 2½ years.

Other offices selected are Frank B. Tracy, Jerseyville, Ill., vice-president and August F. Dieckmann of Lebanon, Ill., treasurer.

Ronald Wesley Allgood and his companion, "Corky," Livingston county, grandchild of Mrs. Anton Ketterer.

This is Mamie Lou Brown, daughter of Mr. and Mrs. Herman Brown, Mercer county, her coon and kitten.

Doris K. Raber and her "bicycle riding" puppy, Wabash county.

Harlan Hooks and riding horse "Skipper," Effingham county.

This winsome cat family belongs to Mrs. William Kelm Jr., Cook county.

"G I" Billy Dean Murphy, son of Pfc. Kenneth and Mildred Murphy, Cook county.

Chatting at the AFBF annual meeting, left to right, were Ralph Mossie, and W. H. Dorsett, Hancock Farm Bureau board members; Walter H. Scott, Hancock organization director; Charles Lauritzen, IAA board member, and C. H. Mills, Cook county organization director.

$5 PICTURE OF THE MONTH

Winner of $5 picture award is Mrs. Anne Kray, Whiteside county, with a photo entitled "Old Dutch Mill."

Rural YOUTH

By Ellsworth D. Lyon

A NUMBER of reports favoring the Red Cross program for Rural Youth as outlined by the state comittee and mentioned in the last issue of the IAA RECORD have been received. Some of the comments follow:

President Glenn Ioder, Bureau county, writes: "Have received your letter acknowledging the decision of the state Rural Youth committee. I am sure that they have planned a program that all Rural Youthers feel should be done, and that we all want to take part in it and make sure that it is done.

"Last year the Bureau County Rural Youth club gave $500 to the Red Cross from our treasury. I am sure that the individual donations were equally as good as the organization's donations. We will plan to do better next year and include Red Cross Work and first aid studies in our educational program."

Whiteside county has had a report by a member on ways of cooperating in the Red Cross program. A county box social and dance was held in January. The proceeds of $30 was turned over to the Red Cross fund. "We have also had five blood donors in our group very recently . . . . our group seemed very much in favor of the report of the state committee."

Ogle, Carroll, Lee and Whiteside counties held a skating party and a box social at the Dome roller rink in Dixon, Lee county, recently. The proceeds amounted to $50 and was turned over to the Red Cross.

No unfavorable responses to this service program have been received. Apparently the Rural Youth of Illinois will go forward with the Red Cross plan of helping themselves and others in any way that is within their power to perform.

Bureau county announced two engagements in January. A highlight of the month was a box social with sales totalling $94.51. The greater portion of this amount will be used for printing and mailing the County News Letter to members in the service.

Rural Youth groups in various parts of the state report some very interesting winter meetings; St. Clair county, youngest Rural Youth group in Illinois, featured an educational movie in February on soil conservation entitled, "The River." Two shorts, a 4-H club picture, "The Road to Tomorrow" and a cartoon "Tom Tom, The Piper's Son" were shown also. Ten new members were received at this meeting and a program of letter writing to members in the service was planned.

Edwards county showed two films on South American neighbors for its February meeting.

The following presidents have been installed since the third edition of the Rural Youth directory was sent out on Feb. 14. Wendall Coulter, Ford county; Eldon Logan, Fulton; Ralph Minders, Massac; Carroll Borrowman, Pike; Ruth Mains, Wabash; Ruth Murphy, Clay; Wendell Terpening, Warren; and Gene Troxel, DeWitt.

J. R. Gilkey, farm adviser, Macon county, led a discussion for his group in January on the theme ."What's Ahead in 1945." A report from the organization says "the Rural Youth group responded to the discussion very well."

Bond county showed a very worthwhile movie in January entitled "Safety on the Farm."

Randolph county discussed "Meeting the World Gracefully" as well as conducting a quiz on travel etiquette. At the February meeting a successful box social was held with boxes averaging $4 each. Congratulations are in order for two members, Walter Mines, Jr. and Lucille Mahan who were married recently.

The south Kane county group reviewed the book, "I Lived in Latin America," at their January meeting. The review was given by Bill Healy, one of the members. At the same meeting a box social was held.

The Rural Youth group of Peoria county broadcast a discussion in January on the theme, "Why Rural Youth Should Be Interested in a Good Soil Program," over station WMBD, Peoria.

In February Woodford county broadcast a discussion over WMBD on "Military Training After The War."

It pays to get married in DuPage county. The Rural Youth group gives $5 to members in good standing at the time of marriage as a wedding gift.

Let's make a bow to Washington county! "We have 22 new members." Ten persons who are not members have contacted us and asked us if they could attend the next meeting" is the word from Violet Rixman, president. Plans have been made for a scrap paper drive during March.

Congratulations to LaSalle county upon Volume I, Number I of the "Starved Rock Sentinel." Their first issue gives a review of the year's work, along with other items of interest. They are going to have a good time publishing their news letter.

Farmers. . . .right now your country needs your dollars invested in War Bonds. After victory you'll need the financial security these bonds can give. In bonds this money will buy the tanks, planes, guns, and ships that are needed for victory now. When peace comes these same bonds will give you financial security. You'll be assured of the money to repair and replace farm buildings and equipment. You'll have the money for better living and better farming.

Union County Man Hired As Sales Manager Of Exchange

Rollie Baldwin, Anna, Union county, was scheduled to start work March 1 as sales manager for the Illinois Fruit Growers Exchange, IAA associated company with headquarters at Carbondale. He succeeds Howard Swartz who resigned recently to enter business with his father-in-law in Michigan.

Rollie Baldwin

Baldwin was born on a farm in Union county and spent his early boyhood there. After completing school he began work in the fruit and vegetable business and has continued in that field since then. For the past several years he has been in business for himself and has operated on the Benton Harbor market in Michigan, the Anna Market in Illinois and in several of the southern states. His reputation in this field is excellent and he comes to the Exchange with the type of experience that should make him a valuable man as sales manager. He is 33 years old. His wife and daughter will move to Carbondale as soon as a home can be secured.

The sales manager of the Exchange has charge of all sales of fruits and vegetables and is employed on a year-round basis.

Clear your buildings of old paper, magazines, rags, furniture and the like, which mature any spark into a fire.

NOTICE
ILLINOIS AGRICULTURE ASSOCIATION
ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meeting of the Boone County Farm Bureau to be held during the month of March, 1945, at the hour and place to be determined by the Board of Directors of said County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

Rural YOUTH

By Ellsworth D. Lyon

A NUMBER of reports favoring the

Union County Man Hired As Sales Manager Of Exchange

Participating in the Sanitary Milk Producers annual meeting, left to right are: A. D. Lynch, secretary-manager; C. Monte Craft, Pevely, Mo.; and August Dieckmann, Lebanon, Ill., both directors, and Rev. G. J. Hildner, religious and civic leader, Villa Ridge, Mo. Reports showed the cooperative's progress.

SMP REPORTS $9000 NET GAIN

A NEW record high average price of $3.49 per hundredweight was received in 1944 by dairymen in the St. Louis milk shed, according to A. D. Lynch, manager of Sanitary Milk Producers, in his report at the 15th annual meeting held Jan. 29 in Belleville. This is the highest price paid in the middle west, he said, and the third highest in the country.

President J. King Eaton warned 1200 members and delegates that there must be a continued strong membership participation if the cooperative is to hold the gains that have been made. He urged a stronger reserve fund, a larger membership, and close attention to milk transportation. More than 413 new members were accepted in the association during the year.

A net gain for the year of more than $9000 was reported by August Dieckmann, finance chairman, in making the treasurer's report.

In an outstanding address, Mayor John B. Gage of Kansas City, who has been attorney for the Pure Milk Association of Kansas City for the past 12 years, declared that "the day has long since passed when the pro and con of the question as to the necessity for a marketing organization of fluid milk producers should be arguable among informed men."

He pointed out that the inevitable seasonal variations in milk production without corresponding change in consumption as well as the fact there are few buyers and many sellers in a commodity such as milk make imperative the establishment of marketing organizations.

Listed as the assets on which members must rely were:

A loyal, active and united membership which is inclusive of the great mass of the milk producers in the milk shed.

A reserve or revolving fund held intact sufficient in amount to meet at average prices at least a half-month's payment for milk to all member-producers.

Delegates in each local who thoroughly understand the functions and problems of the association; a board of directors well selected from the active membership giving thorough attention to association affairs and a capable management.

A membership with a high level of production efficiency.

Guest speakers included H. E. Slusher, president, Missouri Farm Bureau Federation; George Metzger, field secretary, Illinois Agricultural Asociation; Wilfred Shaw, secretary, Illinois Milk Producers' Association; Marie Harrington, educational director, St. Louis Dairy Council; Wm. Eckles, market administrator, and Rev. G. J. Hildner, Villa Ridge, Mo.

Directors from the following districts were re-elected: (1) J. King Eaton, Edwardsville, Ill.; (2) Orville Plocher, Highland, Ill.; (3) John Voss, Breese, Ill.; (4) Aug. Dieckmann, Lebanon, Ill.; (5) Emil Klingenberg, Okawville, Ill.; (6) H. P. Wicklein, Evansville, Ill.; (7) Sumner G. Wilson, Butler, Ill.; (8) Frank Tracy, Jerseyville, Ill.; (9) C. Monte Craft, Pevely, Mo.; (10) Julian D. Ray, Vandalia, Ill.; (11) B. J. Schumacher, Altamont, Ill.; (12) Clem Bierman, Wheeler, Ill.; (13) R. D. Pennewell, Palmyra, Mo.; (14) Tom Creech, Troy, Mo.; and (16) Arthur Kelpe, Cape Girardeau, Mo. Henry Blesi (15) Sullivan, Mo. was elected to succeed Anthony Boland, now in the United States Navy.

Director Julian D. Ray gave the resolutions report which was unanimously adopted and made provision for extending the services of the association by increasing the revenue and for expanding future sales.

The association furnished a big free dinner at five nearby churches at noon. Dairy leaders throughout the middle west attended.

I Love Our Old School

(*Continued from page 9*)

schools, and that they fail to give farm boys and girls an even chance in comparison with the education received by urban youth."

I do feel that the one-room schools did at one time do a pretty good job and the training secured compared quite favorably with the training of the city schools. I do not believe that we can say this today, although it is true that there are still many good one-room schools. Some of you will defend the one-room school and point to the type of men that have gone into industry and government and made a name for themselves. It is my opinion that we cannot credit all of the greatness of these men to the one-room school. Abraham Lincoln had very little schooling and was a great man, but we can hardly recommend this system today.

I believe that rural children have many advantages over urban children. They learn to work at an early age and learn to accept responsibilities.

It seems to me that after the war we will have an opportunity of providing better schools for farm boys and girls than any city can possibly provide. Why not? Most of us have good roads — electricity will be available — modern heating plants and sanitary toilets will be obtainable and we have certain rural values that no city in the world can possibly duplicate. Such schools with good enrollments should be able to attract and pay the best equipped teachers. With such schools we should be able to provide as broad a curriculum as any school in the state.

Boys and girls in this generation and in the generations to come, who do not have a good sound education will be at a much greater disadvantage than they would have been fifty years ago. *Ignorance is a liability wherever it exists.*

I hope we will not delay too long. Dr. John W. Holland says, "That which we neglect, we slowly lose." Let us not lose control of our schools.

Home Bureau Membership In State Reaches 24,679

ILLINOIS Home Bureau members raised a total of $4775.83 in the nation-wide Red Cross clubmobile campaign of the Associated Women of the American Farm Bureau Federation. The current campaign ended in February. Contributions to China Relief amounted to $2416.22.

Mrs. R. W. Stamey, Urbana, Champaign county, vice-president of the Illinois Home Bureau Federation, made this report at the meeting of the executive board and advisory council held in the Illini Union Building, U. of I. campus, Feb. 5. This session was held in place of the annual meeting of the Federation which was cancelled along with other events scheduled to be held during Farm and Home Week.

Since the annual election of officers is usually held during Farm and Home Week, the Federation's advisory council decided that the ballot would be made by mail. Ballots carrying the names proposed by the nominating committee, with additional blanks for write-in candidates, have been sent to all county delegates.

One of the Home Bureau events usually held during the annual program, the presentation of safe home awards, was presented over the university radio station WILL. To McLean county went the award for having the largest number of enrolled families reporting no home accidents for the year. Lee county also received an award for having the lowest percentage of accidents among the total number of families enrolled.

Award certificates were presented by Mrs. Glen Gordon, Champaign county, publicity chairman of the Federation, and Mrs. Helen Drew Turner, Edgar county home adviser and chairman of the Home Advisers' Association. Mrs. Ed Glasser, McLean county, received the award won by that county. McLean county had 739 homes enrolled and 461 of the women reported no home accidents during 1944.

Enrolled in the Illinois safe homes program during 1944 were 8982 families from 49 counties. The program is sponsored by the home economics extension of the U. of I. College of Agriculture, the Home Bureau Federation, and the National Safety Council.

Other reports made at the Home Bureau board meeting showed that Home Bureau membership in Illinois had made a net gain since June 15, 1944 of 1539. Active membership July 1, 1944, was 23,869, and approximate membership as of February, 1945, was 24,679, Mrs. John Clifton, Iroquois county, reported.

Scrap and salvage drives sponsored by Home Bureaus brought in an estimated 30,000 pounds of material and 300 tons of waste paper, Mrs. Helen Parkes, Rock Island county, reported.

Mrs. A. R. Rohlfing, health chairman, Fulton county said that 20 counties are now enrolled in Blue Cross hospital plans.

In 4-H club work, Mrs. Raymond Hanley, Grundy county, reported an increase of 1000 in girl club members in 1944. Total enrollment is now 16,500.

Mrs. Roland McDonald, library chairman, Shelby county compiling reports from 34 counties, said that 244 women were enrolled in reading courses during 1944.

American Red Cross clubmobiles provide music and entertainment, coffee, doughnuts, and good cheer to the men up front. This clubmobile entered Germany in the wake of American troops as early as last October. It is named the "Bearcat."

Home Mechanics Course Popular in Williamson

So popular was the home mechanics course offered to Home Bureau members in Marion, Williamson county, that a second course for homemakers in refinishing and upholstering furniture will be offered, states Miss Olevia C. Meyer, Williamson county home adviser.

The first course, in which the women were taught care and upkeep of household tools, simple repair of electrical equipment, and house plumbing, was outlined and taught by E. E. Long, instructor in building trades, Marion Township High School.

Sixteen enrollees in the first course completed a number of woodwork projects in addition to cleaning and repairing household and electrical equipment and appliances. Diplomas for completion of the 20-hour course were presented Dec. 16.

AN EVENING PRAYER

When evening shadows are drawing nigh
When stars come out to deck the sky
I think of a land far over the sea
Of a gallant youth most dear to me.

Of all the things he has laid to rest
To fight for me and the land of the blessed
Oh, Father in Heaven, hear my prayer
Protect my son while over there.

Whisper to him that you will guide
That "Mother, too, is by his side
When war clouds hover over the place
May he look beyond and see your face.

Maye he feel Thy presence, Thy protecting power
To comfort him each day and hour
May he, Oh, Lord, on thee depend
To see him through this war to end.

Hear my prayer, Oh God above
Bring our boy back to the ones he loves
We'll pray each night and day till then
We'll thank Thee, Lord, and say Amen.

(This poem was submitted by Mrs. Mabel McDonald, Mt. Vernon, Jefferson county, and is dedicated to her son, T/5 Merritt McDonald, who is overseas.)

EDITORIAL

1945 Membership Goals

THE 1945 membership goals, totalling 117,000, set county by county last year in the Membership Maintenance conferences, are now within 7000 of final achievement. Steady progress since the 100,000-member mark was reached in November of 1943 has brought Farm Bureau membership in the state to the total of approximately 110,000 as of February 15, 1945.

That the goals can and should be reached by September 30, 1945, the end of the current fiscal year, is agreed to by organization workers in all parts of Illinois. Surely there was never a more opportune time to build Farm Bureau membership to new record highs.

Farmers realize as never before that this is, and will continue to be, an organized world, in which the individual, as such, can exercise only partial control over his own destiny. Farmers recognize, too, the services which the Farm Bureau, on county, state, and national levels, has rendered to agriculture, and is in a position to render in the future. These convictions, taken together, have led to unusual results in every Illinois county where a membership campaign has been staged this winter.

The results of January campaigns are especially striking. Iroquois county's remarkable record of 242 new members signed in a January campaign tops the list numerically; but equally striking are DeKalb's 175, Bureau's 165, Marion's 134, Fulton's 129, Franklin's 100, Crawford's 96, and Jasper's 87. These are but a few of the splendid totals registered by enthusiastic volunteer workers, calling on their neighbors and extending the invitation to join Farm Bureau to them.

Let us all work during the balance of the year to achieve the long-range goals, and to "Make Farm Bureau forever strong."

The Red Cross is at His Side

THE American Red Cross War Fund campaign of 1945 is now in progress. National goal for the drive to be held throughout the month of March is 200 million dollars.

The Red Cross is serving in every theater of war and with every command. Red Cross workers also are on duty at scores of out-posts over the world and are giving aid to wounded men in hospitals in the major battle areas and in the United States. In every invasion during the past year, the Red Cross has either gone in with the troops, or has followed within a very short time.

American Red Cross workers have packed more than 10 million parcels for shipment to American prisoners of war in enemy territory. Many of those now being freed from German prison camps by the advance of Allied armies have told what these welcome packages have meant to them.

Funds of the American Red Cross have also paid for nearly 180,000 medical kits with first aid requirements for 100 men for thirty days; for 60,366 capture parcels with basic toilet needs and comforts for newly captured prisoners; for millions of cigarets and for 4000 garden seed kits.

More than 10 million pints of blood have been collected by the Red Cross since the beginning of the Blood Donor Service in February, 1941. Thousands of wounded American fighters owe their lives to this service.

These are only a few of the contributions made by the Red Cross in addition to its regular nursing and disaster relief on the home front.

Today the American Red Cross is remaining at the side of the serviceman on the home front as well as the battlefront. It is giving advice and assistance to returning veterans in filing claims for government benefits, supplying information regarding legislation applying to veterans and their families, and, in some instances, giving financial aid during the period claims are pending.

Pointing out that the activities of the Red Cross during recent years have combined closely to identify it with rural life in America, the American Farm Bureau Federation has issued this statement:

"The American Farm Bureau Federation again is happy to call to the attention of its members the forthcoming Red Cross War Fund campaign and to urge every member to give it wholehearted support through the organization's local chapters."

This is your Red Cross and through it you can do your share in human kindness and blunt somewhat the horror that is war.

To Restore Bargaining Power

THE purpose of the Illinois Agricultural Association livestock marketing committee has been stated as follows: "To develop ways and means whereby the bargaining power of the livestock producer in the sale of his livestock can be restored and maintained."

A subcommittee to study the coordination and availability of cooperative marketing agencies in the state began its work February 8. This is a logical first step in the development of an improved program. Fully available and fully coordinated cooperative marketing agencies would mean that no producer would be without the protection on price and service that a cooperative can provide.

Only through such means, plus adequate field service, adequate and reasonable transportation, and good buying service of stockers and feeders, can the farmer enjoy that full bargaining power which he needs to market his livestock advantageously. Only with such bargaining power on his part can there be a truly free market, one which will reflect accurately the interplay of the forces of supply and demand, and give him a dependably fair price.

The project upon which the Livestock marketing committee is embarked is indeed of vital importance to the future of Illinois agriculture.

Partial coverage may be costly . . .

because wind won't wait for you to buy insurance once it's on the way. Nearly all of us have a life insurance program. Everyone agrees on the advisability of automobile insurance. But a surprising number of us seem to feel that a tornado won't come our way because one never has. Hundreds of people discover yearly that Mother Nature doesn't follow any set rule or custom. Why not expect the unexpected — let a few dollars in windstorm insurance protect hundreds of dollars worth of your property.

Your Farmers Mutual man will show you how.

That the goals can and should be reached by September 30, 1945, the end of the current fiscal year, is agreed to by organization workers in all parts of Illinois. Surely there was never a more opportune time to build Farm Bureau membership to new record highs.

Farmers realize as never before that this is, and will continue to be, an organized world, in which the individual, as such, can exercise only partial control over his own destiny. Farmers recognize, too, the services which the Farm Bureau, on county, state, and national levels, has rendered to agriculture, and is in a position to render in the future. These convictions, taken together, have led to unusual results in every Illinois county where a membership campaign has been staged this winter.

The results of January campaigns are especially striking. Iroquois county's remarkable record of 242 new members signed in a January campaign tops the list numerically; but equally striking are DeKalb's 175, Bureau's 165, Marion's 134, Fulton's 129, Franklin's 100, Crawford's 96, and Jasper's 87. These are but a few of the splendid totals registered by enthusiastic volunteer workers, calling on their neighbors and extending the invitation to join Farm Bureau to them.

Let us all work during the balance of the year to achieve the long-range goals, and to "Make Farm Bureau forever strong."

The Red Cross is at His Side

THE American Red Cross War Fund campaign of 1945 is now in progress. National goal for the drive to be held throughout the month of March is 200 million dollars.

The Red Cross is serving in every theater of war and with every command. Red Cross workers also are on duty at scores of out-posts over the world and are giving aid to wounded men in hospitals in the major battle areas and in the United States. In every invasion during the past year, the Red Cross has either gone in with the troops, or has followed within a very short time.

American Red Cross workers have packed more than 10 million parcels for shipment to American prisoners of war in enemy territory. Many of those now being freed from German prison camps by the advance of Allied armies have told what these welcome packages have meant to them.

Funds of the American Red Cross have also paid for nearly 180,000 medical kits with first aid requirements for 100 men for thirty days; for 60,366 capture parcels with basic toilet needs and comforts for newly captured prisoners; for millions of cigarets and for 4000 garden seed kits.

More than 10 million pints of blood have been collected by the Red Cross since the beginning of the Blood Donor Service in February, 1941. Thousands of wounded American fighters owe their lives to this service.

These are only a few of the contributions made by the Red Cross in addition to its regular nursing and disaster relief on the home front.

Today the American Red Cross is remaining at the side of the serviceman on the home front as well as the battlefront. It is giving advice and assistance to returning veterans in filing claims for government benefits, supplying information regarding legislation applying to veterans and their families, and, in some instances, giving financial aid during the period claims are pending.

Pointing out that the activities of the Red Cross during recent years have combined closely to identify it with rural life in America, the American Farm Bureau Federation has issued this statement:

"The American Farm Bureau Federation again is happy to call to the attention of its members the forthcoming Red Cross War Fund campaign and to urge every member to give it wholehearted support through the organization's local chapters."

This is your Red Cross and through it you can do your share in human kindness and blunt somewhat the horror that is war.

To Restore Bargaining Power

THE purpose of the Illinois Agricultural Association livestock marketing committee has been stated as follows: "To develop ways and means whereby the bargaining power of the livestock producer in the sale of his livestock can be restored and maintained."

A subcommittee to study the coordination and availability of cooperative marketing agencies in the state began its work February 8. This is a logical first step in the development of an improved program. Fully available and fully coordinated cooperative marketing agencies would mean that no producer would be without the protection on price and service that a cooperative can provide.

Only through such means, plus adequate field service, adequate and reasonable transportation, and good buying service of stockers and feeders, can the farmer enjoy that full bargaining power which he needs to market his livestock advantageously. Only with such bargaining power on his part can there be a truly free market, one which will reflect accurately the interplay of the forces of supply and demand, and give him a dependably fair price.

The project upon which the Livestock marketing committee is embarked is indeed of vital importance to the future of Illinois agriculture.

Partial coverage may be costly . . .

because wind won't wait for you to buy insurance once it's on the way. Nearly all of us have a life insurance program. Everyone agrees on the advisability of automobile insurance. But a surprising number of us seem to feel that a tornado won't come our way because one never has. Hundreds of people discover yearly that Mother Nature doesn't follow any set rule or custom. Why not expect the unexpected — let a few dollars in windstorm insurance protect hundreds of dollars worth of your property.

Your Farmers Mutual man will show you how.

"Good morning, Judge!"

And this man really means it! He should. Because despite the fact his daughter was involved in a serious traffic accident and he is being sued for $5,000 he knows his insurance company will be there to protect him fully. How does he know that? Because as a Farm Bureau member he took advantage of the auto insurance protection which is written only for Farm Bureau members and for many years he has watched his company expertly take over auto accident lawsuit worries for himself and his neighbors.

IAA OPPOSES CONVENTION CALL NOW

THE Illinois Agricultural Association is opposed to the calling of a convention for revision of our state constitution at the present time.

The apportionment and revenue articles of the present constitution are generally recognized as most in need of change. Separately and together they constitute the most serious conflict of viewpoints between Chicago and downstate voters.

Until some reasonably satisfactory solution of these two problems has been reached, the Association does not believe that the other provisions of our constitution, some admittedly in need of some change, will receive the careful, calm and impartial consideration which should be devoted to changes in our basic law.

In opposing the calling of a constitutional convention at this time, the Association disagrees with those who are opposed to any change in the provisions of the present constitution.

Favors Reapportionment

For several years, the Association has been on record as favoring a change in the reapportionment article which would give the Chicago metropolitan area full representation on a population basis in one House of the General Assembly and would limit the representation from that area in the other House.

Such a provision would enable both Chicago and downstate with their diverse problems to prevent any unfair advantage by either.

The Association favors an amendment of the revenue article which would permit the General Assembly to classify property for taxation and modernize our tax system.

The Association believes that the first step in securing needed changes in our state constitution is the adoption of a change in the amendment process commonly known as a Gateway Amendment.

Experience has shown the need for liberalization of the amending process. Under the present constitution, the General Assembly may submit amendments to only one article at the same session and the favorable vote of a majority of those voting at the election is necessary for the adoption of the proposed amendment. No amendment submitted in recent years has been adopted although the Gateway Amendment submitted in 1932 received the favorable vote of 80 per cent of those voting upon the proposal. The proposed amendments have been defeated by the people who voted in the general election but failed to vote on the amendment.

Supports Gateway Amendment

The Association favors a Gateway Amendment which would permit the General Assembly to submit amendments of not more than three articles at the same session and would provide that the ceiving the favorable vote of two-thirds of those voting upon the proposed amendment should be adopted upon reamendment. Such a proposal would not make amendment of the constitution easy but it would make it possible. With such an amendment, the most urgent problems could be worked out.

The Illinois Agricultural Association does not believe that a constitutional convention at this time would be productive of any constructive results. A large number of proposals upon which there are serious differences of opinion would be submitted to the convention. In working out these differences, compromises necessarily would be made. In order to make certain that one compromise proposal would not be adopted and another rejected, the convention probably would submit its report as a single proposal. The cumulative opposition to the numerous controversial questions would defeat the entire proposal.

IAA POSTWAR PROGRAM ON RURAL HIGHWAYS: All-Weather Roads IN EVERY TOWNSHIP IN THE STATE

A POSTWAR program to provide all-weather roads in every township of the state has been recommended by the Illinois Agricultural Association to the Illinois General Assembly as a basis for legislative action.

The general outline of the program was presented at a dinner conference held by the Illinois Agricultural Association March 27 in the Abraham Lincoln Hotel in Springfield for state senators and representatives. The holding of such a conference for members of the General Assembly is a custom of long standing with the IAA, and more than 150 attended the recent dinner, representing fully three-fourths of the members in the state legislature.

The road building program was one of the matters affecting broad policy deliberations outlined to the members of the General Assembly by President Earl C. Smith and Paul E. Mathias, corporate secretary and member of the IAA legislative committee.

President Smith pointed out that over the years Illinois farmers had been the strongest supporters of good roads legislation and cited their work in securing the 60-million dollar bond issue in the early 20's and later the 100-million dollar bond issue for road building.

The IAA leader offered the all-weather road program, not only as an essential need of the farmers, but as a program that would offer employment in the postwar period. He asserted that there are more than 8,000 postwar planning committees operating throughout the country, but none had offered a program that has as much inherent practical value for possible postwar employment as the rural road building project.

Outlining the need for "farm to highway" roads, President Smith cited these figures. There are 104,651 miles of highways in the state. Of this mileage, 10,283 miles are state highways; 18,191 miles are county and state aid roads, and 76,177 miles are township roads. In other words, nearly three-fourths of the roads in the state are township roads, and although farmers pay the same license fees and other levies as their city neighbors, everything the farmer gets in the way of roads in his township comes from property taxes.

President Smith pointed out that the Association is not seeking to abolish property taxes for this purpose, but that he was merely citing the facts on the situation.

The Association is interested, he said, on how federal funds, allocated to states for postwar road building, are used.

The Association believes that surplus State funds should be used for matching federal funds available for secondary and feeder roads. Under the federal road program, approximately $4,700,000 per year for three years will be available for all-weather surfacing construction for each year for a period of three years. This would mean that a township would have from $8,000 to $10,000 each year for a period of three years to use for its roads.

If these roads are economically constructed, a considerable mileage of roads should be built from these funds. The Association believes that since these township roads are used primarily by farmers with relatively light loads, it is not necessary to build roads with culverts strong enough to carry trains or to have 60 to 80 feet of right of way. With construction standards adjusted to meet the needs of the users of the roads, more miles of all-weather road can be provided with the funds available. The main interest of the farmer is to have an all-weather road that will get him to the primary road during muddy seasons, President Smith asserted. Therefore, the Association is recommending that any road legislation that the General Assembly drafts limit the specifications for these roads to what is shown to be reasonably necessary by traffic surveys.

The construction of the roads would be directed by the township highway commissioner under the supervision of the county highway engineer. Allocation of funds would be on the basis of the mileage of roads in the township, other than state and county roads, as it relates to the total mileage of such roads in the state. The allocated funds would be used for surfacing, with the township building the grade and culverts.

Providing all-weather roads in every township of the state, President Smith said, would not only furnish employment in the local area, but would aid in the improvement of rural schools. He pointed out "We can't get far with rural school improvement in some areas until the roads are fixed." All-weather roads also would be of material aid in the efficient operation of the rural mail routes. There are times, President Smith reported, when the rural mail man finds it impossible to reach some of the farms on his route because of impassable and muddy roads.

Mathias spoke briefly on matters of general policy including the Association's position on the proposed call for a constitutional convention. (This position is outlined in this issue of the RECORD in a statement adopted by the IAA board).

He also discussed the Association's position on school legislation with reference to pending bills on increased school transportation aid, county school surveys and the state distributive fund; legislation in regard to the length and weight of trucks; and regulation by the Commerce Commission of trucks and buses.

IAA STATES POSITION ON PENDING

New Legislation

By PAUL MATHIAS

DEVELOPMENTS on the state legislative front during recent weeks that are of major interest to farmers concern bills on airport authority districts, enriched bread and flour, feed analysis, school transportation, state distributive fund, and the constitutional convention. Position of the Illinois Agricultural Association on the constitutional convention is carried on other pages of this issue of the IAA RECORD.

Airport Authority Districts

The IAA was not able to secure an amendment of the airport authority districts bill making the validity of the entire act dependent upon the validity of the disconnection clause. Attorneys for the bond houses stated that they could not approve bonds of the districts if such a provision were included. However, the bill was amended to restrict the issuance of bonds prior to July 1, 1947 to those airport authority districts which have received a definite commitment in writing from the federal government for assistance on their airport project. This will limit the issuance of bonds to but a very few areas during the next two years. Meanwhile, the validity of the disconnection provisions can be tested in the courts.

While the airport district may include rural territory, amendments provide that after the site for the airport is selected, 60 days notice of the location of the site must be given. In this 60-day-period, the owners of all the rural property except that taken for the airport itself and the immediately adjacent area may file petitions for disconnection.

The Act provides for the disconnection of this property and when the petition is allowed and the disconnection granted, the disconnection will relate back to the date the petition for disconnection was filed. Any bonds issued will not be a lien upon the property disconnected.

The amount of adjacent property that can be kept within the authority of the district has been substantially limited, depending upon the length of the runways on the field and as stated above, the issuance of bonds for the two year period is permitted only where a federal commitment has been received. These amendments seem to protect fairly well the residents of rural areas. After their adoption, the IAA did not further oppose the bill. It passed the House and the Senate concurred in the amendments. It now goes to the Governor.

Enriched Bread and Flour

A bill on the House calendar that is of primary concern to milk producers is one which seeks legislation requiring flour used in making white bread and rolls to be enriched through the addition of certain synthetic B vitamins and iron.

Prior to the war, 75 per cent or more of all white bread flour used by bakers was enriched. For the most part, skim milk powder was used. It contains the vitamins which would be required under the proposed legislation and generally was regarded as superior to the synthetic vitamins. With the advent of war, the skim milk powder was not available in sufficient quantities and the War Food Administration required the use of synthetic vitamins. This bill would continue the provisions of the WFA order after the war. The IAA and the Illinois Milk Producers Association are opposing this legislation. They believe that the enactment of the legislation will deprive dairy farmers of a market which will be much needed in the postwar period. The legislation is not fixing standards for bread but is merely requiring the inclusion of one ingredient. It discriminates against the dry skim milk in favor of synthetic vitamins. The bill has been favorably reported by the committee on public health and is now pending in the House.

Feed Analysis Law

The Department of Agriculture is sponsoring legislation requiring mixed feeds which contain more than 5 per cent minerals and all mineral feeds to state the calcium, phosphorus and iodine content of the feeds and also the salt content.

The legislation also would require the names used for ingredients to be the official names used by the Association of American Feed Control Officials. This legislation is designed to give purchasers a better understanding of the content of the feed which they buy. The IAA is supporting this legislation. This bill has been favorably reported by the House committee on agriculture.

School Transportation

The IAA with other organizations is sponsoring legislation which increases the maximum state contribution to the cost of pupil transportation from $15 to $20 per pupil. The present law provides that the state shall reimburse school districts for three-fourths of the cost of pupil transportation up to a maximum of $15 per pupil. This bill has been reported favorably by the committee on education.

State Distribution Fund

Legislation has been introduced increasing state support for schools. The amount of the flat grants, that is the amount given to each school on a per pupil basis regardless of need, is increased from $13 to $19 per pupil for elementary schools and from $2 to $4 per pupil for high schools.

The special equalization aid which is made available to needy districts where a local levy of $1 on the assessed valuation does not provide adequate revenue, is changed to increase the total amount available from $1048 to $1200 per school for rural schools. In the case of the larger elementary schools, this special equalization aid is increased to provide $80 instead of $62 per elementary pupil and $90 instead of $85 per high school pupil. When these changes become effective, the state will be contributing approximately 26 million dollars per year toward elementary and high schools. The IAA is supporting this legislation.

. . . "AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

THE Million Member campaign of the AFBF is proceeding ahead of schedule, reports Roger B. Corbett, secretary-treasurer of the national organization. As of March 1, 1945, there were 433,535 reported in to the AFBF compared with 339,455 on the same date in 1944 — a lead of 94,080. States have raised their quotas from 960,927 to 990,308 so that when these are attained only 9,682 will have to be made above quotas to reach the million members. "This is one more indication that we are going over the top this year," Corbett concludes.

Zooming along toward the long-range county goals totalling over 117,000, Farm Bureau membership in Illinois stood at a new high of 110,838 as of March 1. Record-smashing drives in every section of the state were reported between March 1 and March 23, and the outlook was for another very substantial increase as of April 1. The record since last September shows that this is THE YEAR to build Farm Bureau to new levels of strength. This is especially true of drives held since Jan. 1, which have produced amazing results. Several counties who "drove" early in the fiscal year are now planning additional campaigns.

Forty-nine Membership Maintenance meetings had been held by March 30, covering the personnel of 63 counties, W. P. Sandford, IAA sales service director, reports. Total attendance has been over 2000. Eleven meetings in April will probably conclude the 1945 series.

For one recently-employed Farm Bureau secretary's reaction to the meetings, we quote part of a letter by Betty J. Rasmussen, McHenry county: "You've shown me that I, through helping in a small way to develop an even stronger agricultural association, can help to protect our American democracy. . . . . I want to say thanks, especially, for showing me a way to be part of the home defense, which is just as important a fight as the one going on in Europe."

Apparently Betty "got her sights adjusted" on the real importance of organized agriculture. We thank her for writing.

Good reports continue to come into the office from the March membership drives. One of the good ones is from Mason county, where 81 members were signed on a recent drive.

Lee county went on a contest drive captained by Les Ullensvang, general agent, and L. S. Hill, Service company manager, and when the smoke of battle had subsided there were 166 new members.

Tazewell, where COD Lloyd Ummel and his co-workers have done a painstaking township-by-township job, with a training school for volunteers in each township, reports the splendid total of 160 new members as a result. "These new members are not going to be forgotten," adds Lloyd enthusiastically, and he says that each new member will receive two visits from Farm Bureau department heads in the near future, "not for the purpose of selling any item, but for a 'good-will' visit to let the new member know that we know he is a Farm Bureau member and to offer him our services at any time he wishes to use them."

Hancock county joins the "over 100" club with a sterling drive which netted 103 new members, COD Walter Scott reports.

Age defeated youth in Shelby county's contest drive, COD Roy Kelly wires. 115 contracts was the stirring total that Roy's co-workers turned in, partly in honor of his recent marriage.

Richland county hit impossible road conditions and missed the 100 mark temporarily, Otto Schafer, COD, says, but with a score of 38 for the young men and 28 for the elders, they rang up a two-thirds mark of 66. More will follow, they promise.

The DeWitt County Farm Bureau office is a happy place these days, for a sensational contest brought in 111 new members. Youth beat Age by just one contract.

Kankakee, not to be outdone by some of its neighbors who ran up tremendous scores, went out and did likewise last month,

(*Continued on page 9*)

Here are some of the top men in the Fulton county membership campaign. Left to right are: Dean Depler, Scott Rowley, Clarence Cox, Everett McCan, D. K. Sweney, R. V. Roberson, Floyd O'Malley, Arthur Abbott and Henry Zumstein.

This picture typifies the many successful membership drive report meetings. More than 116 workers attended this Fulton County Farm Bureau meeting which marked the close of one of the best campaigns ever held in the county. A total of 131 new members were secured in the drive by the above group.

Maximum Production of Poultry needed to ease Meat Shortage

HERE'S HOW:

1. Switch your six weeks old chicks from Blue Seal Chick Starter to Blue Seal Grow Mash or, if you have plenty of home grain, to Blue Seal Poultry Balancer.
2. After ten weeks on this balanced diet, take your plump, sturdy birds to your dealer who will be glad to pay you highest market prices.

HERE'S WHY:

1. Beef and pork are scarce. The demand for poultry is tremendous this year.
2. Poultry for market can be produced more quickly than any other form of meat.
3. Poultry raised the Blue Seal Way will have the advantage. The abundance and proper balance of proteins, minerals and vitamins means faster growth to top the market at low feed cost.

EGGS NEEDED TOO

While the great need is for meat, egg production should not be allowed to slump. We still need a normal production of eggs. Blue Seal will speed your pullets into the laying house at 20 weeks.

See your Blue Seal salesman and order your supply of Blue Seal Grow Mash or Blue Seal Poultry Balancer.

ILLINOIS FARM SUPPLY COMPANY

608 S. DEARBORN STREET, CHICAGO 5, ILLINOIS

INSECTS MAY

James W. Apple, center, field entomologist, Illinois Natural History Survey, demonstrates to M. D. Farrar, right, resident entomologist, and James S. Ayars, technical editor, his new laboratory technique for determining relative toxicity of DDT in suspension as compared with other sprays previously used to control corn borer in sweet corn. Facts obtained will have to be checked again in the field (*Courier Photo*)

FOUR important agricultural insect pests, namely, the chinch bug, the European corn borer, the grasshopper, and the codling moth have increased in numbers to a point where they now stand as serious threats to the crop of 1945, according to George C. Decker, entomologist, Illinois Natural History Survey and Illinois Agricultural Experiment Station.

Chinch Bugs

Weather conditions during the late summer and early fall were extremely favorable for the development of second generation chinch bugs and as a result the population has shown a very great increase.

Hibernation conditions have been almost ideal, and therefore farmers are faced with the possibility of a chinch bug outbreak equal to that of 1934. If weather conditions during the late spring and early summer are favorable for chinch bug development, heavier infestation and greater crop damage may be expected than was experienced in 1944.

More than 70 Illinois counties are included in the threatened area, which extends from highway 50 in the south to U. S. highway 34 in the north.

In central Illinois it is possible, if not indeed probable that all small grains may be heavily infested, and it is quite possible that spotted infestations may occur in all except the extreme northwest counties of the state.

Decker lists the following practices as a means of combating chinch bugs:

1. Where possible, arrangement of fields of small grain and corn should be such that there will be a minimum of boundary where small grain adjoins corn.

2. Use every means of insuring thick, rank-growing stands of grain. Chinch bugs tend to congregate in fields having spotted, thin, or weak stands of small grain.

3. Keep all infested grain fields under observation during May and June.

4. Build creosote barriers well ahead of migration period. Creosote will undoubtedly be available at several points in the vicinity of Chicago and East St. Louis.

For several years the federal government has cooperated with the farmer by providing dinitro dust and creosote for barriers. At the present time, no federal funds are available for this purpose. Federal participation in 1945 depends upon congressional action on an appropriation bill now pending. If necessary funds are made available at an early date, adequate supplies of dinitro dust and creosote will be obtainable.

Grasshoppers

Drouth conditions throughout the summer of 1944 increased the grasshopper population, Decker reports. Heavy and continued rains during the hatching period in May and June might easily reduce the population to a point where it would not be a serious threat in 1945. Recurrence of drouth or semi-drouth conditions could result in a serious grasshopper outbreak in central Illinois and more particularly in the west central counties.

Altho severe damage from grasshoppers was not widespread in 1944, damage could be seen at the edges of fields in some parts of the region bounded by Champaign, Quincy, Belleville and Lawrenceville. If heavy damage occurs in 1945, it probably will be in this area. Trouble may be experienced in isolated spots outside the area. The most damage is likely to occur in the region bounded by a line from Carrollton to Edwardsville to Greenville to Taylorville to Springfield.

In all areas where grasshoppers were noted to be more than usually abundant in 1944, farmers should be on the alert and detect large concentrations of newly hatched grasshoppers before they spread over the uninfested fields.

At this state and under these conditions, grasshoppers may be very effectively and economically controlled by the proper use of a poison bran bait. Information on use and preparation of bait can be secured from the local farm adviser.

European Corn Borer

If we have a warm, early spring with early planting of thousands of acres of corn, and if this is followed by a normal warm, moist growing season in May and June, the corn borer population now present in the area could produce a disastrous corn borer outbreak, Decker says.

If you farm in the area north of a line from Paris to Champaign to Peoria to Rock Island you may have trouble with European corn borer. There could be some damage immediately south of this line. Northern and north-

CHINCH BUGS—Possible outbreak equal to that of 1934. Weather determining factor.

CORN BORER—Population increased in 1944. Cannot predict for 1945.

CODLING MOTH—Attained an all-time high in 1944. Larvae now present threat to 1945 fruit crop.

WHITE GRUB—The year 1945 will be white grub year.

CORN ROOTWORM—Unusually abundant in 1944. Unwise to plant corn in fields that have been planted to corn for two or more years.

western Illinois have the highest overwintering borer populations, and damage is more likely to be severe in that part of the state than in any other. Weather conditions over the past two years have permitted reasonably early plantings in this area; hence the heavy build-up of borers.

Good, clean plowing, which can be accomplished by the use of coulters, jointers, and wires, destroys from 98 to 99 per cent of the borers present in the crop refuse of a corn field. Also fields planted during the latter half of May will produce as much or more corn and suffer less corn borer damage than fields planted very early in the month.

"We know," Decker says, "that different hybrids and different varieties of corn respond differently to corn borer attack, but for the present we can only say that vigorous, strong-stalked varieties that have proven to be well adapted to an individual soil type or climatic condition will in all probability prove most successful under corn borer attack."

Codling Moth

The codling moth population attained an all-time high in the fruit growing section of Illinois in the past year and in some orchards that were sprayed eight or ten times, more than half of the crop was wormy.

Orchardists in the southern half of the state may well expect severe damage from codling moth this coming year if they have neglected sanitary measures in the past few years. The Mississippi and Illinois valley regions south of Havana and Keokuk and that area of Illinois south of St. Louis are the most heavily infested. Orchards in the region bounded by a line running from Springfield to Greenville to Lawrenceville and north to Danville are still in the codling moth area but the infestation is somewhat lighter.

If the 1945 season should be favorable to the development of the codling moth, it is doubtful if any spray schedule will be capable of controlling the pest this year, Decker says. "We therefore recommend the adoption of sanitary practices as a supplement to a good spray program. All trees should be thoroughly scraped and prepared for summer banding and other desirable sanitation measures should be adopted."

White Grubs

Decker says that 1945 will be a white grub year, and we may therefore reasonably expect serious grub damage in many pastures and meadows and also on corn and other crops which may be planted on recently plowed grass sod.

Corn Rootworm

Corn rootworms were unusually abundant in 1944 and it would therefore seem unwise to plant corn in fields that have been planted to corn for two or more years, particularly in areas where rootworm caused damage last year, Decker says.

The grape colaspis and the sweet clover weevil, two insects which were causing some concern in the late '30s and early '40s have been decreasing in abundance for the past three years, Decker reports. On the basis of this trend, he said, "we hesitantly venture the unsafe assumption that they will not appear as very serious pests in 1945."

As Farmers Forward Go

(*Continued from page* 6)

and their mark of 179 gives them a spot high on the honor roll. In this county, the old men trimmed their juniors by two contracts.

Montgomery county's final score hadn't reached the office at this writing (March 23) but with 90 contracts in their hands at the Hillsboro office before the report meeting, they confidently predicted that they will pass the 150 mark.

With a relatively small county in area, Ford's scored 93 new members in their drive, reports COD Fred Tieken.

Mark Cooper, Vermilion COD, sent in a laconic postcard announcing that his workers had joined the exclusive "over 200" club by signing 212. They held a North versus South contest captained for the North by John T. Evans and H. Eugene Andrews, and for the South by James Hart and H. A. Linville. The Danville Commercial News gave the drive a prominent headline and printed the entire list of names of new members.

Ogle county signed 67 on their recent drive, and promise still further efforts, says Vern Hohnadel, COD.

Randolph is in the "100 club" as a result of 103 new members signed in their drive, and COD Verne Campbell and his cohorts are plenty pleased.

A sterling achievement is reported by H. F. Wiesenborn, COD of Pulaski-Alexander county Farm Bureau, for down there they had a one-day drive and came in with 76 contracts. In so doing they exceeded their long-range goal.

Boone county put on a good drive in February, and brought in a total of 75 new members. They expect to pass the 900 mark in membership by their annual meeting.

Double Trouble ?

Doctor bills and idle farm machinery is a heart-breaking combination this time of year.

Nobody wants a disabling injury. Nearly everyone believes he will never be the victim of one. Yet thousands are.

Physical pain and loss of valuable time from the fields is bad enough. But when is added the burden of doctor, hospital, and nurses fees, it's "double trouble" indeed.

We cannot prevent accidents from happening, but we can arrange it so that if you should have a disabling injury your medical expenses will be paid for you plus a cash income for yourself while you are unable to work.

Have your Country Life agent show you why it is that "if you cannot afford an accident — you cannot afford to be without Country Life accident insurance.

Country Life Insurance Co.

POSTWAR FARM CONSTRUCTION

Changes in Agricultural Production Bring New Designs into Farm Buildings, Report U. of I. Specialists

· VIEW FROM LOT ·

Here is one design in a series of farm building plans being issued by the U. of I. College of Agriculture in 1945-46. It is plan No. 445 of a cattle feeding barn. Blueprints for this and other plans may be secured for 20 cents by writing the department of agricultural engineering, U. of I. College of Agriculture, Urbana, Ill. Persons interested in plans of other farm buildings may secure free a list of blueprint plans from the agricultural engineering department. University specialists caution against new permanent construction unless it will aid the food production program. Amount of farm construction, of course, is limited by government rule.

POSTWAR farm building will result in many changes of structural designs. That's the opinion of agricultural engineers who have been giving considerable study to the subject. The emphasis will be fitting buildings to the needs of the farm.

At the University of Illinois College of Agriculture Deane G. Carter, chief of farm structures, reports that more than 100 farm building plans have been developed, ranging from small hog houses and brooder houses to big dairy barns and homes. Any farmer can secure blueprints of these plans at a cost of 20 cents each. Applications may be made through the farm adviser's office or to the university.

The university has made and is conducting a number of studies on farm building needs in Illinois and is shaping its designs to meet these needs.

J. B. Andrews of the university extension staff points out that "we want buildings that look good, but at the same time we want buildings that pay." He points out that the buildings must be planned to provide a service that is worth while.

Changes in agricultural production will mean changes in buildings. Carter points out that mechanization of field crop production, new methods for harvesting hay and various specialized types of farming have affected the need for the general-purpose barn.

Originally the general-purpose barn was designed for storing loose hay and other feed and for housing work stock, cows for family use, and other livestock kept on the general purpose farm, Carter says.

Some farmers, he says, foresee little use for such general-purpose barns in the future as they believe the need can best be met by having separate structures for crop storage, machinery and various classes of livestock. Others believe the general-purpose barn can be redesigned to make it the center of farming operations, with feed storage, feeding yards and animal shelters concentrated in a compact group.

Carter expects many new machine sheds to be built in the postwar period, with very few horse barns constructed. The modern age calls for machinery and sheds to provide protection for implements and for space to clean, oil and repair machinery during the winter months.

The improvement and enlargement of structures for poultry is another one of the important farm building jobs ahead, Carter believes. In a field study of 381 poultry laying houses on 320 farms in 11 counties of Illinois, it was found that the average age of the poultry houses was 21.7 years and average depreciation 34.2 per cent.

As a result of this field study he observed that many poultry buildings are not adequate in size, shape or condition to enable the operator to carry out recommended practices. The survey also revealed a tendency to use movable houses as brooders and as laying houses for small flocks.

In a recent field study of general-purpose barns on 320 Illinois farms, it was revealed that with the exception of the farm dwelling, the barn is the oldest building on Illinois farms. About 10 per cent of the barns have been repaired extensively and about one-fourth have deteriorated to a point where they are no longer worth repairing.

Surveys also indicate that 213,439 farm buildings in the state will receive repairs soon after the war ends and some materials are available.

Nearly one-half of the farm homes are more than 50 years old and it is expected that a general expansion of all modern conveniences is anticipated. It is the belief of agricultural engineers that where new farm homes are constructed, they should be designed for convenience and beauty, rather than copying plans for city homes.

KNOW YOUR PHOSPHATES

By JOHN R. SPENCER

Director of Soil Improvement for the IAA

WITH the use of rock phosphate in Illinois rapidly increasing, it is important that farmers should know the difference between two types of phosphate being shipped into the state.

Most of the standard Tennessee and Florida rock phosphate carries from 30 to 33 per cent phosphoric acid (P_2O_5) and is ground so that at least 85 to 90 per cent will pass through a screen having 200 meshes to the linear inch or 40,000 openings to the square inch.

There is also a colloidal phosphate of a lower grade from Florida which carries from 20 to 24 per cent phosphoric acid and is not as finely ground, according to a number of tests by the soil improvement department of the Illinois Agricultural Association. Dr. F. C. Bauer of the U. of I. College of Agriculture points out that the colloidal phosphate has a value approximately two-thirds that of Tennessee and Florida high grade of materials.

Since the price per ton for the low and high grade phosphate materials delivered are fairly close together, the high grade phosphate is a better buy because the cost per unit of phosphoric acid is considerably cheaper in the high grade material.

Farmers should particularly inquire from the dealer as to the type of material they are buying to find out whether it is 30 to 33 per cent or colloidal 20 to 24 per cent phosphoric acid content.

All of the marketers of the higher grade Tennessee and Florida material furnish an analysis of each rail car shipment to purchasers. In case of doubt, a test on a representative sample of the car contents can be taken by the farm adviser and sent to the soil improvement department of the IAA for testing.

The difference in quality in the two types of material has been recognized by the AAA in their payment rates which are 55 cents per 100 pounds for the standard Tennessee or Florida material and 40 cents per 100 pounds for the colloidal phosphate material. Perhaps one of the reasons why a sizable tonnage of colloidal material has come into the state is that fairly prompt shipments are being made and while low grade it is still a source of needed phosphorous.

In the past Illinois farmers have secured most of their high grade material from "brown rock" sources in Maury and Giles county, Tennessee. Within the last three years an increasing amount of "pebble phosphate", also high grade, has been coming from Florida, due in part to a decrease in exports as the result of the war.

The very large demand for rock phosphate apparently could not be satisfied by the Tennessee producers and may be a factor in the movement of Florida material. Also, until recently the Florida material has been under a freight disadvantage. The rail distance from the Florida "land pebble" field to Chicago is approximately 1320 miles compared with 656 miles from Mt. Pleasant, the center of the Tennessee brown rock field.

However, a new lower freight rate on ground phosphate rock from Florida points to Chicago became effective March 20 and covers both grades. The new rate is $7.35 per gross or long ton (2240 pounds) compared with the former rate of $9.52. This $7.35 rate ($6.56 net ton of 2000 pounds) has also been published to the following points in Illinois: Joliet, Hinsdale, Hoopeston, LaRose, Beardstown, LaSalle, Peoria, Quincy, Springfield, Streator and intermediate points.

A freight rate of $6.70 per gross ton ($5.98 net ton of 2000 pounds) became effective Jan. 11, from Florida to East St. Louis on phosphate rock of both grades of material. This is also effective on intermediate points on the Louisville and Nashville, Southern, Gulf, Mobile and Ohio and Illinois Central Railroads. Minimum weight is 100,000 pounds (50 tons) or marked capacity of the car but in no event less than 40 tons. The freight rates to most of northwestern Illinois are not published as yet but probably will be ready some time in April.

If the demand and rate of incoming shipments is a reliable indication, Illinois farmers have certainly developed a consciousness of their soil's need of phosphate. Amounts of 5000 to 8500 tons of rock phosphate applied per county are no longer unusual records and probably will be exceeded this year due to the several favorable factors in the rock phosphate picture.

Crops are removing more than 500,000 tons of phosphates annually from Illinois land (in terms of 31 per cent rock phosphate). It is estimated that more than 200,000 tons of rock phosphate were applied by Illinois farmers last year so progress is being made on replacing this important plant food element.

Fruit Exchange Meeting Scheduled For April 17

Annual meeting of the Illinois Fruit Growers Exchange and its subsidiary, the Fruit Exchange Supply Company will be held April 17 in the Little Theatre building on the campus of Southern Illinois State Normal University, Carbondale. The meeting will start at 10 a.m.

Guest speaker for the annual meeting will be R. B. Corbett, secretary-treasurer of the American Farm Bureau Federation.

Don't let this happen on your farm. One of the main aims of the spring cleanup campaign sponsored by the National Fire Protection Association is to remind farmers of the necessity of maintaining a sound fire-resistant roof on barns and other buildings to protect crops, machinery and stock. This barn went up in smoke when the flammable roof was set afire by a wind-blown spark.

HENRY CREAMERY HIRES MANAGER

PRAIRIE Farms Creamery of Henry has employed H. F. Mullooly as the manager of the company. "Bert", as he is commonly called by his colleagues and associates, is a native of Wisconsin, is married and has four children. He is a graduate of the dairy school at the University of Wisconsin at Madison and has had splendid training and experience for the position which he holds. He has operated a number of dairy plants, both in Wisconsin and Illinois, and during the past six months has been employed as quality fieldman for Illinois Producers' Creameries. The splendid work which he has done in this capacity made him the logical choice for this position, which will afford him greater opportunities to put his experience to practice.

H. F. Mullooly

More than $65,000 worth of Class "A" stock has already been purchased by producers in this area and within the near future it is anticipated that building operations will be started on this plant in Henry. This creamery will serve Peoria, Stark, Marshall-Putnam and Bureau as well as Woodford counties, offering complete dairy marketing service in these counties both for fluid milk and separated cream. The cream routes formerly operated by the Producers' Creamery of Peoria in this territory are now being operated by the Prairie Farms Creamery of Henry and the cream is temporarily being churned at the Producers' Creamery of Galesburg.

The Producers' Creamery of Peoria is now in the process of liquidating all of its assets and current financial statements show that each of the holders of stock in this company will receive par value for their stock plus a 7% cumulative dividend to the date of redemption, which was February 1, 1945. The Peoria plant manufactured more than 13 million pounds of butter since it was organized in 1933. In addition to rendering twice a week pick-up service at the farm and raising butterfat prices to farmers, it has paid more than $64,000 on patronage dividends to its members. Much of the equipment used at this plant will be used at the Henry plant, but in addition to these butter operations, other needed equipment of the very latest type and design will be purchased and installed for the handling of milk and cream in an efficient and economical manner.

Priorities have already been approved in Washington for the purchase of the needed equipment as well as the construction of a modern sanitary dairy plant. A site has been purchased and the architects now have detailed plans prepared which will be used by the bidders for the construction of the proposed plant.

The board of directors of the Prairie Farms Creamery of Henry are as follows: H. J. Schumacher, president, Marshall-Putnam county; Ray T. Snyder, vice-president, Bureau county; Joel Wilson, secretary-treasurer, Stark county; Joseph Rahn, director, Peoria county; and Peter Schertz, director, Woodford county.

Farm Bureau Radio Program

First of the Farm Bureau's programs over NBC on the "America United" series is scheduled for Sunday, April 15, and is to originate from studios in Memphis, Tenn. Farm Bureau and National Grange will alternate for 10 weeks on the "America United" series heard every Sunday at 1:15-1:30 p.m., EWT. The Grange will give the first of the agricultural programs on April 8.

Tentative schedule for other Farm Bureau broadcasts is: April 29, Des Moines, Iowa; May 13, San Francisco; May 27, New York City, and June 10, Washington, D. C. Speakers and topics will be announced later.

A sustaining feature of the National Broadcasting Company, the "America United" program enables organized labor, business and agricultural groups to discuss their mutual problems before a vast audience. It is the hope of Frank Mullen, NBC vice-president and general manager, who first suggested the series, that the groups may reach improved understanding which may lead to coordination of their respective efforts to improve the national welfare.

Announce 1945 Program Statewide Co-op Wool Pool

The board of directors of the Illinois Wool Marketing Association in meeting March 28 approved the following plans for the 1945 wool pool.

1. Wool will be assembled through county wool pools organized and controlled by county Farm Bureaus.
2. Farm Bureau to appoint county wool pool managers with the approval of the state organization.
3. County Wool Pool Manager to receive, weigh and make cash advances on wool according to recommendations of the Illinois Wool Marketing Association; to store wool in a safe, dry, clean place until given shipping instructions; and at the request of the state association to reweigh wool at the time of shipment to warehouse; to supply wool bags and twine to members only.
4. For these services the Illinois Wool Marketing Association will pay to the county Farm Bureau the sum of 1c per pound on all wool so handled on the graded weight basis at the warehouse; the county Farm Bureau to be paid three-quarters of this 1c per pound at the time the wool is shipped to the warehouse, the balance to be paid after wool is weighed and graded at the warehouse.
5. The state organization will furnish the necessary marketing agreements, weight tickets, tags, and other necessary material, as well as report forms, for conducting said wool pool, without cost to the county.

The following advances also were approved: clear medium wool, 35 cents per pound; fine and fed wool, 25 cents, and rejects, 20 cents.

Wool growers desiring further information may contact their local Farm Bureau or address inquiries to the Illinois Wool Marketing Association, 608 South Dearborn Street, Chicago 5, Ill.

Dairy Month

Dairy Month this year is being staged for the ninth time. As in the past, it will be spear-headed by the National Dairy Council with the cooperation of all branches of the industry.

The plans, purposes and program of June Dairy Month will be geared to government needs as outlined by War Food Administrator Marvin Jones. In a letter to President Milton Hult of the National Dairy Council, Administrator Jones states: "May I ask that your organization and the entire dairy industry again make Annual Dairy Month the occasion for a special effort to impress upon everyone the importance of dairy products in our war effort."

The FARM FRONT ROUNDUP

TRIAL CORN insurance programs on field corn have been launched in 14 representative corn-producing counties in the nation by the Federal Crop Insurance Corporation. In Illinois the trial county is Vermilion. Choice of two plans is offered. One plan follows the pattern of the national insurance programs now in effect on wheat, cotton and flax, with individual farmers making a selection of 50 or 75 per cent of average yield insured. The other provides "investment" protection or "cash" insurance, with coverage not to exceed 75 per cent of production costs. Applications will be taken by the AAA office and authorized agents and must be filed before planting but not later than May 1, 1945. Protection will cover virtually all unavoidable hazards to growing corn.

MORE WAR PRISONER labor is promised to farmers for 1945 production by the WFA. WFA Administrator has appealed to farmers to plant the full crop acreage called for in this year's goals, and has renewed his pledge of WFA's full cooperation in obtaining the labor needed for cultivating and harvesting all crops planted.

MILK PRODUCTION on farms in 1944 amounted to 119.2 billion pounds as compared to 118.1 billion in 1943 and 103.6 billion for the 1935-39 average. Creamery butter amounted to 1,486 million pounds in 1944, compared with 1673 million in 1943, and 1691 million for the average. Cheese production was 800 million pounds in 1944, compared with 765 million in 1943 and 509 million for the average. Evaporated and condensed milk output was 3757 million pounds in 1944 compared with 3352 million in 1943 and 2225 million for the average.

PLANS TO INCREASE subsidy paid to cattle slaughterers have been announced by OPA Administrator Chester Bowles. The additional subsidy will be based on the amounts paid by the slaughterers for live cattle. It will be figured on the basis of the amount paid by the individual slaughterer in excess of the floor established for live cattle prices and will reach a maximum of 50 cents a hundredweight when the slaughterer pays ceiling prices for cattle.

CCC HAS requests to export about 140 million bushels of wheat and flour for the armed services, lend-lease, and UNRRA between now and Aug. 1. CCC currently owns about 65 million bushels of wheat and has about 150 million bushels under loan, most of which may be available for export.

INCREASED CROP ACREAGE is planned by Illinois farmers in 1945 according to a late March report of the state-federal agricultural departments. The report shows that farmers of the state intend to increase their plantings by 200,000 acres this year. Indicated acreage on corn is 3 per cent under 1944 but 7 per cent larger than the 10 year (1934-43) average. Soybeans for all purposes will be up 3 per cent over 1944. Oats acreage is up 12 per cent over 1944. Winter wheat sown last fall shows a 12 per cent increase over the previous period.

FARMERS WHO FEED imported workers may get allotments of rationed foods for them by applying to the local rationing board. Such allotments are limited to a period of two months, and additional applications may be made for each period.

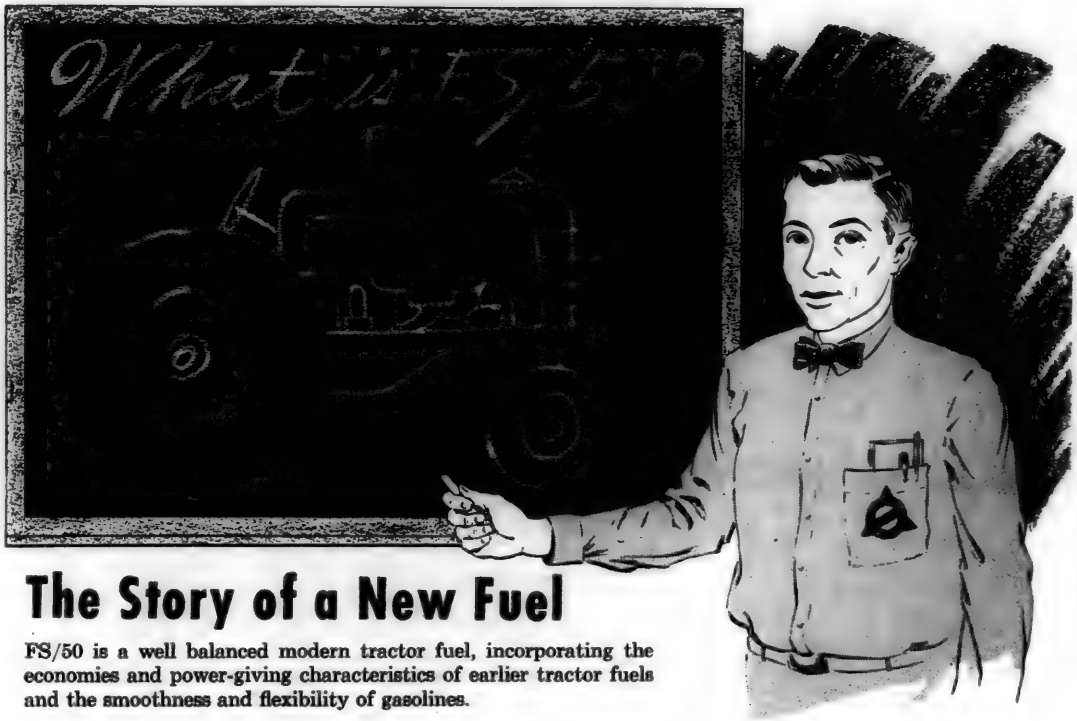
AFBF BOARD of directors has adopted a resolution calling for legislation empowering the federal government to set up plants for producing potash, nitrogen and phosphorus fertilizer. Prepared by a committee composed of President Edward A. O'Neal, Secretary R. B. Corbett and Donald Kirkpatrick, general counsel, the resolution asks that a national fertilizer program be centered in the department of agriculture under supervision of the Secretary of Agriculture. Farm Bureau officials are at work preparing a bill to be introduced in Congress to authorize such a program. Under the proposed plan, the government would build and operate the fertilizer plants but would turn them over to farmer cooperatives at fair appraised value at the end of five years.

FARM CENSUS is one-third completed, USDA officials report. However, the census is running behind schedule in some areas because of difficulties encountered in recruiting an adequate staff of enumerators in some sections. On March 10, 36 per cent of the more than 6 million farms enumerated in 1940 had been covered.

SMALLER SPRING lamb crop is reported for the fourth year in succession, with the reduction in 1945 early crop estimated at about 6 per cent. The early lamb crop this year will be the smallest in the present decade.

GOVERNMENT EFFORTS to improve medical and hospital care for rural people have the support of the Farm Bureau, the Senate committee on education and labor was told March 14. Mrs. Roy C. F. Weagley, Maryland, president of the Associated Women of the AFBF, and W. R. Ogg, director of the AFBF's Washington office, presented the Farm Bureau's views at a hearing in connection with the proposed Hill-Burton Bill which seeks to better rural health facilities.

HOME CANNING SUGAR program for 1945 will provide a maximum allowance of 20 pounds as compared with 25 pounds last year, according to the OPA. Officials of the OPA say that lower sugar stocks and increased military requirements are responsible for stricter distibution.



The Story of a New Fuel

FS/50 is a well balanced modern tractor fuel, incorporating the economies and power-giving characteristics of earlier tractor fuels and the smoothness and flexibility of gasolines.

• WHERE TO USE IT!

FS/50 may be used in any low compression tractor built to operate on tractor fuel or distillate. It is not recommended for high compression tractors.

• HOW TO USE IT!

To obtain the maximum performance from FS/50, tractors must be warmed up on gasoline, also medium hot to hot spark plugs should be used. Manifold temperatures should be maintained by proper adjustment of the manifold heat control valve. Radiator temperatures should be maintained in accordance with instructions outlined in the tractor manual for burning distillate.

• WHAT ARE ITS ADVANTAGES?

FS/50 tractor fuel will operate with more smoothness under varying load conditions. This fuel will also react quicker to the governor and will not "load up" so quickly during short periods of idling.

• WHAT ARE ITS DISADVANTAGES?

The fuel cost per acre farmed, may be slightly higher than that of the other types of tractor fuel. This additional cost is not great, however, and will depend some upon the conditions under which the tractor is operated.

• IS IT TAXABLE?

A State tax of 3c per gallon must be paid by the operator at the time of sale. A refund may be obtained, however, if the fuel is used for a non-taxable purpose.

The Federal tax of 1½c per gallon must be paid by the operator, unless he signs an exemption certificate. Certificates are available from your delivery man.

• WHERE CAN I GET IT?

While some Service Companies still prefer to stock the earlier (T-40) fuel, most Service Companies are now handling the new FS/50.

Your Blue Seal salesman will tell you which fuel is currently available in your area.

BLUE SEAL

ILLINOIS FARM SUPPLY COMPANY

608 S. DEARBORN STREET, CHICAGO 5, ILLINOIS

Illinois delegates to the PMA streamlined annual meeting in Chicago, left to right, front row, are: Chester H. Rasmussen, DeKalb county; Howard C. Klett, Will; Frank Wolff, DuPage; Einar Petersen, Boone. Back Row, A. J. Butz, Kankakee; Ronald M. Paddock, Lake; Joseph J. Lies, Kane, and A. B. McConnell, Montgomery.

PMA Holds Delegate Meeting

LOWERED butter production resulting from the reduced price paid to producers for butterfat is one of the most disturbing war results to dairymen, according to A. H. Lauterbach, manager of the Pure Milk Association.

"Butter is the gold standard of the dairy industry," according to the PMA manager. "When the war ends we may find butter consumption very low, followed by low butterfat prices, and the final result will be low milk prices."

Manager Lauterbach made these observations at the mid-March annual meeting of the PMA in Chicago. Sixteen delegates representing 13,000 dairy farmer members and a resolutions committee composed of a member from each of PMA's 16 districts took the place of the large number of dairymen from Illinois, Indiana and Wisconsin who have attended annual meetings in other years.

Desiring to cooperate with the government directive on conventions, PMA did not petition to be exempted from the ruling against meetings of more than 50 persons.

This matter of decreased butter production was recognized in one of the resolutions adopted by PMA delegates which favored a butter price increase of not to exceed 10 cents per pound to stimulate production.

Manager Lauterbach asserted that dairymen have to meet the continuing threat of the oleomargine manufacturers' attempts to have the color tax removed.

"We have no right and no desire," he said, "to prevent the American housewife from purchasing what she wants when she goes to market, but we do have a right to demand that when she purchases food it be in its own clothes and not masquerading as some other food in order to receive more favorable consideration."

It was further pointed out that last year filled cream was sold in Chicago and used by consumers without the knowledge that they were using a product in which vegetable oil had been substituted for much of the butterfat.

In a resolution adopted by delegates, PMA urged legislative representatives to support and maintain legislation which will prevent intended substitutes from using the natural color of butter, in order to mislead the public. "All we ask," the resolution stated, "is that so-called substitutes for dairy products be sold for what they really are."

Lauterbach also reminded delegates that in the postwar period when milk sales revert to the normal level, quality will become of greater importance, than ever and "we must continue in the vanguard in this respect." He also warned about the disastrous price effects of the trend toward increasing the variation between spring and fall production of milk. In the Chicago marketing area last year 250 million pounds were produced in June and 175 million pounds in October.

PMA members produced a larger volume of milk in 1944 than ever before in the association's history. Some 1½ billion pounds delivered by members was sold to 74 milk dealers in the Chicago marketing area and 83 dealers in nine suburban markets of the association. Of the total milk marketed, 155 million pounds were handled through PMA's own country plants.

Net payments for milk delivered through the association in 1944 totaled 47½ million dollars — or $3.104 per hundred pounds, not including the government's "feed subsidy."

Among the resolutions adopted by delegates was one on the computing of parity prices for milk and other dairy products. This resolution stated:

"The rightful interests of the milk producers and the producers of other dairy products have not been rightly recognized or represented by the manner in which parity prices for milk and other dairy products have been computed and publicly announced by the United States Department of Agriculture.

"We, therefore, insist that in accordance with present law, the secretary of agriculture immediately determine and publicly pronounce prices for milk and other dairy products that are compara-

Illinois members of the resolutions committee of the Pure Milk Association who served at the recent annual meeting of delegates, seated left to right: Louis Kesler, Kankakee county; Arthur E. Anderson, Kane; Andrew Vanderveen, McHenry, and Henry Roesslein, Jr., Lake. Standing, A. C. Geuther, Will; Fred W. Pfingston, Cook; Harry Vandeburg, DeKalb, and Roscoe N. Glenn, McHenry. A delegate meeting was held in place of a regular annual meeting of members.

ble to the parity prices announced for basic soil crops. . .

"That in making determination and pronouncements, due consideration be given to all current costs entering into the production of milk and other dairy products, including farm labor costs and increased costs in the delivery of milk to distributors by producers."

Other resolutions included:

PMA declared in favor of making every effort to cooperate with approved methods for control of Bangs disease in cattle herds, especially calfhood vaccination.

Urged PMA to take the initiative in presenting to the current session of the state legislature a bill to bond milk dealers and that it be made as simple as will accomplish the object of guaranteeing the producers payment for his milk.

Urged an increase in the promotional expenditures of the national dairy industry in an effort to hold the increased market for dairy products that has developed during the war.

Recommended that the board of directors give consideration to stabilizing the production of milk to even the flow throughout the year.

Offered cooperation and assistance to all groups seeking the same common objective as the PMA, and to all groups whose purposes do not work against the interests of agricultural associations.

Former Creamery Manager Killed in Plane Accident

Lieut. O. H. Lauridsen, 28, former manager of the Olney Producers Creamery, was killed March 3 in a plane crash at Alexandria, La. Funeral services were held March 11 in his home town, Dedham, Ia.

Lt. O. H. Lauridsen

Lieutenant Lauridsen began work with the Olney Creamery March 10, 1940, and entered the armed services in 1942. Prior to his managership at Olney he had worked for three years as buttermaker at the Rugby Creamery Company in Rugby, N. D. He was graduated from Iowa State College, Ames, Ia., in March 1937. He had considerable practical experience in the creamery business having worked with his father, H. O. Lauridsen, who operated a dairy farm and creamery at Dedham, Ia.

Lieutenant Lauridsen leaves his wife, parents, one sister and two brothers.

This is an outside view of the Alhambra Grain and Feed Company, Madison county. It is one of the first cooperative soybean processing units to be started.

First Illinois Co-op Bean Mill

IN MAY, 1918, when farmers of the Alhambra community, Madison county, organized the Alhambra Grain and Feed Company, the thought never occurred to them that 27 years later they would be the first cooperative in Illinois to engage in processing soybeans.

However, this cooperative after a trial run on Feb. 22, started operations with a soybean processing unit on March 1.

Manager E. S. Apple got the soybean processing bug before the protein shortage actually occurred in 1942. He saw the shortage coming and got busy. However, with difficulties in securing priorities and other delays, the protein shortage had become successively worse and then eased up before operations were started.

The manager and directors are pleased with their plant facilities. The mill is housed in a building 36 feet by 48 feet with a height of 22 feet. The building is of concrete and concrete block construction. All processing equipment is housed in this building.

Storage space for soybean meal is provided in a two-story building 24 feet by 60 feet. Part of the structure is over the manager's office.

The soybean plant is located close to the parent elevator and beans are carried by gravity from the elevator to the mill.

A good demand for soybean meal exists in the dairy section around Alhambra, but some of the meal will be shipped out. Oil is stored in outside rail tank cars. The oil is in demand.

The Alhambra Grain and Feed Company is a true cooperative. It was originally organized under the 1915 act, but in 1934 it reorganized under the Cooperative Act of 1923.

In addition to handling around 200,000 bushels of grain a year, the cooperative has developed a large business in feed, coal, hardware, fence and fertilizer. It provides a large grinding and mixing service which is appreciated by dairymen for miles around.

Directors of the cooperative are: William Dietz, A. J. Wetzel, W. J. Danderman, C. Wisnasky, C. Uhe, E. A. Klaus and E. H. Isenberg.

Left to right: E. S. Apple, Alhambra Grain company manager; Paul Bauer, plant manager; Farm Adviser T. W. May, Madison county; Arthur Suhre, and E. L. Isenberg, company president. Full production started March 1.

More money for farm pr

By G. H. Iffner

The Ludlow Cooperative Elevator Company in Champaign county has developed an answer to the question, "Does It Pay For An Elevator To Operate As A Strictly Cooperative Concern?" It is surprising the number of farmer-stock companies which still raise that question.

Ludlow's operating experience since it became a cooperative in 1939 proves that it pays to operate as a true cooperative. Let the figures speak for themselves as they were presented by Manager Eugene Hoerner at the 41st annual meeting of members:

Yr.	Total Gr. Bu.	Mdse. Val.	Net Prof.	Pat. Div.
1939	324,000	$17,000	$ 2,721	None
1940	397,000	$22,000	$ 2,742	None
1941	399,000	$29,000	$ 7,309	$ 3,542
1942	516,000	$50,000	$15,022	$ 9,248
1943	616,000	$70,000	$25,914	$17,792
1944	582,000	$96,000	$27,476	$19,678

The Ludlow company was not in a strong financial condition when it became a cooperative in 1939. Today the cooperative has capital stock issued amounting to a little more than $16,000 and has an earned surplus of $43,353 which also belongs to the patrons, since the cooperative operates according to the Cooperative Act of 1923, an act that was sponsored by the Illinois Agricultural Association.

The Ludlow cooperative was responsible for not less than four neighboring farmer elevators becoming cooperatives within the past three years.

Directors of the Ludlow cooperative are Warren H. Watson, James S. Coon, Byron G. Walker, C. C. O'Hare, Edward Quinlan, James Sheehan, W. O. Smith, John F. McCabe and M. P. Quinlan.

Some 109 farmers' elevators companies in Illinois are now operating according to the Cooperative Act of 1923, according to a report from Harry Fulkerson, acting superintendent of the division of markets of the Illinois state department of agriculture.

These 109 farmers' elevators which have re-organized since 1923 are operating on a patronage paying basis for the benefit of both the capital stock holders and the patrons. Capital stock dividends are limited to 8 per cent. Other earnings, after necessary additions to surplus are made, are distributed to patrons.

The 1923 Cooperative Act was secured by the Illinois Agricultural Association to streamline cooperative procedure. At present time the IAA is aiding 10 elevator companies with their reorganization under the 1923 act, and more than 350 Illinois cooperatives are operating under this act.

Illinois Grain Corporation is a new member of the National Federation of Grain Cooperatives. The National Federation now includes the membership of all of the state and regional grain cooperatives in the United States. The regional cooperatives serve more than 350,000 of the nation's grain producers. Their achievements serve as a record of the strong and growing cooperative movement in agricultural America.

Reports from a number of member elevators of Illinois Grain Corporation indicate successful operations, in most cases the best years in their history. Patronage dividends were declared by member companies, for example:

Greenfield Farmers' Cooperative Grain Company, Greene county, refunded $6,803.51 to patrons after building a surplus to more than $50,000. W. M. Metcalf is manager.

Savoy Grain and Coal Company, Champaign county, distributed 4 cents per bushel dividends amounting to $25,511.72 to 250 patrons. The company handled 631,000 bushels in 1944. It was organized in 1904 and became a cooperative in 1931. J. N. Jordan is manager.

The Nokomis Equity Elevator Company, Montgomery county, paid out patronage dividends for the years 1938 through 1941 approximating $12,000. Roy N. Phillips is the manager.

Walter Meyer, manager at the Keyesport Equity Elevator Company, Bond county, reported a good year with net profits of $3,310.05 out of which patronage dividends will be paid.

Earlville Farmers' Cooperative Elevator Company, La Salle county, a 40-year-old company voted to go cooperative after turning in its best year—nearly a million bushels of grain handled. A. E. Bader is the manager.

Kewanee Farmers' Cooperative Elevator Company, Henry county, paid its first dividend in 28 years after netting nearly $20,000. Manager W. D. Weter set a goal of a million dollars merchandise business.

Anchor Grain Company, McLean county, with C. H. Willke as manager paid refunds on the following scale: grain, 1 cent per bushel; seeds, 2 per cent; coal, 4 per cent; feed, 5 per cent; lumber, 5 per cent.

Dillsburg Cooperative Grain Company, Champaign county, organized in 1920 and reorganized as a cooperative in 1942 reported a substantial net profit last year. John Ehmsen is manager.

Secor Elevator Company, Woodford county, became a cooperative in 1944 and reported a net of nearly $6000. Manager Virgil Wilkey wants to pay a patronage dividend next year.

cream

By F. A. Gougler

Virgil Johnson, manager of Producers Creamery of Galesburg, has resigned to take a position with Producers Creamery of Springfield, Mo. Virgil went to work with the Galesburg Creamery when it opened up for business, July, 1935.

Many improvements have been made during his administration. A large adjoining lot was purchased and a wing was built onto the building for a receiving room. The interior of the plant was rearranged for efficiency and much new equipment has been added by Johnson.

During these years, Johnson has proved an able manager and has made many friends in the Galesburg territory as well as throughout the state.

His successor will be James Cramer who has been plant superintendent for many years. Cramer is an Ames graduate and has had plant experience in Iowa and Wisconsin. He will be assisted by Harold Johnson who will devote his time to procurement and Dean Ole who will have charge of quality operations.

Herb Johnson, former manager of Producers Creamery of Peoria, has been employed by Illinois Producers Creamery as salesman. His major work will be that of selling milk powder. He will also be available to member creameries on problems related to equipment installation.

During a recent meeting of the board of directors of IPC, two members of the board handed in their resignation. Harry Leeper, former president of Producers Creamery of Peoria, resigned because that plant has been closed. His vacancy will be filled by a representative of Prairie Farms Creamery of Henry.

William Bismark, former president of Producers Creamery of Moline, resigned because his creamery has been taken over by the Quality Milk Association. He will be succeeded by Arthur E. Myer, president of Quality Milk Association to the IPC board.

The new creamery building in Mt. Carroll is nearing completion. Practically all of the new equipment has been delivered and Manager Ray Sailer is of the opinion that he should be able to start operations in the new building early in April.

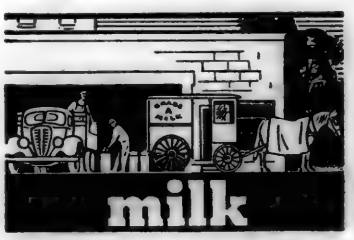
At present, volume is running 35% ahead of a year ago and until the new plant is

ready, no additional volume can be handled. When the plant is completed, a procurement program will be developed and carried out.

Friendly competition. That is what is developing between Farmers Creamery Company of Bloomington and Producers Creamery of Carlinville. For years, Manager Forrest Fairchild has had the distinction of having the largest cooperative creamery in Illinois. He has now been moved out of the lead by Manager F. A. Gourley of Carlinville.

Says Manager Gourley, "When the past year closed, the Carlinville plant exceeded the Bloomington plant by 20,000 pounds butterfat. This gives the Carlinville plant the distinction of being the largest cooperative creamery in Illinois. The nicest thing about this is that the Bloomington plant will not see our dust because at the present time we are purchasing from 55 to 65 per cent more butterfat than a year ago."

Says Manager Fairchild, "Certainly, to hold what we have is not enough. If we are to meet the challenge, not only of some other cooperative creamery, but to meet the needs and aspirations of farmers in our area, we should bend every effort to increase our butterfat volume. — If every farmer were sold on the idea of cooperative cream marketing, the volume would more than take care of itself. — All of this shows that while we are doing a better job than in former years, we must continue to show improvement to maintain our lead. The assistance of members of Farmers Creamery Company is solicited to help meet these new challenges. Let's be at it." That's the spirit.



By Wilfred Shaw

Milk cow numbers in the United States increased less during 1944 than in any recent year.

There were 27,785,000 cows and heifers two years old and over on January 1, 1945, compared with 27,656,000 a year earlier.

Total milk production in February was 8.5 billion pounds, an increase of 3% over the daily average in February of last year.

Butter production of recent weeks has averaged about 9% below a year ago.

Cheese and evaporated milk production continues sharply higher than last year, with evaporated milk production up 30% and cheese production up 19% above last year.

Butter, cheese, and evaporated milk stocks continue much below last year. Cold storage holdings of butter on March 1 were 31,200,000 pounds compared with 107,560,000 pounds a year ago. Cheese holdings on March 1 were 117,557,000 pounds compared with 144,812,000 pounds a year ago. Evaporated milk stocks totaled on February 1 this year 132,000,000 pounds compared with 168,000,000 pounds a year ago.

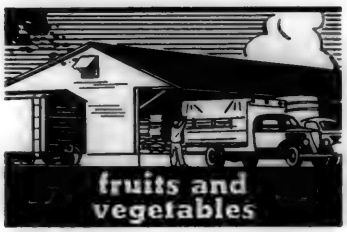
The following are the blended prices received by producers supplying the respective Illinois markets. All are February prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago	3.11
Danville	2.625
Decatur	2.75
DeKalb	2.74
Freeport	2.73
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	2.976
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.07
Springfield	2.85
St. Louis	3.44
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for January, unless otherwise noted:

Baltimore	$3.85
Boston (191-200 mile zone)	3.82
Chicago (70 mile zone) (Feb.)	3.11
Cleveland	3.47
Denver	2.87
Detroit	3.57
Indianapolis (Feb.)	3.28
Kansas City (Feb.)	3.52
Milwaukee (Mar.)	3.00
New York City (201-210 mile zone)	3.34
Omaha (Feb.)	2.95
Seattle (Feb.)	3.10
St. Louis (Feb.)	3.44
St. Paul & Minneapolis	3.00
Washington, D. C. (Feb.)	3.99

The annual business meeting of the Danville Producers Dairy was held Monday evening, April 2, in the Vermilion County Farm Bureau office. The annual meeting for members and wives of the dairy was held Tuesday, April 10.



By L. L. Colvis

According to present indications, Illinois should have a good fruit crop in 1945. The last of March is not an opportune time to make a definite prediction, because future weather, especially during the next two months, can change the entire picture. The sustained cold weather during the winter, without extremely low temperatures, has been favorable.

Peach buds can stand about 10 degrees below zero when they are completely dormant. As they advance towards blossoming, however, they become increasingly susceptible to freezing. At full blossom stage, even a frost will result in high mortality. At this time, they are unduly advanced, and are in good condition.

Over most of the peach area in Illinois there are plenty of buds on the trees for a full crop of peaches. In the Centralia area, however, where there was a tremendous crop in 1944 along with extremely dry weather, the bud set is lighter. Some orchards in that area cannot have a full crop even if there is no frost damage at all.

The Illinois apple crop should be considerably larger than the small crop of 1944. Apples are not as easily injured by freezing as peaches are, although a sharp freeze at blossoming would destroy the year's crop. Present indications are very good for apples.

Incidentally, this is a good time to buy a bushel of apples. There is still a large supply in cold storage, and prices are very reasonable, if they are purchased by the bushel. A bushel of apples weighs about 45 pounds and can be purchased for about $3. This for good quality, crispy, juicy apples. Some of the softer varieties are becoming a bit mealy, but the old-fashioned Winesap for example, is at its best this time of the year.

New plantings of strawberries will be made in a limited way this year. They will of course not affect 1945 production which will again be extremely light. High prices and small supplies are in prospect for this fruit in 1945.

Vegetable production in Illinois is unpredictable at this date. Fewer acres will probably be planted because of labor shortages.

Rural Youth

By
Ellsworth D. Lyon

Kathryn Specht, secretary, reports that Clay County Rural Youthers received a collection for the Red Cross at their March meeting. An unusually full program included a piano solo by Clara Rose Gentry, a discussion of "Flag Etiquette" led by Fritz Thomann and Carl Hasler, a "Double or Nothing" quiz given by Ruth Murphy, a recreation period consisting of games and contests led by Eugenia Specht, and refreshments.

Bond County's February meeting consisted of two timely topics: "Father and Son Farm Partnerships" presented by Elmer Searls of the U. of I. extension staff and "They Will be Coming Home Soon", by Miss Josephine Giganti, home adviser. The recreation was planned around a Valentine theme. Secretary Lois Wise says, "Our meetings are going good".

President Kenneth Wilson of Montgomery County Rural Youth writes that at the February meeting he and Esther Bruntjen were members of a cast which presented an original dramatic skit on "Father and Son Business Partnerships". The playlet, based on the University of Illinois bulletin No. 587 covering this subject, was prepared by Rural Youthers, Home Adviser Miss Helen Bennett, and Organization Director Hugh Rowden. The Farm Bureau has recently made the Rural Youth president an ex officio member of the Farm Bureau board of directors.

Secretary Hester Black, Edgar County, reports that the Red Cross chairman, Mrs. Howard, brought the Rural Youth group information concerning the blood donor program at a recent meeting, pointing out that Edgar County Rural Youthers may contribute to the Terre Haute blood bank. Thelma Sturgeon was in charge of a discussion on the theme "What I Expect Out of Life".

Members of the Central Rural Youth group of Rock Island county are already making plans for the Rural Youth annual week-end summer camp at Camp Hauberg. Secretary Bob Sievers sends the information that a debate was held in January on the question: "Resolved that a Young Man Should Start Farming with His Father". The affirmative was upheld by Charles Schave and Bob Sievers, while the negative side of the question was discussed by Dolores Bolens and Gertrude Tornquist. Audience participation was enthusiastic. At the February meeting they held a symposium on the "Organization and Work of the County Farm and Home Bureaus".

McDonough County Rural Youthers held a discussion on the important subject of "Contributing to the Red Cross in 1945" at their Feb. 20 meeting. "The highlight of the evening was a wiener roast", according to Secretary Karel Swanson.

Y 1/c John Koonce, former member of the Pulaski-Alexander Rural Youth, called at the IAA office March 19. John was enroute to his home in Mt. Morris from the Bermuda Islands where he has been stationed for 19 months.

Pulaski-Alexander county held its eighth annual banquet on March 9 in Mounds. The event was well supported by the entire membership.

Secretary Ailene Thomas's report of the McLean county meeting March 20 is vibrant with news. Pantomine on "Things I Wish Others Wouldn't Do" was given by Betty Belle Ewing, Lloyd Singley and Dorothy Renken. An invitation received from the Bloomington YMCA to join in the "Y" dances was placed in the hands of a committee. The group gave a contribution to the Red Cross. A box social was held in which Paul V. Curtiss, assistant farm adviser helped with the auctioneering.

Cook County Rural Youthers listened with interest to the story of the growth and service of the Farm Bureau in Illinis as told by J. B. Countiss, manager of Illinois Producers Creamery, at their sixth annual banquet held in Tinley Park, March 20. Miss Clareta Walker, extension specialist in Rural Youth, also showed slides of Rural Youth in Illinois in 1944.

McHenry County Rural Youth on March 13 and 14 held short courses in surveying and tiling and tractor repair and operation. Actual field problems were met and solved. Congratulations!!

Warren county held a short course in recreation on March 7 and 8. Assistant Farm Adviser Eldon Powel says of the young people in this experience, "I know that they learned a lot and will make use of the mixers, singing games, dances, etc. in their meetings in the future." This group discussed the "GI Bill of Rights" at the March meeting.

DeKalb county looked "gay but not ninety" when attired in long skirts, bustles, derbies, bow ties, and plume hats at the Gay Nineties' party held at the Waterman gym March 12. Clara Havlins was chosen best dressed girl while Pvt. Hugh McCleery, former president, home on leave, was chosen best dressed man.

Tazewell county held guest night on Feb. 22. Elizabeth Strunk told what Rural Youth is and what it does. "Farm Problems that Confront Rural Youth" was discussed by Louis Hoerr, Eleanor Moser, and Ruth Wullenwaber, Miles Allen, Ruth Huser and Arthur Gaeken. This group has planned to lead recreation at three 4-H rallies.

Current news of Rural Youth in the service discloses one more gold star.

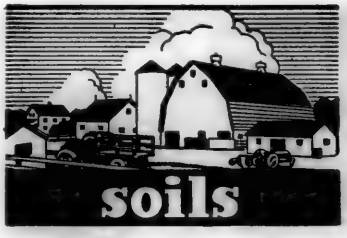
Cpl. David Goldy, Stephenson county, was reported killed in action in Belgium on Jan. 15, according to notice received by his parents.

Pfc. Edward Madden, La Salle county, is recovering in a hospital in England from wounds received in battle Nov. 9 and Jan. 22. He received the Bronze medal and the Purple Heart awards.

Cpl. Robert B. Simon, Bureau county, has been awarded the Purple Heart for wounds received in action at Luxembourg.

Four-H leaders received training to prepare for a new 4-H club project in tractor care and maintenance. Left to right are: Kenneth Kessler, Champaign county; John Deputy, Pope; Melvin Hummel, Kendall; Clarence Wall, Bond, and Joe Welch, Clark. Twenty-three leaders were enrolled in recent course at the university.

Four-H leaders over the state have mapped extensive programs for the coming year. Cass county 4-H leaders in Guy Husted's office, left to right: E. H. Virgin, Ruel Jurgens, Chesley C. Taylor, Edward L. Jones, Roy C. Reichert, Edward J. Gaffney, Glenn C. Herzberger, and Farm Adviser Husted.



By John R. Spencer

Food for plants is just as necessary as food for animals but we still have to make people conscious of the fact. Wartime production goals to increase food, feed and fiber have sapped our soils of vital fertility elements. Crops have removed annually for the last three years approximately 416,000 tons of nitrogen, 168,000 tons of phosphoric acid and 160,000 tons of potash from the 20,000,000 acres of harvested crop land in Illinois, according to Prof. A. L. Lang, U. of I. College of Agriculture.

Seven locations in Shelby county have been designated for lime storage bins as a means of minimizing transportation problems, states W. S. Batson, farm adviser.

Farm account books have pointed out to Logan county farmers the economic importance of adding lime and phosphate, the utilization of crop residues, planting of good crops and the application of commerical fertilizers when necessary, asserts N. H. Anderson, farm adviser.

Kankakee county applied 64,000 tons of limestone, 3200 tons rock phosphate, 3200 tons mixed fertilizer and 800 tons superphosphate last year according to George Swaim, farm adviser.

Lee county applied 126,000 tons of agricultural limestone last year according to C. E. Yale, farm adviser. This is a substantial increase over the 77,000 tons of the 1943 year.

The use of agricultural limestone for the state as a whole has "come a long way" in the last ten years when slightly under 500,000 tons was applied in 1935, compared with the present annual usage of approximately 3,500,000 tons. If labor shortage does not nullify the addition to crushing equipment at established quarries plus the new operators the supply of available limestone should be greater in 1945 than last year.

According to college authorities it would cost approximately 10 cents a bushel, at present prices for fertilizers, of soybeans to replace the phosphorus and potassium removed by them from soils. This is based on the results of a five year test at the Joliet experimental field. H. J. Snider states, "From the most part the beans are sold from the farm and since they contain such a large proportion of the total nitrogen (in the entire crop) there is little probability that soybeans contribute anything toward building up permanently the nitrogen content of soil."

The use of grasses and clover with alfalfa makes it possible for more farmers to get alfalfa seed and provides a good rotation hay or pasture mixture.

Unloading and bagging 50 per cent muriate of potash at the Morgan-Scott bulk plant, left to right: I. E. Barnes, inside car, Russell Chapman, assistant manager, John Ryman and Harold James. Unloading this 50-ton car took two days and a half.

Farmers Save On Carload Muriate of Potash Buying

Savings to farmers of more than $2000 per carload are reported by Illinois Farm Supply Company through carload shipments of high-grade muriate of potash to a number of county Service Companies.

Shipments have been made to Woodford, Whiteside, Grundy, Morgan-Scott, Christian, Bond, and Jackson-Williamson.

According to IFS officials, for the farmer whose soil needs potash, this muriate of potash is a real bargain compared with the potash contained in mixed fertilizer. For example: for each pound of K_2O in 2-12-6, the farmer pays 8.7 cents per pound. For one pound of K_2O in 50 per cent muriate of potash, the price is only 4.4 cents per pound, and for 60 per cent muriate of potash only 4.1 cents per pound.

Leading county in the sale of potash is Whiteside, report IFS officials. More than 320 tons have been sold for spring application.

Orders for more than 2000 tons of muriate of potash are now on hand, and as of March 15, 530 tons had been delivered. The remainder was scheduled to go out within 60 days.

McLean county's supply of milkweed pods moves to war. Left to right are Dr. W. I. DeWees, Normal, in charge of collection program in the state; Doren Young and Lloyd Crichton, helpers, and T. R. Trigger, assistant supervisor.

Former Randolph Adviser's Son Dies On Western Front

Pfc. Eugene Secor, 20, son of E. C. Secor, former farm adviser of Randolph county, was killed in action Feb. 17 while serving as a machine gunner with the Seventh Army in France, according to word received by his parents from the War Department.

The last letter received from the young soldier was dated Feb. 15 and at that time he was preparing to go back to the front lines after spending about two weeks in a rest camp. He went overseas last November and his division became part of General Patch's Seventh Army.

Mr. Secor was farm adviser in Randolph county for 20 years and last July was employed in 4-H club work by the extension service of the U. of I. College of Agriculture.

Besides his parents, Private First Class Secor leaves one brother, Cpl. Clay Secor, serving overseas with the Army Air Forces as a tail gunner and assistant engineer on an Army bomber.

Wind erosion can be reduced by tree windbreaks and such mechanical windbreaks as snowfence or other similar materials. Rows of small grain such as rye help to slow the wind also.

L. Lang, U. of I. College of Agriculture.

Seven locations in Shelby county have been designated for lime storage bins as a means of minimizing transportation problems, states W. S. Batson, farm adviser.

Farm account books have pointed out to Logan county farmers the economic importance of adding lime and phosphate, the utilization of crop residues, planting of good crops and the application of commerical fertilizers when necessary, asserts N. H. Anderson, farm adviser.

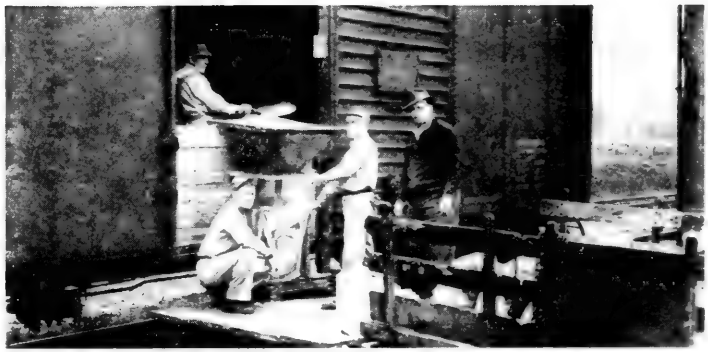
Kankakee county applied 64,000 tons of limestone, 3200 tons rock phosphate, 3200 tons mixed fertilizer and 800 tons superphosphate last year according to George Swaim, farm adviser.

Lee county applied 126,000 tons of agricultural limestone last year according to C. E. Yale, farm adviser. This is a substantial increase over the 77,000 tons of the 1943 year.

The use of agricultural limestone for the state as a whole has "come a long way" in the last ten years when slightly under 500,000 tons was applied in 1935, compared with the present annual usage of approximately 3,500,000 tons. If labor shortage does not nullify the addition to crushing equipment at established quarries plus the new operators the supply of available limestone should be greater in 1945 than last year.

According to college authorities it would cost approximately 10 cents a bushel, at present prices for fertilizers, of soybeans to replace the phosphorus and potassium removed by them from soils. This is based on the results of a five year test at the Joliet experimental field. H. J. Snider states, "From the most part the beans are sold from the farm and since they contain such a large proportion of the total nitrogen (in the entire crop) there is little probability that soybeans contribute anything toward building up permanently the nitrogen content of soil."

The use of grasses and clover with alfalfa makes it possible for more farmers to get alfalfa seed and provides a good rotation hay or pasture mixture.



Unloading and bagging 50 per cent muriate of potash at the Morgan-Scott bulk plant, left to right: I. E. Barnes, inside car, Russell Chapman, assistant manager, John Ryman and Harold James. Unloading this 50-ton car took two days and a half.

Farmers Save On Carload Muriate of Potash Buying

Savings to farmers of more than $2000 per carload are reported by Illinois Farm Supply Company through carload shipments of high-grade muriate of potash to a number of county Service Companies.

Shipments have been made to Woodford, Whiteside, Grundy, Morgan-Scott, Christian, Bond, and Jackson-Williamson.

According to IFS officials, for the farmer whose soil needs potash, this muriate of potash is a real bargain compared with the potash contained in mixed fertilizer. For example: for each pound of K_2O in 2-12-6, the farmer pays 8.7 cents per pound. For one pound of K_2O in 50 per cent muriate of potash, the price is only 4.4 cents per pound, and for 60 per cent muriate of potash only 4.1 cents per pound.

Leading county in the sale of potash is Whiteside, report IFS officials. More than 320 tons have been sold for spring application.

Orders for more than 2000 tons of muriate of potash are now on hand, and as of March 15, 530 tons had been delivered. The remainder was scheduled to go out within 60 days.

McLean county's supply of milkweed pods moves to war. Left to right are Dr. W. I. DeWess, Normal, in charge of collection program in the state: Doren Young and Lloyd Crichton, helpers, and T. R. Trigger, assistant supervisor.

Former Randolph Adviser's Son Dies On Western Front

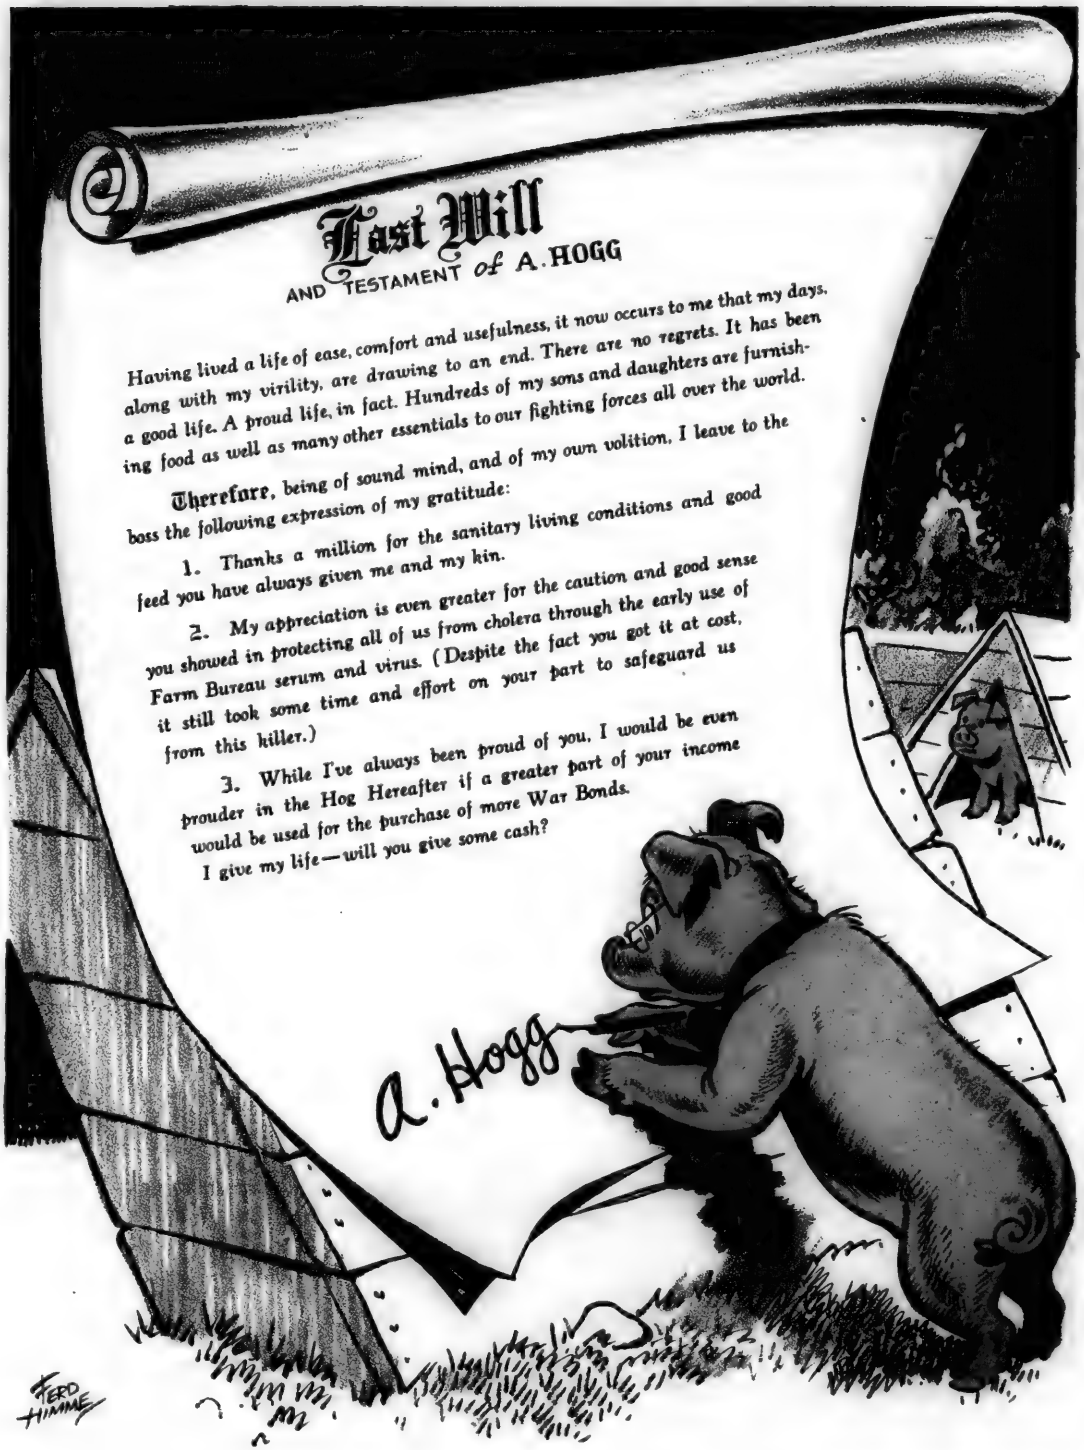
Pfc. Eugene Secor, 20, son of E. C. Secor, former farm adviser of Randolph county, was killed in action Feb. 17 while serving as a machine gunner with the Seventh Army in France, according to word received by his parents from the War Department.

The last letter received from the young soldier was dated Feb. 15 and at that time he was preparing to go back to the front lines after spending about two weeks in a rest camp. He went overseas last November and his division became part of General Patch's Seventh Army.

Mr. Secor was farm adviser in Randolph county for 20 years and last July was employed in 4-H club work by the extension service of the U. of I. College of Agriculture.

Besides his parents, Private First Class Secor leaves one brother, Cpl. Clay Secor, serving overseas with the Army Air Forces as a tail gunner and assistant engineer on an Army bomber.

Wind erosion can be reduced by tree windbreaks and such mechanical windbreaks as snowfence or other similar materials. Rows of small grain such as rye help to slow the wind also.



Last Will
AND TESTAMENT of A. HOGG
Having lived a life of ease, comfort and usefulness, it now occurs to me that my days, along with my virility, are drawing to an end. There are no regrets. It has been a good life. A proud life, in fact. Hundreds of my sons and daughters are furnishing food as well as many other essentials to our fighting forces all over the world.
Therefore, being of sound mind, and of my own volition, I leave to the boss the following expression of my gratitude:
1. Thanks a million for the sanitary living conditions and good feed you have always given me and my kin.
2. My appreciation is even greater for the caution and good sense you showed in protecting all of us from cholera through the early use of Farm Bureau serum and virus. (Despite the fact you got it at cost, it still took some time and effort on your part to safeguard us from this killer.)
3. While I've always been proud of you, I would be even prouder in the Hog Hereafter if a greater part of your income would be used for the purchase of more War Bonds.
I give my life—will you give some cash?
A. Hogg
FERD HIMMAE

IAA Opposes Convention Call

(*Continued from page 3*)

stitutional convention in 1918. In 1922 it submitted its report. Of 1,106,696 votes on the proposal, only 18,298, less than 17 per cent of the total vote, were in favor of adoption of the proposed constitution. If a constitutional convention is called, any attempt to amend the present constitution would, of course, be delayed. All such questions would be deferred to await the report of the constitutional convention.

The cost of holding a constitutional convention is estimated to run between $2,500,000 and $4,000,000. It would require three special statewide elections, a special primary election for the nomination of delegates, a special general election for the election of delegates and a special election for voting on its report.

The Association doubts whether a constitutional convention should be held under present conditions. People are preoccupied and giving full attention to the war and problems resulting from wartime conditions. In the immediate postwar period, attention will be devoted to the problems of readjustment. People will not give the time, attention and consideration required for changes in our basic law.

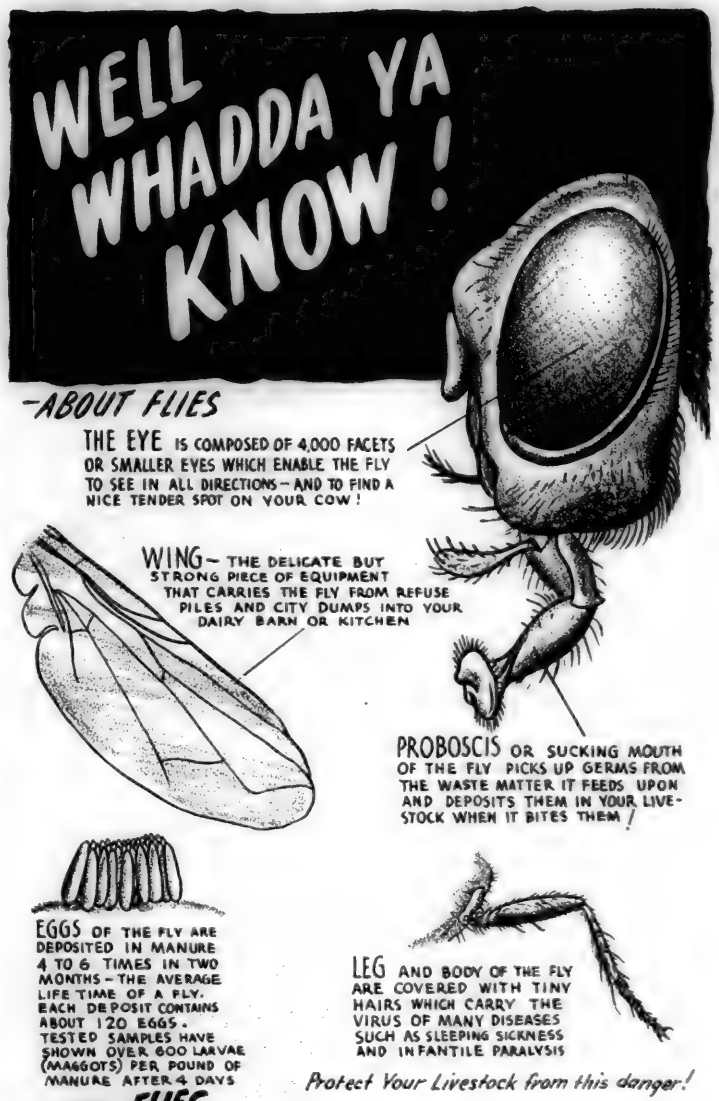
Would Delay Action

Since it appears that the calling of a constitutional convention at this time would not accomplish any constructive results, would entail the expenditure of large sums of money, would only serve to delay action on and solution of our more serious constitutional problems and would thrust new burdens upon our distracted and preoccupied people, the Association urges the General Assembly not to submit the question of calling a constitutional convention in the general election in 1946. Instead, the Association urges the submission of a Gateway amendment and making its adoption possible by re-enactment of the party circle method of voting on such constitutional amendment, which method was used from 1870 to 1890.

Safety Campaign

A "brake-emphasis" campaign is being sponsored by the International Association of Police Chiefs with assistance of 49 other national groups, April 15-June 1.

A simple brake test will be given motor vehicles involved in an accident, stopped for traffic violation, or indicating defective brakes. A block one inch thick will be placed under the brake pedal. If, when the pedal is depressed, it is stopped by the block before the brakes grip, the operator will be informed that his brakes need attention.



FIGHT FLIES with BLUE SEAL FLY SPRAY

Here's the way Blue Seal Fly Spray is effective:

IT KILLS. Blue Seal contains two effective ingredients that kill flies by contact. Many different types of materials and formulae were tested in Illinois dairy barns by cooperating farmers in our search to determine the most effective killing agencies and formulae. We have them now in Blue Seal Fly Spray.

See your Blue Seal Serviceman. • *Reserve your season's supply today.*

ILLINOIS FARM SUPPLY COMPANY

From Our Readers

Dear Sirs:

I have been receiving the RECORD regularly. Keep it coming. I enjoy reading through it to find out the latest happenings and progress of the County Farm Bureaus in Illinois.

I also want to take this opportunity to inform you of my correct address.

Yours truly,
Sgt. Louis M. Bogner
c/o Postmaster
San Francisco, Calif.

(Editor's Note: Thanks for your letter. We'll try to keep the news coming to you. We would like to hear from you again soon.)

Philippine Islands

Dear Sir:

I appreciate your sending me the Illinois Agricultural Association RECORD. It is always good to see those pictures of Illinois farms in it and also to keep posted on the progress of Illinois cooperatives.

Sincerely,
Sgt. Francis W. Campbell

Gentlemen:

The RECORD brings me back to Illinois agriculture, and enables me to keep up with the IAA and Illinois farm front. I would appreciate it very much if you would include my name on the regular mailing list.

I hope some day soon to return to the IAA and Illinois agriculture. I may even help Mr. Brissenden out with organization work. I noticed he and the gang are doing a top-notch job in membership. Leave a few for we vets to sign up.

Very truly yours,
Sgt. Kenneth A. Stocker
H. Q. Det. O. T. C.
Atlanta Ord. Depot
Atlanta, Ga.
(Former organization director in Madison county)

(Editor's Note: Organization Director Brissenden promises to leave a "few for you veterans to sign up.")

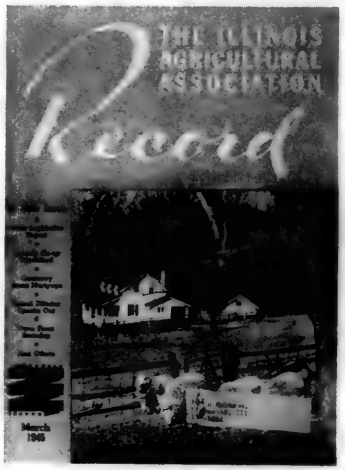
Dear Sir:

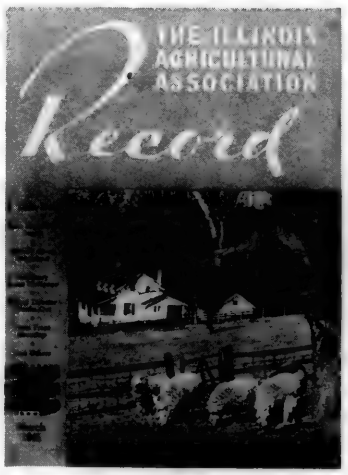
Your much esteemed IAA RECORD comes to me regularly and I read it through with interest; the enclosed front page cover picture must be very beautiful if a fellow could see the animals, so please tell your mailing staff that hereafter I don't want the best two ewes covered up with my postal address and name.

. . . Do not take me as seriously out of sorts because of your censorship, only paste my name on some other place on your next issue.

Very truly yours,

Rev. John Acheson
Presbyterian Church
Kirkwood, Illinois





(Editor's Note: Since we feel that most of our 113,000 readers experienced the same disappointment as Reverend Acheson we have printed two cover pictures of the March issue of the IAA RECORD, one that is censored with the postal address and one in which the view is unobstructed. We're sorry it happened and we feel certain that our printer is not happy about it.)

Cook Assistant Adviser Hired In Clark County

Charles N. Glover, assistant farm adviser of Cook county for the past nine years, has been named farm adviser for Clark county. He will start work in that county April 15.

Charles Glover

Glover is a native of LaSalle county and a graduate of the U. of I College of Agriculture in 1931. He has had experience farming in Putnam county, teaching school in LaSalle and Mercer counties and working for the USDA on barberry eradication in several counties in Illinois.

During his nine years work in Cook county, 4-H club enrollment under his direction more than doubled. Six years ago he organized the Rural Youth group in Cook county.

Ohio Farm Bureau Group Inspects Illinois Co-ops

Seventeen Ohio farm leaders recently came to Illinois to inspect some of our cooperative enterprises. The group represented the Ohio Farm Bureau Federation, the Ohio Livestock Marketing Association and the Ohio poultry and egg marketing associations.

In addition to the Ohio group making the tour, were Manager Ellis Kugler of the Co-op Locker Service of Champaign county, Champaign, Manager William Hegenbart of the Cooperative Refrigerated Service of La Salle county, Ottawa, A. R. Grindley, secretary-treasurer of Co-op Locker Service of Champaign county, Champaign, Sam Russell, IAA director of livestock marketing, F. A. Gougler, IAA director of produce marketing.

At Bloomington, visits were made to Farmers Creamery, the McLean County Farm Bureau building, the McLean County Cold Storage Company and the Bloomington Livestock Marketing Association.

A visit was next made to a turkey dressing plant at Havana, Mason county. Visits were made at Winchester Cold Storage Locker Service, Scott county and Waverly Locker Company, Morgan county. The $6,500 slaughter plant at Mowequa, Shelby county, was inspected and stops were made at DeWitt County Cooperative Locker Service at Clinton and the new locker plant at Fisher, Champaign county.

The last locker plant inspected was the one in Champaign.

Illinois Home Bureau Federation Elects New Officers, Directors

THE ballots are now in and the results of the election held by mail to name 1945 officers and directors of the Illinois Home Bureau Federation have been reported. When Farm and Home Week was cancelled, the officers of the Home Bureau in compliance with the government order on conventions limited the annual meeting to an advisory council and executive board meeting. With terms of certain officers and directors expiring it was decided that the report of the nominating committee would be submitted by mail to the voting delegates for balloting.

Here are the results: Mrs. C. W. Cutler, LaGrange, Cook county, vice-president; treasurer, Miss Myra Robinson, Kansas, Edgar county; Mrs. M. Kimmelshue, Manteno, Kankakee county, north east director; Mrs. E. D. McGuire, Makanda, Jackson county, south east director, and Mrs. R. E. Wrigley, Trivoli, Peoria county, west central director.

The new vice-President, Mrs. Cutler, helped to organize the Cook County Home Bureau in 1941 and was a charter member. She has served as Cook county president for one year and as treasurer for two years. She has been interested in 4-H club work and served for four years as leader of the Lyonsville 4-H club.

Mrs. C. W. Cutler
Cook County

Mrs. Cutler's husband, Major Clarence W. Cutler, is now stationed in Belgium in charge of special equipment for the U. S. Army.

The new treasurer, Miss Robinson, joined a local unit of the Edgar County Home Bureau about a year after the county organization was started. She served as secretary of her local unit and then was elected a director of the county organization in 1940 for a two-year term. In 1943 she was elected county chairman and is just completing her two-year term in this capacity. Miss Robinson is the daughter of J. W. Robinson, a former director of the Illinois Agricultural Association.

Mrs. Kimmelshue, new director of the north east district, is a director of the Kankakee County Home Bureau which is celebrating its 30th anniversary this year. Kankakee county was the first Home Bureau organized in the state and the second in the United States. Mrs. Kimmelshue has been an active member of the Kankakee Home Bureau for 17 years, and was elected chairman of the county organization in 1940 and 1941. For two years prior to 1940 she served as county program chairman. Mrs. Kimmelshue is a former assistant home adviser and her husband is director of the 14th district of the Pure Milk Association.

Mrs. Kimmelshue recalls that "way back in 1915, when horses shied at automobiles," she drove throughout the county for her mother and coworkers. These women were charter members and hence, organizers who worked hard to interest rural women in something new — an organization that would make them better housekeepers, homemakers, and mothers.

"It is most interesting," Mrs. Kimmelshue says, "to look back to see the long, upward path that Home Bureau has traveled. It is also most fascinating to look forward to the great educational opportunities that this organization offers to homemakers."

Mrs. McGuire, south east director, has a Home Bureau career that dates back to 1928 when the Jackson county merged with Williamson and Johnson counties to form the Tri-County Home Bureau. At that time she served as a member of the original organization committee. Mrs. McGuire later served as a member of the organization committee when the Jackson-Perry Home Bureau was started.

Mrs. McGuire
Jackson County

Mrs. McGuire has served at one time or another in each of the various offices of her local unit in the Home Bureau and has served four years as a member of the Jackson-Perry executive board, one year as vice-chairman, one as publicity chairman, and two years as county chairman. She also served on the IAA school committee as one of the two members chosen from the 25th congressional district. Mrs. McGuire also served on the Illinois Home Bureau Federation's 1945 resolutions committee.

Mrs. Wrigley, west central director, is a charter member of the Peoria County Home Bureau which was organized in 1930. She served as its first vice-chairman and then as treasurer. Mrs. Wrigley also acted as secretary at various times while holding both of these jobs. At the present time she is county 4-H chairman with a background of nine years as a leader. Mrs. Wrigley has also served in various offices in her local unit.

Mrs. Wrigley
Peoria County

Mrs. Wrigley says that "4-H club work is my special favorite, and we are a cooperative, Farm and Home Bureau and 4-H family. My husband leads a boys club and Gene, 13, is a member. I am one of the leaders of a girls club of which Miriam is a member and a leader of a junior girls club."

Cook County Home Bureau Has 4th Annual Meeting

Importance of home and family ties in defeating juvenile delinquency was stressed in the address by Mrs. A. R. Rohlfing, former president of the Illinois Home Bureau Federation, at the fourth annual meeting of the Cook County Home Bureau in the Mural Room of the Morrison Hotel, Feb. 28.

A full program included a fashion show by a dress pattern company, an exhibit of hand crafts by members, and a fashion review by the Future Homes 4-H club. Members of the latter club modeled costumes of the last 50 years up to the present day jiving jean-and plaid-shirt clad high school girl.

Officers elected at the meeting included: Mrs. C. W. Cutler, president; Mrs. L. J. Eib, vice-president; Mrs. James Foggo, secretary; Mrs. A. W. Borkenhagen, treasurer; Mrs. W. E. Fritz, membership chairman; Mrs. George Dean Johnson, 4-H club chairman; Mrs. C. J. Hill, and Mrs. A. Zuidema, project chairman; Mrs. Robert Suydam, recreation chairman; Mrs. G. Rex Volz, publicity chairman.

Three hundred of the 600 members attended the meeting.

Fruits and vegetables are valuable in the diet and the food in the soil determines the food values.

Three hundred of the 600 members attended the meeting.

Fruits and vegetables are valuable in the diet and the food in the soil determines the food values.

EDITORIAL

To the New Member

A CORDIAL welcome to the thousands of progressive Illinois farmers who, during the past few months, have aligned themselves with their neighbors in the Farm Bureau! Their decision has strengthened organized agriculture in Illinois and in the nation, in this fateful hour when not only the issues of war, but the issues of the years to come, are in the process of decision.

Not only have they thus joined forces for the long range of welfare of agriculture, but they have placed themselves in a position to benefit materially from the many services built up through the years by Farm Bureau, and now made available to them. No new member should overlook this immediately practical side of his investment in organization.

It has been said that *acquaintance, understanding* and *participation* are three stages through which the member should pass in order to derive full satisfaction from his Farm Bureau connection, and to build the loyalty to the organization which assures its permanence. And even the first of these steps — *acquaintance* — is quite an undertaking. The officers, directors and employees of the county Farm Bureau, and of its subsidiaries, are always glad to give information and assistance to the new member.

There are vitally important *educational* services, sponsored both locally and through the Extension Service. Some of these have to do with farm management and farm accounts, soil improvement, swine sanitation, poultry care, grain experimentation, livestock tours, the farm labor service, and a host of others. Others have to do with the so-called *commercial* services: such as those of the county Service Company, which handles petroleum products, paints, feed, and other farm supplies cooperatively, and at cost. Or the insurance services, life, auto, employers' liability, fire, hail, windstorm, etc., again all handled at cost. Or the Farm Bureau serum and virus service. There are others too numerous to list here. Then on the side of marketing, there are cooperatives in every field: milk, cream, livestock, grain, fruit and vegetable, etc. These are all money-saving and money-making projects. It will pay the new member to investigate them, and to use those which fit in with his farming operations.

Many counties issue printed or mimeographed lists of available services for the information of their members. The new member will do well to ask for such a check-list, in order that he may, as quickly as possible, "get the picture" of the great organization of which he has become a part.

To get the most immediately practical value out of your Farm Bureau membership, investigate the services, and use those that meet your needs. You will find that "it pays to belong."

New Leadership Develops

NO ONE who has had contact with the activities of the younger Farm Bureau members, or with Rural Youth, can be pessimistic about the future leadership of agriculture in Illinois. Younger groups have, in many instances, taken a leading part in the recent organization drives — and in a majority of cases have signed more new Farm Bureau members than their seniors. This participation is an indication of the new strength which the men in the age group from about 25 to 40 are bringing to organized agriculture. Another encouraging fact is that many younger men are assuming their places on boards of directors, and as the sponsors of various Farm Bureau activities. The serious discussions of the Rural Youth groups, including the Talk Fests, where young people speak their mind on issues confronting farmers, suggest that in this still younger group, some dynamic leadership is preparing for its future responsibilities and opportunities.

Young people, by very virtue of their age, have even more at stake in the future of agriculture than their parents. Their participation in Farm Bureau activities, and their serious thought on present and future problems, is the best guarantee that the future will be a good one.

Amending the State Constitution

RECOMMENDED for careful reading in this issue of the IAA RECORD is the statement by the Illinois Agricultural Association board of directors on the calling of a convention for revision of the Illinois state constitution. It clearly outlines the position of the Association on this controversial issue which has received considerable attention during recent days in the newspapers of the state.

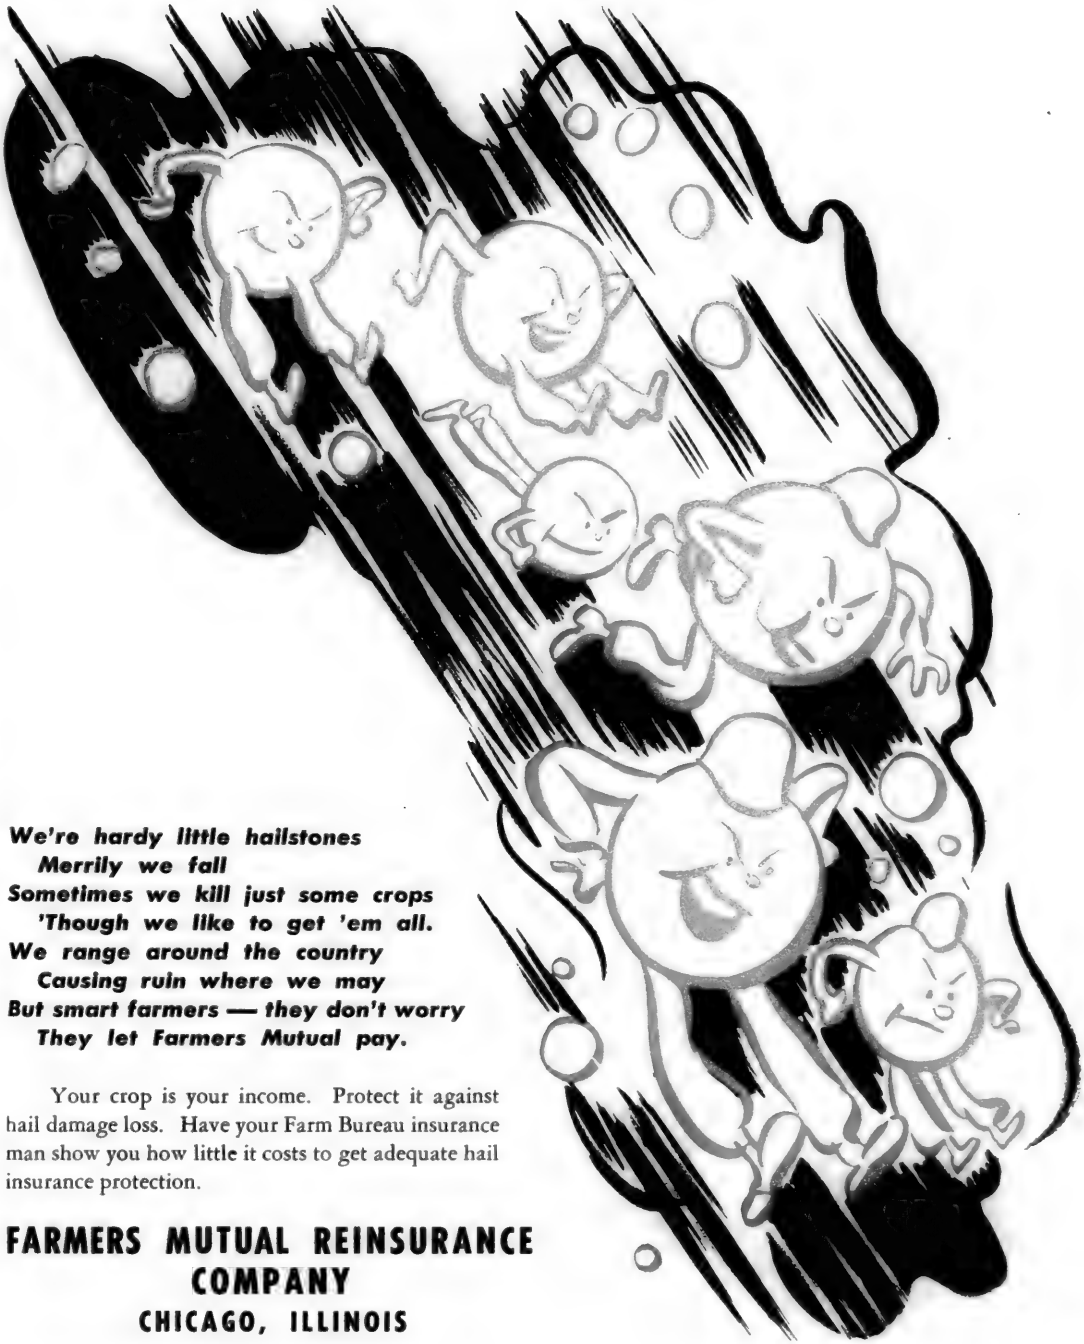
The statement of the IAA board indicates beyond a doubt that the Association is not taking a negative position on amending the state constitution, but that it believes the calling of a constitutional convention at this time would not accomplish the desired objective.

The Association believes that the main job is to get the state constitution in shape so that it can be amended.

Under the present state constitution, the General Assembly may submit amendments to only one article at the same session and the favorable vote of the majority of those voting at the election is necessary for the adoption of the proposed amendment.

No amendment submitted in recent years has been adopted although the Gateway Amendment submitted in 1932 received the favorable vote of 80 per cent of those voting upon the proposal. The proposed amendments have been defeated by people who voted in the general election, but who failed to vote on the proposed amendment.

The Association is in favor of a Gateway Amendment which would permit the General Assembly to submit amendments of not more than three articles at the same session and would provide that the amendment should be adopted upon receiving the favorable vote of two-thirds of those voting on the proposed amendment. Such a proposal would not make amendment of the constitution easy, but it would make it possible. With such an amendment, the most urgent problems could be worked out.



We're hardy little hailstones
Merrily we fall
Sometimes we kill just some crops
'Though we like to get 'em all.
We range around the country
Causing ruin where we may
But smart farmers — they don't worry
They let Farmers Mutual pay.

Your crop is your income. Protect it against hail damage loss. Have your Farm Bureau insurance man show you how little it costs to get adequate hail insurance protection.

FARMERS MUTUAL REINSURANCE COMPANY
CHICAGO, ILLINOIS

As a whole, inequalities in assessments between the two classes of real estate appears to be following the pattern of the later years of the First World War and immediately thereafter. At that time there were few counties in which land assessments were not higher, and in many cases, much higher, than assessments of town and city lots. Then, as now, good prices and the problems of production, including shortage of farm help, led most farmers to ignore inequalities in assessments which required years to remove, and some of which were never removed, after the collapse of farm prices in 1920 and 1921. If the end of the present war should be followed by much lower farm prices, many, if not most, Farm Bureaus and their members will probably face the same problem in unequal taxation which they faced 20 to 25 years ago.

And the best way to prevent or correct trends of this kind is through a powerful farm organization such as we have in the Farm Bureau. That's why I say one of your very first moves should be to join your county Farm Bureau — it gets things done.

A PICTURE OF *Robust Good Health*

A life insurance company such as Country Life, whose business hinges on the life and health of others, must stop once each year to check its own good health. We may say that our health has never been better, thank you. The Statement of Condition printed above is the X-ray photo whereby you can determine for yourself the strength of constitution of your Farm Bureau insurance company . . . Country Life. Look it over.

First, it was the biggest year in the company's history. Twenty-three million dollars of new life insurance was written in 1944 . . . Second, the investment funds of the company's twenty-five million dollars in assets is soundly dispersed among various types of Utility, Railroad, and Municipal Bonds, and led of course by U. S. Government Bonds . . . Third, last year Country Life paid back to its policyholders $466,434.37 in dividends.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

MAY, 1945 **VOLUME 23 - NUMBER 5**

Information is Major Factor in Building Farm Bureau

☆ ☆ ☆

IF YOU want to know anything about the Farm Bureau or its various subsidiary organizations, ask any of the more than 100 members of the Lake County FBI. The members of this Farm Bureau Information Club are keeping abreast of the times when it comes to agricultural problems and the way the Farm Bureau is contributing to the agricultural economy of the nation.

For the members of this Lake County Farm Bureau group are afforded an opportunity at regular monthly meetings to get the latest information on activities in the agricultural field.

Organized back in March of 1943 as a means of stimulating more interest among a larger group of Farm Bureau folk in Lake county, this club has been meeting for supper and a program on the fourth Wednesday evening of every month at a restaurant in Libertyville.

To date not a single month has been missed and the attendance is on the gradual increase. Starting out more than two years ago with about 25 members attending, the attendance has grown to 60. One of the factors contributing to the fine attendance is that meetings are adjourned promptly at 10 p.m.

Speakers who have appeared before the group have come from the IAA and its subsidiaries, the U. of I. College of Agriculture, Pure Milk Association and other organizations.

Not every program includes an outside speaker, for on some occasions the program is left largely to local talent.

The whole idea of the FBI Club is to build Farm Bureau membership and keep them informed. That the idea is working in Lake county is evident from the increase in membership which has resulted. Lake county had no organization director until recently so membership acquisition and maintenance was dependent largely upon loyal Farm Bureau members. The FBI Club plan is based on the idea that if the number of properly informed members is increased, there will be more of them "talking Farm Bureau."

On March 1, 1943, Lake county had 954 members, and today the membership is at 1195.

Whenever a township fails to make its monthly quota, a new member is added to the FBI Club from that particular township. Should a member fail to attend the monthly meetings he is dropped from the club and another member takes his place.

Every means is used to acquaint the new member with the Farm Bureau, both through personal contact and other channels. Once that a member knows he is being serviced, membership maintenance becomes less of a problem, and there is nothing that makes for membership maintenance more than personal contact. There is no substitute for it.

POSTWAR

ROAD BILL

INTRODUCED BY IAA

By PAUL MATHIAS
IAA Corporate Secretary

THE Illinois Agricultural Association is sponsoring legislation introduced in both houses of the state legislature which appropriates $20,000,000 from state surplus funds for surfacing local township and road district roads.

It is proposed that the county superintendent of high-ways in cooperation with the local high-way commissioner select the roads to be improved and prepare plans for their improvement. School bus and mail routes would be given preference. The townships and road districts would do the grading and would install culverts.

The state funds would be used to purchase culverts and to provide for surfacing of these roads. Existing right of way would be used wherever adequate and only the minimum amount of grading would be required in order that the maximum mileage of roads may be surfaced with the funds available.

The state and counties would be authorized to acquire government surplus road building machinery and equipment for use on these roads.

Ten million dollars per year is appropriated from state funds. However, the federal government has appropriated funds for use on these roads and approximately $4,700,000 every year for three years will be available from federal funds. If these federal monies are used on the local roads, then the state appropriation would be reduced by the amount of the federal monies so used.

The money appropriated is to be apportioned between the several townships and road districts in the state in the proportion which the total mileage of secondary and feeder roads in the respective townships or road districts bears to the total mileage of all secondary and feeder roads in the state. The funds would not be available until the end of the war or until the governor determined that the state might proceed with this road building program.

The bills have been favorably reported by the road and bridge committees in each house. However, it appears that a determined effort will be necessary if the appropriation of state funds for these roads is secured. The postwar planning commission recommended that state funds be used for improving these local roads. However, the appropriations for postwar construction sponsored by the state administration, as introduced, do not make any provision for state assistance on local township and road district roads. Approximately $127,000,000 is appropriated for all types of projects, but there is no provision whatever for improving these local roads.

Road Commission

Other legislation which the Illinois Agriculture Association is supporting provides for the appointment of a commission to study the high-way system of the state, and particularly the problems in connection with the local township and road district roads, and to make recommendations for their improvement and financing. The sponsors of this legislation hope that the commission will be able to recommend a program for permanent state assistance for the improvement and maintenance of local township and road district roads — thus supplementing the temporary program for the next two years.

Bang's Disease Control

The legislative committee on livestock legislation, authorized in the 1943 session of the General Assembly, has prepared its report. Legislation covering its recommendations has been introduced.

In general, this legislation provides that:

(1) calves between ages of four and eight months may be vaccinated without first testing either the calf or the entire herd. The matter of testing for Bang's disease before vaccinating the calf would be left optional with the herd owner. Vaccinated calves may be sold and transferred freely without test until they reach the age of 20 months.

(2) Animals over eight months of age may be vaccinated, but a test for Bang's is required before vaccination. Such animals so tested and found negative and then vaccinated may be sold and transferred freely.

(3) After July 1, 1946, no female animals or breeding bulls over eight months of age may be sold, either at private sale or at farm or community auction, unless such animals either (a) come from an accredited herd, (b) are calves under 20 months of age which were vaccinated between 4 and 8 months of age, (c) are animals which were tested, found negative and then vaccinated when more than 8 months of age and are accompanied by a vaccination certificate, or (d) were tested for Bang's within 30 days prior to the date of sale. Animals tested within the 30-day period and found negative may move freely. Animals which react may be sold only for slaughter or into herds where infection is known to exist.

(4) An advisory commission of 13 members is created, and all rules and regulations relating to disease control must be approved by this commission before they become effective.

The Illinois Agricultural Association is supporting the legislation recommended by the commission with the exceptions that the Association believes the effective date for the provisions requiring compulsory testing of animals sold at private or public sales should be postponed to July 1, 1947, and the Association believes that further safeguards should be thrown about the sale and transfer of adult animals which have been tested, found negative and then vaccinated.

Official County School Surveys

The Illinois Agricultural Association with other groups is sponsoring the legislation for official county school surveys. The bill provides that the county superintendent of schools shall call a meeting of all school board members in the county and these board members will vote upon the question of making a school survey. If a majority are in favor of the survey, then a survey committee of 9 members will be selected.

Five members will be selected by the school directors from the rural districts and four members will be selected by the school board members from the urban districts. This committee would make the survey and file a tentative report. Public hearings would be held on the tentative report and the committee would then prepare a final report.

The bill also provides for a state advisory committee to advise with the county committees upon their problems. If the report of any county committee proposes a reorganization or change in any territory, a vote would be held in that territory upon the question of reorganizing or changing the school district organization as proposed by the survey committee.

This election would be called by the county superintendent and the people in the territory affected would determine whether or not they wished to follow the recommendations of the committee. This bill has been favorably reported by the committee on education in the house.

Efficient By-Products Salvage MAKES PROFITS

By F. A. GOUGLER
IAA Director of Produce Marketing

THE purpose of this article is to show gains that might be made by salvaging all of the by-products from the efficient slaughter of animals in a modern slaughter and rendering plant in comparison with present methods. Such a plant complete might cost from $25,000 to $50,000 depending on the territory it would serve and the services it would be expected to render.

Present methods of slaughtering animals for locker plants result in a considerable waste of valuable by-products. Under present methods, we fall far short of meeting packers' claim wherein they say "We save everything but the squeal."

It has been suggested that if all the animals that are slaughtered for a given number of locker plants were slaughtered in cooperative slaughter plants and all of the by-products were assembled at one point for rendering, that we could more than double our income from these products over present methods of disposition.

It appears practical in certain areas of the state where we have a concentration of plants to assemble these products from, say, the slaughtering of animals for 30 locker plants. This raises the question: How many animals are slaughtered annually to supply 30 locker plants, what is the volume of the raw by-products, the volume of finished products from these animals and their value?

The total number of animals necessary to supply 30 locker plants annually is approximately 6,000 cattle and 18,000 hogs. The raw blood and raw offal from this number of animals is: raw blood 322,000 pounds and raw offal 960,000 pounds. Farm slaughtering results in the loss of practically all of this blood and much of the offal.

Recovery from the processing of these by-products is a central rendering plant and their market value can best be shown in table form as follows:

Raw Blood	322,000 lbs.	Dried blood	65,100 lbs. @ .048c —	$3,124.80
Raw Offal	960,000 lbs.	Tankage	240,000 lbs. @ .0365c —	8,760.00
Tallow & Grease			426,660 lbs. @ .0875c —	37,332.75
			Total value	$49,217.55

These calculations are made at present market values for these products. A study made by a representative of the Farm Credict Administration of the operations of 20 of our cooperative locker companies, operating 50 plants during 1944, showed that the gross returns from the sale of by-products amounted to $660 per plant which would amount to $19,800 for 30 plants. Another federal official states that we should net from $12,000 to $15,000 more per plant through the operation of our own rendering plant

The basis for the above calculations are from results accomplished by a small midwest packing plant which kills 1,000 cattle and 2,000 hogs per week. Prior to building its rendering plant, by-products were sold to rendering plants. The net profit from these products to the company was increased by $118,701.44 through processing in its own plant instead of selling to rendering plant. In the case of this plant, these by-products moved directly from the slaughter room into the rendering plant, therefore, there were no hauling costs.

At present locker plants are selling what by-products they have as follows: bones at 1c per lb., cracklings at 2½c per lb., and tallow at 4c per lb. Thus an average locker plant of 400 lockers nets not more than $660 annually from its by-products. By operating central slaughter plants and a rendering plant, the returns from by-products should be doubled.

Dr. W. L. Burlison, right, receives a parchment from staff members in the agronomy department at the U. of I. citing his leadership as department head for 25 years. Dean H. P. Rusk of the College of Agriculture is making the presentation. On the table in back of Dean Rusk and Dr. Burlison is a cake with 25 candles and a gold wrist watch presented to Dr. Burlison. In the 33 years of his affiliation with the College of Agriculture, Dr. Burlison has contributed in large measure to advances in improved crop production in the state and particularly to the research with corn hybrids and the soybean.

Cooper Hired As Plant Breeder At Producers

Robert R. Cooper, a graduate of the U. of I. College of Agriculture in 1937, and formerly assistant professor of agronomy extension, Pennsylvania State College, School of Agriculture, has been employed as plant breeder for the Producers' Crop Improvement Association, Piper City. He will take up his duties during the latter part of May.

Cooper received his master's degree in agronomy at the U. of I. in 1941, writing his thesis on "First and Second Generation Corn Hybrid."

He joined the staff of the agronomy department at the U. of I. in 1937 teaching a basic crop production course. From June 1938 to September 1942, he supervised Illinois Corn Performance tests, and was senior author on the 1939-41 Illinois Corn Performance Tests bulletins. He joined the staff of the Pennsylvania State College in January, 1943.

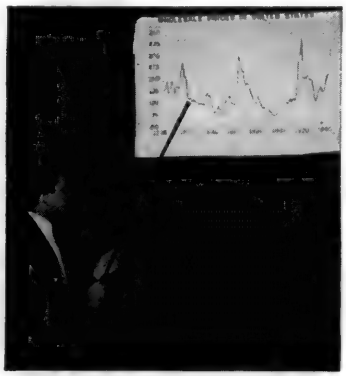
The board of Producers' Locker Association of Carbondale, Jackson county, has authorized Manager Harold Brackett to have plans and specifications drawn up for a slaughter plant at Carbondale. It will be built near the locker plant and is intended to service the 750 patrons of that plant as well as do custom slaughtering. A poultry feeding and dressing department will be included in the plans. Manager Brackett is also fitting up a kitchen where patrons may bring their fruits and vegetables for processing under trained supervision.

A BIGGER YEAR THAN '44

A BIGGER year in 1945 than 1944! That's the prospect for the Illinois Fruit Growers Exchange and its affiliate, the Illinois Fruit Exchange Supply Company.

What makes this prospect real news is the fact that 1944 was a record year for this statewide marketing cooperative, an associated company of the Illinois Agricultural Association located at Carbondale.

Look at some of these figures. They're worth studying because they tell an unprecedented story of cooperative progress made possible through loyal membership, able directorship, and competent managership.



Dr. Robert B. Corbett, American Farm Bureau Federation secretary, gave the main address at the Fruit Growers meeting.

Let's first take the 1944 report of the Fruit Growers Exchange as presented at the 23rd annual meeting April 17 on the campus of Southern Illinois Normal University at Carbondale.

The Exchange marketed more than 300,000 bushels of fruit and vegetables and 35 carloads of watermelons. As Manager L. L. Colvis said, "The watermelon deal was kind of a job we did before breakfast. Then we really started the day's work."

For the first time in history, the volume of marketings in 1944 passed the million dollar mark. In 1943 it was $788,000.

Now let's look at the Fruit Exchange Supply's business for 1944. At the annual meeting, patronage dividends totalling $17,884.13 were distributed. This is more than double the amount of 1943 dividends. Rates of patronage dividend payments were 6 per cent on baskets as compared with 5 per cent in 1943; 8 per cent on fertilizer as compared with 4 per cent in 1943, and 10 per cent on everything else. Patrons received these dividends half in cash and half in stock, unless they already had 10 shares of stock. If they had 10 or more shares of stock in the Exchange Supply, they received the total amount of their patronage refunds in cash. One grower received a patronage dividend check of $1300.

Dollar volume of the Fruit Exchange Supply business hit the $260,000 mark in 1944 as compared with $152,000 in 1943, some $81,000 in 1942, and $61,000 in 1941. This phenomenal growth was not due to increased dollar value of products growers bought, but to increased volume of purchases. For example, some 1500 tons of orchard fertilizers are included in the 1944 business.

"We don't think we have reached the peak in our supply business," Manager Colvis said. "In fact, we believe we are just getting started. Through patronage refunds, growers are buying supplies at wholesale, and they have every right to such a price. When supplies represent such a high proportionate amount of a grower's production costs, he is entitled to buy them at wholesale in the same manner that an industrialist buys his raw materials."

Manager Colvis, however, pointed out that a patronage dividend is not the only benefit a grower expects from his cooperative. The Supply Company endeavors to have essential supplies on hand at all times to meet the needs of the grower and to have efficient and quick service in loading them out.

What are the future plans of the Fruit Growers Exchange and Supply Company? Right now the board of directors is working to secure priorities on a cold storage plant. This is sorely needed by the growers of the area. Application is pending in Washington on priorities for this construction.

An equally big job facing the Fruit Exchange and its members is the growing of higher quality fruit. President A. O. Eckert placed particular emphasis on this factor. "We've got to raise a higher quality fruit and pack a better product," he said.

As an example he pointed out that Illinois had lots of apples in 1944. The consumer also had more money. The result was that consumers were not just buying apples, they were buying good apples.

"Southern Illinois," President Eckert said, "is the best place in the country to grow apples. We are close to market facilities — in fact we have everything. We've got good flavor, but it takes more than flavor to hold the market. We need to have No. 1 quality and good color. We've got to begin thinking about some of these

Officers and directors of the Illinois Fruit Growers Exchange and Supply Company pose for their picture at the April annual meeting. Front row, left to right: Arthur Foreman, A. O. Eckert, president; Talmade Defrees, vice-president; F. G. Anderson, secretary-treasurer. Back row, left to right: L. L. Colvis, manager; Don Lee, Jefferson county, farm adviser representative; E. D. McGuire, H. E. Hartley, and R. B. Endicott. Two directors not present are C. R. Boland and Trevor Jeffries.

things. We've got to begin experimenting in our packaging."

Talmage Defrees, vice-president of the IAA, and vice-president of the Fruit Exchange, declared that perhaps there is not enough stress placed on just what a cooperative is. "A cooperative is you at work through your selected men. The cooperative is interested in selling your products at the best price and returning the proceeds to you. There is no one taking a handout from these proceeds before they come back to you. The reserve that the Fruit Exchange has built up is yours. It is up to you to decide how it shall be used."

George E. Metzger, IAA field secretary, warned growers that cooperatives face stiff competition in the coming change from war to peacetime conditions. There will undoubtedly be many changes in marketing, he added. Cooperatives must be ready to meet the challenge. He also declared that this is a good time to capitalize cooperatives. "Then after your cooperative has set up the machinery, it is up to the membership to furnish the volume that will make it possible for the cooperative to do the best job."

Stewart Chandler, entomologist, State Natural History Survey, outlined the insect prospects for the coming year. He said that peaches are in a more favorable position than apples. The coddling moth, he reported, is coming in strong and advised growers to hit the first brood as hard as possible.

Roger B. Corbett, secretary of the American Farm Bureau Federation, principal speaker of the annual meeting, gave an address packed full of facts relating to the future economic outlook with particular reference to agriculture.

Corbett declared that he believed that history would repeat itself after this war and we would be faced with conditions similar to those following World War I. He pointed out that while most postwar planning was concerned with the adjustment period immediately following the cessation of war, the real period of stress would come some years after the Allied victory. It was 11 years after World War I, he said, that we had the depression of 1929.

Corbett also pointed out that the depression of the '70s came some years after the Civil War. The most important thing to agriculture, he said, is a stable price level. One of the favorable factors in the agricultural outlook, he declared, was the reduction that has occurred in farm debt.

"We are hearing," Corbett said, "that in order to have prosperity, labor must be fully employed. I believe that we should have full employment, but even if we have that it does not follow that we will have a prosperous agriculture. In 1927, 1928 and in the first part of 1929 we had full employment, but agriculture lagged behind. Maybe that's why the depression came in 1929."

Corbett also stressed the need for a balance between agriculture, industry and labor. We cannot have industry and labor curtailing their production after the war while agriculture continues to produce to a maximum, he asserted. There must be a balance.

Agriculture's only postwar protection, Corbett said, is the Steagall amendment. This promises government supported prices of 90 per cent of parity for a period of two years, starting from the first January after hostilities cease. The Steagall amendment covers about 115 commodities. However, Corbett pointed out that if farm prices dropped to 90 per cent of parity it would mean a reduction of one-third in the total national farm income.

"We must tighten our belts and get ready for adjustments in agriculture," Corbett concluded.

Another featured speaker at the Fruit Exchange annual meeting was Dr. Chester F. Lay, new president of Southern Illinois Normal University. He welcomed fruit growers to the campus and gave them a brief outline of the work the university is carrying on and its plans for the future. "We are just a part of the American tradition of trying to train our young boys and girls so that they can take over when we desire and when we must step aside."

Directors re-elected at the annual meeting included: President Eckert, Belleville; Vice-President Defrees, Greenville, and Secretary-Treasurer F. G. Anderson, Anna.

Fruit growers trade orchard reports between sessions at their annual meeting on the campus of Southern Illinois Normal University.

Those attending the Illinois Fruit Growers annual meeting enjoyed a free dinner in the university cafeteria.

Dr. Chester F. Lay, new president of Southern Illinois Normal University, left, and Miss Helen Shuman, center, administrative assistant to the president, were luncheon guests of Mr. and Mrs. A. O. Eckert at the annual meeting.

A BIGGER YEAR THAN '44

A BIGGER year in 1945 than 1944! That's the prospect for the Illinois Fruit Growers Exchange and its affiliate, the Illinois Fruit Exchange Supply Company.

What makes this prospect real news is the fact that 1944 was a record year for this statewide marketing cooperative, an associated company of the Illinois Agricultural Association located at Carbondale.

NEW UNITS ADDED CO-OP

FURTHER developments in the statewide cooperative Service Brand feeds program sponsored by the Illinois Agricultural Association have been reported during the past weeks.

The Service Brand feeds program is being sponsored to make more use of home-grown grains in mixed feeds. Through Farm Bureau appointed local distributors, it is possible to grind and mix home-grown grains in the localities where the feed grain is raised. It permits taking advantage of the purchase of protein ingredients under volume contract through the Illinois Farm Supply Company, IAA associated company, and provides for the distribution of precision pre-mixes containing vitamin carriers and other essential ingredients. These precision pre-mixes are manufactured by IFS in its central mills.

Formulae of the Service Brand feeds have been prepared by the formulation committee of IFS in consultation with recognized nutritional authorities.

In Coles county, the Farmers' Grain Company of Doran has amended its articles of incorporation to become a Farm Bureau-type cooperative. This move followed the approval of the Farmers Grain Company as manufacturer and distributor of Service Brands feeds in the county by the Coles County Farm Bureau. Farmers Grain Company also plans to extend its feed distribution service to a countywide basis and broaden its grain marketing facilities.

Farmers Grain Company was organized in 1906 and has had an excellent record of service. It is a charter member of Illinois Grain. During the past year its total sales amounted to $729,000 and earnings were $18,535. Andrew Homann has been manager since 1932. Present board of directors includes: William Zuhone, Henry Mache, Alfred Pardieck, Harvey Homann, William Kolbus, Emil Speer, Chester Price, Fred Lamphier and Walter Niemeyer.

Provisions have been made for present common stockholders to retain membership rights during their natural lifetime.

In Monroe county, the Columbia Farmers' Cooperative Grain Company has also converted to a Farm Bureau-type cooperative. The Monroe County Farm Bureau has authorized the Columbia Company as the distributor of Service Brand and Blue Seal feeds in the county. Columbia also will expand its services to give more extensive distribution of grain and feed to farmers in the county.

Rushville Farmers Grain and Livestock Company, Schuyler county, has been reorganized as a Farm Bureau-type cooperative. William Eifert is the manager.

IN EXTENSION OF STATE FEED PROGRAM

ration, was organized in 1921, and reorganized as a true cooperative in 1930. It has a branch house at Prairie Du Rocher in Randolph county. The two plants handle from 360,000 to 400,000 bushels of grain per year. List of officers and directors of Columbia are: William Reger, president; Peter Rau, vice-president; Christian J. Diehl, secretary; William V. Mueller, treasurer; Herman Mehrtens, William Schaefer, Arthur W. Hoffman, and Charles E. Holtkamp, directors. Walter Reichert is manager.

Latest conversion reported is that of the Rushville Farmers Grain and Livestock Company, Schuyler county, on April 14. Rushville Farmers Grain was one of the earliest Blue Seal feed distributors in the state and was a pioneer in the first local manufacturing program of country mix concentrates. On April 14, the stockholders certified changes in the articles of incorporation making it a Farm Bureau-type cooperative. Present common stockholders will retain their membership rights during their lifetime. New stockholders will be limited to Farm Bureau members.

Rushville Farmers Grain was organized in 1919 and reorganized under the 1923 Cooperative Act in 1937. It handles approximately 300,000 bushels of grain annually and does an extensive business in feed, coal, fence, fertilizer, seeds, etc. It also has a trucking service, hauling livestock to the Chicago and St. Louis markets, and operates a large grinding and mixing business. It is a charter member of Illinois Grain Corporation. It plans to extend its Service Brand feed program on a countywide basis.

William Eifert is manager of Rushville Farmers Grain and officers and directors are: John D. Young, president; Robert Nelson, secretary-treasurer; Homer Dean, Elmer Griffith, J. F. Herche, George Logan, and Ernest Robinson, directors.

In several other counties, Service Companies have purchased elevators to carry on grain marketing services and the sale and manufacture of Service Brand feeds.

In Cass county, the Service Company has purchased the Baujan elevator properties at the intersection of routes 67 and 125. The properties are on the B.&.O. railroad. Ultimately the Service Company plans to manufacture Service Brand feeds.

In Bond county, the Service Company has purchased the Greenville Equity Elevator Company. This elevator became a cooperative in 1940. It is a charter member of Illinois Grain Corporation since the beginning of the elevator. It handles some 100,000 bushels of grain annually and carries a line of feed, coal, fence, and fertilizers. The Service Company plans to set up a grain marketing service for the county together with facilities for the local manufacture and distribution of Service Brand feeds. These plans have the approval of the Bond County Farm Bureau.

Montgomery Service Company has purchased Montgomery County Cooperative Grain and Supply Company elevator at Butler. These facilities will provide for the marketing of Farm Bureau members' grain, and as soon as priorities can be obtained, additional facilities will be added for the manufacture of Service Brand feeds. The Montgomery County Grain was organized in 1936. It handled approximately 200,000 bushels of grain annually. The Montgomery elevator company is a charter member of Illinois Grain.

Many Illinois farm families are planning to remodel their homes, and one of the first steps should be a thorough study of their needs and a well-organized house plan, says Keith H. Hinchcliff, assistant professor of agricultural engineering, University of Illinois College of Agriculture.

This "House Planning Game" is available for just the cost of blueprinting — 10 cents — and may be secured by writing the Extension Editor's Office, University of Illinois College of Agriculture, Urbana.

The replacement cost of the average set of farm buildings in Illinois was well over $6,000 at 1940 prices, and costs have gone much higher in the last four years, it was disclosed this week in a report by D. G. Carter, professor of farm structures, University of Illinois College of Agriculture.

Typical costs of farm buildings in 1940 and 1941 by units of accommodation were listed: poultry laying house, $3.00 per hen; central hog houses, $100 to $150 a pen; individual hog houses, $25 each; grain storage, small grain, 15 cents a bushel; corn cribs, 25 cents a bushel of ear corn; silos $5.00 per ton capacity; barns, 6 to 10 cents a cubic foot volume; sheds and shelters for cattle, machinery, etc., 75 cents a square foot

Cashing in on carelessness

This treacherous character tallies up a yearly "take" of millions of dollars from OUR farms.

Food is needed as never before. There is a dearth of farm help and equipment. Your farm is a factory — a war plant of the first importance. Protect it and its priceless products.

The annual Clean-up Campaign is now being supported throughout the nation. It's an essential part of the Victory Program. Take a few precious hours to clean up your premises. Few fire prevention measures are more effective. Clear out waste accumulations. Make repairs as the need is discovered. Test and recharge fire extinguishers if necessary.

Check on your gas and oil storage places. Are they safe? How about your brooder stoves? Are the attic, basement, and closets ready for inspection? Has that leak in the barn roof been repaired? How about the lightning rods; are they broken or rusted off at the ground?

Remember it's the little things which start big fires.

FARMERS MUTUAL REINSURANCE CO.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

AT THE time this column is being written the membership in the Illinois Agricultural Association and the county Farm Bureaus exceeds a total of 114,000 members. On March 31, the membership as reported to the IAA was 113,440 following six months of active membership work in most counties where drives met with almost unparalleled success. The total of the county Long Range Goals of more than 117,000 now appears as more than a hope for the immediate future. The county Farm Bureaus throughout the state are reporting many new memberships being requested without solicitation on the part of any one.

More than 12,000 new members have joined the ranks of organized agriculture in Illinois since Oct. 1, 1944, the beginning of this fiscal year. Many counties in the state have either held or are now planning to hold new member meetings as an appropriate means of welcoming these new members into the organization and furnishing them some information with regard to the service to which they are entitled as members. Among counties having held such meetings during the recent month are Edgar, Will, Mason, Clark, Kankakee, and Fulton.

Ensign Duane Kuntz, organization director of Warren county, now serving in the Pacific area, expresses himself as follows in a recent letter to the Organization Director, "I realize that talk out here is cheap, but nevertheless it's a godsend at that. The future is what all of us are fighting for, but the lessons now learned are going to instill a much keener appreciation of what we have always had, but failed to recognize. . . . . Gosh, Brizzy, the organizations boys have certainly gone to town. It stirs the old blood to hear the accounts of a goal of One Million Members in the AFBF during 1945."

Lake County Farm Bureau has a new organization director in Ray R. Spencer, who is well qualified for the position by previous experience as special agent for Country Life and a number of years as truck salesman for Lake-Cook Farm Supply Company.

Fred G. Smith, farmer and long time Farm Bureau member in Warren County Farm Bureau, has taken charge of the organization work in that county succeeding Eldon Powel, who has gone to Brown county as farm adviser.

Carl Robinson, aggressive organization director of Jackson-Perry County Farm Bureau reports that 88 new members were signed during their membership drive and that 150 attended the new member meeting.

Lawrence County — 60 new members were signed as a result of the membership drive just completed. The team composed of men under 45 years of age won the contest hands down.

Clay County — Here the battle of the centuries again resulted in the organization workers under 45 years of age winning by signing 55 new members out of a total of 81 reported. Walter Specht, COD, enthusiastically reported that more members are coming in as a result of this spring campaign.

With a total employee and other attendance passing the 2400 mark, the "Membership Maintenance" meetings came to a close April 24, with a final session in Kendall county. A total of 60 such meetings were held in this year's series, covering the personnel of 80 counties.

Attendance at this year's meetings was more consistently good, and interest was more sustained, than in the pioneer 62 meetings which were held between January and August last year.

The employees' opportunity and responsibility in serving members, and especially in contacting and becoming acquainted with new members, was stressed in all of the sessions. That the rate of cancellations is the index to the success of maintenance programs was another point brought out.

In afternoon conferences in connection with the M-M meetings, matters of organization policy were discussed. Additional emphasis upon service to members, and means of reaching the long-range goals, were also on the list of topics.

Officers and directors of the Danville Producers Dairy at the April annual meeting, left to right, are: Elmer Learnard, vice-president; George W. Lenhart, R. R. Bookwalter, president; William Grubb, and J. W. Ellis, secretary-treasurer.

Virgil G. Brooks, second from left, became the 900th member of the Moultrie County Farm Bureau March 31. At extreme left is Vernie Winings, and at right, Henry Francis and COD T. M. Wright. Francis and Winings are charter members and assisted Wright in signing the 900th contract. Moultrie members average more than 100 per township.

Rowed Beans Yield More

Is it true that soybeans planted in rows yield more than those that are drilled? In general, the answer for Illinois is yes. You can count on three to four bushels more from an acre of rowed beans than from drilled beans when grown on level land in the northern two-thirds of the state.

J. C. Hackleman, University of Illinois College of Agriculture, tells us that the average yield of row planting at the agricultural experiment station was nearly 32 bushels an acre. The average yield for the drilled beans was slightly more than 27 bushels.

These are the new stockyards facilities of the Macon County Marketing Association, Decatur. Capacity will be 1200 hogs or the equivalent in mixed species.

MACON COUNTY LIVESTOCK MEN CELEBRATE *15 Years of Service* BY BUILDING NEW FACILITIES

FIFTEEN years ago the Macon County Marketing Association started business on $100 of borrowed capital. Today, if all the capital stock were retired, the net worth of the association would be approximately $16,000. What's more, during those 15 years the association has returned more than $21,000 to members in the form of patronage dividends.

That's the picture of cooperative growth in the 15th anniversary of the association as it prepares to move to newly completed facilities in the northeast section of Decatur.

The new stockyards of the association is located on five acres of land and will have access to all railroads serving Decatur, namely the Wabash, B. & O., Pennsylvania, and Illinois Central.

The stockyards has a capacity of approximately 1200 hogs or the equivalent in mixed species. Yard operations are centered in a building of Haydite block construction and the entire area of the yards is surfaced with concrete. A modern office and feed storage rooms have been built as a part of the facilities. Adequate loading facilities for trucks have been provided and there is adequate space for empty vehicles.

Since the beginning of its operations in 1929, the association has moved its yards three times. After the last move in 1938, directors of the association turned their thoughts to the ownership of their own yards. Committees were appointed to investigate possible sites, cost of construction, priorities, etc. Plans were drawn up and construction begun in October, 1944. The work seemed to progress slowly due to an unusually severe winter, but the finished job is reward enough to the directors and livestock men of the county for their years of hard work to reach this goal.

J. M. Beckett, left, is the current president of the Macon County Marketing Association, and D. M. Hendricks, right, was the first president.

With these new facilities, the association feels that no matter what direction the trend in livestock marketing takes, it will be able to deliver service to livestock men in Macon county. If the trend is toward a greater rail movement of livestock, the association has adequate facilities. If the trend is toward a greater truck movement, the association is prepared to move in this direction. Loading facilities for the largest trucks are being planned, and roads leading from the yards connect with the through highways direct to yards or packing plants. Space is available for the handling of feeder cattle under ideal conditions. Pasture will be available to condition cattle before sale. There is plenty of space for expansion and with complete control of all facilities the association can adjust its operations to the demands of the patrons who are the real owners of the setup.

The adjustment of services to meet marketing trends has been an important practice of the association in its 15-year history.

The Macon County Farm Bureau was responsible for launching the Macon County Shipping Association. Back in 1927 there was a growing concern about the marketing picture because the cooperative shipping associations of the county which had served shippers for so many years were suffering from loss in volume due to trucking and packer buying. Small shippers particularly were in need of a service in the marketing of their livestock that the local shipping associations could no longer furnish.

The Farm Bureau appointed a marketing committee with Joe Chapman of Cerro Gordo as chairman to study the problem. The committee held a number of meetings with shipping association directors, made trips to public markets and studied the situation from all angles. The Macon County Marketing Association was the result of the committee's work. It was incorporated under the cooperative marketing act of 1923 and was granted a charter on Oct. 16, 1929. The original directors were: D. M. Hendricks, president; A. F. Park, vice-president; C. E. Derr, secretary-treasurer; A. E. Rolofsen, G. B. Fyke, Blake Noland and George Haden.

The association in the beginning operated in the same way as the old ship-

ping associations. Livestock was received, weighed, marked and consigned to one of the Producer Agencies operating on our major terminal markets. The association began operations without selling any stock even though their incorporation papers were filed on the basis of a stock corporation. The first $100 of working capital was borrowed from one of the shipping associations.

From the opening of the yards in 1929 until 1932, all animals received by the association were consigned to Producer Agencies on the public markets. In 1932 when the Illinois Livestock Marketing Association was organized to furnish sales service on hogs, the Macon association entered into an agreement to appoint the ILMA as its agent in the disposition of livestock. From that time until 1939, a great many hogs were sold to packers direct from the yards, but remittance to livestock men was not made until the hogs were shipped. In December, 1938, the Macon association went one step further and set up a daily cash market on all hogs brought to their pens. Cattle, calves and sheep continued to be consigned to the cooperative agencies on the public markets as in the past.

Excepting years of drouth and other years of unusual happenings such as 1944 when it was difficult to sell hogs because of gluts, the growth in volume of the association has been most constant.

Here are the totals by years of all species of livestock handled by the association:

1930	8,770
1931	10,186
1932	25,199
1933	38,349
1934	23,444
1935	15,516
1936	21,113
1937	22,232
1938	23,314
1939	26,688
1940	28,433
1941	23,078
1942	29,785
1943	37,879
1944	35,691

In looking over the years of operation, certain men stand out prominently as having done much hard work in making the Macon County Marketing Association a business institution of which livestock producers of Macon county can be proud. Perhaps the feeling of the men who have labored to establish this cooperative success can best be expressed by a quotation from J. Mason Knox — "It ain't the individual nor the army as a whole, but the everlasting teamwork of every bloomin' soul."

Regional Co-ops *Show the Way*

RENEWED interest in the future possibilities of grain marketing in Illinois results partly from seven or eight years of experience of 20 regionals throughout the United States. This experience was summarized recently by Harold Hedges, acting chief, cooperative research and service division, Farm Credit Administration, Washington, D. C.

Writing in the April issue of News for Farm Cooperatives, Hedges said in part: "The creditable showing of regional cooperatives in marketing a sizable portion of the 1943 grain crop is something more than the report of a year of business activity. When these regionals market a third of a billion bushels in a year, when nine of them handle tens of millions of bushels and when 12 have savings in the hundreds of thousands of dollars, it is no mere accident."

After a brief review of the history of cooperative grain marketing in the United States, Hedges concludes that the operating results of the regional grain co-ops to date provide pretty convincing evidence that they are on the right track.

Hedges' report lists 20 regional grain coops and two large farm supply cooperatives with large grain departments. Seventeen of the 20 limit their grain sales or handling to terminal or sub-terminal markets. Local handling is the principal activity of two regionals, but they do direct grain from their local facilities. The remaining association is mainly a terminal marketing agency and has a substantial interest in a line of country elevators.

Hedges' report cites comparative figures on 17 regionals from the year 1939 to date, a five year period: their total net worth increased from 3 1/3 million dollars in 1940 to nearly 16 million dollars in 1944, when figured before any distribution of margins over operating costs.

Most regionals are adequately financed with farmers' money. The fixed assets of the 17 companies increased from 1.3 million dollars to 6.2 million dollars in the 5 years. Total elevator capacity owned and leased by the regionals reviewed is around 36 million bushels.

Grain volume increased from 105 million bushels to 300 million bushels in the same period.

In services rendered, six regionals operate almost exclusively on a commission-brokerage basis, finding buyers for grain consigned to them by farmers' elevators, while 14 offer additional services, mainly merchandising.

In conclusion Hedges said, "There is a decided correlation between both grain volume and marketing services and the margins over operating costs realized by the individual regionals. Four regionals which have substantial elevator capacity and took title to nearly all the grain handled had net savings in 1943-1944 above 4 cents a bushel. At the lower end of the scale four regionals doing a strictly commission-brokerage business had savings of less than a cent a bushel. All associations operated in the black with aggregate net savings in excess of 7 million dollars.

"A particularly encouraging sign for the future," Hedges said, "is a growing tendency for the regionals to work closely together on mutual interest."

This is the Indiana Grain Co-Operative terminal elevator at Indianapolis which was purchased in 1938 and has 1½ million bushel capacity. Indiana Grain also owns a half-million bushel terminal elevator at Louisville, Ky. Illinois Grain Corporation members have an interest in these properties through holding approximately one-third of a million dollars of stock in Indiana Grain. These holdings were acquired through patronage earnings.

Menard Rural Youth Member Killed In Action In Germany

Lt Howard Johnson, son of Mr. and Mrs. Carl Johnson, Menard county, was killed in action on the German front Feb. 25. His father is the manager of the Farmers Elevator Company at Culver.

A former Rural Youth member and a graduate of the University of Illinois, Lieutenant Johnson was in the 94th Infantry Division of the Third Army. It was only one day after he had joined the 94th as a replacement that he led his men into action. Press correspondents picked up the story of his courageous fighting in his first time under fire from his company commander.

Leo Rennels, Clark county, center, with 68 steers, averaging 1098 pounds, that sold at market top of $17.50, April 5, through Indianapolis Producers. With Rennels is H. O. Harris, Producers cattle salesman, and Bill Decker, Piqua, Ohio, buyer.

Lieutenant Johnson tried to minimize his deeds when questioned by a correspondent. One press story quoted him as saying: "Somebody glorified it. Attacking at 4 a.m., I had a support platoon, which made me happy, since if things went right I wouldn't have to go. But after 30 minutes or so the other two platoons couldn't support each other because of artillery fire, so we went in. There was a lot of shellfire, and I was scared speechless at first, but after a while it was like a problem at the beginning. You forget they're firing real stuff."

He was later killed in action.

THIS CO-OP IS *Your* COMPANY

Because it IS your company, you can depend on it to handle your wool to YOUR best advantage . . . *it has no other purpose than to serve YOU.*

Because it is your company, the wool you sell through your county and state pool in 1945 will be accurately weighed, honestly graded, carefully handled.

Deliver your clip to the county pool, under direction of your Farm Bureau. Receive immediately your cash advance: 35c on clear medium; 25c on fine and fed; 20c on rejects.

Final settlement will be made promptly when the National Wool Marketing Corporation, Boston, your cooperative selling agency, has disposed of the clip.

**Note:* Cooperators have done better every year. Now a pro-rata patronage refund for 1932-39 is being made by "Illinois Wool" from earnings of the National Wool Marketing Association. This is an EXTRA profit of cooperation.

MARKET COOPERATIVELY . . HELP YOUR ORGANIZATION HELP YOU TO BETTER FARM LIVING

ILLINOIS WOOL MARKETING ASSOCIATION

608 South Dearborn Street, Chicago 5, Illinois

The FARM FRONT ROUNDUP

HOG SUPPORT price has been increased from $12.50 to $13 a hundredweight, Chicago basis, for good and choice butcher hogs, all weights up to 270 pounds. The new support price became effective April 11 and will continue to Sept. 1, 1946. Along with announcement of the new support price, War Food Administrator Marvin Jones set the national fall pig goal at 37 million head, 18 per cent more than the number raised last fall. Price Administrator Chester Bowles also announced on April 11 that there would be no reduction before Sept. 1, 1946, in the ceiling prices for live hogs from the present levels of $14.75 a hundredweight, Chicago basis, for butchers and $14 for sows.

ABOUT 240 million more bushels of corn are available for livestock feeding now than a year ago, according to the WFA. If normal yields are obtained on the 96 million acres of corn, which farmers indicated on March 1 they intended to plant this year, sufficient feed supplies should be available to fatten a 37-million fall pig crop, as well as meet the other feed and industrial requirements for corn, says WFA.

SET ASIDE order on turkeys, covering 21 entire states, including Illinois, became effective April 8 and runs indefinitely into the fall months. It requires 100 per cent disposal to the WFA for military uses. Owners of 25 birds or less may arrange for release if they are more than 100 miles from an authorized processor.

LOAN PROGRAM for 1945 crop hay and pasture seed on a note and loan agreement when the seed are stored in an approved warehouse, and including farm storage for sudan grass, has been announced by the WFA. Loans are available on the basis of the support price for about 40 different seeds. Operations of the loan program will be similar to that in 1944 through the AAA, for the account of the CCC.

OPA HAS JUST issued a preferential list of occupations for use in selecting persons to receive passenger car tires. First priority, classed as Group I, is limited almost entirely to persons whose occupations are of emergency nature. Group II includes persons employed in other essential plants and those whose occupations are highly important to the war effort. In this group are farmers, farm workers, and representatives of management, labor and government who recruit for essential establishments.

WFA ADMINISTRATOR Marvin Jones announced April 6 that the review of the whole food situation makes it clear that production in line with the established goals for 1945 is even more important than when the goals were set. "The need," he said, "for continued high-level production is apparent, and the production pattern established by the goals is still the most practical balance for 1945. Nothing is more important in the entire war effort than for farmers to drive ahead with their production schedules, despite wartime handicaps."

CONTROLLED MATERIALS allocated for farm machinery in the second quarter of 1945 have been cut to 195,000 tons, according to WPB. About 256,000 tons were used in the first quarter of this year, and 279,000 tons in the second quarter of 1944. WPB indicates however, that an increase in allocations could be expected after V-E day.

WPB CHAIRMAN J. A. Krug reports that farm machinery production in 1946 will be substantially increased for farm needs if VE day makes a shift from all-out military production possible in the near future. Production of farm machinery for this quarter has been running about 30 per cent behind schedule.

PRICE-SUPPORTING loans will be available on flaxseed grading No. 2 or better, according to a government announcement early in April. The base support price for No. 1 flaxseed of the 1945 crop — available on flax stored in terminal warehouses will be $3 per bushel at Minneapolis, Red Wing, Milwaukee, Chicago, and Portland. The No. 2 price will be 5 cents less.

NEW GAS FORMS will be given to farmers the next time they apply for a supply of E and R gasoline coupons for off-the-highway use. After the farmer gets this new form, each time he spends one of his E and R coupons his dealer will write on the form the amount delivered. This signed delivery record will be submitted when application is made to the ration board for new supplies of E and R coupons.

WFA ANNOUNCES that the 1945 base support price on soybeans will be $2.04 per bushel for green and yellow beans grading U. S. No. 2 with moisture content of 14 per cent delivered by farmers to a country elevator, processing plant or other normal delivery point.

WHEAT CARRYOVER next July 1, according to current estimates, will run between 350 and 375 million bushels. This would be slightly above the carryover of July 1, 1944, and considerably below the carryover of 632 million bushels in 1942 and 622 million bushels in 1943. Exports of U. S. wheat are expected to increase this year to help feed Europe.

CORN PURCHASE program of the WFA ended May 1. The program provided for the purchase of farm-stored corn grading No. 3 or better (except for moisture content) at applicable ceiling prices, and of corn grading below No. 3 at market prices. A March 31 report indicated some 4 million bushels were purchased in Illinois, but more was expected to be bought in April.

H. D. Van Matre, Iroquois County Farm Adviser, Dies

H. D. Van Matre, 51, farm adviser in Iroquois county since 1937, died in his home at Watseka, April 26. Funeral services were held April 29 in the Watseka Methodist Church and burial services were held April 30 in Middletown, Ind.

Prior to serving as farm adviser in Iroquois county, Mr. Van Matre was farm adviser in Edgar county. He had also served as farm adviser in Rush county, Indiana.

Mr. Van Matre was a graduate of Purdue University and received his master's degree from the Iowa State College at Ames. For a time he was employed on the staff of the Iowa State College in the animal husbandry department. Mr. Van Matre was a native of Middletown, Ind.

Mr. Van Matre leaves his wife and two children, one brother and two sisters.

Service Company Managers Help Move Illinois Apples

Contrary to appearances, Farm Bureau service stations are not going in the apple business. Some folks in a number of counties might have got this idea during April when they saw bushel baskets of Illinois apples being displayed and sold.

Here's why those apples were at service stations, bulk plants, and other Farm Bureau cooperative outlets.

Early in April, L. L. Colvis, manager of the Illinois Fruit Growers Exchange, the IAA statewide fruit and vegetable marketing cooperative, asked C. H. Becker, manager of IFS, for some help in moving some several thousand bushels of storage apples. Because of market conditions, producers were faced with a loss on these apples. Colvis asked if member Service Companies could be called upon to market the apples on a consignment basis at a price below the current ceiling price, but which would net the grower a fair return for his product.

There was a good response from Service Company managers, and some 5000 bushels of apples were moved. Most of the purchases were made by Farm Bureau members.

Here's a good example of what cooperatives can do when they work together.

Two hundred thirty million pounds of waste fat — that's the quota for American homemakers for this year. If the goal is to be reached, even the dark or smelly fats that have lost their usefulness so far as cooking is concerned must be salvaged, according to the War Food Administration.

Outstanding Illinois 4-H Club Members Are Honored

Wartime conditions require that the national 4-H club camp not be held, but the honor of being named delegates is being continued, according to 4-H specialists of the U. of I. College of Agriculture.

Delegates for the 1945 camp have been announced as follows: Helen Marion Goodwin, 19, Wilmington, daughter of Mrs. Phil B. Goodwin. She is a sophomore at Illinois Wesleyan University and has been a 4-H club member for nine years, and served as county federation president last year.

Mary Ellen Pearman, 20, daughter of Mrs. Bertha F. Pearman, Paris, Edgar county, is a senior at DePauw University, and has been in 4-H club work 11 years. She served as county federation vice-president in 1940, was local club leader for seven years and leader for two years.

Donald Stengel, 20, son of William C. Stengel, Mt. Morris, Ogle county, has accumulated enough money during his seven years in 4-H club work to start farming on his own. He has won numerous awards.

Raymond Thompson, 20, son of Charles Thompson, Minooka, Grundy county, has been a 4-H club member for 11 years. He and his twin brother, who is now an Air Corps cadet, raised enough hogs to put them on a partnership basis with their father in the farming business.

County Livestock Tours Planned for Five Months

Here's a list of tours planned by county livestock marketing committees for district 5 during May, June and July:

May 23 and 24, Pope-Hardin county; June 13, Union county; July 18, Johnson county; July 25, Johnson county. There will be other tours in August and September.

List of June and August tours of the U. of I. Dixon Springs experiment station, to study pasture improvement work and livestock feeding methods, is as follows: June 29, Hamilton county; June 30, Gallatin county; Aug. 7, Franklin county; Aug. 8, Saline county; Aug. 9, Wayne county; Aug. 22, White county; Aug. 23, Pulaski-Alexander counties; Aug. 24, Lawrence county; Aug. 29, Richland county; Aug. 30, Washington county. There also will be some tours in September to Dixon Springs.

Cows fed grains medium finely ground will produce 20 per cent to 25 per cent more milk than when similar grains are fed whole. When concentrates are as expensive as they are this winter each cow should receive a balanced grain mixture fed according to daily milk production.

ARE FLIES LIKE COWS?

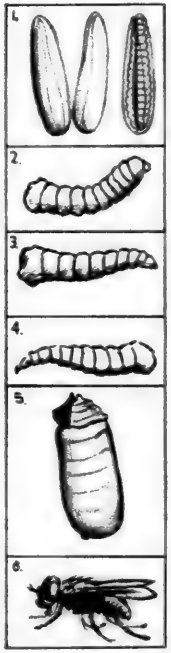
NO!—BUT THEY DO HAVE SEVERAL THINGS IN COMMON. "CHEWING THE CUD" IS ONE! THE FLY, AFTER FEEDING, RETIRES TO A QUIET SPOT AND REGURGITATES ITS FOOD, MIXING IT WITH SALIVA AND RE-SWALLOWING IT. THIS IS REPEATED AT INTERVALS OF 1½ MINUTES. THIS ALSO HELPS TO SPREAD GERMS!

MITES & PARASITES INFEST FLIES, TOO! TINY INSECTS ATTACH THEMSELVES (ALONG WITH GERMS) TO THE UNDER SIDE OF THE FLY. SOMETIMES THEY FEED ON THE FLY—SOMETIMES THEY JUST "GO FOR THE RIDE", ALIGHTING WHEN THEY FIND "GREENER PASTURE."

WELL WHADDA YA KNOW! ABOUT FLIES

LIFE CYCLE OF THE FLY

THE FLY PASSES THROUGH SIX PHASES OF DEVELOPMENT—1ST AFTER A GESTATION PERIOD OF ABOUT SIX DAYS, THE EGGS ARE DEPOSITED IN MANURE AND HATCH OUT IN 24 HRS. THE LARVA'S (MAGGOT'S) FIRST STAGE IS 24 HRS. SECOND STAGE IS 24 HRS. THIRD STAGE IS THREE DAYS. IT THEN GOES INTO THE PUPAL STAGE FOR FIVE DAYS, AFTER WHICH IT EMERGES AS A FLY. AFTER 14 DAYS THIS CYCLE IS REPEATED— IF ALL EGGS MATURED AND IF NO FLIES DIED, EGGS DEPOSITED APR. 15 WOULD HATCH 5,598,720,000,000 FLIES BY SEPT. 10



FIGHT FLIES with BLUE SEAL FLY SPRAY

IT KILLS. Blue Seal contains two effective ingredients that kill flies by contact. Many different types of materials and formulae were tested in Illinois dairy barns by cooperating farmers in our search to determine the most effective killing agencies and formulae. We have them now in Blue Seal Fly Spray.

IT REPELS. These barn tests prove also that Blue Seal Fly Spray has powerful knock-down and repellent property. By spraying the cows at night and in the morning a half hour before milking time, its effectiveness will last through the day.

IT'S SAFE. Blue Seal kills flies, but it is harmless to animals and humans. Its highly refined petroleum oil base assures easy spraying, prevents dirt collection, will not mat the hair nor irritate the skin.

ILLINOIS FARM SUPPLY COMPANY

608 South Dearborn St. Chicago 5, Illinois

More money for farm pr

Chicago Producers recent fat cattle survey prepared from reports sent in by 9000 farmers, principally in the central portion of the corn belt, shows a decrease of about 14 per cent in the number of cattle on feed from the number on feed at the same time a year ago. Indiana shows a 23 per cent decrease, a large feeding area in central Illinois a 25 per cent decrease, the state of Illinois 12 per cent decrease, and Iowa 11½ per cent decrease.

The survey points out that of the number of feeders coming to the corn belt states this year, fewer will be fed intensively, and a greater proportion will be wholly grazed or fed some grain on grass. This, the report says, is almost obvious when it can be easily figured that honest drylot feeding is prohibitive now because the price possible to receive for the fed steers is not high enough to pay for the cost of the feeder cattle and the feed which they will eat.

Chicago Junior Market Lamb Show and Sale will be held at the Chicago Stock Yards June 15. It is open to all boys and girls who have raised lambs either in 4-H club or vocational agricultural projects. A prize list of $250 in cash awards will be provided. A sheep shearing contest open to all exhibitors is an additional feature of the program.

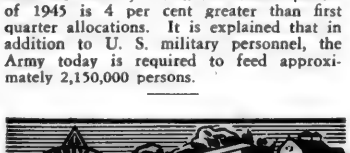
The lamb market at National Stock Yards went into a new high ground recently when the Producers sold for Lester Martin of Morgan county, a consignment of 51 head, 95 pounds average, at $17.15 per hundredweight, the best price since 1929. These were part of a string of Texas lambs which Martin obtained through his cooperative last September at a weight of 62 pounds. Previous to the recent sale he had topped the market with a double deck of them — 240 head — at $17, the previous market high.

A new heifer top since last October was obtained by the St. Louis Producers recently for 13 choice Whitefaces from the feedlots of Dave Coultas of Menard county. The lot averaged 827 pounds and sold at $16.35 per hundredweight. These were part of a bunch of Texas calves which Coultas purchased through his cooperative last September at a weight of a little better than 400 pounds. He started the lot on bluegrass pasture and threshed oats placed in feed bunks. After they got used to grain, some ground ear corn was added.

Regardless of when the war in Europe ends, the demand for live stock should exceed supply for many months, in the opinion of the St. Louis Producers. Never before in history has the need for meat and meat products been so urgent.

Although the government has been working on a program for more equitable geographic distribution of civilian meats, it is admitted that this will not increase the overall supply which will remain tight in any event.

Allocation of 1,381,000,000 pounds of meat for military use in the second quarter of 1945 is 4 per cent greater than first quarter allocations. It is explained that in addition to U. S. military personnel, the Army today is required to feed approximately 2,150,000 persons.



cream

By F. A. Gougler

In spite of continued labor shortage and other handicaps, it appears that our dairy farmers are meeting war production demands for milk.

The department of agriculture reports that milk production is exceeding last year's output by 2.7%. Higher rate of feeding is given as the major factor for this increase.

Butter production continues to decline. Compared with a year ago, it appears that about 13% less butter is being produced.

American cheese production on the other hand, is 16% higher than last year. It would appear from these production figures that there has been little if any change to date this year, in the diversion of milk compared to a year earlier.

During the April meeting of Illinois Producers Creameries board, three representatives of the dairy department of the U. of I. appeared before the board. Those present were Dr. William W. Yapp, professor of dairy husbandry, Paul H. Tracy, professor of dairy manufacturers, and Ralph V. Hussong, professor of dairy bacteriology.

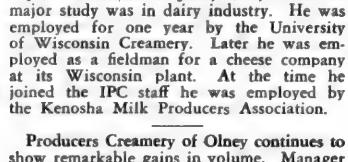
They stressed the need for improving the quality of all dairy products and explained that to bring this about meant starting with soil improvement, better and larger herds for certain farmers, as well as better care of dairy products on the farm and improvements in the handling of dairy products from the farm to the consumer. It is hoped to develop a program for southern Illinois covering all of that part of the state south of the Pennsylvania Railroad running east from St. Louis through Effingham.

Robert B. Trumpy of Kenosha, Wis., has been employed by the Illinois Producers Creameries to succeed Bert Mullooley. His duties will be to work with the member creameries in the production of high quality products. His time will be divided between the member plants and the IPC laboratory in Chicago. Mullooley is the new manager of the Producers Creamery of Henry which is in the process of building a plant.

Trumpy was graduated from the University of Wisconsin in June, 1941, where his major study was in dairy industry. He was employed for one year by the University of Wisconsin Creamery. Later he was employed as a fieldman for a cheese company at its Wisconsin plant. At the time he joined the IPC staff he was employed by the Kenosha Milk Producers Association.

Producers Creamery of Olney continues to show remarkable gains in volume. Manager Frank Mleynek recently reported that butter production is up 22.8% above a year ago and milk purchases are up 55.7%. Milk powder manufactured is 97.5% above last year.

Sgt. Charles Redding, assistant plant superintendent at the Producers Creamery of Champaign, was killed in action in Germany April 2, according to word received by his parents. He had been with the Creamery for four years and entered the Army in May of 1943.



By G. H. Ifmer

Cooperative grain marketing lost a staunch friend in the passing of A. J. Gillfillan, 83, who died April 15 at his Watseka home following 11 days illness from heart trouble.

Mr. Gillfillan was charter member and president of the Watseka Farmers' Elevator and charter member and treasurer of the Iroquois County Farm Bureau and Service Company.

A short while before his illness Mr. Gillfillan had arranged a meeting with the board of directors and the IAA director of grain marketing for the purpose of reorganizing the Company, making it a true co-

mproducts The Co-operative Way

operative. It was his last wish that the elevator operate cooperatively and as a member of Illinois Grain Corporation.

Fred J. Rovey, president of the Farmersville Cooperative Elevator Company, Montgomery county, has announced the employment of Lester Sheridan, Lincoln, Logan county, as manager. Both Mr. and Mrs. Sheridan had been in the employ of the East Lincoln Farmers' Company for several years. They are known to be friends of the cooperative movement.

Reorganization papers have been completed for the Paxton Farmers' elevator, Ford county. The company is now operating under the Cooperative Act of 1923, which is the true cooperative act of this state.

Farmers at Elliott in Ford county are at a loss to know just what happened to cause the Farmers' Elevator to pass into the hands of independent operators. A substantial amount of stock had been subscribed for by producers in the community who were anxious to have a true co-operative elevator. Within a few days they learned that the Farmers' Stock Company had been sold.

Time is the only element required for a farmers' stock company to drift into corporate difficulties. The following is typical of what can happen.

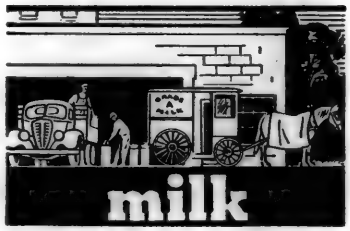
In 1904 a group of farmers organized a farmers' elevator under the business corporation act. They sold $15,000 capital stock. After operating 20 years a surplus of $30,000 had been accumulated. The directors decided to re-organize under the 1915 Elevator Act. What to do with the surplus? They issued two shares of new stock to each share of original stock making a capital obligation of $45,000.

Twenty years later a similar surplus had accumulated and now the directors, nine of them, want to reorganize under the Cooperative Act of 1923. What to do with the surplus? They will pay it out in cash.

A check on the holders of capital stock reveals that more than half of them no longer live in the community and a majority have no farming interest. The problem now is to get the consent of the holders of two thirds of the stock to reorganize. This should have been done in 1924 when a majority of stockholders were producers.

Dr. L. J. Norton, department of agricultural economics at the College of Agriculture, University of Illinois, observed in the April RECORD that there are 109 farmers' elevator companies operating as true cooperatives under the 1923 Act, and that there is a trend toward reorganization under the Act.

Lieut. Harry Morris, Graymont, lost his life in action over Burma, according to a message from the War Department to the A. B. Scheeler family. Lieutenant Morris was the husband of Mr. Scheeler's daughter. Mr. Scheeler is manager of the Graymont Cooperative Elevator, Livingston county, largest shipper to Illinois Grain Corporation.



By Wilfred Shaw

The War Food Administration has suspended that portion of the Chicago Federal Milk Marketing Order which would have decreased the Class I milk price for May and June 20 cents per cwt. This action of WFA will increase the dairymen's return in the Chicago milk shed about $450,000 during these two months.

The ninth annual JUNE DAIRY MONTH observance will be held this year. The 1945 Dairy Month will stress the vital importance of dairying to the nation with this pointed message as the theme, *"Dairy Foods Are Essential"*. All segments of the dairy industry will cooperate in this year's program in stressing the essentiality of dairy foods in the wartime diet.

The annual meeting and stockholders banquet of the Danville Producers Dairy were held in early April. The reports submitted to stockholders disclosed substantial increases in the sales of the dairy for the past year and satisfactory earnings upon the past year's operations. Capital stock dividends of 6% were declared and in addition a 5% patronage dividend was also paid to patrons.

The board of directors of the dairy for the coming year will be composed of R. R. Bookwalter, Danville, president; George Lenhart, Georgetown, vice-president; J. Warren Ellis, Ridgefarm, secretary-treasurer; William Grubb, Covington, Indiana; and Elmer Learnard, Georgetown. Learnard was elected to succeed Charles DeLong of Potomac. F. F. Bott, Danville, is manager of the dairy.

Stockholders and their wives attending the annual banquet in the Wolford Hotel heard Tom Collins of Kansas City, Mo., who gave the main address. Among the honored guests present were Otis Kercher, of Indiana, who was farm adviser of the Vermilion County Farm Bureau at the time the dairy was originally organized; I. E. Parett, farm adviser, and other officials of the Vermilion County Farm Bureau and of the other affiliated cooperatives.

War Food Administration has increased some milk marketing quotas and removed others on dairy products to make the best possible use of milk during the flush months of production. H. H. Erdmann, market agent of WFA, Chicago, who is in charge of the WFA milk quota orders effective in Chicago, Rockford and Peoria, recently announced a new milk quota of 115% of June 1943 milk sales effective April 1, and a 100% quota on butterfat in cream effective April 20.

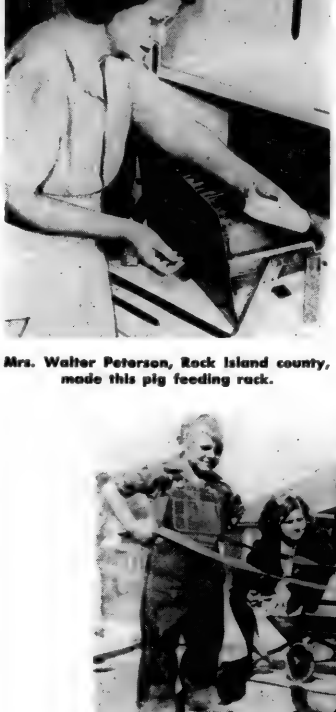
Directors of Dairy Products Promotion of Illinois, the Illinois unit of the American Dairy Association, in two recent meetings completed plans for the annual campaign June 1 to 15 for the collection of funds to finance the dairy industry promotional organization, American Dairy Association. Oscar Swank is the manager of Dairy Products Promotion.

The following are the blended prices received by producers supplying the respective Illinois markets. All are March prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

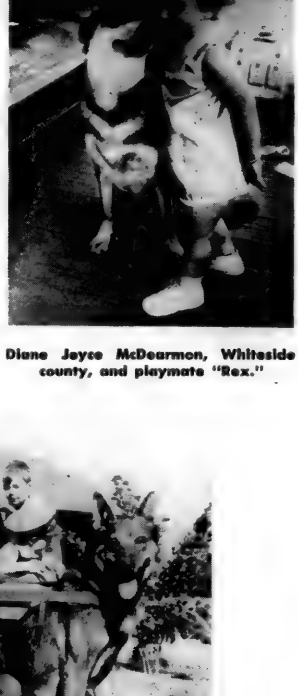
Bloomington	$2.41
Canton	2.75
Champaign	2.75
Chicago	3.07
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.74
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	2.974
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.05
Springfield	2.85
St. Louis	3.42
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealer's platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for March, unless otherwise noted:

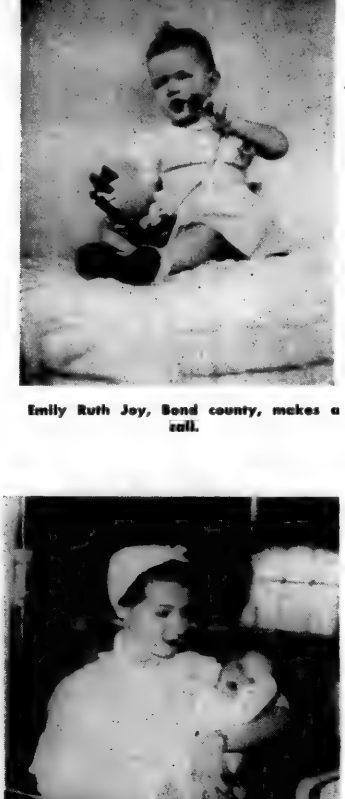
Baltimore	(Feb.)	$3.85
Boston (191-200 mile zone)	(Feb.)	3.35
Chicago (70 mile zone)		3.07
Cleveland	(Feb.)	3.43
Denver		2.87
Detroit	(Feb.)	3.57
Indianapolis		3.28
Kansas City		3.64
Louisville		3.38
Memphis	(Feb.)	3.60
Milwaukee		3.00
New York City (201-210 mile zone)	(Feb.)	3.32
Omaha		2.96
Pittsburgh	(Feb.)	3.32
Seattle		3.10
St. Louis		3.42
St. Paul and Minneapolis		3.00
Toledo	(Feb.)	3.44
Washington, D. C.	(Feb.)	3.99



Mrs. Walter Peterson, Rock Island county, made this pig feeding rack.



Diane Joyce McDearmon, Whiteside county, and playmate "Rex."

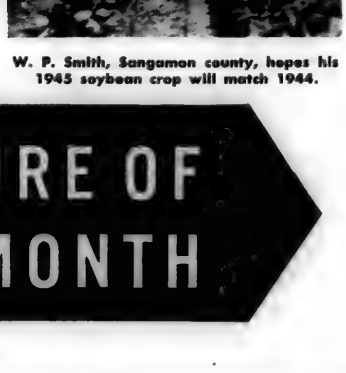


Emily Ruth Joy, Bond county, makes a call.

"Playtime" features Jimmy and Betty Lou Jones, Garry and Larry Nelson, and Ronnie Jones, Stark county.

Frank Gingrich, former IAA director of young people's activities, takes the first picture of his son, Dave Dennis.

Carl Kraklow, Rock Island county, demonstrates his labor-saving cart.



W. P. Smith, Sangamon county, hopes his 1945 soybean crop will match 1944.

$5 PICTURE OF THE MONTH

Winner of the $5 picture award is Ray T. Nicholas, Lake county farm advisor, with this pose of his pin-up daughter, Gayle Dene.

lockers

By Frank Gougler

Construction of the new 850 locker plant at Paris, Edgar county, is nearing completion. The board of directors is investigating possible locations for a slaughter plant.

At a recent meeting of the board, C. W. Allen of Chicago was interviewed and employed as manager. He will assume the responsibility of management sometime before the plant opens for business.

Members and officers of the board are as follows: president, Leo Swinford, Paris; vice-president, O. O. Winans, Paris; secretary, David B. Long, Paris; and treasurer, John M. Tate, Kansas, Ill.

Since there has developed a deficit meat supply, Washington OPA officials have under consideration, plans for bringing locker plants under more strict regulations. Recently a two day conference of locker operators and OPA officials was held in Washington, D. C. Briefly, what they are attempting to do is to require every locker patron to fill out a detailed statement about all rationed food products that goes into the locker plant and to indicate if any is for resale. Also, they propose to have all beef, veal and mutton that is processed in the locker plant, graded. Furthermore, an attempt is being made to require the operator or manager to act as the agent for OPA.

The National Frozen Food Locker Association has registered a strenuous objection against such a demand on the part of OPA. No other similar business acts in such a capacity. Local OPA Boards regulate the distribution of tires, gas, etc. without requiring the dealer to assist or act as its agent to see that every buyer conforms with OPA regulations. Representatives of the National Association will probably be required to remain vigilant until this thing is worked out on a satisfactory basis.

The second new locker plant project applied for through the district WPB office has been denied. These two are the only cooperatives in Illinois that have been denied since new construction of locker plants started July 1943. One was denied because it is within 10 miles of an existing plant. At Chapin, Morgan county, the reason given for rejection was that the plant is not necessary to the war effort.

Plans are being developed for two new slaughter plants. One of these will be built at Yorkville, Kendall county, in connection with the locker plant which is housed in the Kendall County Farm Bureau building. Kendall county has locker plants at the following other points: Yorkville, Plattville, Plano, Newark, and Oswego.

Dana Cryder, president, Illinois Cooperative Locker Service, who lives in Kendall county, states that plans are for a slaughter plant large enough to slaughter all the animals for patrons of their locker plants who may want this service.

AFBF Plant Food Program

Are farmers building up future troubles by working long hours to maintain high wartime production?

Yes, if they fail to replace the phosphate, potash and nitrogen removed by big crops.

To increase mineral fertilizer supplies and show how to use them most effectively, the American Farm Bureau Federation, representing over 828,000 farm families, proposes a national fertilizer program.

Two plants producing phosphorus and one for the production of potassium would be built and operated for not more than five years by the government.

Within the five-year period, the government would offer the plants for sale at a fair appraised value to farmer cooperatives which would continue manufacture and distribution of the fertilizers.

Fifty per cent of the plants' output would be sold to farmer cooperatives and the fertilizer trade, and the other 50 per cent would be earmarked for a proposed test-demonstration which, eventually, would include an average of 75 farms in each agricultural county in the nation.

Development of phosphate deposits in Florida and the inter-mountain area of the West is asked in the program that is now before Congress. Potash deposits in the Southwest would be developed and public lands would be explored for other possible deposits.

A recent report by the American Farm Research Association said farmers should triple their present use of mineral fertilizers. Although the proposed plants actually will produce but a fraction of the country's total fertilizer requirements, the program is designed to give incentive to fertility practices that safeguard agriculture in the postwar years.

---

soils

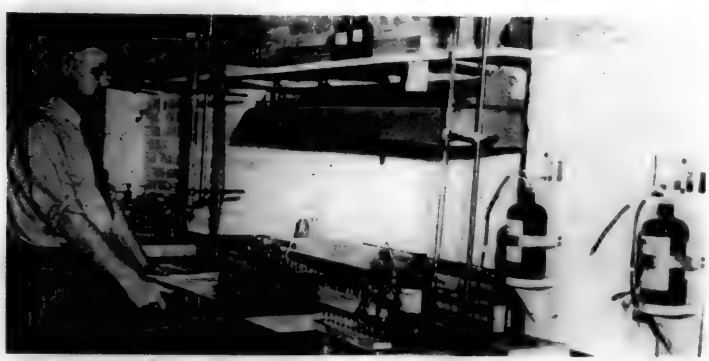
By John R. Spencer

The 300th man brought in a sample to the Whiteside county soil testing laboratory on March 19, approximately six months after the start of testing work. This is a much larger participation in usage by farmers than had been hoped for within the first year according to Farm Adviser F. H. Shuman.

Prof. A. L. Lang says "Soil testing laboratories will do the bookkeeping of fertility for the farm soil". He also points out that "much fired corn seen during hot weather is suffering more from the lack of plant food than it is from a lack of moisture".

It now appears that Illinois established last year a new all time high record in limestone usage of approximately 3,985,000 tons according to the State Geological Survey, which compiles figures from several sources.

Another new all time high record in rock phosphate usage was made last year by the application of 218,986 tons according to the U. of I. College of Agriculture. For this amount, 160,520 tons were commercially sold, 45,081 tons was AAA distribution and 13,385 tons was colloidal phosphate.



Woodford County Farm Bureau's complete soil testing laboratory is now in operation. Homer Reesman, science teacher in Eureka High School, is at the left.

IT'S OUR PATRIOTIC DUTY—

To see that none of this year's pigs are lost through neglect. Our boys at the front, our own civilians, our liberated allies, need all the pork we can produce.

"Old Devil Cholera" would like to see you let down this year . . . so would Tojo and his pals!

Fool 'em again! Protect every pig with that good co-op Farm Bureau serum and virus. Then Mr. Porker can grow up and do his bit for Victory!

See Your Farm Bureau

WHAT'S YOUR SCORE?

How well are you informed on farm affairs? Test yourself on the questions below. Each question is followed by three answers. Select the one which you think is correct. Compare your selections with the correct answers. Allow yourself 10 points for each correct answer. Add your score.

90 to 100 = Excellent
70 to 80 = Good
50 to 60 = Fair
Below 50 = Poor

1. The number of Farm Bureau members in Illinois is approximately:
   17,500 — 47,000 — 114,000
2. The state having the largest number of Farm Bureau members is:
   Illinois — Iowa — New York
3. In Illinois the state organization of Farm Bureau members is:
   The Illinois Agricultural Association
   The Illinois State Farm Bureau
   The Illinois Farm Bureau Federation
4. The second most important farm crop in Illinois is:
   Corn — Soybeans — Wheat
5. The average corn yield per acre in Illinois in 1944 was:
   35 bushels — 45 bushels — 65 bu.
6. The Corporate Secretary of the Illinois Agricultural Association is:
   Paul Mathias — George Metzger — John Spencer
7. The average price of milk cows in Illinois in March was:
   $85.00 — $126.00 — $161.00
8. The Chicago ceiling price on most hogs is: (per cwt.)
   $12.50 — $13.50 — $14.75
9. Illinois Farm Bureau members have organized several state-wide cooperative associations. The number of such associations is now:
   3 — 5 — 14
10. Illinois Farm Bureau members organized the Farmers' Mutual Reinsurance Company in 1925. It provides members with:
    Auto insurance — Fire insurance — Life insurance

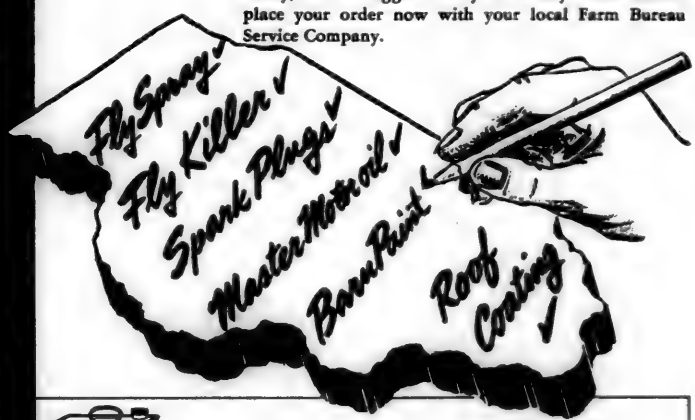
Answers

1. 114,000, 2. Illinois, 3. Illinois Agricultural Association, 4. Soybeans, 5. 45 bushels, 6. Paul Mathias, 7. $126.00, 8. $14.75, 9. 14, 10. Fire insurance.

Farmer dads . . . this time welcome your victorious warrior sons home with a big sheaf of War Bonds. In 1918, too many farmers had nothing but a bigger mortgage to show for their wartime efforts.

Check Your Needs Early

All over Illinois, Farm Bureau Service Companies are doing an excellent job in maintaining direct-to-the-farm service on fuels, lubricants, and other essential farm supplies. Quality has been maintained surprisingly well. Tires, batteries, house paint and similar items are hard to obtain. Other items like these listed are available currently, but we suggest that you check your needs and place your order now with your local Farm Bureau Service Company.



BLUE SEAL FLY SPRAY

A repellent and killer. Use in dairy barn. Helps keep cows contented while milking. Also ideal on horses. Effectively repels flies for hours.

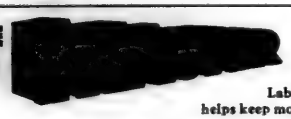
BLUE SEAL FLY KILLER

For use on all insects. 12% greater killing strength than similar products. Safe to use in homes. Odorless—stainless—deadly to flies, mosquitoes, moths, ants, bugs, and other pests.

Edison SPARK PLUGS

You cannot find better plugs. Avoid fuel waste and loss of power by checking your plugs and replacing with Edisons. Your BLUE SEAL Salesman can give you Edison Spark Plugs to fit any motor on your farm.

BLUE SEAL



MOTOR OIL

Built for heavy duty lubrication of farm machinery. Tested by BLUE SEAL Laboratory technicians. Lubricates, cools, and helps keep motors clean. Ask the BLUE SEAL Salesman.

I. F. S. ROOF COATING

Heavy roof coating made with flake-graphite, asbestos and asphalt. Stops leaks on old roofs—fills broken seams and nail holes. Prolongs life of roofs on barns and other farm buildings.

SOYOIL BARN PAINT

Made with rich, red, iron oxide and especially refined oils. Has extraordinary covering qualities. Penetrates and protects the surface. Makes any barn look better and adds years to the life of outside walls.

Rural Youth

By
Ellsworth D. Lyon

The Red Cross program is growing in popularity with Rural Youth as groups find ways to cooperate with the county Red Cross organizations. Reports from 17 counties show cash contributions of the amount of $978.-76. These counties are Lee, Franklin, Whiteside, Marshall-Putnam, Clay, Knox, McLean, Clark, Brown, St. Clair, Washington, Macoupin, McHenry, Adams, Randolph, Ogle and Kane. Livingston, McLean and Bureau counties are assisting at Red Cross Canteens. Clark helped in the annual financial canvass for the county organizations, some young people teaming up with county Red Cross workers, others forming teams among the Rural Youth. Rural Youthers in Clark also cooperated with a local movie in selling tickets for a Red Cross benefit. Macoupin staged a big carnival and netted $475 for the Red Cross. Blood Donor groups have been formed in 12 counties. Each month additional county groups are inviting Red Cross representatives to meetings to explain the Red Cross program and to indicate ways in which Rural Youth may take part in this program of service.

Montgomery Rural Youth has been visited by a Red Cross representative who is an area director under the St. Louis office. The county chairman was present also to explain the Red Cross program. Representatives were sent to the Red Cross Camp and Hospital Council meeting at Scott Field. They plan to participate in the work of the Council to serve the soldiers at Scott Field. More definite plans will be made later.

In April St. Clair county joined the list of counties having a county newsletter. The new publication has not been named, but members are on the alert trying to think of a suitable "handle". This young group is moving right along in many good activities.

Woodford has published the first of its quarterly county paper "The Woodford Gang Reports". Copies of the first issue appeared early in April and were sent to service men.

Under date of April 2, Fulton county sent a three page letter to soldiers who have gone from Rural Youth. It contained much information of the group and of various Rural Youthers now in service.

Franklin county's April meeting consisted of a pot-luck dinner, mixers, games and dancing. This county has an adult committee on Rural Youth, two of whom were present at this meeting. Attending, also, were members of the Mt. Zion 4-H club.

Schuyler gave a barn dance on April 19 as a farewell party to its president, Franklin Kotter, who is entering the Army. Secretary Rosalee Hess says that not only Uncle Sam but Dan Cupid, as well, has been calling the Rural Youth officers.

McHenry County Rural Youth learn about putting in tile under the direction of Farm Adviser W. H. Tammeus, and R. C. Hay, extension engineer, U. of I. College of Agriculture, extreme right. Members, left to right, are: Myron Richardt, Charles Darfler, William Paterson, Don Anthony, Orville Pagles, and Robert Gerloff.

Macoupin's benefit carnival really was a big event. More than 75 young people serving on various committees worked together to make this Rural Youth undertaking one to be remembered. Maxine Denby was crowned queen. A bouquet of roses was presented to her by Evelyn Burger, queen of last year. Ross Gates was master of ceremonies.

LaSalle county comes up with another big annual banquet. This year the theme "April Showers" seems quite appropriate, as was May Flowers of last year. Do they contact the weather bureau? The date — April 25.

Hamilton county, our youngest county group, came into existence March 28 when 12 young people met at the Farm Bureau office and effected the organization. This group proceeded on April 5 with their first monthly meeting. Twenty-four additional members came to this meeting. Keep going, Hamilton, we're all behind you in spirit.

Peoria county, at its April meeting, studied a subject in Applied Psychology. The theme "Overcoming Inferiority" brought forth much audience participation.

Parents' nights were held recently by Wayne and Edwards county Rural Youthers. Wayne displayed souvenirs sent by members from various countries and war fronts. Edwards held a panel discussion which was led by parents on the theme, "The Work of the Farm and Home Bureaus and Their Connection with Rural Youth."

Double-header meetings were held in two counties in April. The Prophetstown-Tampico Warrior boys discussed farm accounts, while the girls studied home beautification, drawing pictures of their dream homes. Kane (South) boys studied soil conservation, during which time the girls considered the topic of window treatment.

St. Clair county and Twin City Ripples of Whiteside have presented the skit, "The Banquet," which deals with dining in public. This skit provided many suggestions for discussion in both groups.

The Crystal Lake Wildcats of McHenry county were very much on the beam in their consideration of race relationships. Many adult thinkers believe this topic should receive much consideration.

Popular among Rural Youth groups is the theme "What Do You Want Out of Life," which was discussed recently by Wabash, the Hebron group of McHenry, and by Randolph.

Edgar county adds another activity to its community service program. At stated times members of Rural Youth lead games for the children's home in Paris. This club formed a blood donor group from its membership in April. "What Rural Youth Is and Does" was the topic for discussion in April.

McDonough county had as guests representatives from the Rural Club of Western State Teacher's College for a social evening of recent date held in Macomb. The program consisted of roller skating, social dancing and square dancing.

Wedding bells rang for two of Randolph County Rural Youthers, Ray Kattenbracker and Marjorie Siemers. They were married March 4.

The eight McHenry County Rural Youth Clubs studied their county constitution in detail during March and April meetings. Various amendments were made and the new Constitution was adopted by a called meeting of representatives on April 24.

Jackson-Perry got on the air March 22 when eight Rural Youthers gave a history of Rural Youth and sang the Rural Youth march over WJPF, Herrin.

Pfc. Dale Strohm of West Union, died from pneumonia in the Mediterranean area around the first of March according to recent word received from the Rural Youth group. Pfc. Strohm was the son of Mr. and Mrs. Perry Strohm. He had received the Purple Heart after being wounded Nov. 27, 1944.

Sgt. Ramon O. Bomgardner, Edgar county, a member of the Gliders division, has been awarded the Purple Heart for wounds received at Bastogne, Belgium, on Christmas Day.

A member of Rural Youth from DuPage county, Pvt. Henry Hoffman, United States Marine, was wounded in the battle of Iwo Jima. Pvt. Hoffman has written his parents since receiving wounds, according to word from members of the DuPage group.

NEWS and Views for Women

The recipe for these tasty-appearing tea rings is printed in our recipe column.

Sugar for Canning

Sugar supplies are showing the pinch of a long war, and a tightened home canning sugar program for 1945 is in order, according to Administrator Chester Bowles, OPA.

This program is designed to insure a fair distribution of sugar to those who actually need it for canning, and to avoid the over-issuance of home canning sugar which occurred last year, when 300,000 tons more than the allotment was used.

This year you will obtain sugar for home canning by filling out provided application forms, and your allotment will be based on your actual needs — the number of quarts of fruit canned last year and the number of quarts you expect to can this year.

No ration stamps in Book No. 4 will be good for canning sugar this year; however spare stamp No. 13 must be attached to your application as evidence that each person named in the application is a holder of Book 4.

For canning fruit or fruit juices, the allowances will be on the basis of one pound of sugar for each four quarts to be canned, the total allowance not to exceed 20 pounds per person or 160 pounds per single family of eight or more. Of this maximum allowance, not more than five pounds per person may be allowed for canning vegetables, making jam, jellies, relishes and catsup.

All applications must be made by October 31, 1945, and definite dates will be announced for issuance of coupons in each area. This should help with distribution, since canning seasons vary with different states or even within a given state.

Remember to have your figures ready when you apply for your canning sugar — know how many quarts you canned last year and your estimate of this year's need. Under the new plan you'll get your fair share of the sugar — that's the aim of the program, which sets aside exactly the same amount of home canning sugar as last year, 700,000 tons.

Randolph County Home Bureau Assured

Organization of a Randolph County Home Bureau was assured early in April when a membership drive netted 327 signed cards. It is expected that more than 350 women will have joined by May meeting time.

When the drive for members was started in February, quotas were assigned each precinct in the county. When the first reports were received at the end of March it was found that 10 of the 17 precincts had exceeded their quotas. The Steelville-Percy unit had 195 per cent of its quota signed.

The largest number of members is enrolled in Sparta which had 79 signed in the last of March.

There have been two units of the Home Bureau in Randolph county for several years and one in the Red Bud area. The Sparta units were a part of the Jackson-Perry Home Bureau, and the Red Bud unit was a part of the Monroe Home Bureau. These units are now transferring to the Randolph County Home Bureau.

Mrs. W. M. Kimmelshue, Manteno, Kankakee county, is the new northeast director of the Illinois Home Bureau Federation.

Recipe Treats

TINY TEA RINGS

2 c. sifted enriched flour
3 tsps. baking powd.
1 tsp. salt
2 to 4 tblsps. short.
2 eggs
½ c. milk (about)
1 tblsp. honey or white corn syrup
½ c. cooked chopped fruit

Sift together flour, baking powder, and salt. Cut or rub in shortening. Beat 1 whole egg and 1 egg yolk, reserving white for tops. Add milk and honey to beaten eggs and add all to flour mixture. Stir only enough to moisten flour. Turn out on lightly floured board and knead ½ minute. Roll out into a rectangle 8 inches wide and ⅛ inch thick. Cut in half lengthwise. Spread each portion with fruit, and roll jelly-roll fashion, sealing edges. Cut into 8 inch pieces and form into rings on greased baking sheet. Pinch ends together. With scissors, cut through rings almost to center, in slices about 1 inch thick. Turn each slice slightly on its side. Brush rings with remaining egg white and sprinkle with sugar. Bake in moderately hot oven (425°F) 12 to 15 minutes. Fill center with a spoonful of ice cream or whipped cream. Yield: 6 Tiny Tea Rings.

EDITORIAL

"Let Us Move Forward"

IN THE Little White House in Warm Springs, Georgia, only a day before his passing, Franklin Roosevelt wrote a speech. It was to have been delivered by radio on Jefferson's birthday, April 13. This prepared address rose above partisan spirit. It envisoned a world of peace, and it faced the responsibility of peacemaking . . . to make an end to wars.

It contained a summons to forward-looking men and women everywhere, to press forward toward the goal of universal peace. Its conclusion contained a great President's last injunction to his countrymen:

"Today as we move against the terrible scourge of war — as we go forward toward the greatest contribution that any generation of human beings can make in this world — the contribution of lasting peace, I ask you to keep up your faith. I measure the sound, solid achievement that can be made at this time by the straight-edge of your own confidence and your resolve. And to you and to all Americans who dedicate themselves with us to the making of an abiding peace, I say:

"The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

Let us move forward!

Others may appraise his place in history. Others may pour forth tribute for his deeds and words. Whenever and wherever his name comes into the minds of men, his actions will be recalled, discussed, interpreted. Yet these words epitomize the man: "Let us move forward, with strong and active faith."

To them, America responds. We are moving forward, and after the first unbelieving shock of loss and grief which spread over the countryside, we have closed ranks. In unity behind a modest, unassuming man who came from a Missouri farm, we face the future unhesitating and unafraid.

The strong and active faith for which President Roosevelt pleaded is in America. Harry S. Truman and the Congressional leaders of both major political parties who have pledged him their support are its living symbols. The confidence of the people, their determination to fight on to victory, and to the establishment of the necessary means of peace, in themselves are evidence of the strength of our democratic government and our Constitution.

The mutual respect between the new Executive and the Congress which is daily becoming more evident is indeed heartening to all thinking people regardless of partisan views. This mutual confidence and respect between the Executive and Congress justifies renewed hope and confidence of the people that a united nation will meet and overcome the gigantic problems of the present day.

* * *

It would be untrue . . . it would be maudlin sentiment unworthy of the man . . . to say that farmers always believed President Roosevelt right. Many have been the questions of policy upon which there was disagreement and at times serious controversy.

But farmers, in common with all citizens, were electrified and reassured when in his first inaugural address in 1933, President Roosevelt said, "The only thing we have to fear is fear itself." They shared with all other classes the stimulation and encouragement of the famed Hundred Days, when legislation to combat depression was rushed through Congress, and agencies for relief and reconstruction were born.

Farmers will not forget that Roosevelt called together farm leaders even before his inauguration, and counselled with them on means of restoring agriculture to solvency and stability. They will not forget his declaration on farm prices, made in speaking of the AAA, October 22, 1933:

"I do not hesitate to say in the simplest, clearest language of which I am capable that, although the prices of many products of the farm have gone up and although many farm families are better off than they were last year, I am not satisfied either with the amount or extent of the rise, and that it is definitely a part of our policy to increase the rise and to extend it to those farm products which have as yet felt no benefit. If we cannot do this one way we will do it another. *Do it, we will.*"

Later, in the same speech, he said, speaking of the administration's policy of price relationships:

"It has been gradually to restore a balance in the price structure so that farmers may exchange their products for the products of industry on a fairer exchange basis. It has been and is also the purpose to prevent prices from rising beyond the point necessary to attain those ends. The permanent welfare and security of every class of our people ultimately depends on our attainment of these purposes."

Then, in 1935 at Fremont, Nebraska, he said prophetically:

"Methods and machinery change, but principles go on, and I have faith that, no matter what attempts may be made to tear it down, the principle of farm equality expressed by agricultural adjustment will not die."

Recounting his farm policy before the A.F.B.F. annual meeting December 9, 1935, in Chicago, the President revealed his understanding of the interdependence of all groups in the national economy, and of agriculture's basic place:

"So long as agriculture remained a dead weight on economic life, sooner or later the entire structure would crash."

And again, at Washington:

"Empty pocketbooks on the farm don't turn factory wheels in the city."

These are some of the highlights of the days when he, with the cooperation and support of farm leaders, was building a national agricultural program. Farmers are indebted to him for much of their subsequent progress.

EDITORIAL

"Let Us Move Forward"

IN THE Little White House in Warm Springs, Georgia, only a day before his passing, Franklin Roosevelt wrote a speech. It was to have been delivered by radio on Jefferson's birthday, April 13. This prepared address rose above partisan spirit. It envisoned a world of peace, and it faced the responsibility of peacemaking . . . to make an end to wars.

It contained a summons to forward-looking men and women everywhere, to press forward toward the goal of universal peace. Its conclusion contained a great President's last injunction to his countrymen:

"Today as we move against the terrible scourge of war — as we go forward toward the greatest contribution that any generation of human beings can make in this world — the contribution of lasting peace, I ask you to keep up your faith. I measure the sound, solid achievement that can be made at this time by the straight-edge of your own confidence and your resolve. And to you and to all Americans who dedicate themselves with us to the making of an abiding peace, I say:

"The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

Let us move forward!

Others may appraise his place in history. Others may pour forth tribute for his deeds and words. Whenever and wherever his name comes into the minds of men, his actions will be recalled, discussed, interpreted. Yet these words epitomize the man: "Let us move forward, with strong and active faith."

To them, America responds. We are moving forward, and after the first unbelieving shock of loss and grief which spread over the countryside, we have closed ranks. In unity behind a modest, unassuming man who came from a Missouri farm, we face the future unhesitating and unafraid.

The strong and active faith for which President Roosevelt pleaded is in America. Harry S. Truman and the Congressional leaders of both major political parties who have pledged him their support are its living symbols. The confidence of the people, their determination to fight on to victory, and to the establishment of the necessary means of peace, in themselves are evidence of the strength of our democratic government and our Constitution.

The mutual respect between the new Executive and the Congress which is daily becoming more evident is indeed heartening to all thinking people regardless of partisan views. This mutual confidence and respect between the Executive and Congress justifies renewed hope and confidence of the people that a united nation will meet and overcome the gigantic problems of the present day.

* * *

It would be untrue . . . it would be maudlin sentiment unworthy of the man . . . to say that farmers always believed President Roosevelt right. Many have been the questions of policy upon which there was disagreement and at times serious controversy.

But farmers, in common with all citizens, were electrified and reassured when in his first inaugural address in 1933, President Roosevelt said, "The only thing we have to fear is fear itself." They shared with all other classes the stimulation and encouragement of the famed Hundred Days, when legislation to combat depression was rushed through Congress, and agencies for relief and reconstruction were born.

Farmers will not forget that Roosevelt called together farm leaders even before his inauguration, and counselled with them on means of restoring agriculture to solvency and stability. They will not forget his declaration on farm prices, made in speaking of the AAA, October 22, 1933:

"I do not hesitate to say in the simplest, clearest language of which I am capable that, although the prices of many products of the farm have gone up and although many farm families are better off than they were last year, I am not satisfied either with the amount or extent of the rise, and that it is definitely a part of our policy to increase the rise and to extend it to those farm products which have as yet felt no benefit. If we cannot do this one way we will do it another. *Do it, we will.*"

Later, in the same speech, he said, speaking of the administration's policy of price relationships:

"It has been gradually to restore a balance in the price structure so that farmers may exchange their products for the products of industry on a fairer exchange basis. It has been and is also the purpose to prevent prices from rising beyond the point necessary to attain those ends. The permanent welfare and security of every class of our people ultimately depends on our attainment of these purposes."

Then, in 1935 at Fremont, Nebraska, he said prophetically:

"Methods and machinery change, but principles go on, and I have faith that, no matter what attempts may be made to tear it down, the principle of farm equality expressed by agricultural adjustment will not die."

Recounting his farm policy before the A.F.B.F. annual meeting December 9, 1935, in Chicago, the President revealed his understanding of the interdependence of all groups in the national economy, and of agriculture's basic place:

"So long as agriculture remained a dead weight on economic life, sooner or later the entire structure would crash."

And again, at Washington:

These are some of the highlights of the days when he, with the cooperation and support of farm leaders, was building a national agricultural program. Farmers are indebted to him for much of their subsequent progress.

Standing Room Only

. . . almost, but not quite!

Yes, it was one of those kind of months. Eighteen hundred policies for various forms of automobile and employer's liability insurance . . . all of them issued to members of the Illinois Farm Bureau. Our office staff could scarcely keep up with the clerical work involved in writing and recording that vast volume of business. That is why we say it was almost a case of "standing room only."

The reason why the Farm Bureau automobile insurance is so popular can be summed up in a very few words: Nowhere can you buy such complete coverage in a company so financially sound for rates so moderate! Yes, I. A. Mutual automobile insurance must be good to be the favorite of so many people. And you won't have to stand in line. See your friendly neighbor, the Farm Bureau insurance man. He'll be glad to explain our auto insurance and employer's liability policy, too, and to tell you about our enviable record of regular and special dividends.

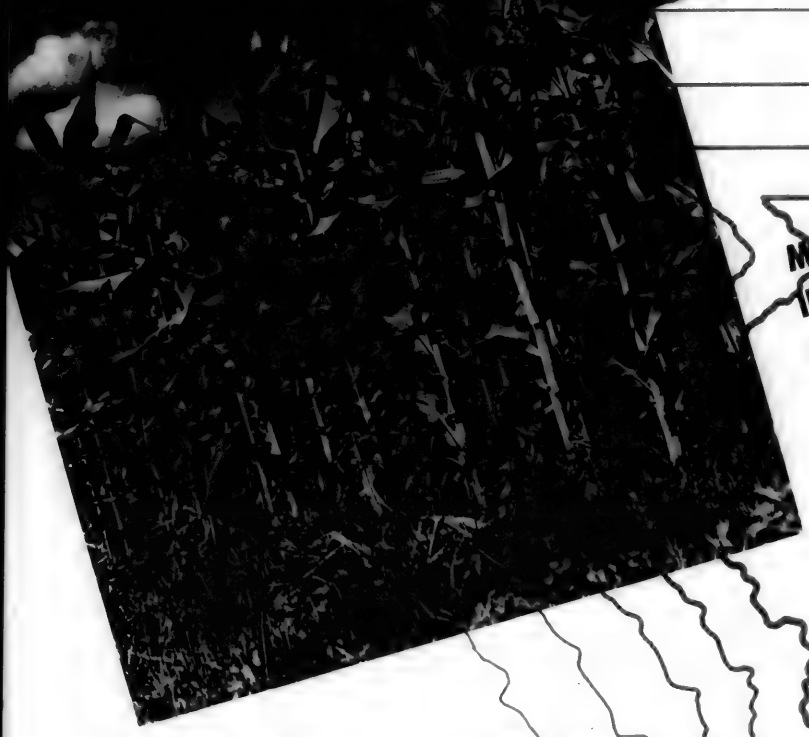
Typically ILLINOIS . . . like corn!



MORE ILLINOIS FARMERS INSURE WITH ILLINOIS AGRICULTURAL MUTUAL THAN WITH ANY OTHER COMPANY OPERATING IN ILLINOIS

Yes, Illinois is proud to be one of the principal corn belt states. From June through autumn harvest you see corn everywhere. And everywhere you go throughout Illinois you see cars and trucks and other farm vehicles insured with the Farm Bureau's own insurance company, the Illinois Agricultural Mutual. Insurance records show that not only are there more policies carried with the Illinois Agricultural Mutual than with any other company operating in Illinois — but this company *leads all others* in the total premium volume of collision and property damage insurance. This typically Illinois auto insurance company serves Farm Bureau members and Farm Bureau members only. Coverage is complete. The company is financially sound. Net rates after regular and special dividends are the lowest in Illinois. Claims are promptly and satisfactorily settled. *Are your vehicles insured* with Illinois Agricultural Mutual? See our representative about it, soon!

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

JUNE, 1945 **VOLUME 23 NUMBER 6**

This Month

By Earl C. Smith

THE Gateway Amendment to the constitution of Illinois, which was sponsored by the Illinois Agricultural Association, has been approved by the Illinois General Assembly, and will be submitted to the voters of the state at the next general election in November, 1946.

This amendment if approved by the voters will make possible the submission to the voters, by the General Assembly, of amendments to as many as three articles of the constitution at one time, instead of only one as at present, and provides that amendments to the constitution, submitted by the General Assembly, will be adopted by the affirmative vote of two-thirds of those voting on such proposition, instead of A MAJORITY OF ALL WHO VOTE for candidates in the election, as is now required.

The Gateway Amendment is simply an amendment to the amending clause of the Illinois constitution. Under present constitutional limitations, proposed amendments to the constitution have been defeated by the large number of voters who voted in the general election, but who did not have sufficient interest in constitutional matters to vote on amendments. In other words, a proposed amendment must now have a favorable vote of the MAJORITY OF THOSE who cast ballots in the election, and thus, those who fail to vote on proposed amendments are counted against the proposition. In short, failing to vote on an amendment amounts to the same thing as voting against it. It is therefore, apparent, under the present requirements, that it is practically impossible to amend any article of the constitution.

A review of amendments submitted to the voters of this state since 1894 reveals that only two amendments to the constitution have received a favorable vote by the MAJORITY OF THOSE VOTING in the election, although in many instances, such proposals have received from seventy to eighty percent of the votes cast on such proposals.

The immediate question is — how to secure favorable action by voters in the adoption of the Gateway Amendment, and avoid the tremendous obstacle of present constitutional requirements, which require a MAJORITY OF ALL VOTES CAST IN THE ELECTION, regardless of the favorable vote of those interested enough to vote on the proposal.

To overcome this obstacle, the Illinois Agricultural Association is sponsoring the so-called Party Circle Bills in the present General Assembly. In effect these bills provide that the Gateway Amendment is to be considered by state conventions of the respective political parties, and later when voting, any citizen who votes in the party circle at the top of the ballot will have his vote counted in accord with the position taken by such political party on the Gateway Amendment. However, if such voter is not in accord with the position taken by his political party, he can vote directly on the proposition in such manner as he may choose and his vote will be counted accordingly. The Party Circle Bills, therefore, do not restrict the individual voter in any way from voting as he may desire on the Gateway Amendment, but do prevent that large number of voters who vote straight party tickets and who have ignored constitutional questions, from being counted as voting in opposition to a proposed amendment.

Many persons have expressed opposition to the so-called Party Circle Bills,

Road Bill makes PROGRESS in Both Houses

By PAUL E. MATHIAS

THE bill appropriating 20 million dollars from State surplus funds for surfacing local township and road district roads has advanced in both Houses of the legislature.

However, objection to an appropriation of more than 10 million dollars for this purpose has been raised on the ground that the appropriation was not included in the budget. The secondary road program was recommended by the Postwar Planning Commission but was not approved by the Priorities Committee of that Commission and was not included in the budget for postwar projects. It also develops that no part of the federal funds ($4,700,000 per year for each of three years) to be allocated to Illinois for secondary and feeder roads will be used on township or road district roads.

The state division of highways already has obtained federal approval of a system of secondary and feeder roads to be improved by these funds. Practically all of these roads on this system so approved are state or county roads. While rural areas will benefit from the improvement of these roads, it does not meet the problem of the townships and road districts. The IAA has agreed to an amendment reducing the appropriation to 15 million dollars, and the bill so amended passed the Senate.

Road Commission

The legislation providing for the appointment of a commission to study the highway system of the state and particularly the problems in connection with local township and road district roads and to outline a permanent secondary road program has been enacted into law.

Feed Analysis Law

A bill has passed both Houses which requires mixed feeds containing more than 5% minerals and all mineral feeds to state the calcium, phosphorous and iodine content of the feeds and also the salt content. This bill also requires the names used for ingredients to be the official names used by the Association of American Feed Control Officials. This legislation is designed to give purchasers a better understanding of the content of the feed which they buy and was supported by the Illinois Agricultural Association.

Commercial Fertilizers

The Illinois Agricultural Association is sponsoring legislation which would place rock phosphate under the commercial fertilizer law. This bill would require any commercial fertilizer containing any two or more of the elements, nitrogen, phosphoric acid and potash, to carry a minimum combined percentage of at least 20% of these elements. It also provides that the results of the official analysis of commercial fertilizers made by the State Department of Agriculture shall be published by the Department from time to time.

Special State Aid for Schools

The Illinois Agricultural Association is sponsoring legislation which provides that the qualification for special state aid for needy school districts shall be based on actual value of the property in the district rather than on the assessed value.

Under the present law, if a school district levies $1 on the assessed value of property in the district and if this levy does not produce $1200 (proposed amendment), the state will supplement the local levy to the extent necessary to provide $1200 for the one room school district. Assessment ratios used in the several counties vary widely.

In some counties property is assessed at less than 25% of its value. In others, it is assessed at 75% of its real value. It is obvious that a school district in a county with a 75% assessment ratio must make three times the effort locally, which is required of a district in a county with a 25% assessment ratio in order to qualify for this special state aid. The IAA bill would equalize the requirements upon these districts by providing that in order to qualify for special state aid a school district must levy an amount locally equal to 25c on each $100 of actual or real value of property in the district.

This will place all communities on the same basis.

School Transportation

The bill to increase the maximum state contribution toward the cost of pupil transportation from $15 to $20 per pupil has passed the House and has been favorably reported by the Senate committee on Education.

The bill authorizing the creation of official county school survey committees in counties where such a survey is approved by the local school board members has passed the House and has been favorably reported by the Senate committee on education.

Open Season on Foxes

A bill providing a year-round open season on foxes in the central zone has passed both Houses of the legislature. The law now provides a year-round open season on foxes in the northern zone and this legislation will place the central zone on the same basis.

Bang's Disease Control

Bills covering the recommendations of the legislative committee on livestock legislation have passed the Senate and have been referred to the committee on agriculture in the House. The bills as passed contain the provisions outlined in the May 1945 issue of the RECORD. However, the provision requiring compulsory testing for Bangs of animals sold at private or public sales was amended to become effective July 1, 1947. The Illinois Agricultural Association is supporting this legislation.

Sealing Oil Wells

The Illinois Agricultural Association is supporting legislation which would require persons proposing to drill oil wells to give a bond for the proper plugging of the well in case it is dry or is abandoned. This bond would be in the amount of $1,000 for each well or a $5,000 blanket bond for all wells of any operator. There have been a number of instances in which operators have failed to plug or to properly plug oil wells and have failed to clean up their slush pits, resulting in a great deal of damage to the property on which the oil well is located and also to adjoining property. This legislation has been favorably reported by the Senate committee on efficiency and economy.

Name Chapelle As IAA Comptroller

R. G. Ely, comptroller for the Illinois Agricultural Association and associated companies since 1935, has resigned to accept a position as secretary and auditor with the Strom Steel Ball Company of Chicago. Mr. Ely's resignation is effective June 9.

Named to succeed Mr. Ely is C. C. Chapelle, tax consultant for the Illinois Agricultural Auditing Association.

C. C. Chapelle

Mr. Chapelle joined the Auditing Association staff in September, 1935. A native of Michigan, Mr. Chapelle was employed with the Radio Corporation of America for 10 years and by Arthur Young & Company, certified public accountants, for five years before being employed by the Auditing Association. He studied at Shurtleff College, Alton, for three years and received his law degree from Chicago Kent College of Law in 1915. He was admitted to the bar in the same year. Mr. Chapelle has one daughter, Elizabeth, a student at Wheaton College.

Mr. Ely, a native of Chicago, was graduated from the University of Wisconsin College of Commerce in 1923 and passed an examination for certified public accountant in Illinois in 1930 with honors. Before joining the IAA staff, Mr. Ely was associated as a certified public accountant with Price, Waterhouse & Company for nine years and also worked in the auditing department of a Chicago bank for several years.

R. G. Ely

J. T. Nelson, auditor in charge of the Bloomington district office of the Illinois Agricultural Auditing Association, has been named chief accountant and assistant to Mr. Chapelle in the comptroller's office.

Mr. Nelson came with the Illinois Agricultural Auditing Association in the fall of 1939 and worked in the Chicago office for a year before going to Bloomington. He is a native of Wisconsin and was graduated from Northwestern University in 1931. After graduation he was employed by the Chicago Title and Trust Co. He later worked for the public accounting firm of Alexander Grant & Company, Chicago, as junior accountant. In 1935 he went with S. D. Leidesdorf & Co., Chicago, another public accounting firm, as senior accountant. In 1938 he served as office manager and accountant for a large retail grocery store in Chicago. He is married and has one son.

stating that they felt action in political convention was too general in character to be permitted to play such an important part in the consideration of an amendment to the constitution. Were the Gateway Amendment other than an amendment to the amending article of the constitution, the Illinois Agricultural Association would be in accord with such opposition. However, it must be understood that the wording of the Gateway Amendment, if adopted, will forever close the door to the use of the poltical convention or party circle voting in the consideration of any amendment later submitted to a basic article of the constitution.

The Gateway Amendment provides that when adopted, any proposed amendment submitted thereafter, shall be submitted to the voters in a separate column provided on the main ballot or upon a separate ballot.

The immediate concern is to provide the machinery whereby the Gateway Amendment (which amends only the amending article of the constitution) may have a reasonable opportunity of favorable consideration at the polls. Adoption of the Gateway Amendment will give to the people of Illinois the opportunity and privilege in the future of amending basic articles of the constitution to meet current needs, if such amendments are submitted to the electorate by two-thirds vote of each house of the General Assembly, and if two-thirds of those voting on the proposal vote affirmatively.

If the citizens of Illinois are to be permitted to modernize the Illinois constitution in the future to such extent as is required to meet some of the present day problems, both the Gateway Amendment and the Party Circle method for its consideration by the voters at the polls in the next general election should have the aggressive support of the people of Illinois and their representatives in the present General Assembly.

CONFLICTING REGULATIONS STUMP LOCKER OPERATORS

By F. A. GOUGLER

IAA Director of Produce Marketing and Secretary-Treasurer of the Illinois Cooperative Locker Service

OPA OES FDA OPA OES FDA
OES FDA OPA OES FDA OPA

OPA OES FDA OPA OES FDA

EARLY in World War II, the Office of Price Administration was created. Later other agencies were established such as Office of Economic Stablization, Food Distribution Administration, and sundry departments or divisions such as enforcement division, rationing section, grading and labelling department. All of these have had a hand in attempting to regulate rationed foods and to stabilize prices.

With such an array of agencies trying to accomplish a certain objective and operating at national, state and county levels, it is not surprising that confusion prevails.

When this machinery was first thrown into gear, it was proposed that locker plants have invoiced all rationed foods in each individual locker and whenever a patron took rationed food from his locker he was expected to relinquish stamps for same. Likewise, all beef, veal and mutton that was brought to a locker plant for processing had to be graded by a federal grader or someone designated by him before it could be "broken", that is, reduced from wholesale cuts to retail cuts or into packages as requested by patrons. Thanks to the efforts of the National Frozen Food Locker Association and the American Farm Bureau Federation these proposals were eliminated.

All went well in this regard with locker operators, managers and patrons until there developed a meat shortage. As soon as the meat shortage became real in certain deficit meat producing areas, these various agencies mentioned above began pouncing on locker plants as the cause of the shortage. As a matter of fact, if all locker meat were handled illegally, it would not exceed 3½% of the total meat supply and the amount stored in lockers by city patrons does not exceed one-half of one percent of the total meat supply.

In pointing out these facts, the locker industry is not claiming that its industry is wholly free of OPA violations, but the industry does resent being charged as a major violator. Furthermore, the locker industry is willing to cooperate with OPA officials in freeing its industry of illegal practices.

Consider Some Factors

There is a real meat shortage compared to a year ago. Military requirements and other government purchases are made only from federally inspected plants and since such plants are located largely in densely populated areas, these areas are drained of meats leaving civilians short. Another contributing factor resulting in a maldistribution of meat is the fact that meat moving from surplus producing states to deficit areas must be shipped across state lines and generally only federally inspected meat can be shipped across state lines.

An attempt is being made to correct this maldistribution of meat through a more rigid control of slaughters. This requires an understanding of slaughter classifications and the restrictions applied to each under Control Order Number 1, issued April 25, 1945. There are three classes of slaughterers as follows:

A Class I slaughterer is a slaughterer who operates under federal inspection.

A Class III slaughterer is a resident operator of a farm who slaughters cattle, calves, lambs or swine or had been slaughtered for him and from which he sold or transferred during 1944 or during a 12-month period from January 1, 1944 to March 31, 1945 inclusive, the total amount not exceeding 6,000 pounds. *Class III slaughterers have no limit placed upon the amount of meat that they may slaughter for home consumption.* This group is limited, however, in the amount of meat which can be delivered into commercial channels. The limit may be up to 100% of the dressed weight of meat that was delivered during the four corresponding quarters of the calendar year 1944.

Class I slaughterers (federal inspected) are subject to no quota restrictions.

Class II slaughterers on the other hand must have quotas established for 1945 in the same manner as Class III slaughterers, but if either of these two groups avail themselves of federal inspection service, then quota restrictions are removed. It is the desire of the control agencies that many Class II and Class III slaughterers qualify as Class I so more federal inspected meat is made available for interstate movement, thus aid meat short areas.

Locker Patrons

1. *City Patron*:

If you are a city patron and have no farm interests, then all rationed foods that have been purchased to be placed into your locker, must have ration points exchanged for these foods on a graded basis. No such locker renter shall purchase any beef, veal or mutton from a producer unless it has first been graded and the price does not exceed the ceiling price for the various grades and the correct amount of points have been exchanged.

2. *Producer Patron*:

What are the conditions under which a producer may qualify for putting meat into his locker point free and ungraded?

a. Residence Farm Operator:

Must have raised the animal on the premises which the producer operates: (1) From birth to the moment of slaughter; or (2) For at least 60 days immediately preceding slaughter or (3) For a period immediately preceding slaughter during which

ANSWERS TO SOME OF YOUR QUESTIONS ON

LOCKER MEAT REGULATIONS

★ ★ ★ ★ ★ ★ ★ ★ ★

1. *Q. Do all farmers have to register and secure permits, even though they transfer or sell no meats whatever?*
   A. Resident farmers who slaughter only for consumption in their own household do not have to register and secure a permit.
2. *Q. Can a resident farmer give meat to his son or daughter living in town, without that being classified as a "transfer?"*
   A. If a farmer gives meat to a son or daughter living in town, that would be classified as a transfer. Furthermore, in order to do so he would have to register and secure a quota permit. Any such transfer would be subject to the provisions of Revised Ration Order 16 (meat regulation), requiring the surrender of points and the filing of reports.
3. *Q. Can a resident farmer give meat to his own hired man as part of his wages without that being classified as a "transfer?"*
   A. A resident farmer can give meat to his own hired man without that requiring a quota and collection of points, providing the meat will be consumed on the premises operated by the farmer. Otherwise the answer will be the same here as that given to question No. 2.
4. *Q. Can a group of farmers exchange meats as usual in butchering rings without that being classified as a transfer?*
   A. Resident farmers can exchange meats as usual in butchering rings without requiring them to register and qualify for a quota.
5. *Q. What is the final date for Class 3 slaughterers to register, May 14th or June 30th?*
   A. The final date for registering for Class 3 slaughterers is June 30, 1945. This must be done with the board for the place where the slaughtering establishment is located.
6. *Q. Does a Class 3 slaughterer who intends to sell or transfer meat have to register, on what form and where?*
   A. Yes, he is required to register on O.P.A. Form R-315 and file same with the Local War Price and Rationing Board. If permitted to slaughter, sell or transfer meat, then he is issued a permit O.P.A. Form MC-1 and is assigned quotas for such sales or transfer of meat for each quota period beginning on or after May 15, 1945.

its weight was increased by at least 35% of its weight when acquired.

b. The Non-residence Farm Operator, But Has Farm Interests:
(1) Actually supervised the raising of such livestock and was on the premises on which the livestock was raised at least one-third of the days during the applicable period specified above or (2) Operates the farm on which he resides more than six months of the year.

Those who qualify under the various classifications listed under "a" and "b" above may put any amount of rationed meat into their rented lockers for the purpose of home consumption only.

If any farm residence or non-residence farm operator coming under the above classifications "a" and "b" intends to sell or give away any of the meat produced under the conditions indicated, then further rules and regulations should be understood as follows:

a. Ration points must be exchanged for all rationed food sold or given away.

b. If any beef, veal or mutton is to be sold either before being placed into the individual's locker or after having been placed into the locker, then all such beef, veal and mutton must be graded before the meat is broken down, that is, while still in the carcass or quarter forms. This becomes necessary in order that no grade of meat is sold above ceiling prices.

Since a meat shortage has developed and black markets have sprung up throughout the country, much pressure has been put on OPA Washington officials by Congress. The Senate and House Committees on food shortage investigations, have been particularly effective. Hence, one can readily conclude the reason for extra activities by OPA through the district offices and in the field, with particular attention by them on the locker industry, since this is an easy group to single out.

Most conflicting statements are a result of O.E.S. Order No. 1, effective August, 1943, but dormant as far as locker plants are concerned until now. OPA picked it up recently and has been charged with its enforcement. A technical interpretation has been placed on the grading of meat, even to the point that producer's meat for his own consumption must be graded.

National, district and local OPA officials have not been in agreement in the interpretation of this ruling. Some have said that the farmer who places beef, veal, mutton or lamb in his locker, in accordance with OPA regulations and even though the meat is point free, it must be graded by an official grader or someone so designated, even though none is to be sold. Other regulatory officials have stated that such meat does not have to be graded.

It is these various interpretations that have confused producers, locker patrons, managers and operators. It has even resulted in filing of mass injunction complaints on the part of the state OPA office against 28 Illinois locker companies including five cooperative plants, and every day new ones are included.

Everything possible is being done to clarify this situation and when it is straightened out, all cooperative locker plant managers will be notified.

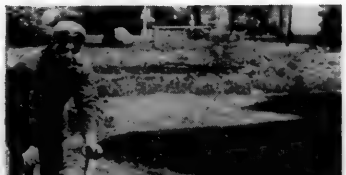
LIST SCHEDULE OF FARM LAND CLINICS

Schedule of farm land clinics to be held in a number of counties during June and July has been outlined by J. B. Cunningham, associate professor of farm management, U. of I.

Farmers and others interested in agriculture will have an opportunity to work out in groups the steps that must be taken in arriving at what farm land is worth. A farm typical of the county in which the clinic is held will be used for demonstration purposes.

Clinics were held in Champaign, Knox, Adams and Macoupin counties prior to June 14. Other clinics to be held include: Watseka, Iroquois county, June 19; Eureka, Woodford county, June 20; Yorkville, Kendall county, June 26; Morrison, Whiteside county, June 27; Freeport, Stephenson county, June 28; Nashville, Washington county, July 17, and Newton, Jasper county, July 18.

Flies will soon be here. This is the time of the year to save your religion and think clear on the fly nuisance control. Clean stables, using phosphate in the gutters, lime on the floors; clean yards and use reliable fly sprays.



Here's another view of the barrier planter. H. A. Lovenguth, DeWitt county, shown here, made this one. A corn planter runner is welded on the under side of the metal front and the hollow keel between the two planks will be used to plant the building paper in the soil.

(Pantagraph Photo.)

Central Illinois farm advisers witness a demonstration of the chinch bug paper fence barrier on the W. C. Picken farm, Champaign county. Left to right are J. E. Harris, Champaign county farm adviser; H. B. Petty, Jr., and Dr. G. C. Decker, State Natural History Survey. They are examining the barrier layer as it strings out a fence of creosote-soaked paper.

(Champaign Courier Photo.)

DEFENSE AGAINST CHINCH BUGS

Those who plan to use dinitro dust barriers may find a device such as this handy to lay the line of potent dust. Farm Advisor N. H. Anderson, Logan county, shows the device made from a hollow drum of tin, with a double line of nail holes punched 1 inch apart. The dust placed in the drum falls through the holes to form a small line as the operator rolls the drum along.

(Pantagraph Photo.)

CHINCH bugs planning invasion of corn fields this year are likely to find that Illinois farmers have planned some new defense measures.

While a dinitro dust barrier is considered the major element in meeting any offensive thrust of chinch bugs in the event weather conditions favor their growth, a vertical creosote-soaked paper barrier has been tried that promises good results.

This barrier is made from tarred felt-base building paper, soaked in creosote, and placed edgewise in the ground. The paper is cut in rolls 5 inches wide with half of the width in the ground and the other half sticking up from the soil.

A sled-like machine which can be pulled by a horse or small tractor has been developed for inserting the barrier in the ground. The machine costs about $25 to build and farm advisers have blue prints available for prospective builders.

After the paper barrier is placed in the ground, the creosote is renewed by using a bucket or can with a small hole punched in one side near the bottom so that a stream of creosote flows out on one side of the barrier.

H. B. Petty, Jr., of the entomology department of the U. of I. College of Argiculture and the State Natural History Survey reports that the paper barrier is not superior to the dinitro barrier, but in case dinitro dust becomes short the paper barrier will be a useful aid.

Petty points out that the paper barrier has two advantages. First, it establishes a vertical wall of several inches in height and bugs are less likely to be swept across by wind or to cross the barrier on leaves or sticks. Second, the paper barrier does not wash out in the rain.

Post-hole traps have to be dug along the paper barrier in the same manner as when the old creosote barrier was used. Chinch bugs moving along the barrier, fall into these traps, and then have to be killed with kerosene or other materials. Dinitro dust placed along the barrier will also kill the chinch bugs as the material works into their respiratory system and finishes them in several hours.

Illinois farmers will have some 2 million pounds of 4 per cent dinitro dust for use this year and an unnamed quantity of creosote, according to Dr. G. C. Decker, entomologist, Illinois Agricultural Experiment Station and the State Natural History Survey. While this is twice the amount available last year, the material will be rationed to make sure that all counties get a fair share.

Counties may place orders and receive delivery on 5, 10, or 15 tons of dust, depending upon their potential needs. Additional quantities will be released to the counties only on evidence of immediate need. In no case will individual counties be permitted to obtain more than their pro rata share of the total supply until it is evident that other counties will not need or use their quota.

It is recommended that dinitro dust be rationed at a rate not to exceed 100 pounds of dust for each 80 rods of barrier.

The federal government supplies dinitro dust at central warehouse points and it is to be given free to farmers except that a small charge may be made to cover expense incurred in handling and distribution.

Warehouse points have been established in LaSalle, Champaign, Salem and Springfield as well as at the mixing plant in Quincy. The Adams County Shipping Association in Quincy operates the mixing and bagging plant.

Creosote will be available at plants in Chicago, St. Louis and possibly Terre Haute, Ind. Farmers will be required to provide their own containers and to cover the cost of transportation and handling.

Dinitro dust was developed at the U. of I. experiment station and was tried out for several years prior to 1942 at the university farms. It differs from creosote in that dinitro dust kills chinch bugs while creosote repels chinch migration from small grains to corn.

IFS EMPLOYEE DIES ON OKINAWA

Illinois Farm Supply Company has received word of the death of Francis William Campbell who was killed on Okinawa, April 9. Campbell, a sergeant major in a coast artillery battery, was formerly employed by IFS as an accountant at Kingston Mines.

F. W. Campbell

Sgt. Campbell had passed his exams for ASTP training but the program was suddenly curtailed and he was shipped out. His first stop was Hawaii. He later distinguished himself in action on Leyte, and after a short rest period was sent to Okinawa where he met his death.

Hugh James, Champaign county farmer, demonstrates a homemade weed cutter which won him the top award among 516 devices exhibited at 24 labor-saving shows held during January and February over Illinois.

☆

WEED CUTTER WINS STATE PRIZE

HUGH JAMES, Rantoul, Champaign County Farm Bureau member, was named state winner for his weed cutter exhibit from among 516 labor-saving devices shown at 24 labor-saving shows in as many Illinois counties during January and February. He will receive a $100 war bond.

Other winners designated were: C. R. Rogers, Maroa, Macon county, exhibiting a power tractor scoop, awarded a $50 war bond. Erwin Gehlbach, Lincoln, Logan county, a self-feeder filler; William Staff, Pittsfield, Pike county, a power garden tractor and lawn mower, and J. B. Stouffer, Sterling, Whiteside county, a hay bale loader, each received a $25 war bond.

Winners for displaying electrical exhibits were: Arthur Prasse, Freeport, Stephenson county, an elevator, $50 war bond; Norman Riegel, Peotone, Will county, a water heater, $25 war bond, and Clarence Bull and Delmar Decker, Danforth, Iroquois county, a hack saw, $25 war bond. Prizes were made available by the public service companies.

Thirty-two $25 war bonds had previously been given to county winners at the time of the county exhibits.

The committee selecting the prize-winning exhibits in the state contest were: E. W. Lehmann, head, agricultural engineering department; T. J. Shambaugh, Cerro Gordo, Piatt county farmer who assisted in planning and conducting the various county shows and exhibits, and W. D. Murphy, assistant state supervisor, emergency farm labor program of the extension service.

A total of 19,927 persons attended the 24 county shows held as a means of showing how farmers and homemakers had contrived to "beat the labor situation." As a result of the shows, a total of 9,000 bulletins and circulars were requested from the College of Agriculture as more information on labor-saving machines and appliances was sought.

Nation-wide publicity resulted from the series of shows with many requests addressed to the agricultural engineering department for blueprints and plans of many of the outstanding exhibits. Plans are available on a portable motor, electric lamp chick brooder, phosphate and limestone spreader, baled hay elevator, emergency or temporary silos, power post-hole digger, poultry equipment, labor-saving hog equipment, self-feeders for hogs, and the weed cutter.

Sorry—Our Error!

In the May issue of the IAA Record, an error was made in the spelling of the name of Robert R. Copper, recently hired as plant breeder for the Producers' Crop Improvement Association, Piper City, Ford county. His name was incorrectly spelled as "Cooper."

Copper is a graduate of the U. of I. College of Agriculture and formerly served as assistant professor of agronomy extension, Pennsylvania State College, School of Agriculture.

Take Strawberries, FOR INSTANCE

Strawberries taste good to the corn-minded Illinois farmer, but he would have a hard time making a living raising them. Yet there are men who do extremely well raising strawberries, for they have specialized in them . . . done nothing else for many years. * * * That's just the way it is with your friendly Farm Bureau insurance man. He has devoted to insurance the same study over a period of years that you have to corn or to livestock. He knows life insurance and what it will do for you — knows it from the ground up. More important, he has seen Country Life Insurance help many a farmer over a rough spot in his career . . . seen it pay off a mortgage . . . watched it providing a college education for young men and women . . . prove a life-saver for widow and family when the breadwinner was suddenly removed. Your county Country Life insurance man will be glad to share his very special experience with you, FOR YOUR BENEFIT. Why not review your insurance needs with him — SOON?

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

THE splendid membership of 114,001 as of April 30, 1945 is only 4,443 short of the total of the county long-range goals. In most counties it was contemplated that these goals would be achieved by September 30, 1945.

The long-range county goals are being taken seriously by the county organizations as evidenced by the intense interest shown by representatives from the 92 county Farm Bureaus in attendance at the district meetings just completed. These goals are important and impressive when it is remembered that they were set up and approved by the county organization committees after careful consideration of not only the possibilities of membership within the counties, but also the responsibility of the organization in the future.

It is recognized that some county committtees were more optimistic than others, but the goals do represent their best thought as to the number necessary to carry the program for agriculture in the respective counties.

The long-range goal for your county Farm Bureau is carried on a poster which is prominently displayed in its office. You can help attain it by signing your neighbor.

POINTED REMARKS AT COD MEETINGS (The following are only a few of the good things said by COD's and others at the meetings at St. Charles, Urbana, Hillsboro and Effingham).

"Those who receive our services should be our best salesmen." Leo Mosher.

"I am interested in organization because it is the life blood of Farm Bureau." Jacob Ouwenga, president, Cook county.

"Plans mean nothing unless we get out and work." Jim Hart, Vermilion county.

"To get a man to be a Farm Bureau member should be easy, for it's only good citizenship. Agriculture is the foundation of our government." Bert Downey, Piatt county.

Farm Bureau membership in Iowa gained approximately 2800 during the month of April, swelling the total paid membership to 87,062.

BUTCH WANSTREET, star personal solicitor in Franklin County Farm Bureau's recent membership drive, is the new general agent of insurance and county organization director in Hamilton county.

JAMES POTTER has taken charge of the organization and insurance work in Gallatin county, succeeding Dan Collins, who resigned as of June 1.

Richard O'Dell, Piatt county organization director and general agent, left, and Bert Downey, right, special organization worker, show IAA Organization Director O. D. Brissenden, their campaign map used successfully in signing new members.

Piatt's 100% Membership Plan

IT'S NO ordinary goal that the Piatt County Farm Bureau has set for itself — every farm in the county represented by a Farm Bureau membership. What's more the goal is in sight.

This is the way it started. Back in November, 1944, the proposition was put up to the organization workers. They were asked if they thought it could be done. Forty of the organization workers said they thought it could be accomplished.

Richard O'Dell, county organization director and general agent, enlisted the aid of Bert Downey, a well-known farmer in the county who has been active in farm programs and had served on the county AAA committee, to work with the 40 volunteers.

First step was to make a map of each township in the county listing every farm with the name of landlord and tenant. If either the landlord or tenant was a Farm Bureau member, a red star was placed on the township map where his farm was located.

Armed with his maps, Downey usually was accompanied into each township by a worker from that locality. Most of the prospects showed an interest in the map of their particular township and asked what the red stars meant. When informed that they designated Farm Bureau memberships, the prospect often times was surprised to discover that his neighbor or a number of his neighbors were Farm Bureau members. How did Downey convince prospects that they should join their neighbors in belonging to the Farm Bureau? His story was simple and direct.

We believe, Downey said, that agriculture is the foundation of America, and when we say agriculture we mean the farmers. Then if agriculture is going to do its part in bdiilding a better America it means that farmers should be organized — if we are going to do the job we have to stick together. Also if we believe that we as farmers are the foundation of America we should do something about building our government and shaping its policies. We can do that through the Farm Bureau because it is set up to do the job.

Using these basic facts, Downey worked every day from the first of the year up until March 1, and was assisted by the 40 volunteer workers.

First township to be 100 per cent Farm Bureau was Downey's own — Monticello. There are eight townships in Piatt county. Now there are two that have 100 per cent representation, one township has only one farm not represented by a membership, and several of the remaining townships only lack seven or eight of the 100 per cent goal. In Piatt county, O'Dell estimates that there are about 30 farmers not represented by Farm Bureau memberships.

Yes, it looks as though Piatt County Farm Bureau will make its 100 per cent goal.

But this is not the end. The Farm Bureau board in Piatt county plans to set up an organization with a leader representing each four sections in the county. It will be the responsibility of this leader to correlate the membership in his territory and through a series of educational meetings, in which the leaders are called together, pass on to the farmers in his vicinity pertinent information. This, of course, would also work in reverse. Any problems or criticisms farmers in these four sections may have are to be carried to the Farm Bureau board and these leaders.

In Piatt county, O'Dell estimates that there are about 30 farmers not represented by Farm Bureau memberships.

Yes, it looks as though Piatt County Farm Bureau will make its 100 per cent goal.

But this is not the end. The Farm Bureau board in Piatt county plans to set up an organization with a leader representing each four sections in the county. It will be the responsibility of this leader to correlate the membership in his territory and through a series of educational meetings, in which the leaders are called together, pass on to the farmers in his vicinity pertinent information. This, of course, would also work in reverse. Any problems or criticisms farmers in these four sections may have are to be carried to the Farm Bureau board and these leaders

FIVE DISTRICTS MERGED SUCCESSFULLY INTO ONE

Pupils arrive by bus at the LaHogue Community Consolidated District No. 260 school house in Iroquois county. The district was organized in 1942.

RURAL SCHOOL *Reorganization* TELLS STORY

IF YOU'RE looking for an interesting story of rural school reorganization, you'll find it in the LaHogue Community Consolidated District No. 260 in Iroquois county.

This is the way W. O. Sayler of the LaHogue community tells about it. His is more than a casual interest because he has spent more than 26 years teaching school, with all but one year in Iroquois county. He has also farmed so he knows the farmer's viewpoint.

Before the spring of 1942, there were five grade school districts serving a territory consisting of 17 sections, 16 in a square, with two half sections joining on the south side of the area. One of the schools — the LaHogue school — was located exactly in the center of the area. One of the other schools was joined to the LaHogue structure and today it is serving as the school building for the newly reorganized district.

Two reasons are given for the move toward reorganization. Several of the school buildings in the districts were old and attendance also was down. Willow Twig school had 14 pupils, Plainview 2, Haubach 7, Fulton 7, and LaHogue 7, or a total of 37.

Some of the folks started talking about reorganizing into one district. The first step taken was to canvass the territory. The assessed valuation of each district and the assessed valuation of the proposed district was considered, as well as the two year levy of each district. From these figures an approximate budget for the proposed new district was made which showed that it could be run at a rate of from 65 to 75 cents on the $100 valuation in normal times.

These facts were presented to the parents of school children, and as there seemed to be little opposition, an election was held. About 80 per cent voted for the new district. Some did not vote for one reason or another. After reorganization was voted, one of the old districts sought to withdraw because it had a fair school attendance. However, the district did not withdraw as less than two-thirds voted for such action.

Because of wartime restrictions, the new district did not erect a new building. Instead, the Haubach school building was moved and joined to the LaHogue school. The other three school buildings of the old districts, land and equipment were sold for about $1300. It cost about $600 to move the one building, join it on, build a foundation and put in new floors. While this arrangement was satisfactory under existing conditions, Sayler says it would have been better if a new modern building could have been erected. At any rate the district has a large building fund and it does not levy for building fund.

Attendance in the new district is 47, and two teachers are employed, each taking care of four grades.

The transportation service has been more than satisfactory. In three years, Sayler reports, the pupils were delivered 10 minutes late only once. The school bus collects the pupils in the south half of the district and brings them to school. Then the bus picks up those living in the north half. This arrangement is alternated each month so that no pupil is on the bus more than 45 minutes.

These satisfactory transportation services must be credited to the principal, Wendell Keefe, who is bus driver as well as teacher.

The district furnished all school books for pupils on a rental basis. Rental cost for eighth grade is $3.54 per year, seventh grade, $3.52, sixth grade $2.82, fifth grade $2.76, fourth grade, $2.87, third grade $2.77, second grade $2.62, and first grade $2.62. The rental pays for the books in four years. Advantage to this system is that each pupil has his books on the first day of school. If he moves to another district he does not have books that cost from $8 to $12 on his hands that he may not be able to use.

How has the new district worked out financially? Before reorganization the survey showed that it would take a rate of from 65 to 75 cents on the $100 valuation to run the district in normal times. The district did operate on this rate for two years after it was organized, but the last levy was raised to 90 cents because of the high cost of things in general. This rate gives the district some surplus and it is contemplated that the rate will be less next year, according to Sayler.

Even with the 90-cent rate, it is not above the average levy of the five districts before reorganization.

It is also believed that the people are getting more for their money, Sayler says. None of the five schools maintained before the reorganization met the standards for state recognition, he points out. Now all the pupils can attend a recognized school.

The district receives $13 per pupil per year from the state for instructional purposes and also $15 per year for each pupil, who lives more than 1½ miles from the school house, for transportation expenses.

Valuation of the new district is approximately $650,000 for the 17 sections of farm land. There is one large grain elevator in the district, about four miles of railroad and four miles of high lines.

In conclusion, Sayler says, "I am sure that one cannot find over 10 per cent in the district that are not wholeheartedly for the present setup."

The present school board consists of: Arthur Jensen, President; William Haubach; William Walsh; George Wykoff; Herman Zachgo; Theodore Schoolman; Fred Sipp.

Sayler served as president of the board for three years and retired this Spring preferring to turn the responsibilities over to younger persons.

Keep livestock fenced out of the woods, for their own benefit. The woods will be better off too.

Give your planted trees a chance to grow by cultivating them and protecting them from fire and grazing.

CONFIRM DEATH OF FORMER IAA EMPLOYEE

The death of Lt. Harry H. Just, Jr., 21, former IAA and Country Life employee, missing in action since June 7, the day after D-day, has been confirmed by the War Department, according to word received by his parents, Mr. and Mrs. Harry H. Just, Sr. Lieutenant Just was one of a group of U. S. Eighth Air Force fliers who lashed at Nazi gasoline trucks rushing to bring supplies to the invasion battle area on the Western Front.

Lt. Harry Just, Jr.

A recent news item in the *Chicago Times* stated that Lieutenant Just's wife would be presented with her husband's awards, the Distinguished Flying Cross and Air Medal with one silver and two bronze Oak Leaf clusters.

Other IAA gold star servicemen include Horace O. Bunting, Kenneth Kirby, and Richard Leskovar.

PERRY BECOMES 99TH COUNTY FARM BUREAU

At a meeting May 10, William Timpner, Pickneyville, was named president of the incorporating board of directors of the Perry County Farm Bureau. Perry will be the 99th County Farm Bureau in Illinois.

Other incorporating officers are R. L. Bigham, vice-president, Cutler; Henry O. Winter, treasurer, Pickneyville, and Allen Reuntree, secretary, DuQuoin.

F. E. Longmire, representing the Extension Service of the U. of I., was present at the May 10 meeting and the Memorandum of Understanding between the Farm Bureau and Extension Service was signed. John Moore, assistant director of organization for the Illinois Agricultural Association, was present at the signing of the agreement between the IAA and the new County Farm Bureau.

The Perry County Farm Bureau has 122 members signed and will receive by transfer from the Jackson-Perry County Farm Bureau 243 members. The transfer of members will be as of June 1.

To be effective, the grass in grass-covered waterways should cover all the depressions and somewhat more on the sides. If too narrow, washing often occurs on both sides of the grass. Tillage operations should not destroy the grass.

This is the dramatic June Dairy month poster that is being used by stores, restaurants, etc., and is one of the many pieces of promotional material being used in a campaign to bring a more favorable public understanding of the essentiality of dairy foods and dairy manpower.

Present at the signing of the German unconditional surrender at Rheims, France, was a former employee of the Illinois Agricultural Association. Capt. Harry C. Butcher, naval aide on General Eisenhower's staff, is pictured here second from the left in the back row. He formerly served as IAA director of publicity.

By John R. Spencer

The wet and cool weather of April and May has prevented much shipping and spreading of limestone and one result has been the building up of sizable storage piles of limestone at several of the larger quarries.

"The use of liming materials reached an all-time high for 1944, the total amount used being estimated at 64,842 tons. This is still below the amount that should be used annually to keep our soil in the most productive state according to our agronomist". This is a quotation from *Pit and Quarry* magazine and is not for a county but is for the state of Connecticut. Several of the smaller eastern states are listed with usage of agricultural limestone in 1944 over 100,000 tons.

Can limestone test over 100 per cent Calcium Carbonate Equivalent? The answer is "Yes", for the yardstick or measuring device is calcium carbonate limestone which when pure has a C.C.E. of 100 per cent. There are deposits of limestone in some parts of the state in which magnesium carbonate has replaced part of the calcium carbonate and hence is called dolomitic limestone. The magnesium carbonate has a somewhat greater ability to neutralize sour or acid soils (almost one-fifth more by weight than calcium carbonate). We may have native rock containing up to a maximum of 45 per cent magnesium carbonate which with 55 per cent of calcium carbonate would make a sum total of 100 per cent but a Calcium Carbonate Equivalent test of approximately 109 per cent. This, however, is about the top test obtainable from the natural limestone rocks of the state.

lockers

By Frank Gougler

Since there has developed a meat shortage, the Washington office of OPA undertook to draw up new regulations which were intended to bring all locker plants under closer supervision of OPA. Representatives of the National Frozen Food Locker Association and officials of the American Farm Bureau Federation have taken a firm stand against some of these proposed plans.

The secretary of the NFFLA, Albert Guggedahl, in a letter to members on May 15, writes under the heading "New OPA Locker Regulations" as follows: "The proposed regulations, special for the locker industry are out the window at the present time. OPA heads in Washington conceded this point to our National representatives.

"We are as formerly, ruled mainly by ration order No. 16; by slaughtering rules as amended and by all the reports related thereto".

New locker associations continue to be organized. Organizations undetway at present are at Red Bud, Randolph county, Golconda, Pope-Hardin county, Hardin, Calhoun county, and at Anna, Union county. New plants are about ready to open for business at Paris, Edgar county, Charleston, Coles county, Windsor, Shelby county, Noble, Richland county, Steelville, Randolph county, and Metropolis, Massac county. The Randolph Locker Association also has recently purchased a small plant in Sparta from a private operator. The Board plans to modernize this plant and expand it so many more patrons may be accommodated.

The seventh annual meeeting of the Co-op Locker Service of LaSalle county was held May 31 in the Farm Bureau auditorium. Despite the busy season, a fair attendance was had. Manager Wm. Hegenbart gave a splendid report. An election was held and F. A. Gougler of the IAA was the principal speaker.

When making hay this year, cut in the late afternoon. This produces hay with higher nutritive value than when cut in the morning. Wind row as soon as wilted, put in barn as soon as dry. Cut and cure hay only in dry, hot, fast curing weather, to save Vitamins A and D.

WELL WHADDA YA KNOW!

—ABOUT BLUE SEAL FLY SPRAY

POWERFUL KNOCK-DOWN AND REPELLENT PROPERTIES.

KILLS ON CONTACT—CONTAINS TWO EFFECTIVE INGREDIENTS WHICH KILL FLIES.

HARMLESS TO ANIMALS AND HUMANS, BUT DEADLY TO FLIES.

BARN-TESTED — BLUE SEAL FLY SPRAY WAS DEVELOPED THROUGH MANY TESTS IN DAIRY BARNS.

LABORATORY TESTED — HERE, RESULTS OF BARN TESTS WERE STUDIED AND FORMULAS PERFECTED. QUALITY CONTROL TESTS ARE ALSO MADE HERE.

IT SOOTHES AND KEEPS COWS FREE FROM FLIES DURING MILKING.

REPELS FLIES EFFECTIVELY FOR FOUR TO EIGHT HOURS AFTER APPLICATION.

BLUE SEAL FLY SPRAY IS AVAILABLE IN ONE GALLON DRUMS OR IN QUART CANS. THE LARGER SIZE IS MORE ECONOMICAL.

IT'S SOLD ONLY BY YOUR BLUE SEAL SALESMAN OR YOUR FARM BUREAU SERVICE CO.

The FARM FRONT ROUNDUP

PRESIDENT TRUMAN on May 23 accepted the resignation of Secretary of Agriculture Claude R. Wickard and nominated Rep. Clinton P. Anderson, Democrat, of New Mexico, to succeed Wickard. Wickard was nominated as director of the REA. At the same time President Truman announced that Marvin Jones would resign his post as head of the War Food Administration and would return to the Federal Court of Claims from which he has had a leave of absence. The President said that the work of the WFA would be merged with the Department of Agriculture. Wickard's resignation will become effective when he is confirmed as REA administrator. Judge Jones' resignation will become effective June 30. Representative Anderson, 49, is chairman of a special House committee that has been investigating the food situation. He is a native of South Dakota and went to New Mexico more than 25 years ago. He entered Congress in 1940. He built up a successful insurance business in New Mexico and owns a 1000 acre farm in the Rio Grande valley just outside Albuquerque where he has a large dairy operation and raises Hereford cattle. Two other cabinet resignations accepted by President Truman on May 23 were those of Attorney General Francis Biddle and Secretary of Labor Frances Perkins. The President nominated Thomas C. Clark, Dallas, Tex., now assistant attorney general, as Biddle's successor, and Judge Lewis B. Schwellenbach, Spokane, Wash., as secretary of labor. The three cabinet nominations are subject to confirmation by the Senate.

REMOVAL OF the 300-pound top limit on the weight of hogs for which support prices are effective was announced May 21 by War Food Administrator Marvin Jones. Under the broadened program, prices will be supported until Sept. 1, 1946 at $13 a hundredweight, Chicago basis, for all good and choice barrow and gilt butcher hogs regardless of weight. Increase in the hog support price from the previous $12.50 to $13 a hundredweight, for good and choice butchers up to 270 pounds was announced on April 11, 1945. The top limit on support weights was raised to 300 pounds on April 25. This top limit is now removed.

FEWER PERSONS were working on farms on May 1 than the previous record low for that date a year ago, the USDA reports.

FEEDERS OF beef cattle will receive a payment of 50 cents per hundred pounds on AA and A grade cattle sold for slaughter weighing 800 pounds or more which have been owned by the seller for 30 days or more. This program became effective May 19, and CCC will make the payments. Director Vinson of the Office of War Mobilization and Conversion also announced at the same time that there would be no downward revision in the over-riding ceiling prices for beef cattle without six months advance notice.

FARMERS WILL receive special acreage payments as an inducement to harvest legume seed in a program announced by the WFA. In addition, payments of 2½ cents per pound will be made for alfalfa and alsike clover seed, and 3½ cents per pound for red clover seed, harvested and sold into commercial channels before Dec. 31, 1945.

REA BORROWERS in Illinois have plans for a $19,500,000 postwar program, according to REA officials. It is designed to bring electricity to 42,700 unserved rural consumers within three years after materials and manpower become available for large-scale power-line construction. Fifteen million dollars would be used to build distribution lines and $4,500,000 to finance generation, transmission and other facilities.

PRICES FARMERS get for eggs will be moderately higher in 1945 than in 1944 when the average price was 33.8 cents per dozen, or 93 per cent of parity, USDA reports. This ought to be good news, if it comes true. Farmers have been considerably puzzled over the prices they hear quoted that consumers are paying in the cities, and what the farmer is actually getting for eggs.

USDA REPORTS that its research laboratory at Peoria has succeeded in producing 90 to 95 gallons of liquid motor fuel from a ton of corncobs. A semi-commercial plant is to be built in Peoria in about two months to develop fully this project. Dr. E. O. May, chief of the bureau of agricultural and industrial chemistry, says "The Department has only a part of the operating and economic answers on the conversion of these farm wastes into useful industrial products. Cost figures to establish final economic feasibility on a commercial scale will not be available until the process has been tested in the semi-works plant that is being constructed . . . ."

ORDERS WHICH require farmers to obtain certificates of eligibility from county AAA committees in order to apply for electrical extensions and connections have been revoked as of May 12.

PRODUCTION QUOTAS limitation on manufacturers of farm machinery and equipment and repair parts will be removed effective July 1, WPB announced May 17. Large producers, however, must obtain an approved schedule for each item they plan to make after July 1.

MORE THAN 21 million bushels of corn were sold by farmers to the government under the WFA's corn purchasing program which ended May 1. Corn purchases in Illinois under the program amounted to 5,392,783 bushels.

DAIRYMEN BOOST MILK PRODUCTION

That dairy farmers are responding to the war request and demand for more milk production is evident with the following facts obtained from reports of the respective cooperatives and milk market administrators upon these markets.

Milk receipts upon the Chicago market for April 1945 were 8.32% above those of April 1944, and this milk was produced by approximately 1% less dairymen. April 1945 milk production was 5.65% above March production. The tremendous increase in milk production in the Chicago milk shed is shown by the fact that milk receipts on the Chicago market for March 1945 as compared with March 1940 were 33.84% greater. The number of producers for this same period of 5 years was only 5½% greater, or an increase of 917 dairymen. For the same period (March 1940 as compared with March 1945), Class I sales in the Chicago market (bottled and wholesale milk) increased 44% while Class II sales (cream) decreased 3½%, and Class III and IV sales (evaporated, condensed, dry milk and cheese) were 61% greater.

In the St. Louis marketing area, local milk production in April 1945 as compared with April 1944 was 12.99% greater. April 1945 production was 6.47% greater than March 1945. The April 1945 production was 16.79% greater than that of April 1943. Class I milk sales in the St. Louis market in April 1945 were 6.10% above April 1944 and 7.78% greater than in April 1943.

In the Quad-Cities marketing area (Davenport, Moline, Rock Island, East Moline), April 1945 milk deliveries were 14.78% above those of April 1944 and 9.914% above those of March 1945. April 1945 deliveries were 27.06% above those of April 1943. The number of milk producers supplying the milk for the area in April 1945 was 7.105% above April 1944 and 10.65% above April 1943. Class I milk sales in the area (bottled and bulk milk) were 6.27% higher in April 1945 than in April 1944 and 15.25% higher than in April 1943.

April 1945 milk production in the United States totaled 10.8 billion pounds, exceeding that of April 1944 by 470 million pounds and exceeding the ten-year April average production by 1.5 billion pounds. April 1945 milk production was the largest production ever recorded for that month.

Almost 65 billion pounds of milk was sold wholesale in 1944, compared with 44 billion pounds in 1939, according to the Bureau of Agricultural Economics of the U.S.D.A. In 1944 66% of all milk was sold as whole milk from farms, as compared to 52% of sales as whole milk from farms in 1939.

Total cash farm income from dairy products in 1944 was $2,969,361,000. In addition dairy farmers received production subsidies amounting to $384,418,000 and the value of dairy products used in farm households was $557,336,000. This makes the total dairy return for 1944 of $3,911,115,000. In 1939, the lowest year in the past ten, total returns were $1,686,824,000.

Keep pigs away from lots in which cockleburs are found growing in the small two-leafed stage, in this stage of growth they are poisonous to pigs.

INCREASED
PORK PRODUCTION
with
BLUE SEAL
Summer Hog Supplement

WITH GOVERNMENT requirements setting the pace for pork production, every farmer will want to use the best production methods in getting his hogs to market as cheaply as possible. We support the "Illinois Plan" as being the answer to this problem.

If you have been following this plan, you should be about ready to put your hogs on pasture and supplement. If you haven't followed this plan, now would be a good time to start.

Blue Seal Hog Feeds are formulated to work with the "Illinois Plan." Blue Seal Summer Hog Supplement contains 40% protein and is an ideal supplement for hogs on legume pasture.

Now is the time to start feeding Blue Seal 40% Summer Hog Supplement and get your hogs on the road to market.

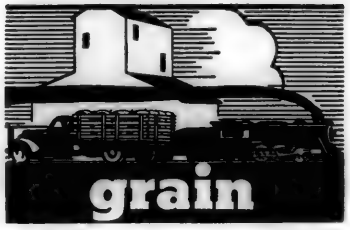
The

ILLINOIS PLAN

The "Illinois Plan" for swine feeding is a system of feeding developed at the university. This plan, as explained in the "I.A.A. Record" of May 1944, is based on feeding four different supplements.

I. A protein supplement to be fed during the gestation and lactation periods.
II. A protein supplement for pigs from two weeks old to 75 pounds weight, fed in the creep.
III. A protein supplement for drylot fattening of pigs from 75 pounds to market weight.
IV. A protein supplement for growing-fattening pigs on pasture from 75 pounds to market weight.

More money for farm pr



By G. H. Iffner

Grain producers in Illinois have at their disposal something like 365 farmers elevator companies. At the end of 1944 about one third were operating as cooperatives under the 1923 Cooperative Act. The other two thirds were operating as stock companies or according to the 1915 Elevator Act.

The following is a list of companies that are operating under the 1923 act for cooperatives: Alhambra Grain and Feed Company; Alta Farmers Cooperative Elevator Company; Altona Cooperative Grain Company; Anchor Grain Company; Assumption Cooperative Grain Company.

Bethany Grain Company; Big Rock Farmers' Cooperative Company; Bluffs Farmers' Grain; Bond County Service Company; Bremfield Elevator Company.

Carrollton Farmers' Elevator Company; Champaign County Grain Association; Columbia Farmers' Cooperative Grain Company; Cooperative Grain and Supply Company of Serena; Cowden Cooperative Equity Exchange; Cruger Farmers' Cooperative Association; and Culver Farmers' Cooperative Company.

Dillsburg Cooperative Grain Company; Eldena Cooperative Company; Earlville Farmers' Cooperative Grain Company; Elmwood Elevator Company; and Eureka Farmers' Cooperative Association.

Fairland Grain Company; Farmers' Cooperative Association of Varna; Farmers' Cooperative Association of Colfax; Farmers' Cooperative Elevator Company of Edwards; and Farmers' Cooperative Grain and Coal of Morton.

Farmers' Cooperative Grain and Supply of Lisbon Center; Farmers' Elevator Company of Biggs; and Farmers' Elevator and Supply of Morrison.

Farmers' Elevator Company of Ransom; Farmers' Grain and Coal Company of Flanagan; Farmers' Grain Company of Kane; and Farmers' Grain Company of Benson and Skelton.

Farmers' Grain Company of Dalton City; Farmers' Grain Company of Dorans; Farmers' Grain Company of Fairbury; Farmers' Grain Company of Gibson City; and Farmers' Grain Company of Palmer.

Ferrin Cooperative Equity Exchange; Ferris Elevator Company; Godfrey Elevator Company; Granville Cooperative Company; and Greenfield Farmers' Cooperative Grain Company.

Havana Cooperative Grain Company; Henry Stark Service Company; Hudson Grain Company; and Jersey County Grain Company.

Kerrick Grain Company; Kewanee Farmers' Cooperative Elevator Company; Keyesport Equity; LaPlace Cooperative Grain Company; Lee County Grain Association; Lenzburg Farmers' Cooperative Grain Company; and Ludlow Cooperative Elevator Company.

Mazon Farmers' Elevator Company; Mechanicsburg Farmers' Grain Company; Montgomery County Farmers' Company; Milla Elevator Company; and Monticello Grain Company.

Morrisonville Farmers' Cooperative Company; Moultrie Grain Association; Mt. Morris Elevator Company; Moweaqua Farmers' Elevator Company; and McNabb Grain Company.

Newark Farmers' Grain Company; Nokomis Equity Elevator Company; Orleans Cooperative Grain Company; Ottawa Cooperative Grain Company; Paw Paw Cooperative Grain Company; and Penfield Grain and Coal Company.

Pearose Elevator Company; Peotone Farmers' Elevator Association; Pierson Grain and Supply Company; Pisgah Cooperative Grain Company; Pontiac Farmers' Grain Company; and Putnam Grain Company.

Richland Cooperative Elevator Company; Rosamond Cooperative Association; Rushville Farmers' Grain and Livestock; Sadorus Cooperative Elevator Company and San Jose Cooperative Company.

Savoy Grain and Coal Company; Sheffield Farmers' Grain Company; Shirley Farmers' Grain and Coal Company; Shields' Cooperative Elevator Company of Benson; and Stark County Service Company.

Sterling Rock Falls Cooperative Marketing Association; Stonington Cooperative Grain Company; and Summerfield Farmers' Cooperative Grain Company.

Towanda Grain Company Cooperative; Trivoli Farmers' Cooperative Company; Tuscola Cooperative Grain Company; and Ursa Farmers' Cooperative Company.

Victoria Farmers' Elevator Company; Villa Grove Farmers' Elevator Company; and Virden Grain Company Cooperative.

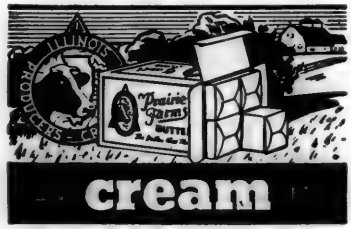
West Lincoln Farmers' Grain Company; White Hall Cooperative Elevator Company; Williamsfield Farmers' Cooperative Association; and Woodson Farmers' Elevator Company.

Farmers' Grain Company of Charlotte; Belleville Cooperative Grain Company; Farmers' Square Deal Grain Company of Morris; McDonough Grain and Milling Company; Secor Elevator Company; and Paxton Farmers' Grain Company.

Cooperative elevator companies limit stock dividends to 8 percent; limit surpluses to actual needs; pay patronage dividends to producers on grain and supplies; and in case of liquidation provide that after stock and dividends are paid for, the balance be distributed on a patronage basis.

The legal department of the Illinois Agricultural Association prepared the reorganization papers for practically all of the above companies and at present is assisting at least 12 other elevator companies with reorganization procedure.

Farmers' companies contemplating reorganization should contact the director of grain marketing of the IAA or their local County Farm Bureau office.



cream

By F. A. Gougler

The four plants manufacturing milk powder are showing splendid increases over last year. During the past seven months, these increases have been: Galesburg, 13.-55%; Mt. Sterling, 39.70%; Carlinville, 56.-45%; Olney, 115.08%.

Ninety percent of this powder is being sold to the War Food Administration. All of it is Government Graded and during April, all powder graded Extras except one lot.

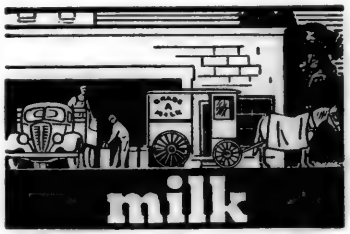
Butter quality of all member plants continues to improve. The fact that more cream is being churned from separated whole milk in addition to gathered cream is improving butter quality. During the past 7 months of the total butter received at the Central plant, 9.3% graded 92 or better and 86% graded 90. Producers Creamery of Mt. Carroll leads all plants in the production of high quality. At this plant, no butter scores less than 90 and nearly half of the butter made during the past 7 months has scored 92 or better.

Practically 100% of the Illinois dairy industry is committed to the national advertising program promoted by the American Dairy Association. This association derives its funds exclusively from milk and cream producers through a deduction based on butterfat sales. From June 1 to 15 inclusive, every buyer of milk or cream deducts 1c per pound of butterfat from each producer's sales. Last year, Illinois dairymen contributed nearly $45,000 toward this fund. Total fund received by ADA amounted to approximately $500,000.

Prairie Farms Creamery of Henry signed a contract recently with a construction com-

pany for a new building which will cost around $55,000. Construction has already started. Some new equipment has been purchased. A large boiler capable of developing 300 H.P. with stoker is to be installed and a double effect stainless steel milk evaporator has been purchased at a cost of nearly $25,000. Three new vats, glass-lined storage tanks and a plate milk cooler will also be purchased.

Since priorities have been cleared for this project, and the contracts have been let, it is expected to start handling milk early this fall.



By Wilfred Shaw

During the first 15 days of June dairy farmers and dairy plant operators in Illinois and 32 other states will raise a fund of approximately one million dollars to finance the activities of the American Dairy Association for the coming year. The American Dairy Association is the national dairy industry's advertising, merchandising and research organization. The Illinois member unit of ADA is Dairy Products Promotion.

The 1944 collections in Illinois for this program amounted to $44,000 and was the largest amount collected in Illinois for this program during the four years of operation. The dairy farmers' cost of cooperating with this program is 1c per pound of butterfat marketed between June 1 and 15. This amounts, roughly, to 10c per cow in the average herd. The 1945 Illinois June collections of American Dairy Association are expected to reach approximately $50,000.

Frank Binno, president of the Kewanee Milk Producers, and his wife were killed in a tragic automobile accident on April 29. Killed in the same accident were Mr. Binno's son and daughter-in-law. Frank was one of the organizers of the Kewanee Milk Producers and a director of that organization since its formation in 1937. He had only missed one meeting of that organization's board of directors and that by misunderstanding. His interest and contribution to cooperative milk marketing will be greatly missed by his organization and by the cooperative milk marketing associations throughout the state. To the one son surviving is extended the deepest sympathy of Illinois milk marketing cooperatives.

The War Food Administration has announced that the supplementary dairy feed production payments to be paid by the government to producers of milk and cream are to be as follows in the Middlewest area: May and June, 25c per cwt. on milk and 10c per pound on butterfat in cream; July, August and September, 45c per cwt. on milk and 13c per pound on butterfat in cream; October, November and December, 1945 and January, February and March, 1946, 60c per cwt. on milk and 17c per pound on butterfat in cream.

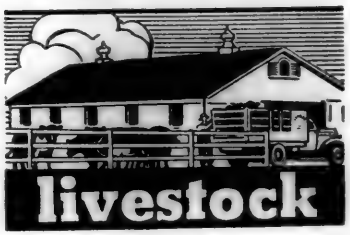
The following are the blended prices received by producers supplying the respective Illinois markets. All are April prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.40
Canton	2.75
Champaign	2.70
Chicago	3.02
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.73
Galesburg	2.65
Harrisburg	2.60
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.69
Moline	2.856
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.00
Springfield	2.85
St. Louis	3.24
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for March, unless otherwise noted:

Baltimore	$3.85
Boston	3.69
Chicago (70 mile zone) (April)	3.02
Cleveland	3.38
Denver	2.87
Detroit	3.50
Indianapolis (April)	3.15
Kansas City	3.40
Louisville (April)	3.08
Memphis	3.58
Milwaukee (April)	3.00
New York City	3.78
Omaha	2.96
Pittsburgh	3.44
Seattle	3.10
St. Louis (April)	3.24
St. Paul and Minneapolis (April)	3.05
Toledo	3.31
Washington, D. C. (April)	3.99

The necessity for keeping the rows of clean-tilled crops on the true contour often is not appreciated. Each ridge acts as a dam and holds water in a long narrow pond.



By S. F. Russell

P. O. Wilson, secretary-manager of the National Livestock Producers Association, says that the new six point meat program announced by Judge Fred M. Vinson, director of war mobilization, will only add to the confusion already existing in the livestock producing industry as a result of detailed and complicated government controls.

He adds that the new program leaves feedlot operators in much the same position — where cattle cannot be fed and finished with any assurance of a profitable margin. However, Wilson points out that Judge Vinson should be commended for his assurance that no downward revision in ceiling or maximum compliance prices will be made without six months advance notice.

Results of a survey made among 8000 feeders in the St. Louis market territory by the Producers Livestock Commission Association shows that: (1) The production of meat animals is under that of a year ago; (2) Marketings will be fairly evenly divided over the next several months.

The decided trend toward light-weight steers was shown by the fact that more than one-half of the cattle reported on feed were under 1075 pounds against 17.7 per cent of medium weights and only 2.8 per cent heavy steers. The report said present price ceilings encourage a short rather than long-time feeding program.

One of the largest individual shipments of wool received by a county wool pool to date is from J. A. Bauer & Sons, Pearl, Pike county. He marketed 8,292 pounds through the Morgan county pool, according to R. J. Ash, manager. Last year, Bauer marketed 5,100 pounds through the wool pool.

If you have wool to market, contact your County Farm Bureau. Don't send it to the Illinois Wool Marketing Association at Chicago. One shipment of wool already has been shipped to Chicago by mistake.

A recent outbreak of buffalo gnats in Williamson county, attacking livestock, especially horses, has encouraged the federal bureau of entomology to release a special order of 25 pounds of the new chemical insecticide DDT to the department of animal pathology and hygiene, U. of I. College of Agriculture. Experiments are going to be carried on with DDT to see how effective it is in combating the buffalo knat.

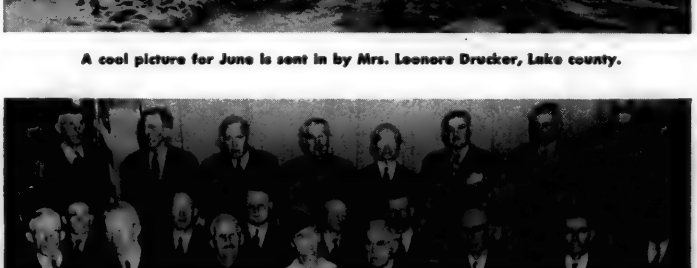
Pfc. Kenneth Fitzsimmons, son of Mr. and Mrs. William Fitzsimmons, Kendall county, was liberated after spending 45 days in a German prison camp.

Quenching his thirst at the water fountain doesn't seem to be the only interest of Jimmy Coomber, 3-year old son of Elwood Coomber, Stephenson county.

What a fine tribute to the parent organization is this plane pictured by S/Sgt. Oscar Grossmann, former manager of Peoria Service Company, now in Italy.

A cool picture for June is sent in by Mrs. Leonore Drucker, Lake county.

These puppies are "just resting," says their owner, Mabel S. Colcord, Bond county.



Thirty-year Farm Bureau members gathered recently at the annual meeting of the Lake County Farm Bureau.

Winner of the $5.00 picture award is Mrs. Edwin Unger, Schuyler county, with this photo of her husband, and Lee Bunfill, her brother, digging for coal right on their farm.

Prairie Farms CREAMERIES

By J. B. Countiss

AT A special meeting of all stockholders of IPC in Chicago, May 17, the name Illinois Producers' Creameries was changed to "Prairie Farms Creameries." The vote was 37,763 for the change, and only 852 against the change.

Since its organization the state company has operated under the corporate name of Illinois Producers' Creameries and all member plants as Producers' Creamery of (name of town).

At the next annual meeting of member plants, the stockholders of the respective plants will be given an opportunity to change their local creamery name to Prairie Farms Creamery to correspond with the state company.

Prairie Farms, unknown 13 years ago, now means on butter what Sterling means on silver. On May 13, 1933, H. W. Enn, Minier, Tazewell county, attending the first organization meeting of the Illinois Producers' Creameries board, made the following motion:

"That IPC adopt the name of 'Prairie Farms' as its brand or trade name."

The board not only unanimously passed this resolution, but realizing the importance of properly safeguarding and protecting this new name, Prairie Farms, they unanimously adopted the following resolution:

"RESOLVED, That no butter be sold from the local member plants of IPC under "Prairie Farms" brand or any other brand with the company's name on it unless it scores 90 score or more."

H. W. Enns, the only remaining member of the original IPC board of directors, has served as president for the past several years.

Throughout the past 13 years of operations, Prairie Farms has become synonymous for quality among the milk and butter fat producers and Farm Bureau members, as well as the housewives throughout the state, who appreciate quality. More than 35,000,000 pounds of Prairie Farms Butter have been sold in Illinois. Sales are now being severely rationed because of lend lease requirements which are 55% of the total amount manufactured for May.

The "Prairie Farms" trade name is copyrighted and registered for dairy products by the State company, whereas the name "Producers" applies to all kinds of products, including dairy products.

Farmers in Illinois now have nearly a million dollars invested in plant facilities for making Prairie Farms high quality dairy products. It is the policy of the state company not only to protect this capital investment, but also the trade name of all its products.

The new plant at Henry, Marshall county, replacing the Producers' Creamery of Peoria, was incorporated under the name Prairie Farms Creamery of Henry, and any other new plants organized in the future will be Prairie Farms instead of Producers' Creamery.

The operations of the member plants have been diversified during the past two years in an effort to produce butter, cheese and milk powder for lend lease, and at the same time to provide a dependable year-round market for producers marketing both separated cream and fluid milk.

Mt. Carroll Creamery, Carroll county, is moving into a new modern plant equipped to handle both milk and cream. Henry has started the construction of a milk and butter plant of the latest design. Olney, Richland county, has just completed an extensive program of expansion for handling milk, including the installation of a new large size milk dryer, a new 150 H.P. boiler, six-can a minute washer, 3,000-gallon stainless steel holding tank and other needed equipment. Carbondale, Jackson county, is planning to equip its plant for handling milk. Mount Sterling, Brown county, recently purchased a new location consisting of four acres of land and a large garage building to be used as storage for milk powder and supplies. Plans are now being drawn by the architect for a new streamlined modern sanitary plant to be erected on a new site of seven acres recently purchased by the Creamery at Carlinville, Macoupin county.

These expanded facilities have become necessary to handle the increased patronage given these plants by producers who are convinced that they can do a better job of marketing themselves through their own cooperative Prairie Farms Creamery.

April 1945 shows an increase of butter fat purchases of 8.44% over April 1944. Butter manufacturing increased 4.45% and milk powder production 56.94%. Continued increases of this kind will mean smaller operating territories and further expansion and diversifications of present plants, and the establishment of additional plants.

Two new directors have been named to the Prairie Farms Creameries board of directors. Arthur E. Meyer, president of the Scott County Farm Bureau, Ia., succeeds William A. Bismarck. The latter represented the Producers Creamery of Moline which has been taken over by the Quality Milk Association. Herbert Schumacher, a director on the board of the Marshall-Putnam Farm Bureau, succeeds Harry Leeper, Fulton county, who resigned because the Peoria Producers Creamery plant was closed. Schumacher will represent the new Prairie Farms Creamery of Henry.

Meyer operates 240 acres in Scott county, Ia., which he owns, and operates an additional 100 acres which he rents. His chief farming interest is dairy and hogs with supplementary interest in feeding cattle. He has been a member of the Quality Milk Association since its beginning in 1930, and a member of the board of that cooperative since 1933. He is now serving his fourth term as president of Quality Milk. He completed two courses of two years each at Iowa State College, Ames, in agriculture and dairy operations.

A. E. Meyer

Schumacher is both a grain and livestock farmer and operates 240 acres of land. A member of the board of directors of the Marshall-Putnam Farm Bureau since 1932 he also is a charter member. He has served on the Marshall-Putnam Farm Bureau dairy marketing committee for a number of years. Schumacher is now rebuilding his dairy herd as he had to get rid of a number of his cows about a year ago when the herd was found to be infected with Bang's disease. Schumacher has served for a number of years as a grain sealer.

H. Schumacher

Pfc. Kenneth Fitzsimmons, son of Mr. and Mrs. William Fitzsimmons, Kendall county, was liberated after spending 45 days in a German prison camp.

Quenching his thirst at the water fountain doesn't seem to be the only interest of Jimmy Coomber, 3-year old son of Elwood Coomber, Stephenson county.

SHIELD YOUR MARKET-BOUND PIG *from* HOG CHOLERA

WHEN that little porker starts his journey through the woods of life, he's potential VICTORY over Tojo . . . and over food shortages everywhere in this troubled world.

But he's as helpless as Little Red Ridinghood unless you shield him against "Old Wolf Cholera."

Protect him on his way to market . . . one shot of that potent Farm Bureau serum and virus will do the job!

REMEMBER: "One Shot" Will Help Bring Victory!

SEE YOUR FARM BUREAU

Melvin Peterson, president of the South Kane group, calls the square dance.

RURAL YOUTH IS HOST TO CITY GROUP

In Kane County a definite effort is being made by Rural Youth and the young people of the city of St. Charles to understand the life and problems of one another.

Rural Youth have been holding monthly parties at the Youth Center in St. Charles since January. The rural young people have shown their appreciation at various times by helping with recreation for the St. Charles young people at the Center. Recently a joint party was held with 120 in attendance, about half coming from each group. Rural Youth led folk games and square dances which were greatly enjoyed by all present.

The Kane County South group celebrated their first anniversary by a parents' and guest night, held at the Youth Center on May 10.

HERE'S How It's Done

☆

Rural Youth demonstrates to city young people how to do the Forward Three square dance. The dance begins with the

Introduction:

Everybody balance and everybody swing
A left allemande, and a right hand grand
(Grand right and left shown above)
Hand over hand, around the ring,
Hand over hand, with the dear little thing.
Meet your partner and promenade
Eight 'till you come straight.

☆

Then follows the Change Call:

1. First couple balance and swing
2. Promenade around the outside ring
3. First lady go half way around again,
4. And forward three,
5. And lone gent follows,
6. Ladies cross over to opposite gent
7. Forward three and back.
8. Meet in the center, circle four and right and left home.

Conclusion:

Same as introduction.

☆

DUCK THE OYSTER is being danced by Rural boys and city girls. The introduction is the same as for "Forward Three" with the Change Call as follows:

First couple out to the right.
And four hands half way around.
Duck the oyster,
Now the clam,
Now the one from fairyland.
Break and swing your opposite
Now your own.
Circle four,
Right and left through and on to the next.

Rural Youth

By
Ellsworth D. Lyon

The Young People's Activities department of the Illinois Agricultural Association filed with the special events division of the U.S. Treasury, the names of the four pieces of military equipment which Rural Youth of Illinois won the privilege of selecting through the purchase of war bonds in 1944.

The four pieces of military equipment with the names chosen for them were the following:

Ambulance Plane: Spirit of Illinois Rural Youth
Ambulance Plane: Farmer's Daughter
Pursuit Plane: Fighting Farmers
Amphibious Jeep: Illinois Rural Youth Puddle Jumper

The first ambulance plane was sponsored during the first six months of 1944, and the name "Spirit of Illinois Rural Youth" was selected by Rural Youth at the Rural Youth Training School at East Bay Camp, near Bloomington last August. The other names were all chosen and voted upon by mail. (This process required some time, but it was democratic and gave each county rural youth group an opportunity to present names).

The amount of bonds purchased by Rural Youth was $309,918.60. The cost of the pieces of military equipment named are:

Ambulance Plane: $110,000.00
Pursuit Plane: $75,000.00
Amphibious Jeep: $5,250.00

This project was sponsored through the Illinois Agricultural Association and the University of Illinois Extension Department.

President John Rollins, Knox county, writes, "We Rural Youthers of Knox county feel we are accomplishing things and advancing. We are building up leaders and having a lot of fun." This group has selected seven working committees: (1) publicity and finance, (2) radio and publicity, (3) membership and hosts, (4) recreation, (5) program, (6) service, (7) music. These committees making up the Rural Youth board to plan and guide Knox county activities called their first meeting for May 29.

Wayne presented "Living After the War" in connection with its May lawn party. The membership drive of this group is gaining momentum.

DuPage county Rural Youthers meet in members' farm homes. Anyone attending can always count on an interesting discussion. Their most recent was entitled, "Should Women Hold War Jobs?"

Jasper reaches new successes in Rural Youth. By careful plans, some reorganization, letters, personal announcement, and by news items in the local papers, nearly 150 young people were brought together to enjoy an evening of education and recreation during the last week in April.

Clark county discussed, "Selecting a Life Partner." Secretary Virginia Fishback reporting upon the meeting remarked, "What a meeting!!" Good looks and cash seem to count much less than any other factors in this serious consideration. This group sponsored a movie for the Red Cross and made $73.61.

Clay county recently reviewed the goals and work of Rural Youth and its relationship to the Illinois Agricultural Association and to the Extension Service of the University of Illinois. Various members and the farm adviser led the discussion. The movie "Three to be Served" was shown.

Northern Kane group sponsored a spring dance at the Hampshire high school during the latter part of April.

Wabash put on its annual banquet in true Bar X western style. Each rancher present introduced his neighbor and told where he was from and what his hobby was.

With the Servicemen

Pfc. Jesse Weedman, a Wayne county Rural Youther, wounded while fighting in Germany, is now in a hospital in Washington, D.C. receiving treatment.

Cpl. Vern Ford, a member of Schuyler county Rural Youth who was seriously wounded in both legs in Germany is now in a hospital in England.

Lt. Jim Stewart of the Hebron group of McHenry county has received the Purple Heart medal for wounds received while fighting in the European War.

Lt. Lyle Borop of near Princeton, a member of the Rural Youth of Bureau county who was wounded March 5 in Germany, is now in a hospital in England.

NEWS and VIEWS

New Fabric Finishes

Peacetime will probably bring greater progress in the production of textile goods than occurred in the 1930-40 decade, which witnessed developments in this field more significant than in any previous period, says Miss Florence King, assistant professor of home economics, University of Illinois College of Agriculture.

New fibers and new finishes for old fibers are being developed by textile chemists bringing such wonders as shrinkage control, water repellency, crease resistance, permanent glaze, starchless finish, fire resistance and moth proofing.

Synthetic resin is a term which is becoming very important in the new vocabulary of finishing agents. There are thousands of these in spite of the fact that they are a comparatively new development.

Resins for textile finishing must be colorless, the water clear and must be able to produce qualities such as crease resistance without injuring the strength or flexibility of the fabric. "Tebilized" and "vitalized" are names applied by the trade to these crease-resistant fabrics and this treatment, when applied to cotton, permanently increases its luster.

This finish also increases the strength of the fabric. It acts as a shrinkage control in rayons, and when applied to hosiery gives a soft, elastic finish, with a greater resistance to abrasion and snagging, and also stabilizes color.

New type cellulose ether is used for impregnating sheetings and cotton damask tablecloths and napkins, causing them to acquire a permanent nonlinting and lustrous finish.

Fabric strength is also increased and susceptibility to mildew decreased. This treatment may be used also to produce the starchless finish for use on print cloth of more open weave. When applied to knitted materials and nets, such as curtain marquisettes, it gives a permanent set and reduces shrinkage to as low as 2 per cent. When applied to rayons, it prevents yarn slippage and reduces shrinkage.

Aid to Dressmakers

If you are discouraged because the dresses you make have that "homemade look," you'll be interested in a circular just issued by the University of Illinois College of Agriculture. It's called "MAKING A GOOD-LOOKING DRESS" and explains through the use of a "half and half" dress, some of the things to keep in mind so that the finished product will be neat, stylish and really professional looking.

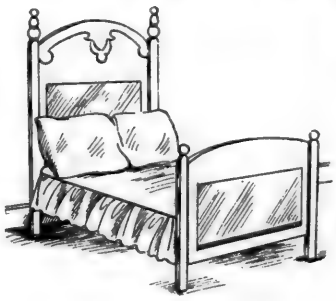
The "half and half" dress was fashioned by Miss Betty Eisenbrandt, a student in the advanced clothing course at the University, under the supervision of Miss Mary Whitlock, clothing specialist.

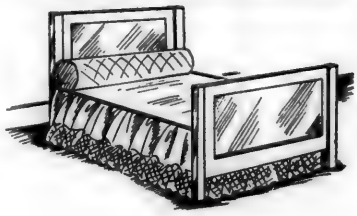
Large, clear pictures used throughout the circular are visual proof of the message Miss Eisenbrandt's study is meant to convey.

For your copy of "MAKING A GOOD-LOOKING DRESS" send a postal card to the Extension Service, University of Illinois College of Agriculture.

Demonstrating proper adjusting of the pattern are left to right: Mrs. Robert Rayburn, Mrs. Fred Mohr, Mrs. Joe Klasen, Mrs. Ernest Mohr, Mrs. Charles Patton, Mrs. Clarence Rayburn, Mrs. John Dunlap and Mrs. Richard Watts.

Undaunted by the scarcity of muslin for patterns, these Mahomet Unit members of Champaign county, Mrs. Robert Rayburn, left, and Mrs. Richard Watts, prove their ingenuity by using the inexpensive victory net to make slip cover patterns.





Now is the time to give that old piece of furniture a new look. From the illustration shown the head and foot boards are relieved of the old-styled four postered effect by cutting down to the panel. The results are well worth the time and energy put forth. For further information write to the Extension Service in Agriculture and Home Economics, University of Illinois, College of Agriculture, Urbana.

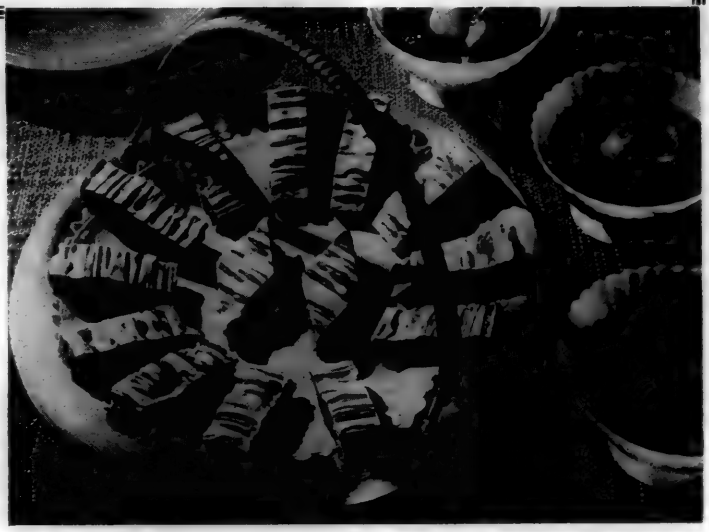
for HOMEMAKERS

HOME BUREAU RECORD

Here's something of a record for Home Bureau folks to try and better. Mrs. Mary Kelly, Canton, has a record of perfect attendance at Home Bureau meetings for a period of 15 years in Fulton county.

Mrs. Kelly joined the Pleasant unit of the Fulton County Home Bureau as a charter member 20 years ago. Since the death of her husband she has had a full-time job with a Canton clothing manufacturing company, and unable to attend afternoon meetings, has changed her membership to an evening unit so that she can continue to attend regularly.

Out of 19 annual meetings of the Home Bureau, Mrs. Kelly has attended 18, her only absence in that period being at the time of her husband's death, according to Mrs. Edith Huffman, Fulton county home adviser.



These coffee bars make an appealing summer snack. See our recipe column.

Organize Home Bureau In Randolph County

Mrs. Lester Campbell of near Coulterville has been elected president of the newly organized Randolph County Home Bureau.

Other officers and directors named at the organization meeting were Mrs. Arthur Weber, Sparta, vice-president; Mrs. Harry Edmiston, Coulterville, secretary; Mrs. Robert H. Hayes, Sparta, treasurer; board members, Mrs. Henry Schnoeker, Steeleville; Mrs. William Sternberg, Schuline; Miss Nora Ernsting, Sparta; Mrs. Adolph Reickenberg, Wine Hill, and Mrs. Will Baue, Sparta.

The organization meeting held in the grade school gym late in May was attended by 250 women from all parts of the county and the principal speakers were Mrs. Kathryn Van Aken Burns, state leader of home economics extension, and Mrs. Stanly Castle, president of the Illinois Home Bureau Federation.

The new Randolph County Home Bureau starts out with a membership of approximately 350. Community units will be established in all parts of the county.

Thoughtful study can reveal easier ways to do any job correctly.

Bond county Rural Youth victory queen, Helen Hunter, poses with her attendants at annual banquet. Left to right are June Hunter, Bernell Baits, Lois Wise, Miss Hunter, Merwin Gaffner, Norma Hockett, and Betty Painter. Farm Adviser H. H. Kuhnen had the honor of crowning the queen.

Recipe Treats

COFFEE BARS

⅓ c. shortening	½ tsp. baking powd.
¼ c. sugar	½ tsp. soda
¾ c. molasses	½ tsp. cinnamon
1 egg	½ tsp. salt
½ c. hot coffee	½ c. raisins
2 c. sifted enriched flour	¼ c. chopped nuts

Cream together shortening and sugar. Add molasses gradually, mixing well. Add egg. Beat until light and fluffy. Add hot coffee. Mix well. Sift together flour, baking powder, soda, cinnamon, and salt. Add flour mixture to creamed mixture, mixing until smooth. Add raisins and nuts. Bake in greased paper lined pan, 11 x 16 inches in moderate oven (350° F.) 15 to 20 minutes.
Yield: 2 dozen bars, 1 x 3 inches.

BAKING POWDER BISCUITS

To glamourize baking powder biscuits, roll out biscuit dough ¼ inch thick and spread with orange marmalade. Roll jelly-roll fashion and cut in 1-inch slices. Place cut side down in greased muffin pans and bake in moderately hot oven (450°F) 12 minutes. These sweet fruity biscuits require no sugar and make excellent tea rolls or accompaniments for tossed vegetable salads.

EDITORIAL

Churchill and Agriculture

DURING these war years, many Americans have heard Great Britain's prime minister, Winston Churchill, in one or another of his major radio addresses. It is of interest, therefore, to read what he said on March 15 while discussing postwar policies at the annual conference of the Conservative Party:

"Agriculture. . .assumes a place in the forefront of post-war policy. A healthy and well-balanced agriculture is one of the mainsprings of our national life.

"I note with interest and sympathy the resolution which this conference carried yesterday on this subject, supporting as the resolution did, a long-term policy which, by means of price stability, would secure an efficient and fair return for his capital and for the worker a standard of living comparable with that in other industries.

A prosperous agriculture brings benefits alike to town and country. It brings health, both physical and moral, to the nation as a whole, and we must cherish it as the first of British industries and nourish all our other industries thereby."

We have some statesmen in America who, like Churchill, realize the basic place which agriculture has in the national economy, and who see that a fair return to capital and labor invested in agriculture, and a comparable standard of living to that of other groups, vitally affect the prosperity of the merchant, the manufacturer, the professional man, and the workingman. It is to be hoped that in the years ahead their influence will be increasing felt. Informed people recognize that much of the present day shortage of food, and chaos in the field of its distribution are the result of immature policies formulated by impractical people. There are problems facing this nation which will demand broad-gauge, common-sense understanding of the interrelationship of farming and all other industries.

Proper recognition of this fundamental interrelationship is vital to the welfare of every man, woman and child in the United States for without it our nation or its people cannot prosper.

Truckers Seek New Privileges

THE trucking industry is again seeking passage of legislation at Springfield which would change our state laws to permit increases in the lengths and weights of trucks and busses.

Under the proposed legislation, the permissible length for a straight truck would be increased from 35 to 40 feet; for a semi-trailer from 35 to 45 feet, and for a combination of vehicles — that is, a truck or semi-trailer with a trailer — from 40 to 50 feet.

The weight limit would be increased from 16,000 pounds to 18,000 pounds per axle. The overall weight limit would be 72,000 pounds.

The Illinois Agricultural Association does not oppose an increase in the over-all length of semi-trailers and combination vehicles up to 45 feet, but it is opposed to any increase beyond 45 feet.

There are safety reasons for the IAA's position in this matter of increasing lengths of trucks. Any motorist knows of the difficulty encountered in trying to pass one of these so-called "highway boxcars" on our state roads, most of which were built for ordinary traffic.

On the matter of increasing truck weights, the IAA is opposed to any such move. Less than one-fourth of our paved roads have been built to take loads in excess of 16,000-pound axle weights. Roads are already rapidly deteriorating under the limits now permitted. If the weight limits are increased to 18,000 pounds per axle, the destruction of our highway system will be speeded up tremendously.

In seeking an increase in truck weights, the trucking interests are asking farmers and the average motorist to pay for the high maintenance and extra costs of highways to carry these excessive weights. Only a small proportional number would benefit from the increased expenditures. Of 1,761, 931 motor vehicles licensed in Illinois in 1945, only 15,742 were trucks, busses or trailers licensed for more than a 20,000-pound over-all gross weight. This is less than 1 per cent.

Under the truckers' proposed bill, trucks with increased weight limits would not be limited to state highways or to roads built to carry such weights, but would be permitted on any road in the state.

Up until recently, the state highway department's attitude has been in line with the IAA's longtime position on the weight limits of trucks, and the department has worked cooperatively with the Association, but now these officials have changed their position and have approved an increase in axle weight limits. The highway department's explanation of its new position is that the federal departments are seeking uniform regulations for all states to facilitate movement of trucks from one state to another.

The IAA's answer to this is that the 18,000-pound axle weight should be permitted only on new highways that have been constructed to carry this weight.

This is the IAA's position. Farmers whose tax money pays a big share of the costs of roads will watch the outcome of the legislative debate in Springfield with high interest.

If the selfish approach of the trucking industry prevails, it will behoove the people to rise up and demand a large increase in license fees for the operation of such trucks in the state so as to meet the tremendous increase in the construction and maintenance costs resulting therefrom. To accomplish this would require an increase in fees for super-heavy trucks to many times what they are now paying.

World's Costliest SCARECROW

Looks just like an ordinary scarecrow. Doesn't it? But it isn't! It's a very special kind. For instance, you cannot SEE this scarecrow. Yet, its old rags flap in the breeze in hundreds of thousands of corn fields. It takes only a second to build, only a thought to create — this scarecrow — yet, it has cost many farmers all they owned to build. You see, this is the scarecrow many farmers erect to scare away *hail!* This sounds silly? Listen! All you need *think* is: "HAIL WON'T HIT ME," and you have built your scarecrow. No, your neighbors won't laugh at you, trying to ward off hail with a scarecrow. This scarecrow standing in your fields is invisible. But if hail *does* strike, and cuts your growing crops to ribbons, and you have no insurance . . . well, neighbors still won't laugh. They'll feel sorry for you . . . and your scarecrow. But how much wiser you will be today to secure some REAL PROTECTION against HAIL DAMAGE to growing crops. Just call in your FARMERS MUTUAL man, and discover how little it costs to be protected. The wise man invests in insurance; the improvident man builds SCARECROWS.

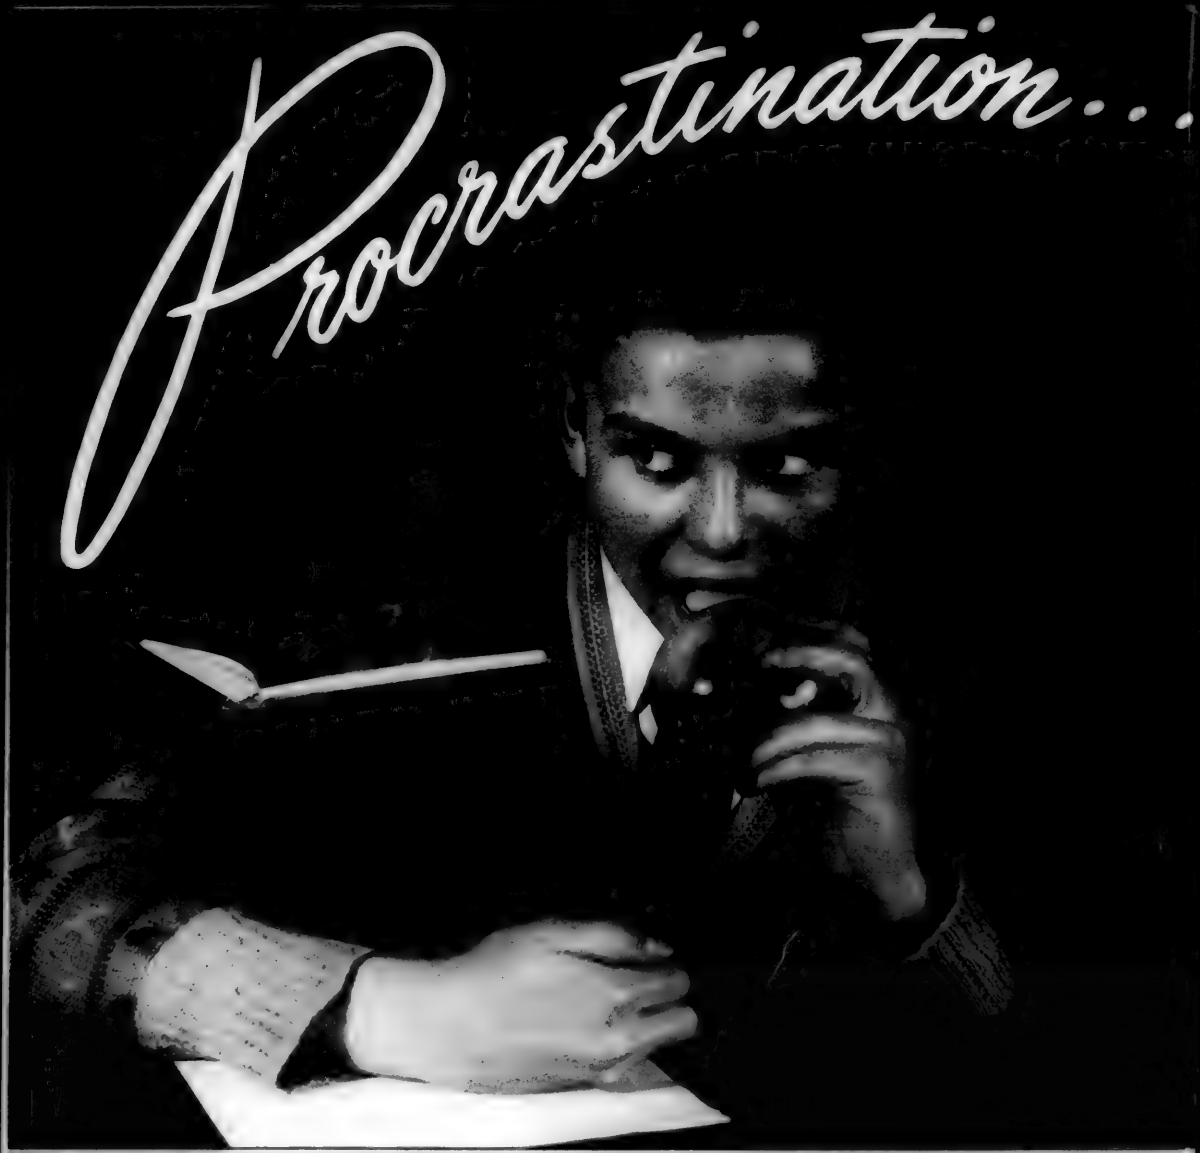
Procrastination . . .



Yes, we are hiding behind a false security when we put off taking action on important decisions. Procrastination is more than the thief of time . . . when it results in inadequate insurance protection, it can cost us money. By forcing us to take long risks it can also cost us peace of mind. Nearly every farmer employs extra help. If they are injured, and if negligence on your part can be established, you are liable. With Illinois Agricultural Mutual insurance protection you need not worry about financial loss or even the legal aspects of such an accident. Your problem becomes our problem. You need not worry or suffer loss, either, in case of a damage suit caused by your stock wandering loose on the highway. You should secure this protection now . . . without procrastination . . . for the cost is surprisingly low. Make a date today to discuss the whole problem with your Farm Bureau insurance man.

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

JULY-AUGUST, 1945 VOLUME 23 NUMBER 7

Secretary Anderson Starts Work

FARMERS will watch developments in the agricultural field with interest in the next few months as Hon. Clinton P. Anderson works into his new job as secretary of agriculture. Secretary Anderson officially started in his new position July 1.

Few complete biographies have been run in the press on the new secretary, so here is his background as reviewed by the USDA.

Secretary Anderson owns and operates a farm of 800 acres of irrigated land south of Albuquerque, New Mexico, and another farm of 640 acres near Mitchell, South Dakota, his native state where he was born Oct. 23, 1895.

Secy. Anderson

On his New Mexico farm, Secretary Anderson maintains a herd of 125 Holstein cattle, both grade and registered, and raises alfalfa, oats, barley, and grain sorghum for feed. The milk is sold on the fluid market. Secretary Anderson belongs to the New Mexico Cattle Growers' Association.

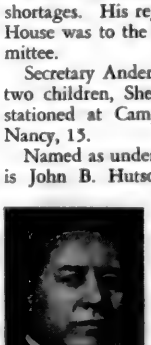
The new secretary of agriculture was educated at Dakota Wesleyan and at the University of Michigan. He is president of the Mountain States Mutual Casualty Company, which he organized in July, 1937, and also operates a general insurance agency in Albuquerque. He has been active for years in civic clubs, and in 1932-33 served as president of Rotary International.

During his career in public service, Secretary Anderson has served as state treasurer of New Mexico, 1933-34; administrator of state relief and field representative of the Federal Emergency Relief Administration, 1935-36; chairman and executive director, Unemployment Compensation Commission of New Mexico, 1936-38; managing director, Coronado Exposition Commission, 1939-40; and was elected in succession to the 77th, 78th and 79th Congresses.

He was chairman of the House Committee to investigate campaign expenditures for the 78th Congress; and this year was chairman of the special committee of the House to investigate food shortages. His regular assignment in the House was to the Ways and Means committee.

Secretary Anderson is married and has two children, Sherburne, 20, a corporal stationed at Camp Crowder, Mo., and Nancy, 15.

Named as undersecretary of agriculture is John B. Hutson, 55, who has been deputy director for agriculture, office of war mobilization and reconversion, since Jan. 1, 1945. Before transferring to the OWMR, he had been both president of the Commodity Credit Corporation and director of production for the War Food Administration. From 1936 to 1940, Hutson was assistant administrator of the AAA. He first started work in the department of agriculture in 1917. Farm-reared Hutson is a native of Kentucky.



J. B. Hutson

Former Secretary of Agriculture Claude R. Wickard has been confirmed by the Senate as director of REA. With the return of War Food Administrator Marvin Jones to his post as judge of the Federal Court of Claims, July 1, authority over both regular and wartime food programs was vested in the Secretary of Agriculture.

Secretary Anderson has named as his executive assistant, Nathan Koenig, a New England man, who is now with the United States News in Washington. Koenig served in the early AAA days on press contact and information work.

The Thief

Of Time... Of Money... Of Security... Of Peace of Mind!...

Yes, we are hiding behind a false security when we put off taking action on important decisions. Procrastination is more than the thief of time . . . when it results in inadequate insurance protection, it can cost us money. By forcing us to take long risks it can also cost us peace of mind. IAA-SPONSORED

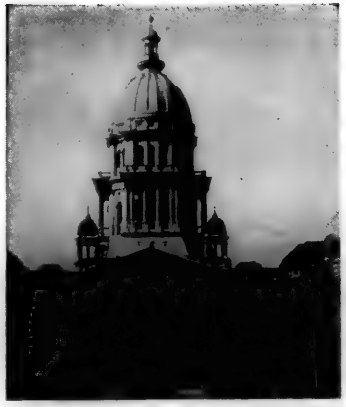
POSTWAR ROAD BILL PASSES



By PAUL E. MATHIAS

AS THE RECORD goes to press, the 64th General Assembly has just adjourned. A full report by the IAA legislative committee, together with the voting record on downstate members of the legislature on bills of major importance to agriculture will be carried in the next issue. In general, legislation sponsored by the Association has fared very well in the session of the General Assembly just closed. However, the Association was unable to secure the defeat of the bills raising property assessments to 100%. This tax program was one of the most far reaching matters considered by the General Assembly and over the years seems likely to result in substantial increases in local taxes. A brief report on a number of important measures follows:

The bill sponsored by the Illinois Agricultural Association and appropriating 15 million dollars from State surplus funds for use on township and road district roads passed. If approved by the Governor, these funds will become available upon termination of the war. Under the legislation, the townships and road districts would do the grading work and the State funds would be used for surfacing work and materials.

Gateway Amendment

The General Assembly has submitted an amendment of the Constitution to be voted on in November, 1946. The amendment would permit future General Assemblies to submit changes in not more than three articles of the Constitution at the same time. It would permit the adoption of amendments by the favorable vote of two-thirds of those voting on the proposition instead of the present requirement of a majority of all votes cast in the election. It further would require that in the future, votes on constitutional amendments shall be cast on a separate ballot or in a separate column on the main ballot. The Association feels that this liberalization of the amending process is necessary in order that the State may adopt whatever changes are necessary to meet the problems of the postwar period.

Party Circle Bills

In order to secure adoption of the Gateway Amendment to the Constitution, the Association joined with others in sponsoring the so-called "party circle bills." Under these bills, the State conventions of the political parties would be requested to take a position upon the Gateway Amendment to the Constitution. If a State political convention did take such a position, then votes in the party circle, i.e., straight tickets, would be counted in favor of the position taken upon the proposed amendment by the respective political party unless the voter crossed over and voted otherwise upon the amendment where it appears in the separate column. These bills passed the legislature. If the Governor permits them to become law, it is hoped that adoption of the Gateway Amendment can be secured.

100% Assessment

Among the most far reaching legislation of the session were bills providing machinery for forcing all assessments of property in the State to full fair cash value. The percentage of fair cash value at which property heretofore has been assessed has varied from county to county.

Under this legislation the assessment would be made by the local officials as at present but the State Department of Revenue would determine the percentage of full fair cash value at which the assessment had been made locally and would then direct that the assessment be increased (or decreased) in an amount necessary to bring it to full fair cash value. Companion bills cut tax rates in half.

Other companion bills provide that for a five-year period local tax rates may not increase more than 5% in any one year nor more than 15% in the five year period. The Association strenuously opposed this legislation. However, the Association was unsuccessful and the program was passed and the key bill has been approved by the Governor. Under the program, bonding power is greatly increased since bonds are based upon assessed valuation. Downstate property has been assessed at an average of about 30% of its full cash value. With the tax rates cut in half, it is obvious that substantial increases in local taxes can result. In many instances the local taxing officials will have greatly increased taxing powers. Tax payers residing in these taxing units can protect themselves only by protesting to these local tax levying authorities against any increase in taxes. This program does not become effective until January 1, 1946 and will not affect taxes levied in 1945.

Trucks and Busses

Bills were passed which increase the maximum length of trucks to 45 feet and also raise the speed limit for trucks. The bills further would increase the maximum axle weight from 16,000 to 18,000 pounds per axle upon hard surfaced roads which are designated by the Division of Highways as adequate to carry these heavier loads or which are designated by the Division of Highways as obsolete and in need of rebuilding. The Association made a

strenuous effort to limit the use of the increased weight to these designated highways.

Bangs' Disease

The General Assembly passed bills designed to encourage calfhood vaccination against Bangs' disease and to hasten the elimination of this disease. Effective July 1, 1947, all breeding and dairy stock sold in the State, except for slaughter, will in effect be required either to originate from a clean herd or to be tested for Bangs' disease within thirty days prior to the date of sale. The legislation also sets up an advisory commission to cooperate with the Department of Agriculture in the making of rules and regulations concerning animal disease control.

State Aid for Schools

Legislation was enacted which substantially increases the State's contribution to schools. The State's contribution to transportation of school pupils was also increased. The General Assembly also enacted legislation providing for official county school surveys in those counties electing to make such surveys, as is described elsewhere in this issue.

Feed and Fertilizers

Legislation was enacted increasing the requirements for both commercial feeds and commercial fertilizers sold in the State. This will serve to further protect purchasers of these products.

SCHOOL SURVEY LAW

ON OR before Dec. 1, 1945, every school board member in Illinois will have a vote on whether his county will adopt the provisions of the School Survey Bill, which passed the Illinois General Assembly and was signed into law late in June.

The bill was written by the Illinois Agricultural Association and the State Association of School Boards, and had the support of the Illinois Education Association in the legislature.

If the school board members of a county agree to make a survey, then the act calls for the setting up of a county school committee of nine members elected by the board members themselves, five members of which committee will represent the board of director districts, and four, board of education districts. Any committee, if it so desires, may set up an advisory group consisting of one person from each township in the county to advise with and assist the committee. Also committees in neighboring counties are urged to have occasional joint meetings to compare ideas and work out the problems of districts overlapping county lines.

In the words of the act itself, the county committee shall have power and it shall be its duty:

"(a) To study the school districts of the county and their organization for the purpose of recommending desirable re-organization which in the judgment of the committee will afford better educational opportunities for the pupils and inhabitants of the county, more efficient and economical administration of public schools and a more equitable distribution of public school revenues;

"(b) To confer with school authorities and residents of the school districts of the county, hold public hearings, and furnish to school board members and to the public information concerning re-organization of school districts in the county; and

"(c) To make reports of its study and recommendations, including a map or maps showing existing boundaries of school districts and the boundaries of proposed or recommended school districts, concerning the re-organization and financing of the school districts of the county."

Within the space of 18 months the county committee will make a tentative report which will include recommendations for the setting up of some new school districts and the elimination of a larger number of smaller and less efficient ones. Hearings on this tentative report will be held in each proposed new district and the people affected will have an opportunity to consider and recommend changes in the proposed plans. Also copies of the tentative report will be sent to the state commission for its suggestions. The suggestions of both the local people and the state commission are then considered by the county committee in an effort to harmonize broad and long range planning with the special wishes of local people.

The county committee then prepares and publishes its final report and recommendations. Within 9 months after the final report is made an election is called by the county superintendent in each proposed new district. If the vote is favorable, the people involved have a new school district and will proceed, under the law, to elect a school board representative of the larger area. If the vote is in the negative the people will at least, by this time, be convinced of what they do want and can proceed, under the law, to make adjustments more suitable to them.

. . . "AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

THE Long-Range County Goals to be attained by Sept. 30 and set up by the County Organization Committees are now being reported completed by counties in every section of the state.

Thirty-three County Farm Bureaus have made the goals. Many more are in easy striking distance. As of June 1, there were 21 counties within fifty members of their goals.

Others that lack a larger number are making their plans accordingly and will be over, well in advance of the deadline.

IT IS IMPORTANT THAT THESE GOALS BE REALIZED. LET US ALL BE CONSCIOUS OF THAT FACT AND WORK TOWARD THAT END.

"Every industry has two distinct operations: (a) Manufacturing and (b) Selling. Farmers have two distinct operations but they have done little except manufacturing. Selling is most important. Until we can sell we cannot compete. The average Illinois farmer has over $10,000 invested in production machinery on his farm to say nothing of depreciation. The interest of this investment is certainly some sizeable amount. When you ask farmers to invest $15 in a membership in an organization to help look after the selling side some say they cannot afford it. What's wrong with his reason? How much has the farmer put into the selling of his products? Many of our farmers produce and sell $10,000 worth of products each year. Selling at the other man's price, the other man's grade, the other man's weight. Through our cooperatives we are changing some of these programs. By a complete organization many more could be changed to the point where the farmer would have more to say about the price of his products which in turn would give him more net income."

—A. B. Culp in McLean County *Organization News*, July, 1945

Lyman Bunting declared at a recent district organization meeting, "As long as I've lived, the plans outlined today were the best I've heard . . . . We must organize things to get the job done. In the old days, membership went along on faith and hope, but today it is a service program . . . . We must see that the things farmers need are available for them . . . . We are beginning the greatest period of Farm Bureau history if we will just work together."

"After new blood has been injected into organization work, along with good leadership, well planned campaigns, general and personal publicity, etc., etc., there still remains the problem of making an effective personal contact with every prospective member. Chevalier says: "The salesman is the foot soldier of business, and it's the foot soldier who takes and holds a country.'"

—From Summary at Organization School.

In the foreground is a self-typing hay baler described in Professor Shawl's article. In the upper right is a self-propelled combine.

SOME OF THE

NEW THINGS

COMING UP

IN

FARM MACHINERY

WHAT new developments in farm machinery can farmers expect as soon as war conditions permit their manufacture?

Here's what Prof. R. I. Shawl, agricultural engineering department, U. of I. College of Agriculture, has to say on that subject.

The hydraulic lift and control is one of the foremost steps in tractor farming. One manufacturer has hydraulic lift and control for all its implements. Most of the implement adjustment levers are eliminated by this system. Another manufacturer has released information on its new hydraulic lift and control for its small tractor with 20 or more newly-designed farm implements controlled and lifted by this system. The drawbar can be moved up and down for attaching to implements which makes hooking up easier and safer. Manufacturers also promise to have 3-bottom plows attached to and lifted by the tractor hydraulic system.

New pulled plows will have more clearance under the beams for the passage of trash.

Three manufacturers now make plow shares of the "safety razor blade" type, which are low-cost and are thrown away as soon as they become dull. Two manufacturers have replaceable plow points. These new shares and points eliminate all blacksmith work on plow shares which greatly simplifies the farmer's plow problem. There also will be many more models of two-way plows for terracing and contour farming.

Disk plows and Wheatland plows for terracing and general farm planning are likely to be more common.

Other developments to come include the culti-mulcher—a double corrugated roller with spring teeth between front and rear roller gangs and a leveling bar ahead. This machine takes the place of a disk and does an excellent job of leveling, clod crushing, stirring and mulching the ground. It is excellent for preparing the seed bed soon after plowing. A 2-plow tractor pulls an 8-foot width.

Then there is the once over tiller or rotary plow that plows, disks, harrows and levels in one operation. This type of plow has had considerable publicity recently by one manufacturer. It is a type that was used in Europe for many years and has been demonstrated in the United States since 1920 or earlier.

Two small engine-propelled machines of this type varying in width from 14 inches to 2 feet have been used for several years by florists, vegetable gardeners and landscape architects. Machines have power-driven rotary cylinders with knives or fingers which tear up the soil and trash and mix them together. The soil and trash are thrown against a bangboard which drops them to the ground and levels the surface.

Combination corn and bean planters and cultivators have also received some publicity. These are four-in-one machines with a main frame and quickly attachable planter for corn and beans and also cultivators.

Four rows of beans and two rows of

This is a combined field hay chopper mower and ensilage cutter. It will mow and cut green standing hay, pick up hay from the windrow and has an attachment for converting it into a field ensilage cutter. Four manufacturers are making these machines.

Manufacturers of farm implements have now developed a self-propelled corn picker. It looks considerably like the self-propelled combines.

A disc plow used for terracing is demonstrated here.

corn are handled with the machines. One manufacturer's machine plants beans in 18-inch and 24-inch, and corn in 40-inch rows so that the tractor can work in either field without changing the width of the tread of the rear tractor wheels. This combination four-in-one machine costs less than a grain drill for planting six rows of beans.

Manufacturers also are promising a self-propelled corn picker. It will not tie up a tractor for the corn picking season, and it is possible that the machine can be removed from the self-propelled chassis and the chassis used for other farm work.

One new idea that may be tried is a combination corn picker and equipment to crush or shred all stalks and thus kill corn borers. Back in 1926 such a machine was tried out in Ohio and it seemed to do a good job of killing corn borers, yet it never was put into production.

Pickup hay balers that have self-tying equipment, using twine, are now being made by several manufacturers. These are one-man operated machines, and one man in good hay can turn out a good many bales of hay an hour. However, there may be some objection to shipping twine-tied bales. One manufacturer has a new self-tying baler which puts the hay into a tight roll instead of a square bale. It is claimed that these bales are easy to unroll when feeding. A partial self-tying wire baler is being built by one company. It does everything but put the end of the wire through the loop and twist it. One man is required for this job.

A field baled hay loader for use with any tractor is being made by one company. This machine is mounted on wheels and fastens to the tractor. It straightens the bales before picking them up and delivering them to the wagon behind.

Field hay choppers are being built by most implement manufacturers. These machines chop dried or wet hay and deliver it to a wagon from which it is dumped into a blower and elevated into the storage building. This machine makes it possible for one man to make hay by himself if the cutter has a blower, or other means of loading the wagon, which can be controlled from the tractor. Chopped hay requires about one-half as much storage space as long hay.

A field hay chopper mower, and ensilage cutter combined, mows and cuts green standing hay, and picks up hay from the windrow. It has an attachment for converting it into a field ensilage cutter.

Other machines in this line include a hay crusher and mower. This is a tractor-operated machine for crushing or cracking the hay stems at the time of mowing. The rollers do not have sufficient tension to squeeze any moisture from the hay, but the cracking of the stems allows the moisture in the stem to dry out in about half the time normally required. This method gives better quality hay, better colored hay and saves most of the leaves. This machine costs about $1200.

Some of this machinery discussed in this article is now available, and most of it is ready to go into production as soon as war conditions permit.

George D. Miller, Rock Island county, has attracted considerable interest with this self-styled 4-row tractor push planter. He has been well satisfied with the time and labor-saving results it achieved for him on 151 acres of corn planting. It can be backed or turned around anywhere a tractor can go. It is flexible for easy planting through uneven ground. One of the best features is that the operator always has his work in front of him. (Moline Dispatch Photo.)

CURING HAY IN BARN

Plans for curing hay in the barn are now available from county farm advisers and at the U. of I. College of Agriculture. Mow curing in the barn is made possible by blowing air into the hay through tubes installed in the barn. A motor and a fan are the largest items of cost in installing the system.

Specific measurements need to be worked out for each installation and according to plans for the system. Farmers are warned against trying the fast hay-making technique unless they have obtained plans tailored to the mow area of their barn.

Soil Investment Pays *Big Returns*

By DR. R. H. BRAY
Professor of Soil Fertility
U. of I. College of Agriculture

ON THE average, the use of lime and fertilizers is not an expensive proposition on most Illinois soils. It is true that some of our soils are very unproductive because they need good amounts of lime, phosphate and potash and the cost seems out of proportion to the value of the crops now being produced as well as the value of the land. But even these soils are well worth treating if one can manage to finance the original treatment costs to get the balanced fertility program underway.

On such soils the original cost of treatment per acre may average over the first couple of rotations as much as $4 to $5 per year. But the increase in yields obtained may be worth 3 to 4 times as much as this.

On the more fertile soils the cost of fertilization is not problem. These soils are already giving high enough yields so that one cannot afford not to use fertilizers.

After all, a 20 per cent decrease in yields, because either phosphorus or potash or both are not quite good enough, means a decrease of as much as 16 bushels of corn per acre if you have one of those good soils capable of producing 80 bushels of corn. It costs only $2 to $3 per acre per year to increase your average yields 20 per cent. Is 20 per cent of the yield you are getting now worth $2 or $3? Of course it is, and a lot more.

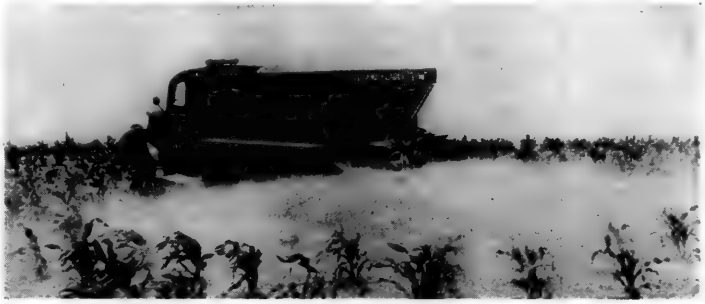
My point is that when you base your lime and fertilizer use on a good soil testing program, you insure your returns by using them where they are needed and in the amounts needed. Under the soil testing program, such as your farm adviser has for you, lime and fertilizer use is not a gamble.

Just how sure is this soil testing program? Can it be applied to all the soils of the state or the Corn Belt? Can it discover deficiencies for lime, phosphate and potash and give each farmer a special lime and fertilizer program which fits his own field? The answer is yes to all questions.

For proof, let us take the experiment fields in Illinois where the response to lime, phosphate and potash have been studied for years. Year after year yields on the treated and untreated plots have been carefully measured on these fields. Can the soils of these fields be tested and the most profitable treatment system be picked out by the soil tests? Again the answer is yes.

For example the soil tests for the Aledo field said the use of just limestone in addition to residues and clovers would be sufficient. The reports of Doctor Bauer and his associates show that, over a period of 30 years or more, the Aledo field has returned $16.50 each year for the use of lime and the residues system costing $1.33 a year. Or take the Bloomington field. Here the test said to use both lime and phosphate along with the use of clovers in the residue system. This field, for over 30 years, has been paying off at the rate of $10.69 per acre each year at a cost of $2.79 per acre per year.

Or take the Toledo field where the tests said lime, phosphate and potash were needed at a cost per year of $5.78. This field has been paying back $17.-15 each year for this practice for the past 30 years or so. Who says lime fertilizers don't pay! Now these calculations are based on prices like 30 cent oats and 50 cent corn, but the lime and fertilizer prices are almost the same now as before the war. At present crop prices the returns for fertilizers will be greater than this.



The practice of spreading limestone on growing corn is expanding rapidly.

However, let us stick to our average crop prices and survey the rest of the experiment fields. As I look up and down the whole list of 23 experiment fields located all over the state, I cannot find a single field where the consistent use of the material recommended by the test values did not double or treble the money invested.

In fact the average cost of treatment for all 23 fields is $3.60 per acre while the average return each year has been $9.53 or almost a 3 to 1 return. This is about $6.00 per acre net, a profit to be taken seriously. Do any of you own any $100 bonds which are returning you $200 to $300 each year or 200 to 300 per cent? Furthermore, these returns on the fields are the average returns for 30 or more years. The larger yields now being obtained with hybrid corn and other improved varieties of crops would increase the returns still more.

However, you cannot guess about fertilizer use. You cannot get these profitable returns unless you use it where it is needed and in the amounts

needed. And soil testing is the only practical means for you to insure yourself of a profitable return from lime and fertilizer use.

Testing your soil is sure to reveal one or more deficiencies which have been holding back your yields. We can now test your soil and tell you what is needed, where it is needed, how much is needed and the approximate increase in yield you will obtain by using either phosphate or potash fertilizers or both. When you use lime and fertilizers as a result of soil testing, you will have a balanced fertility program with lime, phosphate and potash all at the proper balance. Whether or not it will be balanced with nitrogen depends upon how good a legume program you have or on how much manure you return or how much commercial nitrogen you plow under.

Soil testing is not expensive. It costs a few dollars for a 40 acre field and often times this testing is done at a very low fee or even free by the farm adviser. Your farm adviser will also talk over with you the results of the tests and make you definite recommendations and a plan for limestone and fertilizer use which fits your own particular field.

Get in contact with your farm adviser who will give you directions for sampling soil and after it is tested will help you plan a balanced fertility program especially adapted to your own soils' needs and your ability to invest in soil treatment.

Generally speaking all Illinois soils need more active organic matter and nitrogen for highest yields. About 16 million acres still need limestone. About 18 million acres need phosphate. But only 5 or 6 million acres are more than slightly deficient in potash.

There are very few soils in Illinois which do not need treatments of some kind in addition to the universal need for nitrogen and organic matter. But no two soils have exactly the same needs.

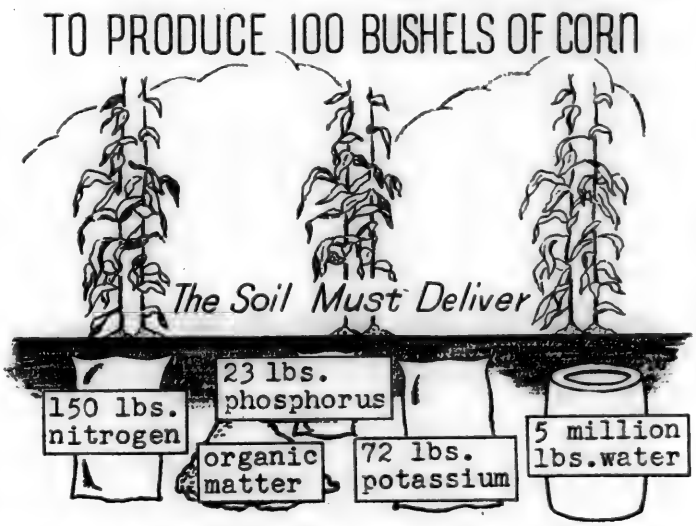
To lime these 16 million acres will take about 50 million tons of limestone which at $2.00 per ton is 100 million dollars.

To get Illinois soils off to a good start as far as phosphate is concerned will require the immediate use of either 11 million tons of rock phosphate or of 1.6 million tons of superphosphate at the initial cost of around 90 to 160 million dollars, depending upon the phosphate used. To get our soils off to a good start as far as potassium is concerned will require the immediate use of 200,000 tons per year of muriate of potash at a cost of 10 million dollars.

This totals up to between 200 to 250 million dollars as the approximate price to pay for starting our soil fertility program off with a bang. A quarter of a billion dollars is a lot of money but 25 million acres of good rich productive soil (which we do not have but which we can have with a good program) is a lot of productive soil in any country.

However, let's not be scared by such totals. What does this mean to the average farmer? On the average this is only $10 per acre as the initial cost to get started, no where near the value of one year's crop. But even this does not give the whole picture because the average cost per year is much lower. The average cost per year for the first 10 years would be only 43 million dollars for the state and the cost per acre for the individual farmer would depend on his own needs, varying from $1 to $5 per acre per year.

Our total crop value for 1942 in Illinois, when prices were not much above average, was over $600 million. The use of 43 million dollars worth of treatment would boost this valuation to over 800 million dollars or a 200 million dollar increase for a 43 million dollar investment.



Entitled "What It Takes to Produce Corn" this drawing was made by U. of I. College of Agriculture extension for use in leaders' schools.

NAME FARM ADVISER

Kenneth Imig, Watseka, has been appointed farm adviser for Iroquois county, succeeding H. D. Van Matre who died April 27.

Imig has been assistant farm adviser in Iroquois county since July 31, 1943. He was graduated from the University of Illinois College of Agriculture in 1936, and had several years' experience on a McLean county farm and as vocational agricultural instructor at Kansas.

FARM ADVISER RESIGNS

Resignation of John L. Walter, farm adviser in Massac county, has been announced effective July 1. He plans to return to his farm in Crawford county. He was graduated from the U. of I. College of Agriculture in 1942, and started work in Massac county in July, 1944.

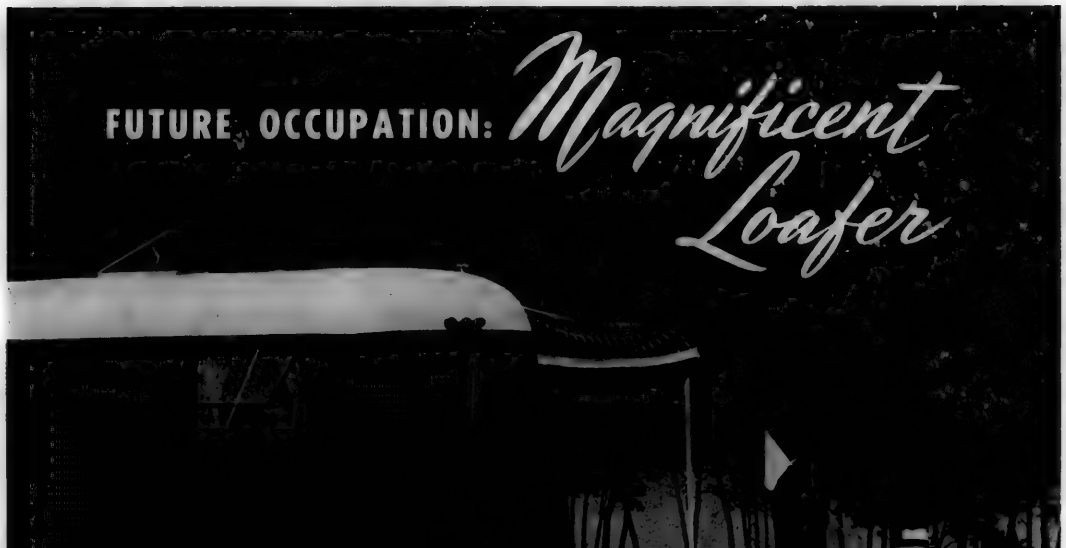
CARROLL TO ENGLAND

Prof. W. E. Carroll, head of the department of animal husbandry, U. of I. College of Agriculture, has arranged with the War department to take charge of educational work in animal husbandry and dairying at one of the American University Study Centers serving American occupation troops in Europe.

He was scheduled to leave Urbana June 30 and expects to be stationed at Shrivenham, England. He will serve a minimum of seven months and possibly a year.

The national milk goal for 1945 is 121 billion pounds, which is an increase of three billion pounds over the production in 1944.

Phenothiazine protects lambs from unthriftiness and death.



WILL YOU BE READY FOR THE DAY WHEN IT COMES?

YOU WOULDN'T be very human if you did not have dreams and plans for the day when you put down your work and become just a plain loafer. Let's see now, what will you do when you retire? . . . yes, travel a bit . . . fish and hunt . . . pursue a hobby . . . time to do the things you've always wanted to do. Retirement of course means that you must have a steady retirement income. Not all of us can be sure that we will have accumulated enough income-producing property or investments to insure financial independence.

The SURE way and the businesslike way is to plan now for a regular monthly income through a Country Life Annuity or Retirement Income insurance policy. It is the plan that is so popular these days. A Country Life Retirement Income plan provides systematic savings — at the same time giving your family very essential insurance protection. Be ready when retirement day comes, by talking it over now with your friendly Farm Bureau insurance man.

LAND PRICES OUT OF LINE WITH LONG-TIME INCOME

THERE is some indication that prevailing land prices, in many cases, appear to be out of line with expected future earnings. Such a trend was cited in the 11 land appraisal clinics held during June and July throughout Illinois under the sponsorship of the U. of I. Extension Service and Farm Bureaus in cooperation with the Federal Land Bank.

U. of I. economists pointed out that not all high bids for land now producing abundantly are out of line, but some bidders for land are putting prices much above the estimated long-time value for agricultural uses.

The purpose of the clinics was to demonstrate the use of a "form chart" as a check list in appraising farm land values.

In the clinic held in Woodford county, which drew representatives from nine other counties, the average estimate of 37 farmers on the 160-acre farm used in the demonstration, was $192, or within $8 per acre of the estimate made by the Federal Land Bank appraiser. This particular farm was considered by many at the clinic to include some of the best land in the district.

These appraisals were based on normal values, but it was reported that recent sales in Woodford county indicate that comparable farms are selling from 60 to 75 per cent higher than the people who attended the clinic think they are worth if they must be paid for out of expected future earnings.

In the clinic held at Champaign, where a typical farm was used, estimates ranged from $132 to $275 per acre, and the average was $162 for 37 persons making valuations.

In contrast to these valuations on this particular farm, which includes land most of the appraisers regarded as above average for the area, Prof. C. L. Stewart furnished some figures on 38 recent transactions in Champaign county. The average per acre price in these transactions which covered a period from Jan. 1, 1945 to March 31, 1945, was $250. These 38 farm sales involved 3600 acres.

There also was a lesson to be gained in the Champaign clinic in studying the variation in gross income of the farm used in the study. At depression prices, the appraisal study showed the gross income would have been $661, at present prices it would be $3984, and at "normal" prices, $1737. A man buying a farm on credit at prevailing prices and trying to pay for it at depression income levels would find himself in a squeeze.

Soil samples were studied by those attending the land appraisal clinics held throughout the state during June and July. Here in Champaign county, left to right, are Dr. R. S. Smith, agronomy department, U. of I., Clark E. Wise, Champaign County Farm Bureau president; J. Q. Scott, Douglas county farm adviser, and Fred Meers, Champaign county farmer and livestock raiser, extreme right. (Courier Photo)

At the Champaign and Woodford clinics, as well as the others held over the state, the appraisers used prices for saleable products which they expect to prevail during the next 25 to 30 years as a basis for their estimates. According to the average of many predictions made at Woodford county, corn prices will average 55 cents and oats 30 cents in this period.

Illinois grain prices from 1930 to 1944 averaged 64 cents for corn, 36 cents for oats, 90 cents for wheat, and $1.08 for soybeans.

YOU WOULDN'T be very human if you did not have dreams and plans for the day when you put down your work and become just a plain loafer. Let's see now, what will you do when you retire? . . . yes, travel a bit . . . fish and hunt . . . pursue a hobby . . . time to do the things you've always wanted to do. Retirement of course means that you must have a steady retirement income. Not all of us can be sure that we will have accumulated enough income-producing property or investments to insure financial independence.

The SURE way and the businesslike way is to plan now for a regular monthly income through a Country Life Annuity or Retirement Income insurance policy. It is the plan that is so popular these days. A Country Life Retirement Income plan provides systematic savings — at the same time giving your family very essential insurance protection. CLUTTERED STAIRS PUT CHILD IN HOSPITAL

IAA REPORTS ON ITS STATEWIDE STUDY OF

TREND IN SCHOOL DISTRICT REORGANIZATION

By JOHN K. COX

IN ORDER to get a better idea of what school reorganization is taking place over the state, IAA department of rural schools relations office has selected a number of counties at random and written to the county superintendents for information regarding recent reorganization in their counties. A number of encouraging replies have been received to date and we are expecting additional ones in the near future. In addition we would welcome information from any county superintendent not thus far contacted by the department or from any other person who can tell us about reorganizations that are taking place locally.

Piatt County

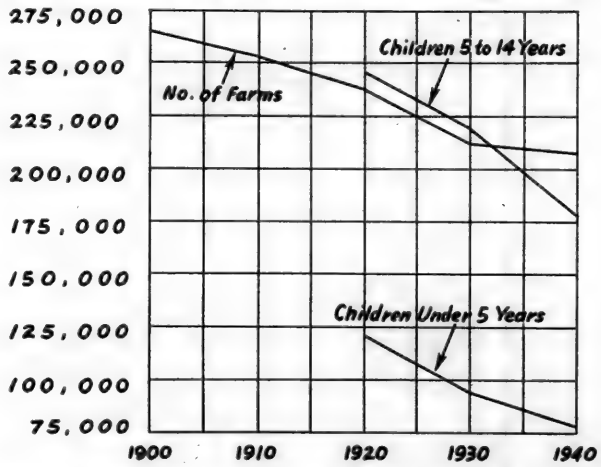
From Piatt county Superintendent McIntosh reports that there have been 7 reorganizations of school districts within the last two years around the centers of Deland, Mansfield, Hammond, White Heath, Cisco, LaPlace, and East Union. Twenty-one districts were eliminated in these reorginizations affecting 650 pupils. Most of these reorganizations took place under the new law requiring an election to be held in each district affected, and a favorable vote in each district before reorganization is affected. Superintendent McIntosh thinks that there is a possibility for a reduction of taxes in most cases, depending upon what additional services the local people want their school to provide. He states that the general attitude of the people affected is very favorable, that the children enjoy being in the larger groups, and that parents like the transportation of their children, and getting them to and from school even in bad weather without exposure to the elements. He adds that there is a possibility of future reorganizations, that six districts voted May 19 on whether to unite with the Cisco grade school and that a discussion meeting had been held at Atwood relative to reorganization. He says he does not urge the districts but that the voters get a chance to ask questions and are impressed with the idea that theirs is the final answer. Under those conditions, he says, the vote is usually favorable and the new district starts with no ill feeling.

Superintendent McIntosh further says, "What we must keep before the people is that no plan works itself. Because you have effected a consolidation doesn't mean that now you can forget all about your schools. Consolidated schools have their problems. There needs to be men and women on the board who will study the conditions in their district, who will insist on getting good teachers, who are willing to supply the teachers and the pupils with the equipment and supplies necessary to have a good school, they must insist on getting good service from the teachers, and insist on fair treatment for all pupils whether they come from the families of the rich or poor.

"Consolidations furnish the possibilities for enriched courses, for better prepared and trained teachers, and for larger social contacts. Whether a district realizes these possibilities depends upon the district and the board."

In answer to the question of "What reorganization of school districts have

NUMBER OF FARMS AND CHILDEN ON FARMS IN ILLINOIS, 1900-1940



The decrease in number of farms is only one of the contributing causes of the decreased number of children on the farms. Decrease in the birth rate and the tendency of older people to remain on the farms are other causes. The number of children on farms is not available before 1920.

taken place within your county within the last two years?", County Superintendent Oscar A. Schmitt of Monroe county answered "None". In answer to the question, "Is there much possibility of future reorganizations within your county?", Mr. Schmitt answered, "None — under the present laws."

Iroquois County

County Superintendent R. P. Roberts of Iroquois county reports there have been seven reorganizations in Iroquois since 1940 and that the Iroquois and the Donovan Community Consolidated school districts have been formed in the past two years. The former school district comprises eight former common school districts and the latter 10 former districts. The Iroquois district will have from 60 to 75 pupils and the Donovan district will have approximately 135 pupils. Also District No. 220 in the south end of Iroquois joined recently with several districts in Vermilion county to form the East Lynn Consolidated District No. 6. This district was organized under Section 121A of the Illinois School law whereby, two directors of the school board may, after proper procedure, submit the question to a vote in their district.

Superintendent Roberts reports that chiefly due to a shortage of good teachers and the fact that many rural districts are now taxing the limit, that there is more than the usual interest in reorganization. He reports that a number of meetings have been held there for the purpose of discussing other reorganizations and that the districts thus far voted on have received the approval of a large majority of the voters.

Marion County

The following quotation from a letter from Paul B. Chance, County Superintendent of Schools in Marion county, pretty well explains the situation in that county.

"We have several schools that are combining next year for school purposes only, but keeping their districts intact. There is a growing interest in larger districts in this county, when road conditions will permit, and I think after the war, when we get better roads, we will have many districts that will want to reorganize. In Marion county there is a small percentage of our total roads that are all weather ones. This is the one thing that keeps township reorganization in Marion county back at this time."

Edwards County

County Superintendent Virgil H. Judge of Edwards county reports that a few rural schools are closing and transporting their pupils to other schools, which step may lead to some future reorganization of districts. Superintendent Judge also states that a county school survey might give valuable results in Edwards county.

Paul Conklin, now serving his second term as president of the State Association of County Superintendents, states that there have been no school district reorganizations in Winnebago county during the past two years and that he has not discovered any possibility of future reorganizations there. He recalls that Winnebago pioneered in consolidation, Seward, established in 1903, being the first consolidation in the state. Then followed Kishwaukee, New Milford, Harlem, and Argyle, then Winnebago, Burritt, and Harrison. Mr. Conklin, along with a representative of the IAA, was asked to attend a county meeting of school board members in Winnebago county on June 7, the purpose being to discuss school problems and reorganization needs in that county.

Cook County

County Superintendent Noble J. Puffer, Cook county, reported three reorganizations in Cook county within the last two years. District No. 1 extending over into Kane and McHenry counties now enrolls 154 pupils in one district instead of six and is steadily growing because of the better educational program and transportation provided. Mr. Puffer reports no lowering of taxes there since the program there is a broader one including music, art and band. Also districts 32, 33 and 34 have been combined into one district with 557 pupils. This new district provides for transportation, music and art courses, and a strong physical education program, including the use of a fine gymnasium. A third reorganization combines districts 62 and 65, which resulted in an enrollment of 1347 pupils. All reorganizations took place under Section 84-A of Circular 308 of the Illinois School Law. Mr. Puffer said that it was his understanding that the people in the first two reorganizations were much better pleased with the added facilities made available to their boys and girls than the last one. He thinks that additional reorganizations will grow out of a program of education and as a result of an increased availability of transportation.

The IAA and its department of rural school relations appreciates the cooperation of the county superintendents in supplying us with this information. A brief discussion of the status of school reorganization in other counties will follow in subsequent issues and we hope the information on the number of districts being combined, the enrollments, the legal procedure, the additional opportunities offered, the reaction of the public to the new programs, and the probable effect on the tax rates will be of value to interested readers.

WHAT'S YOUR SCORE?

How well are you informed on farm affairs? Test yourself on the questions below. Each question is followed by three answers. Select the one which you think is correct. Compare your selection with the correct answers. Allow yourself 10 points for each correct answer. Add your score.

90 to 100 = Excellent
70 to 80 = Good
50 to 60 = Fair
Below 50 = Poor

1. *The average butterfat content of milk is about*:
   3% 4% 5%
2. *A bushel of shelled corn weighs*:
   56 lbs. 60 lbs. 70 lbs.
3. *The parity price per bushel for corn is*:
   91c $1.01 $1.11
4. *Illinois Farm Bureau members organized the Illinois Agricultural Mutual Insurance Company in 1927. It supplies farmers with*:
   Auto insurance Fire insurance Life insurance
5. *Of each 100 Farm Bureau members driving cars, about how many will have an accident this year?*
   10 20 30
6. *U. S. cash farm income for 1944 was about*:
   20 million dollars 2 billion dollars 20 billion dollars
7. *Over a period of years 100 lbs. of live hogs are equal in value to how much corn?*
   12 bushels 15 bushels 20 bushels
8. *The serum and virus required to vaccinate a 35 pound pig against cholera costs about*:
   10c 30c $1
9. *The offices of the Illinois Agricultural Association are located at*:
   Springfield Urbana Chicago
10. *Mastitis is a serious disease of*:
    Poultry Dairy Cows Hogs

ANSWERS

1. 4%, 2. 56 lbs., 3. $1.11, 4. Auto insurance, 5. 30, 6. 20 billion dollars, 7. 12 bushels, 8. 30c, 9. Chicago, 10. Dairy cows.

Doing a Swell Job!

**"Jim, you see how nice that separator runs?
That Blue Seal grease is doing a swell job!"**

Illinois farmers are well pleased with the fine performance of Blue Seal petroleum products. Today, thousands of farmers depend on Blue Seal quality to keep their farm machinery operating at top efficiency. They agree that it's doing a swell job.

HOW'S YOUR FALL AND WINTER SUPPLY?

It's not too early to look ahead and plan now for your fall and winter motor oil and grease requirements. You can place your order now for your fall and winter supply of oils and greases.

PRE-SEASON DISCOUNT

In addition to being assured of an ample supply of oil, you will make substantial savings on your early orders.

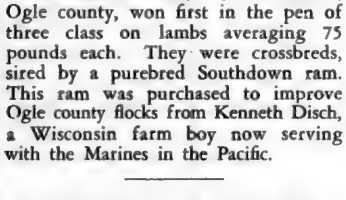
OGLE COUNTY TOPS MARKET LAMB SHOW

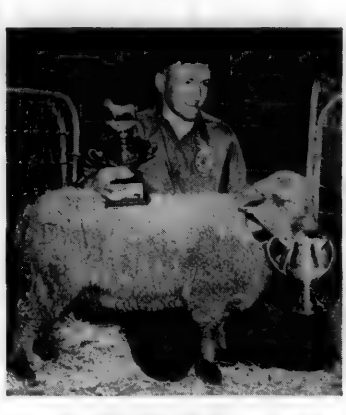
Some 67 boys and two girls from 19 counties in Illinois and two counties in Indiana exhibited 365 lambs at the recent Chicago Junior Market Lamb Show and Sale, with three boys from Ogle county winning all four of the top ribbons.

The champion lamb of the show, a 100-pound crossbred wether, was exhibited by 19-year-old Marvin Gatz, Polo. Gatz also won first prize in the pen of 10 lambs class.

Sherwood Stouffer, 17, Mt. Morris, Ogle county, won first in the pen of three class on lambs averaging 75 pounds each. They were crossbreds, sired by a purebred Southdown ram. This ram was purchased to improve Ogle county flocks from Kenneth Disch, a Wisconsin farm boy now serving with the Marines in the Pacific.



Marvin Gatz, Polo, with his champion lamb at the seventh annual Chicago Junior Market Lamb Show.



Sherwood Stouffer, Mt. Morris, with first prize pen of three lambs.

lockers

By F. A. GOUGLER

A survey was made June 26 of a number of locker plants to learn what steps have been taken to meet OPA's demands with reference to grading beef, veal, lamb and mutton.

In those areas where federal graders are available, most plants are securing the services of such a grader to do all the grading, usually once each week.

In areas where federal graders cannot be secured, permits have been obtained from the chief grader which allows someone in the plant to do all of the grading. Other plants have secured the grading equipment and require each patron to do his own grading and stamping.

One OPA district official in Illinois allows the producer to do his own grading without first applying for a federal grader provided the producer is storing his own meat, in his own locker for his own use.

Another district in Illinois has still a different interpretation to OES Regulation No. 1 which requires all beef, veal, lamb and mutton to be graded. For example, this district office states that if the producer who brings such meat to a locker plant will cut it up himself, it need not be graded. Or if the manager will secure a certificate from the producer showing that the animal from which the carcass or cut was derived, was slaughtered by the farmer or his employee and not custom slaughtered for him, and that the meat is intended for his home consumption, it will be considered as prima facia evidence that the carcass broken by the plant operator and the meat stored in the farmer's locker is for his own consumption. Then the plant operator may break the ungraded carcass or cut. This, of course, tends to make the manager the enforcement officer for OPA.

Cooperative locker companies continue to expand their operations either by building new plants or by enlarging existing plants or both. A good illustration is seen in the action taken by the Henry County Cold Storage Locker Service. Early last year, this association expanded its Kewanee plant until it now accommodates nearly 1000 patrons.

June 1, a new plant was opened for business at Woodhull with approximately 700 lockers and plans have been drawn up for the expansion of the original Cambridge plant to accommodate 775 patrons. These three plants will provide zero storage space for about 2500 patrons.

Already the company has built a 20 x 50 slaughter plant near Cambridge costing approximately $7,500 and farmers in the northwest corner of the county are clamoring for a locker in their community.

Dean Bates is general manager of this cooperative enterprise and is of the opinion that when all of the demands for lockers have been satisfied, then other related projects can be undertaken. He and his board are giving serious consideration to the question of building more slaughter plants to accommodate all of Henry county or to enlarge the present slaughter plant at Cambridge so it will serve the entire county.

EGGS - but WHEN?

This Fall?
Next Spring?

Do you know how many weeks
it will be until your pullets start to lay?

Mrs. Y. Worry Says:

"Oh, I just let the chickens run. They'll start laying when they get ready. I'll feed 'em a little this winter."

We Say:

"Your flock will start to lay by September or October if properly fed during the summer. A ration using Blue Seal Poultry Balancer or Grow Mash will produce well matured birds with a surplus of body weight for heavy winter production."

Uncle Sam Says:

"With the military taking such a large proportion of meats, civilians will require large quantities of eggs and poultry to fill their needs. The demand will be exceptionally high during the winter."

MAKE MONEY *THIS* YEAR!

Poultry and egg markets this fall will continue to be favorable. It is our obligation and privilege as farmers to produce all the eggs possible—and the sooner, the better. Begin now to feed Blue Seal Poultry Balancer and get your pullets into the laying house by fall.

The FARM FRONT ROUNDUP

FARMERS may obtain certificates for Grade 1 passenger tires for use on cars converted to serve as farm vehicles. This is permitted provided regular farm vehicle tires cannot be used and secondhand ones are not available.

SOME 60 million more hatchery chicks broke the shells during the first 5 months of 1945 than in the same period last year, or 6 per cent more output by commercial hatcheries; only 4 per cent below the 1943 record production. Illinois was second among the 10 high states in hatchings for 5 months this year with a figure of 87,592,000.

NEW MILK payment rule provides that hereafter acceptable evidence of milk and butterfat production under the dairy payment program will be limited to regular sales statements issued by cooperatives, dairies, local creameries, etc., showing amounts bought, date of sale and names of buyer and seller. Producer-distributors of course retain the personal certification privilege.

USDA REPORTS that the 1945 spring pig crop totaled about 51,687,000 head, considerably short of the government's goal of 57,500,000, and 7 per cent under 1944. Nearly all the decrease in this year's spring pig crop was outside the corn belt. Illinois' 1945 spring pig crop was reported at 5,379,000 as compared with 5,391,000 last year. June reports for Illinois show 117 per cent fall sows to farrow compared with 1944. Corn prospects may change this figure either way.

TWELVE production credit corporations of the country recently voluntarily returned $6,700,000 of their capital to the revolving fund of the U. S. Treasury, according to C. R. Arnold, Production Credit commissioner of the Farm Credit Administration. This recent payment makes a total of $11,700,000 that the corporations have repaid in the past two years in their program of retiring the government-owned capital in the production credit system.

AN ORDER restricting the distribution or use of corn for the manufacture of alcohol or for export issued by the WFA became effective June 16. The order also prohibits the use of previously acquired corn in manufacturing alcohol or for export, unless the corn was acquired under contracts entered into before June 11, 1945.

MAY FARM INCOME report by BAE shows that farm marketings for that month were 1,390 million dollars compared with 1,416 millions in April. Milk production gained 14 per cent while prices fell 4 per cent; egg production down 4 per cent but prices up 2 per cent; meat animal income unchanged, and fruit income having less increase than usual.

FORMER Secretary of Agriculture Claude Wickard won Senate confirmation to a 10-year term as rural electrification administrator June 22 by a 56 to 6 vote. He succeeds Harry Slattery who resigned last Dec. 1.

WHEAT SYRUP process developed at the USDA laboratory, Peoria, has been taken up commercially and one company has been producing wheat syrup at the rate of one million pounds a month, with market value between 8 and 10 cents per pound. It is believed that the most logical area for production of syrup from wheat is in the Pacific Northwest, where wheat has consistently sold for less than corn delivered from Chicago. Wheat is more expensive than corn as a rule in the Midwest.

WFA HAS been informed that the War Department is releasing 10,000 light and 20,000 medium trucks to meet agricultural needs. The 30,000 trucks will be released Aug. 1 to the department of commerce. WFA is permitted to certify specific needs to the surplus property board, which may direct the department of commerce to sell specific trucks to dealers who serve the needy areas and who agree to sell only to persons holding certificates from county AAA committees.

WHEN SURPLUS TRUCKS are available, county AAA committees will begin issuing certificates entitling farmers and cooperatives to buy surplus trucks in areas where lack of trucks threatens to impair agricultural production. WFA will certify such areas to the Surplus Property Board on the basis of information received from the field.

VETERANS OF this war are given preference over nearly all other prospective purchasers of new farm machinery through an order issued in late June by WFA. Under the order, veterans who can show both the need for and the inability to obtain farm machinery may obtain preference certificates that require dealers to give priority to their needs.

WHEAT LOAN rates on the 1945 crop, recently announced by WFA, will average $1.38 a bushel at the farm. In another government action, producers' ceilings for the 1945 wheat crop have been increased 3⅛ cents a bushel.

WHILE QUOTA restrictions have been removed on the manufacture of new farm machinery, the industry warns farmers not to expect an ample supply of machinery at any early date.

CONGRESS HAS authorized the Farm Security Administration to lend 25 million dollars in the next 12 months to returning servicemen who want to buy family-size farms.

By JOHN R. SPENCER

When limestone was added to manure treatment on the Toledo experimental field in Cumberland county increases in yield of crops ranged from 35 to 300 per cent. The average increase per acre on 25 corn crops was 12 bushels, on 25 oat crops was 12 bushels, on 22 wheat crops 11 bushels and on 24 hay crops 1.1 tons. The highest yields per acre in this period was with a complete treatment of residues, lime, rock phosphate and potash.

The increase in use of rock phosphate for direct soil application in states adjoining Illinois has been interesting in that farmers apparently have been "looking over the fence" at results. Missouri used 1347, Wisconsin 2420, Kentucky 4854, Iowa 6025 and Indiana 13,065 tons last year. Iowa's usage doubled that of 1943 with the comparative figures of 1973 to 3905 tons for rock phosphate (the figures above include 2120 tons of colloidal phosphate). Indiana's usage increased from 6081 tons in 1943 to 13068 last year. Illinois' total for 1944 usage was 218,992 tons — the largest amount ever applied.

A price increase of 10 cents a ton at the mines level, for Tennessee phosphate rock effective Feb. 17 was absorbed by manufacturers. Furthermore distributors who buy finely ground phosphate rock (for direct soil application) will absorb the price increase and continue selling to farmers at present prices, OPA said.

"Corn plants grow best in well drained and aerated soils. They cannot endure wet soils for any length of time and cannot get along without plenty of oxygen for their hard working root system. Few of us realize the amount of work which the roots of corn plants perform. They must anchor the plants firmly and must absorb mineral nutrients in abundant amounts to support the demands of the above ground sun-lighted parts of the plant." — G. N. Hoffer.

A total of 30 limestone quarries were sampled and resampled during the month. The campaign against coarse limestone continues with better material being found during May in that 18 out of 24 quarry test reports received to date show a satisfactory fineness of 80 per cent or more passing an 8 mesh screen. Those producing coarse material are advised along with suggestions for finer grinding and later will be resampled.

On most cultivated land nitrogen scarcity is a bottleneck in the production of high yields of corn and grain, states L. B. Miller, assistant chief, soil experiment fields, University of Illinois College of Agriculture. Legumes, like alfalfa and clovers, are commonly used to restore nitrogen supplies. Nitrogen-fixing bacteria live on the roots of such plants and perform their miracle of transforming atmospheric nitrogen to a form that can be used by plants.

Farm Bureau Soil Testing Labs. Say:

Illinois Soils need POTASH!

A majority of the soil tests performed in the 40 Farm Bureau soil testing laboratories throughout the state show a definite need for potash.

The University has long recommended the use of straight potash to replenish the soils which are low in this important element.

NOW you can get it!

Although the total potash production has not been increased, a very substantial quantity of Muriate of potash has just been made available for direct application to Illinois soils.

We now have Muriate of potash for you ready for shipment *direct* from potash mines to your county. In fact, several cars are now in transit to various sections of the state.

SAVE

ON PRE-SEASON DELIVERY

Substantial savings may be made by farmers who order early. Potash is produced in fairly equal monthly quantities which must be either shipped or stored. Commercial storage is costly and raises the price. Save money by ordering your year's requirement now for storage on your farm. This material is granular—it can be kept in good condition.

If you don't know your soil needs, see your Farm Adviser. If your soil tests show a need for potash, see your Authorized Farm Bureau Plant Food Distributor in your county.

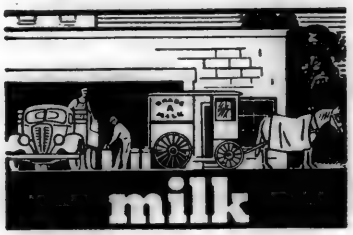
More money for farm pr



By WILFRED SHAW

Twelve St. Louis milk distributors who have held back $163,000 in payments to milk producers since Jan. 1, 1944 have been ordered to pay the dairymen in a decision handed down by U. S. District Federal Judge Rubey Hulen.

The milk distributors brought legal action against the enforcement of the Amended Milk Order which went into effect Jan. 1, 1944 and put the price increases into escrow pending final court action.

The new amendments provided that milk distributors must give credit of up to 95% of the Class I sales to local producers before they can allocate any milk shipped in from the outside to Class I use. The order also raised the butterfat differential to reflect more nearly current butterfat values.

Sanitary Milk Producers was the only milk producer group to favor the Amended Order when it was presented to producers for ballot.

The following milk distributors were enjoined: Pevely Dairy Company, Quality Dairy Company, St. Louis Dairy Company, Biermann's Dairy, Inc., Chapman Ice Cream Company, Clover Leaf Dairy Company, Golden Rod Dairy Company, Knackstedt Farm Dairy Company, Raskas Dairy Company, St. Charles Dairy Company, Valley Farm Dairy Company and Bailey Farm Dairy.

Milk production in the Chicago milk shed reached a new all-time peak on June 10, according to the Pure Milk Association, when the average production per herd reached 575 pounds per day. This was 32 pounds per day above the production per herd on June 10, 1944.

Milk production in the St. Louis area was 8.27% above that of May, 1944 and 4.58% above that of April, 1945.

Most of the other major milk sheds in Illinois are reporting similar increases in milk production over a year ago. The wet cool weather has maintained the high production of milk later this Spring than usual in all markets of Illinois.

Gov. Dwight H. Green, in early June, proclaimed June as Dairy Month in Illinois. In this proclamation Governor Green said, "Dairy products have a vital place in all well balanced diets and are therefore in constant demand. The dairy farmers and the whole dairy industry of Illinois are making splendid records of production, despite the handicaps imposed by war. There is need for better understanding of the importance and proper use of dairy products, to the end that the greatest possible food values may be obtained from the supplies that are available."

The following are the blended prices received by producers supplying the respective Illinois markets. All are May prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

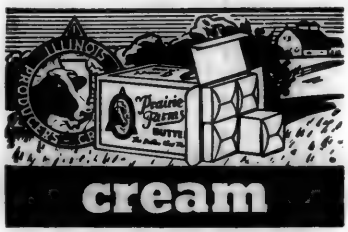
Bloomington	$2.40
Canton	2.75
Champaign	2.70
Chicago	2.95
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.71
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.66
Moline	2.78
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	2.97
Springfield	2.85
St. Louis	3.20
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for April unless otherwise noted:

Baltimore	$3.82
Boston	3.48
Chicago (70 mile zone) (May)	2.95
Cleveland	3.23
Detroit	3.37
Indianapolis	3.08
Kansas City	3.34
Louisville	3.04
Milwaukee (May)	3.00
New York City	3.66
Omaha	2.89
Seattle	3.04
St. Louis (May)	3.20
St. Paul and Minneapolis	2.99
Toledo	3.18
Terre Haute, Indiana	2.90
Washington, D. C.	3.95

A federal milk marketing order becomes effective in the Dayton-Springfield, O., area following the favorable vote upon the same by the producers in the referendum.

At Columbus, O., where a hearing upon a proposed Federal Order was held early in the year the War Food Administration announced that the hearing was to be reopened in late June upon the proposed order for further testimony upon the proposed order.



cream

By F. A. GOUGLER

Thirty-seven states are now members of the American Dairy Association, the association that was organized about six years ago to promote the dairy industry.

Dan T. Carlson, president, predicts that when the final deductions for the current year are received by the National Association, it will approach a million dollars. This money is a voluntary contribution made by individual milk and cream producers at the rate of one cent per pound of butter fat sold during the first fifteen days of June each year.

Carlson reported that for the year 1944-45 only 4⅝% of the total income was expended for membership work and 5⅜% for administrative expenses. The remainder was expended for radio, magazine and newspaper advertising. A liberal amount is also expended for research work.

Those states that have supported the program from the very beginning, according to Carlson, are now approaching 100% support. A year ago, only 18 states were members; this year there are 37.

On hundred thousand pounds of milk daily. That's a lot of milk, but that is the peak volume of milk received daily by Producers Creamery of Carlinville, or 40% over a year ago. Manager F. A. Gourley, reports that this volume has more than taxed the capacity of his plant during the heavy production of May. Through that period it was necessary to send a truck load daily to Mt. Sterling. Furthermore, many producers who wanted to send milk to the creamery could not be accommodated.

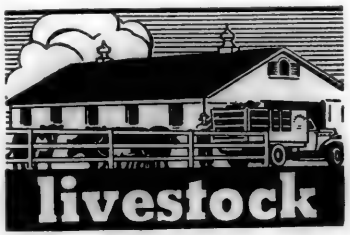
Steps have been taken to remedy this situation. Already, the board of directors has purchased a 7 6/10 acre tract just north of Carlinville at a cost of $3,000, are placing orders for about $60,000 worth of new equipment and are about ready to let a contract for a $60,000 new building, making a total investment of approximately $125,000. Priorities have already been granted for this expansion program.

Producers Creamery of Carbondale is progressing according to plans with its dairy expansion program. Recently, a new six-car garage has been completed. At present, a new boiler room is being constructed to accommodate two boilers. Likewise, a new boiler, stoker, coal tower, and other boiler accessories are being purchased.

Additional new dairy equipment being

purchased will be of the latest design and of stainless steel throughout.

This expansion project is being developed so the creamery will be in a position to serve milk producers in the territory who have never before had an opportunity to market their milk through their own cooperative plant.



By S. F. RUSSELL

Here are the recommendations made at a meeting early in June by the Joint Live Stock Committee representing 134 livestock groups, including the American Farm Bureau Federation, and sent to Washington. The recommendations were made as practical means of increasing the production of beef and pork.

CATTLE

1. We recommend that the extension of the Price Control Act be limited to a period of not to exceed six months from and after June 30, 1945.
2. The present OPA regulations controlling prices and the use of subsidies in the cattle and beef industry have resulted in fewer cattle being fed, with the resultant failure to secure maximum production of beef. No increase in beef production can be expected under existing regulations.
3. Increased feeding of cattle and increased production of beef can be secured if the following specific actions are taken by the government:
   A. Removal of the overriding ceiling on live cattle.
   B. Increase of the compliance maximum price on AA and A grades of cattle at least 50 cents per cwt.
   C. Increase of the ceiling price on AA and A grades of beef in such amounts that the spread between these two grades and the lower grades will be sufficient to justify the feeding of cattle to secure production of beef in volume. . . . . It must be remembered that the greatest increase in beef tonnage will result from the production of AA and A grades of cattle in the feedlot.
4. The industry has been making these recommendations throughout the history of price control. The present shortage of beef is largely the direct result of failure on the part of the government to recognize these fundamental requirements for the production of beef. This shortage will be further aggravated by a continuation of present government regulations.
5. This committee recommends that the OPA undertake immediately to make a thorough study of the problem of subsidy withdrawal, with a view to developing a plan for the gradual and orderly withdrawal of these payments at a time when there is a high level of consumer purchasing power so that consumers will be able to continue to purchase large quantities of beef at prices which will maintain the stability of the cattle industry. . . . . .

HOGS

1. **Floors** — The present minimum price floor of $13.00 per cwt. Chicago base should apply on all good to choice butcher hogs weighing 160 pounds or more. A minimum price floor of $12.00 per cwt. Chicago base should be applied on all weights of good sows and stags.
2. **Enforcement of Floors** — Steps should be taken now to implement and enforce price floors. When the average monthly drove cost to packers falls below $14.00 per cwt., Chicago base, for good and choice butcher hogs, subsidy payments should be withheld on the basis of 2c for each 1c below $14.00, this same deduction to apply to good sows and stags when the average monthly drove cost falls below $13.00 per cwt.
3. **Ceilings** — If ceilings are continued they should be increased to $15.00 per cwt. on all weights of good and choice butcher hogs, Chicago base, and remain at $14.00 on sows and stags for market.
4. **Extension of Price Guarantees** — The announced guarantee by OPA and WFA that price floors and ceilings will not be lowered before September 1, 1946 is commendable, but this period should be extended to December 31, 1946, and any change thereafter in ceiling and/or floor prices shall be announced at least nine months in advance of such change. . . . . .

By L. L. COLVIS

All necessary governmental priorities for the construction of a cold storage plant at Carbondale have been received by the Illinois Fruit Growers Exchange.

At a special meeting early in June of the board of directors of the Exchange, arrangements were made to go ahead with all possible speed in order to get the building erected this year.

Having a capacity of 60,000 bushels of apples, the new building will be erected on lots adjoining the present Fruit Exchange building in Carbondale.

Building plans have been made keeping in mind availability of materials so no tremendous difficulty is expected to arise from this source. The building itself will be the first unit of a larger plan so that additional units may be added in future years if they are needed.

The engineering, construction, and power machinery used will make it the most modern and up-to-date cold storage plant in Illinois.

The main immediate purpose for the plant will be for the storage of apples. It is expected, however, that it might also be used in the future to help care for peak days in peach harvest and strawberry harvest.

Pre-cooling of peaches under some conditions is being given consideration. The directors also have in mind that if the Fruit Exchange takes any part in the development of fruit and vegetable processing in Southern Illinois, they will need refrigeration as a basic requirement.

The idea of owning its cold storage facilities is not a new one with the Fruit Growers Exchange. It has been considered as a necessary part of the organization's facilities for several years, but actual construction had to be delayed because of wartime conditions.

From the very beginning, the directors insisted that when such a building could be obtained it must be one that could serve as a model for cold storage in Illinois. Every feature is planned for efficient use and for the convenience of the growers. Both carloadings and truck loadings can be made simultaneously with the use of power conveyors installed. Careful consideration has been given.

When completed the new building will house the general offices of the Fruit Exchange, which make them more available than they are at present. This will in turn release the present offices for additional storage space for the Fruit Exchange Supply Company.

For peaches sold from June 18 to the end of the season, the maximum f.o.b. shipping point price will be $3.64 per bushel on this year's crop.

The Fruit Exchange Supply Company has been in position to furnish more bushel tub baskets this year than for the past two years.

A small amount of corrective pruning for both fruit and shade trees is necessary each year until the desired form is established.

Soils lacking fertility cannot produce adequate vegetative cover.

Montgomery County Farm Bureau bowling team, left to right, front row, are: Mrs. William Durrett, Evaughn Smith and Esther Bruntjen. Back row: Mary Frkovich and Millie Frkovich.

Ford County Farm Bureau officers and workers lay a new concrete floor in the basement of their new quarters in Melvin. (Pantagraph Photo.)

Recently meeting in Chicago was the preliminary National Youth committee. Illinois representatives are: front row, third from left, Margaret Schertz. Back row, third from left, Ellsworth D. Lyon and extreme right, Franklin Allen.

"Goodnight Daddy!" Evelyn Kay of McHenry county kisses the picture of Pfc. Kenneth W. Hood. He is in the Army overseas.

Illinois Farm Supply Company has purchased these properties of the Benton flour mill in Franklin county and will convert them into a feed manufacturing plant.

In true brotherly fashion, Mervin and Howard share their ice-cream treat. They are the children of Graydon L. Peterson of Bureau county. This picture wins the $5 award. Other pictures on the page win $1 awards. The picture page editor would like more pictures of servicemen and women from Farm Bureau families.

$5 PICTURE OF THE MONTH

INCREASE FARMING ENTERPRISE

THE pork production program of A. K. Golden of Saybrook, McLean county, indicates how many Illinois farmers have increased and improved their farming enterprises through sound breeding, feeding, and marketing practices.

A. K. Golden

An example of this is indicated by 115 head of finished hogs that weighed 299 pounds at seven months of age. These pigs were farrowed between Aug. 6 and Sept. 6 by 18 cross bred Berkshire and Chester White sows, and sired by a purebred Chester White Boar. This was an average of 6.4 pigs per litter.

Seventy-five head of these hogs were marketed at seven months of age at an average weight of 299 pounds. The remaining 40 head were marketed one week later at an average of 304 pounds. All of these hogs were marketed by the Illinois Livestock Marketing Association through the Producer's Stock Yards in Bloomington. They were sold to the eastern packing firm of Arbogast and Bastian at Allentown, Pa. This packing firm indicated that these hogs were of excellent quality.

Golden has had 22 sows farrow 168 pigs since January which is an average of 7.6 pigs per litter. One of these sows farrowed and weaned 11 pigs. Golden has 61 sows yet to farrow before September, which is an increase of 15 sows over his 1944 production. The four year average of 7 pigs per litter indicates careful selection of foundation stock. Golden produces between 400-500 hogs annually on this 250 acre McLean county farm on a livestock share lease basis with his landlord Frank Hubert of Saybrook. All of the livestock produced on this farm is marketed through cooperative channels.

THROUGH SOUND BREEDING!

A feature of Kane county livestock marketing committee's program is its sponsorship of a beef calf 4-H project. Interest in the project makes for shows like this one.

LIVESTOCK MARKETING COMMITTEE ACTIVE IN KANE COUNTY

There's a reason for Kane county showing a gain of 111 cars shipped to the Chicago Producers during the past year. It's largely due to the program of the county livestock marketing committee of the Kane County Farm Bureau which has enlisted the cooperation of the livestock producers.

Perhaps the most important of all the activities of the livestock committee is the sponsoring of a beef calf 4-H project. This project has made the 4-H club show of Kane county one of the most outstanding in the state from the standpoint of interest shown by boys and the encouragement given by parents. More than 2000 have attended these 4-H club shows.

The club project works about as follows. In the fall of the year, an order is placed with the Chicago Producers for delivery of calves suitable for 4-H club purposes. At the time of delivery, the calves are weighed individually and at the time of the club show they are again weighed to furnish figures for the rate of gain contest. The winners in this contest are awarded prizes ranging from $8 down.

Four-H club members are billed directly from the Chicago Producers for their calves. This gives the member some business experience in dealing with his cooperative agency.

A larger percentage of the members insure their calves through the Illinois Agricultural Mutual Insurance Company, thereby learning another lesson about cooperative enterprises.

Another feature of the Kane committee's program is the feedlot tour. In a recent tour more than 2400 head of feeder cattle were counted in one mile square of Kane county. These feedlot tours are popular and average attendance runs at 300.

Members of the Kane county livestock marketing committee are Arthur Lind, Aurora, chairman; Charles Keslinger, LaFox; Ira Whildin, Big Rock; George Dauberman, Kaneville, and Hubert Davis, Elburn.

PLANE DUSTS MASON COUNTY WHEAT FIELDS

An airplane was brought into use for dusting wheat fields of Mason county infested with army worms during late June and the results were highly satisfactory, according to Farm Adviser Ray V. Watson.

Calcium arsenate proved to be the most effective dusting agent, Watson said, with a 100 per cent kill reported in the first field treated. Some 2200 acres of wheat were dusted by plane.

The dusting material used in the first trial was a mixture of poison, bran and oil. However, the mixture failed to work well through the dusting equipment attached to the plane.

Several farmers in the south edge of Tazewell county also secured the airplane dusting service. Farm Adviser Clarence Bayles of that county also prepared some poison bait which was scattered by men riding on a corn detasseling machine.

RURAL YOUTH SHORT COURSES

There will be twelve district short courses sponsored by the department of young people's activities of the Illinois Agricultural Association late this summer. The dates are Aug. 21 to Sept. 7. Beginning at 10 a. m. and running for one day and evening each, there will be workshop courses in public speaking, recreation, parlimentary procedure, and officer training. There will also be a quiz on county Farm Bureau facts.

The leaders of the young people who will be teaching these courses are William P. Sanford, IAA director of sales service, Ellsworth D. Lyon, IAA director of young people's activities and Miss Clareta Walker, extension specialist in Rural Youth of the University of Illinois.

The following is the schedule of dates with the locations where the meetings will be held. All meetings, with the exception of Villa Ridge, will be held in the Farm Bureau offices.

Aug.	21	Newton
Aug.	22	McLeansboro
Aug.	23	Villa Ridge (Grange Hall)
Aug.	24	Sparta
Aug.	27	Carlinville
Aug.	28	Rushville
Aug.	29	Canton
Aug.	30	Bloomington
Aug.	31	Yorkville
Sept.	5	Henry
Sept.	6	Oregon
Sept.	7	Moline

YOUNG FOLKS' GROUPS FORMED IN COUNTIES

Preliminary meetings have been held in two counties to plan programs for young married farm people.

In Rock Island county, two meetings have been held, and four monthly meeting programs have been planned in advance by a group in the county. The next meeting will be held July 13. Elmer N. Searls, assistant professor in agricultural economics extension, will speak on "Financial Planning for the Farm Family," at this meeting. About 25 young couples have indicated an interest in forming an organization in the county.

In Montgomery county, a group of young married couples held a dinner June 22 in the Hillsboro Hotel. The next meeting of the group will be held Aug. 8 at Hillsboro Park with an evening picnic to be followed by a discussion session. Prior to the meeting, a special effort will be made to inform all young married couples of the program.

Forests conserve soil moisture because they cast shade, because the forest floor is covered with a mulch of leaves, and because forest soils contain a large amount of humus.

Rural Youth

By
Ellsworth D. Lyon

Christian County had a full and profitable meeting in June with a movie on soil and wild life conservation, a quiz program about farm and home safety, Julia Muirhead's report of the Leisurecraft and Counseling Camp at East Bay, and recreation under the direction of Donald Downs.

Schuyler Youth enjoyed a barn dance and slumber party at the home of Oleta Clayton, a member, for its June meeting. A number of new dances were learned.

Clay County Rural Youth sponsored a parents' night in June and presented the timely playlet, "A Two-Family Farm Business." Former Rural Youthers now in the service who attended the meeting were James Fleener, Harold Roley, and Carroll Stanford.

McDonough Rural Youth served a potluck supper for the June meeting. Rural Youth slides for 1944 were shown, after which President Hitchfield proved himself to be a good square-dance caller for the recreation period.

St. Clair recently heard a speech on "The G. I. Bill of Rights" by R. L. Thorne, former teacher at the Belleville Township High School, but now with the Veteran's Rehabilitation Bureau.

McHenry County Rural Youth has three members serving as Volunteer Nurse's Aids, is planning to invite a Red Cross speaker soon, and is making plans for a Red Cross benefit dance.

Jackson-Perry Rural Youth held an outdoor meeting at Riverside Park, June 14. Two former members, Clarence Mann, who is home on furlough from overseas with the Army, and Rose Lee Johnson, who has been doing war work in California for several months, were present.

Randolph's 11th annual banquet was built around the theme "Looking Ahead," with emphasis upon "Work," "Home," "Community," "Life."

Franklin County Rural Youthers recently gave a program to cheer the soldiers of the Marion Veterans' hospital.

Clark County's third annual banquet was a well-planned event. The good menu, Ray Farris' humorous poems, Virginia Fishback's enthusiastic song leadership, and Mr. Kenneth Cohee's address on "Rural Youth and Post War America" provided very substantial physical and mental food.

Edgar's fifth annual banquet was held on the previous night to Clark's, but equal in plans and personalities among youth. Leave it to Edgar to find a way out when at a very late hour it becomes necessary to make changes in the program. Visitors from these two adjoining counties were in evidence at each other's banquet.

Why shouldn't Rural Youthers tell of their interesting employment, as did Loraine Gray of Livingston county when she talked upon the theme, "My Experiences in the Hatchery." Volley ball and dancing concluded the evening's activities.

Bureau sets up a standard by which Rural Youthers may become eligible to wear the official Rural Youth emblem. A member must first attend meetings regularly and serve in an office or on a committee. This county is continuing to buy war bonds during 1945. The amount, $826.25, was reported as the total at the June meeting.

McLean County has been contributing baked goods for the Red Cross Canteen.

Adams Rural Youthers have been working with the county on the clothes collecting campaign for Europe's needy peoples.

Among the Rural Youth groups represented recently at the blood banks were Bureau, Adams, McHenry, and Knox.

"What Rural Youth Is and Does" was discussed by a member, Kenneth Cheatham at Bond's June meeting.

Jackson, Mississippi. Private Swartz received three major battle stars. He was awarded the Philippine liberation ribbon, the good conduct ribbon, and the South Pacific ribbon for service in New Guinea, Caledonia, and New Zealand.

Loren Brunson, former Rural Youth member of Eureka, Woodford county, accompanied the body of the late president F. D. Roosevelt from Fort Myers, Va. to the White House.

The eighth Oak Leaf cluster was recently awarded to First Lt. W. A. Grusy, former Rural Youth member from Woodford county. Lt. Grusy is a veteran of 56 missions over enemy territory and is the pilot of a P-51 mustang fighter.

Walter Burton, a former Woodford County Rural Youth and a veteran of the North African and European theatres of war attended the San Francisco peace conference and drove the car which conveyed Secretary of State Stettinius to and from the meetings.

Charter members of the newly organized Hamilton County Rural Youth are: front row, left to right: Edith James, Fay Erkmann, Myrtle Sink and Katherine Gibbs. Second row: Elsie Gholson, Gene Endicott and June Irvin. Third row: George Smith, Frank Allen, Charles Robertson and Ray Erkmann.

President Kenneth Wilson of McHenry county reports "We collected ten decks of playing cards to take on the next camp and hospital council meeting. We contributed $10 toward furnishing a day room for the WACS at Scott Field. We enjoyed a very good talk on "Plant Foods."

Pfc. John T. Schmitt, a former Marshall-Putnam Rural Youther serving in the Marines, was killed March 16 on Iwo Jima, it was reported to the Rural Youth organization.

Capt. Paul F. Sharpe, Marshall County, chaplain in the United States Army, died June 7 in the Philippine Islands. He was stricken with pneumonia and later contracted a fever which caused his death. Before entering the armed forces, Captain Sharpe was pastor of the United Presbyterian Church of La Prairie. He was an active Rural Youth member.

Private Frank Donald Swartz, a former Lee County Rural Youth member is now at home on furlough. Following his furlough, he will return to the Percy Jones Hospital, Fort Custer, near Battle Creek, Michigan. Formerly, he was in the Gardner General Hospital, Chicago, and prior to that was in the Foster General Hospital,

Lieut. Wayne Young, 23, son of Mr. and Mrs. W. C. Young, Princeton, Bureau county, was killed in action May 12 while piloting a B-24 Liberator bomber over Mindoro Island in the Philippines, according to a war department telegram received by his parents. The plane's entire crew was lost.

Lieutenant Young's bombardment squadron was a member of the famous "Jolly Rogers" Bombing group, which holds the highest record for enemy aircraft downed in the Pacific area.

Last March Lieutenant Young received the Air Medal for meritorious achievement in action, while participating in aerial flights in the southwest Pacific theater of war. He is a veteran of more than two and a half years of service, having been inducted in September, 1942. Lieutenant Young trained at several centers in the United States, and received his silver wings and commission following graduation from Douglas Air Field, Douglas, Ariz., on March 12, 1944.

He received his schooling in rural schools of Bureau County, and was a member of the 1940 graduating class of the Walnut community high school. He was well known in the county, and had been active in 4-H and Rural Youth work.

NEWS and VIEWS

Canning Hints

Canning programs are uppermost in the thinking of many homemakers right now, but the outlook is for a program with little or no sugar.

One of the questions that is being asked is whether saccharin can be used in canning fruit. The answer from Miss Grace Armstrong, foods specialist, University of Illinois College of Agriculture, is a firm and unequivocal NO! The use of saccharin is definitely not recommended — it imparts a bitter taste and unpalatable flavor to canned foods.

Don't hesitate to can fruits, though, Miss Armstrong urges, even though sugar is scarce. Can without sugar if necessary. Although flavor and texture are better in fruit canned with sugar, those qualities can take second place in this year of emergencies. Sugarless fruit is better than no fruit at all.

Remember the correct preparation and processing are the things that count in preservation — the amount of sugar used in fruit canning is not enough to have any preservative action, Miss Armstrong continues.

Another alternative open to the home canner to help in extending the sugar supply is the use of corn sirup or honey to replace part of the sugar. The leaflet "Canning Fruits with Little or No Sugar" gives complete information on how to use corn sirup or honey to stretch your canning sugar ration and how to can fruit without sugar. Send your request for a free copy to the Extension Editor's Office, University of Illinois College of Agriculture, Urbana, Ill.

About Your Kitchen

Busy war times with many extra jobs to do have made farm women realize the importance of an efficient kitchen workshop where routine jobs can be done in record time with the minimum of effort.

As a result, kitchen clinics are being requested in a number of counties throughout the state.

Receiving first billing in these clinics is the ever-important kitchen sink, says Miss Gladys Ward, home management specialist, University of Illinois College of Agriculture. Although there is no blanket answer to the many questions that arise concerning the size and arrangement of the kitchen sink, here are some things to consider in choosing a sink:

Think about the number and location of doors and windows in the kitchen, the adequacy or inadequacy of work space available, the size of sink and the pros and cons of buying a double or a single sink.

If having a double sink means a resultant shortage of work counter, then it is better to choose a sink 20 inches long and have three to five feet of work counter on the right side with storage cabinets above and below for food supplies and utensils used in baking. This arrangement is to be preferred to a longer sink and shorter work counter.

If there is ample work space, the double sink with swing faucet and a removable cup strainer is a decided time and labor saver, especially if hot running water is available. With this combination no pans are needed for dishwashing, cleaning of vegetables and other sink jobs, and even the requirements of a large family can be met with ease and dispatch.

Chop fresh vegetables for a mixed salad just before mealtime, and add the dressing at the very last minute. It's good insurance against a limp, wilted salad that has lost its vitamins and its appetite appeal.

Fasten a coat or dress when it is placed on a hanger. This will help the garment to hold its shape.

New Home Bureau

Officers have been elected for the newly organized Clinton County Home Bureau. The organization has over 370 cooperators on the roll. The new officers are: president, Mrs. Frank Warnecke, Breese; vice president, Mrs. Charles Twigg, Carlyle; secretary, Mrs. R. Gordon Kramer, Carlyle; treasurer, Mrs. Ray Schroeder, Breese.

Vitamin C in Tomatoes

Sunlight influences the amount of vitamin C in tomatoes, an important source of this vitamin.

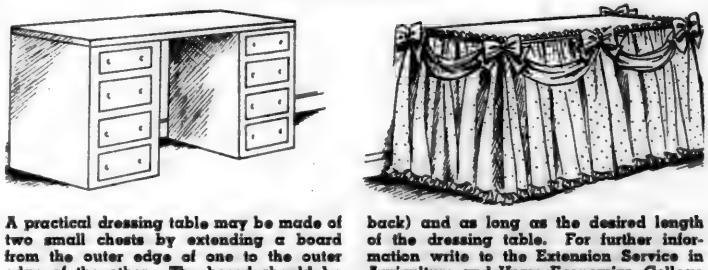
This has been shown by research workers at the U. S. plant, soils, and nutrition laboratory at Ithaca, N. Y. This laboratory, operated by the department of agriculture's research administration, studies nutrition from the soil up to the sun.

From these tests it appears that the tomatoes richest in vitamin will be ones that ripened during a spell of sunny weather.

Soap Next?

Soap is apt to be the next big shortage. Flake and powder soaps are hard to find now and bars and cakes are liable to be equally scarce unless more fats are available to the soap factories. There's good reason to keep pushing the fat salvage campaign.

Small Chests



A practical dressing table may be made of two small chests by extending a board from the outer edge of one to the outer edge of the other. The board should be the same width as the chests (front to back) and as long as the desired length of the dressing table. For further information write to the Extension Service in Agriculture and Home Economics, College of Agriculture, University of Illinois.

for HOMEMAKERS

4-H Clubs Plan Camp Memorial

Illinois 4-H club members have officially opened a new state-wide campaign to raise sufficient funds to build a state camp, which will be a memorial to Illinois 4-H members who have lost their lives in the present war.

Details for the camp are not yet completed, although it will be located somewhere in Illinois. In view of the rapidly increasing camp program, such facilities are needed.

Many clubs already have sizeable funds on hand which they expect to turn in at once. Other clubs will be getting under way shortly to earn money for this project. Such funds will be sent to their farm or home adviser.

The committee directing this project consists of Mrs. Esther K. Thor, Champaign county home adviser; W. F. Coolidge, Livingston county farm adviser; and F. H. Mynard and Miss Mary McKee, U. of I. College of Agriculture.

New Home Advisers

Mrs. Jean K. Lystad, home adviser in Iroquois county for five years, will start work as home adviser in McLean county Sept. 1. She will succeed Miss Clara R. Brian, who is retiring after serving 25 years as McLean county home adviser.

Mrs. Lystad is a graduate of the University of Wisconsin and has taught home economics for 11 years in the junior and senior high schools of Rockford, and Milwaukee, Wis., and Chisholm, Minn.

Mrs. Mildred Morris Seeman, Jacksonville, is the new home adviser in Morgan county. Mrs. Seeman is a graduate of Western Illinois State Teachers' College and has studied at MacMurray College and at the University of Illinois. She has taught home economics work in Pawnee, Sangamon county, and in Bluffs Community high school, Scott county. Mrs. Seeman replaces Eureath Fryermuth who has been named La Salle county home adviser.

Mrs. Sara Eastman Dalrymple has been named Stark county home adviser. She is a graduate of the University of Illinois and has studied at Iowa State College and Oxford University, Oxford, England. Mrs. Dalrymple has taught home economics in high school and from 1940 to 1942 served as home supervisor for FSA with headquarters in Decatur, Macon county.

A basic sugar-saving coffee cake to finish a meal on a delightful note.

Mrs. Dalrymple is the mother of two children. Her husband is serving in the U. S. Army.

Miss Ruth Grant has assumed her new duties as home adviser for Williamson county. Miss Grant is a 1931 graduate of the University of Illinois. Recently she has served as associate home supervisor with the FSA in Johnson and Massac counties.

The new home adviser of Kendall county, **Mrs. Alice Herron,** has taken over her duties. Mrs. Herron is a graduate of Joliet Junior College and received her B.S. degree at the University of Illinois in 1941. Since February, 1944, she has been emergency food assistant with the WFA in Will county.

Salvage Facts

Fat salvage authorities are now looking to farm and small-town families to increase the quantities of waste household fats for salvage. This is necessary because quantities of collected fats are declining in urban areas due to smaller supplies of meats and edible fats available in those districts.

Furthermore, the available meats are less and less fat these days; but the war needs for fats are growing greater and greater.

Recipe Treats

MARMALADE GLAZE COFFEE CAKE

1½ c. sifted flour	½ c. milk
2 tsp. bak. powd.	3 tblsp. melted shortening
½ tsp. salt	½ c. orange marmalade
1 egg	
½ c. corn sirup or honey	

Sift together flour, baking powder, and salt. Beat egg, add sirup, milk, and shortening. Blend thoroughly. Add to flour mixture, stirring until flour is moistened. Put orange marmalade in paper-lined pan, 8x8 inches. Spread batter over marmalade in pan. Bake in moderately hot oven (400°F.) 25 minutes.

CHERRY ROLL

2 c. flour	2½ c. fresh or canned sweetened cherries, drained
3 tsps. baking powd.	
½ tsp. salt	2 c. cherry juice and water
2 tblsps. sugar	½ c. sugar
½ c. shortening	
½ to ¾ c. milk	

Sift together flour, baking powder, salt, and sugar. Cut or rub in shortening. Add milk to make soft dough. Toss out on lightly floured board and knead gently ½ minute. Roll into rectangular sheet ¼ inch thick. Spread cherries over dough and roll jelly-roll fashion. Cut 1½ inch slices and place cut side down close together in greased deep baking dish 8 x 12 inches. Heat cherry juice and water and dissolve ½ cup sugar in it. Pour over rolls. Bake in moderate oven (375°F.) 45 minutes.
Yield: 1 dozen rolls.

EDITORIAL

The Charter

AN OVERWHELMING majority of the American people, and farmers are no exception, realize that the hope of avoiding future wars is largely tied up in the San Francisco Charter, signed June 26 by the representatives of fifty nations. By the time this issue of the IAA RECORD reaches its readers, the document will have been placed before the U. S. Senate for its ratification.

No one, we think, feels that the Charter represents perfection, nor that it signifies more than one step forward toward international comity and fair dealing. It was probably the best that could be obtained at this time, just as Washington is reported to have said of the newly-framed Constitution of the United States.

Granted that it may have imperfections, it is still to be hoped that the United States Senate will give immediate and sympathetic consideration to this important document and that partisanship will have no part in the deliberation.

Facts You Should Know

FARM Bureau members rightfully assume that their cooperatives not only follow ethical business practices but that they meet their tax obligations fully and without any attempts at evasion through technicalities.

In the midst of a propaganda campaign conducted by a relatively small group, charging that cooperatives have unfair tax exemptions (and sometimes it is inferred that they pay *no* taxes!) it should be understood fully by our members and the general public that Farm Bureau-sponsored cooperatives in Illinois, many of which operate without tax exemption, meet their obligations fully and up to the letter and spirit of the law.

Specifically, they pay property taxes both on real and personal holdings, license fees applicable to their businesses, federal excise taxes where applicable. Federal income taxes are paid by the non-exempt cooperatives on all non-member earnings and such earnings as are not annually distributed to members.

Antagonistic interests complain seriously because cooperatives are tax exempt on patronage refunds paid to members. It should be understood that all sums paid in the form of patronage refunds to members, however, enter into the member's income, either as reduced costs or added income and there become subject to taxation. Moreover, the courts have held that any corporate or individually-owned business, may, by agreeing in advance to pay its patrons such refunds, be tax-exempt to the extent of such payments. Cooperatives enjoy, therefore, no unfair privilege in this regard.

Farm Bureau members may be assured, and they should reassure their business friends, that their cooperatives measure up in meeting tax obligation, as on all other matters involving business ethics, legal or moral duty.

Cooperation That Pays

SOME 40 County Farm Bureaus in Illinois either have set up or are in the process of setting up complete soil testing laboratories, according to the latest available report on this project. Some 15 more are contemplating setting up such laboratories.

The installation of these complete soil testing services in so many counties is one of the significant developments of the Farm Bureau in the past year. These laboratories will make a vital contribution to soil building and improvement and aid farmers in discharging their responsibilities as trustees of the land.

They also furnish an excellent positive example of the cooperation that has existed in Illinois and elsewhere between Farm Bureau and the Extension Service. Financed by Farm Bureaus out of membership fees paid by farmers, the laboratories furnish the concrete, practical means of illustrating and making effective the teachings of the Extension Service. They will help get things done; and after all, education, or information, or research, call it what you will, is only effective when it is actually put to work.

It is one of the great facts in Illinois agriculture that this happy co-working of theory and practice, information and action, research and its practical application, has been made possible.

Cooperative Credit

THE members and directors of the Federal Land Bank of St. Louis should be highly commended. The last remaining capital stock subscribed by the government was repaid in 1940. Since that time the capital stock of the bank has been owned completely by the farmers' cooperative National Loan Associations in Illinois, Missouri and Arkansas. Since November of 1944 the bank has been repaying to the federal treasury the "paid-in surplus" at a rate of a million dollars a month. According to present plans, all federal funds in the bank will have been repaid by June 30 of this year. After that date the institution will be completely financed by farmers.

The Federal Land Bank of St. Louis is one of twelve such banks established in 1917 under authority of the federal farm loan act. These banks are permanent institutions designed to provide long-term farm mortgage credit to farmers at reasonable rates of interest. The land banks make loans only on the security of first mortgages on farm land.

The Federal Land Bank of St. Louis is a splendid example of the results of cooperation. Farm people of Illinois, Missouri and Arkansas may well be proud of this institution. It has been well managed; it has served the interests of farm people, it has not been a drain upon the federal treasury. It is hoped that this splendid example will be followed by other institutions which have been created under federal laws in order to facilitate the development of cooperation in agriculture.

To our way of thinking, farmer owned and controlled cooperatives are among our soundest institutions. There are some people in this country who would eliminate cooperatives, or greatly reduce the encouragement which is being given to them. Let those who would undermine our cooperative system note well the results in Germany and Italy where cooperatives were abolished and there was established in their place a system of fascist controls. Let them contrast the situation in Germany and Italy with that in Sweden and other Scandinavian countries where it has been the policy to encourage and promote the organization and operation of cooperative associations.

● When Jane Smith tells this story, she starts out with: "We'd just gotten married . . . . . ." And then Bill always breaks in with: "No honey, that makes the story too long. Start where you were making fudge. I'd just built you a bright, spankin' new house. Like a woman, you wanted to show it off. So we decided on a house warming and sent out a silly little invitation card to neighbors for miles around. That night, before the guests arrived you were making fudge and I was dusting. And like a woman you had to come in and point out all the spots I was missing. That's when we smelled smoke. A minute later the whole kitchen was in flames. And by the time the first guests arrived our pretty little home was in ashes. HOUSEWARMING? OH BROTHER! It almost broke your heart. And I was trying to think of something to say, when our I.A.A. insurance man drove in. And I pointed to him and said: "Jane, here comes the man who'll build you a new house!" And he did! Right down to the little sun porch that you didn't like on the first house." Jane finishes the story like this: "I wanted to take that money we invested in insurance and buy a new dress. Bill put his foot down, though. And I was pouting for a week! Now, I'm really SOLD on insurance, and on I.A.A. insurance service. Gee! Without it, Bill and I couldn't have built again for ten years!"

"PAPER MISTER?"

"SURE, Son. We'll take a paper. And we're not afraid of the headlines — today's, tomorrow's or next year's. You see, Son, we're *organized* . . . . more than one hundred thousand strong. We *make* headlines ourselves when it's necessary. No, one farmer alone can't do it. But when over one hundred thousand voices speak as one the *windows rattle* in Washington and Springfield and Chicago and newspaper men reach for the big black type. That's *organization,* boy! And while we hold it, and use it, the news is going to be *good* for farmers. We're going to *make* that kind of news."

THE STATE FARM BUREAU PUBLICATION

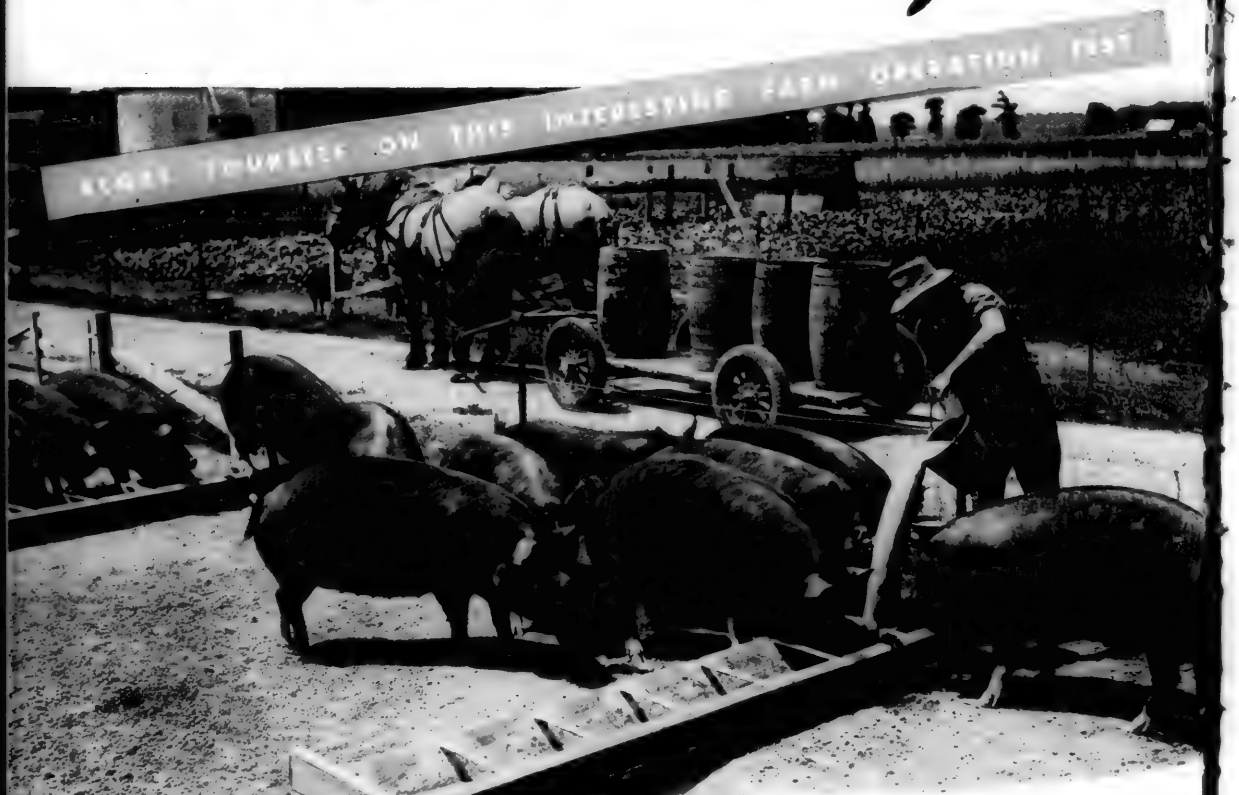
How Smart Are You?



1. How does a cow lie down—front feet first or hind feet first?
2. What is the gestation period of sheep?
3. Suppose your hired man is injured by a corn picker. Are you legally liable?
4. Which dairy breed has the highest annual butterfat production record?
5. What is a good average rate of gain per day for a pig from date of birth to market weight?
6. If your cow breaks out and wanders on the highway, causing an accident, who is liable?
7. Name two hardy varieties of alfalfa.
8. How many bushels of corn can be placed in a crib measuring 30′ x 12′ x 14′?
9. How many quarts in 100 pounds of milk?
10. If your hired girl is injured on the steps of your home, must you pay her doctor and hospital bills and continue her pay while she is laid up?
11. Which breed of beef cattle commonly has the highest dressing percentage?
12. What is humus?
13. Which contributes most to corn yield — plowing under a catch crop of sweet clover or letting the stand of clover remain a year for pasture and then plowing under?

ANSWERS TO FARM OPERATION TEST

(Score yourself 8 points for each correct answer)

1. Front feet first. 2. 21 weeks. 3. If you were at all negligent and you do not have liability insurance, you better see your lawyer. You may have to pay. 4. Holstein. 5. 1 lb. per day. 6. Same answer as No. 3. 7. Cossack-Ladah and Grimm South Dakota. 8. Approximately 2,113 bushels. 9. 46½ quarts. 10. Same answer as No. 3. 11. Aberdeen-Angus. 12. Partially decayed vegetable and animal matter in the soil. 13. Let remain for a year, then plow under. Illinois Agricultural Mutual Insurance Company provides adequate insurance protection against the hazards referred to in questions 3, 6, and 10.

The Illinois Agricultural Association RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

This Month... by Earl C. Smith

AUGUST of 1945 will be recorded in history as being the month in which the most gigantic war of all times was brought to a close. It also will be remembered as the month which brought renewed hope to the people of the world and in which plans were inaugurated for a successful peace.

Farm people, in common with all other citizens, feel a deep sense of relief and satisfaction at the capitulation of Japan and Germany. But these feelings are tempered in realization of the gigantic and complex problems that must be met and solved if we are to enjoy a complete and lasting peace.

The coming months and probably years call for and require the greatest contribution on the part of every citizen in assisting the responsible leaders of government in solving the problems of reconversion and readjustment that affect every line of business and every American home. These problems cannot be solved through idleness of the individual and a false feeling of security which comes through dependence upon the government. They can and must be solved through stimulated productivity in which all individuals must play a part and through adoption of policies directed toward the interchange of industrial and agricultural products on a basis of fair economic balance.

These are days that call for calm and sound thinking and vigorous action. The young men of America have won the war. It is the inescapable responsibility of their elders to measure up to the requirements of the peace. Only through such effective action can we justify in some measure the tremendous loss of life and crippling wounds suffered by hundreds of thousands of young men who have made such sacrifice to preserve the principles of freedom and justice. It is only through well-directed action that we can make certain that the government operates in the interest of all and not for any one particular group. It is only through the proper discharge of these obligations that the economic machinery of America can be placed in shape so that the young men who return can one day assume their rightful place of leadership in the affairs of the nation.

Both individual and group selfishness must be definitely set aside. Partisanship must be subdued and a true spirit of Americanism in the common good must prevail.

I have full confidence that the people of our country will meet their responsibilities as they have so magnificently met the great demands of war. I am equally sure that farmers will do their full part during the days of readjustment in the same wholehearted manner that marked their outstanding contribution to the needs of our government during the stress of war.

HOW'S YOUR HEALTH?

By L. H. SIMERL

Height and weight — an index of growth. This service, together with record keeping and interpretation, can be part of your school program, with the cooperation of your local health department.

"Betty Ann Jones, pretty 8-year-old daughter of Mr. and Mrs. Adam Jones of Pleasant View Farm, won the county health contest last week."

"Funeral services were held yesterday for 8-year-old Mary Jane Brown, only daughter of Mr. and Mrs. John Brown, who live three miles north of town."

THUS your newspaper tells the stories of joy and sorrow brought by good health and the lack of it.

Betty Ann enjoys near perfect health because she has had proper food, has been immunized against preventable communicable diseases and has had periodical physical examinations leading to the correction of physical defects.

Little Mary Jane died of typhoid fever, a disease which can be prevented by immunization and proper sanitary precautions. Her life might have been saved if the county had had an efficient health department.

Perhaps your county is one of the nine in Illinois which have already acted to establish a county health department. If not, then it is likely that many persons in your county are considering the advisability of establishing one. In any event, you will want to know what services a county health department can provide, how one is established, and how much one would cost.

A county health department is a part of the county government which devotes its attention to protecting the health of the people of the county. Its activities are largely regulatory, educational and promotional.

The county health department does not engage in the practice of medicine or in social work. It does not compete with or replace either practicing physicians or welfare workers. It does, however, cooperate with physicians, dentists, hospitals, schools, welfare agencies and other organizations concerned with the protection of health.

A county health department is responsible for the enforcement of state and local health laws and regulations. It is responsible for the quarantine of cases of communicable disease. It inspects and enforces laws and regulations concerning public water supplies and sewage disposal systems. It inspects and enforces health regulations regarding restaurants, food processing plants, swimming pools, tourist camps, etc. This regulatory work is carried out by the chief medical officer, usually with the assistance of a sanitary officer.

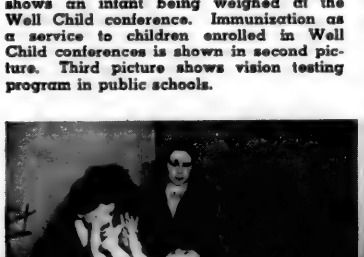
A large part of the activities of the county health department are educational and promotional in nature. In this work the department cooperates with public schools, civic groups, Farm Bureaus, Home Bureaus and other organizations in the community interested in health protection.

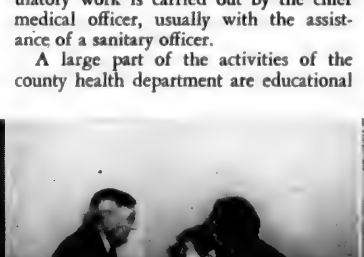
The county health department carries on an educational program to secure the immunization of infants and young children against diphtheria, typhoid fever, small pox, whooping cough and other preventable diseases.

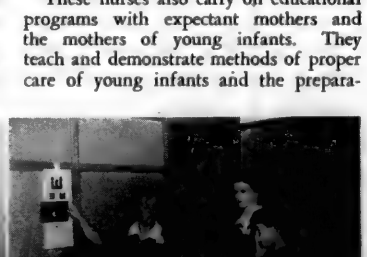
The public health nurses of the department, upon invitation from the family physician, visit families which have cases of communicable disease and demonstrate procedures which will prevent the spread of the disease to other members of the family or to other persons of the community.

These nurses also carry on educational programs with expectant mothers and the mothers of young infants. They teach and demonstrate methods of proper care of young infants and the prepara-

Here are some pictures from the Morgan County Health Department. First picture shows an infant being weighed at the Well Child conference. Immunization as a service to children enrolled in Well Child conferences is shown in second picture. Third picture shows vision testing program in public schools.







tion of food and the sterilization of bottles and other equipment used in the care of the infant.

The county health department carries on educational work and arranges for clinics intended to discover and lead to the correction of physical defects of children. At these clinics children's teeth, eyes, ears, nose and throat are given examinations and their parents are informed as to any defects which are in need of correction. The actual examination of the children is made by doctors and dentists of the community.

The activities indicated above are only a few of the services which can be rendered by an efficient county health department.

The typical county health department in Illinois would include a chief medical officer, a sanitary officer, two or more nurses, and one or two stenographer-clerks. All of these employees must have special qualifications, specified by the Illinois department of health, fitting them for their work. The chief medical officer is responsible to the board of health. The other employees work under his supervision.

According to information received by the Illinois Agricultural Association, nine Illinois counties have already established county health departments. These are Morgan, Lawrence, Wabash, Edwards, Adams, DuPage, McLean and Montgomery. All of these counties have established their health departments within the last two years, since it was only in 1943 that the General Assembly passed the Searcy-Clabaugh Act authorizing their creation.

There are two methods of creating county health departments. The county board of supervisors (or commissioners) can create a county health department by adopting an appropriate resolution. If two or more counties are to be included in a single health department, a joint resolution of the county boards is required.

County health departments may also be established by a majority vote in a referendum in the county, or counties, concerned. A referendum may be ordered at the discretion of the county board, or boards, upon receipt of an appropriate petition signed by at least five percent of the registered voters in two-thirds of the affected townships.

County health departments are controlled by a county board of health. The members of the county board of health are appointed by the chairman of the county board of supervisors (or commissioners), with the approval of his board. Their terms are three years except that some of the first appointees serve only one and two year terms. Board members serve without compensation and may be removed for misconduct or neglect of duty by the chairman of the county board who appointed them.

Your sanitation officer can frequently inspect and make recommendations regarding rural water supplies.

In single county health departments the board of health consists of seven members, including at least two physicians and one dentist. Where two or more counties combine to form a single health department the board of health consists of three persons including one physician and one dentist from each county.

The duties of the county board of health include the selection of the chief medical officer and, with his approval, the appointment of the remainder of the staff. The county board of health also establishes rules for the guidance of the employees of the county health department and makes annual reports to the county board of supervisors and the general public.

Neither the county board of health, nor the health department officials can make rules or regulations governing the public. The health department can, however, make recommendations to the county board of supervisors (or commissioners) as to desirable health regulations. When a county health department is established it becomes responsible for the enforcement of local and state health laws and regulations.

In counties which do not now have county health departments the responsibility for public health services is divided. In counties with the township organization of government, each township has a "board of health" consisting of the supervisor, clerk and assessor. In counties having the commission form of government the county board of commissioners is a "board of health." The state law provides that where these local "boards of health" do not discharge their duties properly the state may take over those duties and charge the costs of the same to the township or county.

The cost of an efficient public health department probably will range from 75c to $1 per person per year. At the present time some federal and some state money is available for the support of county health departments. The law also provides that any available county funds may be used for the support of the county health department. The Searcy-Clabaugh law also provides that any county may levy an additional tax to support the county health department if the levy of such a tax is approved by a majority of the voters in a referendum. The special tax may not exceed 10c on each $100 of assessed valuation.

According to an old saying, "The proof of the pudding is in the eating." So we should find out how county health departments have worked out in some of our neighboring states. Michigan and Kentucky are reported to have the best county health organizations in the middlewest. So we have asked our Farm Bureau friends in these states what they think about their county health departments.

J. F. Yaeger, assistant executive secretary of the Michigan Farm Bureau, says that, "The evidence indicates that the services far outweigh the cost of operating these county units. . . . The best testimony to their success is that no health department has ever been discontinued even during the years of depression when many county boards of supervisors were forced to reduce appropriations drastically."

Joe Betts, director of information for the Kentucky Farm Bureau, says, "It is our opinion that county health departments have been beneficial to rural people. Besides the work they do in preventive medicine and sanitary control, they are doing an effective piece of work in educating rural people to the benefits to be derived from medical science. It is our opinion that the money appropriated to county health departments, by and large, has been wisely spent."

A principal handicap to the organization and operation of county health departments at this time is the acute shortage of well qualified personnel. Due to war-time conditions the supply of capable doctors, nurses, and sanitarians available for public health work is very limited.

Health departments staffed under these conditions probably will accumulate a number of inferior persons on the payroll. Some of these are likely to be retained indefinitely. This is not necessarily an argument against the creation of county health departments at this time. It does, however, indicate a necessity for proceeding slowly and carefully in the organiza-

(*Continued on page* 17)

LEGISLATION

IMPORTANT ISSUES AFFECTING ILLINOIS FARMERS ARE ENACTED

By PAUL E. MATHIAS

LEGISLATION of far-reaching importance was enacted by the 64th General Assembly. Some of the more important measures affecting downstate are the provisions requiring property to be assessed at its full cash value, the greatly increased state appropriations and the much higher level of state expenditures, and the bill providing for state assistance in the construction of local roads under which the state first recognized its duty to assist in the construction and maintenance of these local roads.

A total of 1507 bills were introduced. Of these, 742 passed the legislature and 691 became law; 51 were vetoed by the Governor. A few of the more important measures affecting agriculture and farmers are outlined in this article and the voting record of downstate members of the legislature is given on some of them.

IAA Secondary Road Program

The Illinois Agricultural Association sponsored legislation to appropriate 20 million dollars from state surplus funds for use on township and road district roads. Objection was raised to this appropriation on the ground that it was not included in the budget for post-war activities. It was also pointed out that federal funds in the amount of $4,700,000 per year for three years are to be available after the war for these local roads. These funds are to be matched by an equal amount of state and county road funds. While the roads improved from these funds are on the county system, nevertheless, they are in rural areas. Finally it was agreed that the appropriation from the state surplus for these township and road district roads should be reduced to 15 million dollars and this amount was appropriated.

The law provides that the townships and road districts will do the grading work and install the smaller culverts. State funds will be used to provide culverts, to install the larger culverts and to provide for surfacing of these roads.

The funds will be allocated among the townships and counties in the proportion which the mileage of township or road district roads in the county and in the township or road district bears to the total mileage of all township and road district roads in the state. The roads to be improved are to be selected by the county superintendent of highways in cooperation with the local highway commissioners and the work is to be carried out under the general supervision of the county superintendent of highways. The appropriation becomes available with the termination of the war or when the Governor determines that conditions are such that the program can be undertaken. The enactment of this legislation is the first recognition by the State of its obligation to assist in the maintenance and construction of these local roads. The roll call on this bill is given on page 9.

Road Commission

Legislation was also enacted which provides for the appointment of a commission of 17 members to study the road system of Illinois and particularly farm-to-highway and secondary roads. This commission is expected to give particular attention to the improvement and reorganization of our township and road district system and to methods of providing state funds for these local roads. This commission is to report to the next General Assembly.

Gateway Amendment

The Illinois Agricultural Association joined with other organizations in sponsoring a Gateway amendment of the state constitution. The proposed Gateway amendment provides:

(a) Amendments to three articles of the constitution instead of one may be submitted by the same session of the General Assembly.

(b) An amendment of the constitution can be adopted by the favorable vote of two-thirds of those voting on the proposition instead of the present requirement of the favorable vote of a majority of all those voting in the election.

(c) Votes upon future amendments to the constitution shall be cast on a separate ballot or in a separate column on the main ballot.

The Association believes that these provisions will enable the General Assembly to submit amendments to those articles of the constitution most in need of change and would make it possible to secure needed changes in our state constitution. This amendment will be voted upon at the election in November, 1946. However, in order to be adopted it will require the favorable vote of a majority of all votes cast in the election. The roll call on this amendment is given on page 9.

Party Circle Bills

In order to make possible the adoption of the Gateway amendment, the Association joined with others in sponsoring the so-called "party circle" method of voting on the Gateway amendment.

Under this party circle method of voting the state conventions of the political parties would be requested to take a position upon the proposed amendment. If the state convention of the party took such a position, either for or against the proposed amendment, then the position of the party upon the proposed amendment would be printed in the party column at the bottom following the names of the party's candidates.

The proposal for the amendment of the constitution would also be printed in a separate column on the ballot. A vote in the party circle, that is a "straight ticket" would be counted for the position taken by the political party unless the voter crossed over and voted otherwise on the proposition where it appeared in the separate column.

It was hoped that the two political parties would approve the proposed amendment and that through this method of voting a majority vote on the proposed Gateway amendment could be secured and the amendment adopted. The Gateway amendment, when adopted, would write into the constitution provisions barring the use of the party circle method in the future. This method could have been used only this one time, that is, for the adoption of the Gateway amendment.

After members of the Senate fully understood that the party circle method could not be used in the future, the bills passed the Senate by a vote of 40 to 1. There was no particular opposition. When the bills reached the House, the state administration actively opposed the bills. The Chicago Democratic machine was also prevailed upon not to support the bills in the House. When the bills were called for passage on the last night of the session, they received a bare 77 votes, just enough to pass them. Then after it appeared that the bills had passed, a number of representatives who had sat silent during the roll call jumped on the band wagon and the final roll call showed a vote of 127 to 3. However, Governor Green vetoed these bills. This veto and these bills are discussed elsewhere in this issue of the RECORD. The roll call on these bills is given on page 9.

School Legislation

The Illinois Agricultural Association supported legislation which substantially increases the amount of state support for schools. The flat grants, that is, the amount given to each school regardless of need are increased from $13 to $19 per pupil for elementary schools and from $2 to $4 per pupil for high schools.

The special equalization aid which is made available to needy districts where local taxes do not provide adequate revenues is increased from $1048 to $1200 per school for rural schools. In the larger elementary schools this special equalization aid is increased from $62 to $80 per elementary pupil and from $85 to $90 per high school pupil. These changes are expected to bring the state's contribution to elementary and high schools to approximately $26,000,000 per year.

The IAA sponsored legislation which was enacted which increases the maximum state contribution to the cost of pupil transportation from $15 to $20 per pupil. State contributions to transportation materially assist in securing school reorganization.

County School Surveys

The Association, with other groups, sponsored legislation providing for county school surveys. As previously reported, this legislation provides that the school directors in each county shall be called together prior to Dec. 1, 1945 and shall vote upon the question of making a county school survey. If a majority favor the survey, then a survey committee of nine members is to be selected.

Five members of the committee are to be selected by the school directors from the rural districts and four members are to be selected by the school board members from urban districts. This committee will survey and study the school system of the county and file a tentative report with recommendations.

Hearings will be held on the tentative report and the committee will then prepare its final report. If the county committee in its final report proposes reorganized districts, an election will be held in the proposed reorganized district upon the question of reorganizing the district as proposed by the committee.

Provision is also made for a state advisory committee to advise with the county committees concerning their problems. It is expected that a number of counties will make surveys under this law which will result in plans for the future reorganization and improvement of their schools. The roll call on this bill is given on page 9.

Bangs' Disease Control

The committee on livestock legislation appointed pursuant to legislation enacted in 1943 recommended a number of changes in the Bangs' disease control law of the state. The Association supported this legislation as it was finally enacted.

In general this legislation provides that calves between the ages of four and eight months, may be vaccinated without first testing either the calf or the entire herd for Bangs' disease. Testing is optional with the owner. Vaccinated calves may move freely until they reach twenty months of age. Adult animals may be vaccinated but are required to be tested for Bangs' before vaccination. So long as the vaccinated animal reacts to the test, the movement of the animal is restricted.

After July 1, 1947 no female animals or breeding bulls over eight months of age may be sold either at private sale or at a farm or community auction unless such animals either (a) come from an accredited herd; (b) are calves under twenty months of age which were vaccinated between four and eight months of age; or (c) were tested for Bangs' within thirty days prior to the date of sale. Animals which react may be sold only for slaughter or into herds where infection is known to exist. Animals which are tested and found negative may move freely.

The legislation also provides for an advisory commission of 13 members to advise with the Department of Agriculture concerning animal disease control rules and regulations and programs.

In this article Mr. Mathias discusses nine of the major issues which were acted upon by the State Legislature — and gives vote of each representative on four of the issues.

Taxation

Legislation to place all property assessments on an actual full fair cash value basis was enacted. The assessments will continue to be made by local assessors and equalized in the county by the board of review. The state department of revenue will determine the percentage at which property has been assessed in the several counties and will direct the county clerk to make whatever adjustments in assessments are necessary to bring the assessments to the full fair cash value.

For instance, in a county which has assessed property at 40% of its full value, the county clerk would be directed to multiply the local assessments by two and one-half in order to bring the assessment to full value. Taxes will be extended upon this full value.

Companion bills reduce tax rates one-half. One companion bill provides that for the first five years under this program tax rates may not be increased more than 5% over the 1942 rate, in any year, or more than 15% over the 1942 rate for the five year period except where increases are authorized by referendum. At the end of the five year period the full increase will be effective unless a referendum has been held in the taxing district and the authorized tax rates reduced. The 100% assessment program goes into effect Jan. 1, 1946.

It appears that over a long period the taxing power of local governments will in most cases be greatly increased. The average assessment ratio in downstate counties is now approximately 30%. This ratio varies from 16% and 20% in counties with the lower assessment ratios to 71% and 73% in counties with the highest assessment ratios. Taking the 30% average, it is obvious that downstate assessed valuations on an average will be multiplied by three and one-third in order to bring them to 100%. With tax rates cut only in half, it is obvious that over a long period the taxing power is greatly increased. Bonding power is based upon assessed valuation and likewise is greatly increased.

The Association strenuously opposed this program. However, it was forced through the legislature by a bi-partisan combination of state administration and Chicago City Hall forces. With the greatly increased taxes which are possible under this legislation, it is essential that tax payers in the local governmental units watch the levies made by their local authorities and make every effort to keep them within reasonable limits. The roll call on passage of S.B. 229, the key bill, is given on page 9.

Legislation which would have provided for the appointment of a county assessor, a new office, in each county to take over the functions now exercised by the county treasurer, as supervisor of assessments, was defeated.

Busses and Trucks

Legislation was enacted increasing the maximum permissible length of a straight truck from 35 feet to 40 feet and of a semi-trailer or two or more unit combination to 45 feet.

The speed limit for trucks was also increased to 45 miles per hour for lighter trucks and to 40 miles per hour for heavier trucks. The IAA did not oppose the increases in length or speed.

It was also proposed that the maximum axle weight on all roads be increased from 16,000 pounds to 18,000 pounds per axle. The IAA opposed this increase and secured an amendment which permits a maximum of 18,000 pounds per axle, only on concrete roads or roads with a concrete base which are designated by the highway department as adequate to carry the heavier loads or on roads which the highway department has designated as obsolete and in need of reconstruction. The license fees for these heavier trucks and busses were also substantially increased. The roll calls on the adoption of the IAA amendment are not complete and therefore are not given.

Miscellaneous

Other legislation sponsored or supported by the Association included a bill providing for a year-round open season on foxes in the central zone; legislation tightening up the State feed law and designed to give purchasers a better understanding of the content of the feeds which they buy; legislation placing rock phosphate under the commercial fertilizer law and repealing the provision which gave fertilizer manufacturers a 10% tolerance in the content of their fertilizer; legislation requiring persons drilling oil wells to give bond prior to drilling for the proper plugging of the well in case it is dry or is abandoned, and legislation giving county boards authority to make rules and regulations relating to water supply, sewage treatment and collection and street drainage in subdivisions outside cities.

The Association was interested in many other bills which affected agriculture and the activities of the Association. It is not possible to refer specifically to all these measures. An attempt was made to confine the Association's efforts to matters which directly affected farmers and the activities of the Association and the Farm Bureaus.

State Appropriation

Of concern to the citizens of the state generally were the very substantial increases made in state appropriations. Appropriations for regular operating expenses were increased from $503,612,630 in 1943 to $625,796,673 in 1945. This is an increase of $122,184,043 or 24%.

The salaries and operating expenses of the state were placed upon a substantially increased level. Experience has demonstrated that once expenditures are established at this higher level, it is very difficult to reduce them.

In addition to the general operating increase, the state administration sponsored huge appropriations for a large number of postwar projects. These postwar appropriations total $139,174,132. Some of these post war projects no doubt are desirable. Many are questionable. Practically all of them were included in one appropriation bill. It was impossible for members of the legislature to choose between these projects. A member who favored some particular project or projects was compelled to vote for the entire appropriation in order to secure the appropriation for the project in which he was interested.

The Tax Payers Federation of Illinois computes the total appropriations at the 1945 session at $772,465,826 as compared with a total of $519,974,232 for the 1943 biennium. This is an increase of $252,491,594 or 48.5%. As of July 1, 1945, the State surplus was a little more than $135,000,000. The appropriations for postwar projects of more than $139,000,000 would completely wipe out this surplus.

In addition to increases in salaries and operating expenses, a number of bills increasing pensions or providing for new pensions for public employees were passed. These included a pension for members of the General Assembly. However, Governor Green vetoed many of these pension measures, including the bill providing a pension for members of the General Assembly.

Representatives of the Illinois Agricultural Association were present in Springfield on practically every legislative day. They attempted to present the views of the Association upon measures of interest to agriculture and farmers. County legislative committees were very helpful in contacting members of the legislature from their respective districts. Representatives of the Association were extended every courtesy by the chairmen of the several committees and the presiding officers in the two Houses. They also found members of the legislature to be uniformly courteous and interested.

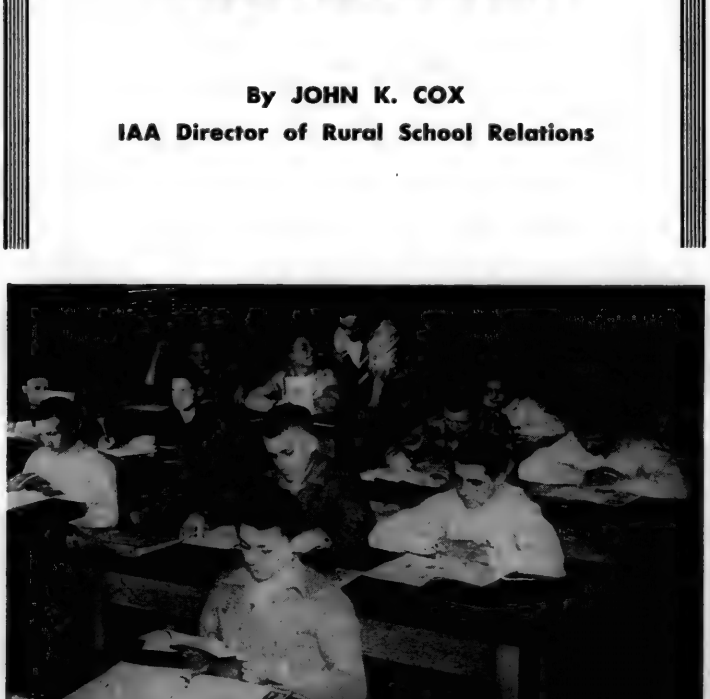
WHAT'S NEW

Over the State

in RURAL SCHOOL ORGANIZATION

By JOHN K. COX
IAA Director of Rural School Relations



Back to the books for another school term.

IN THE second of two articles designed to give rural people a better idea of what is happening over the state in the field of school district reorganization, County Superintendent L. A. Tuggle reports seven consolidations in Vermilion county within the last two years.

VERMILION

Tuggle's letter, along with a number of others, is in answer to a request for information from a few counties on the recent progress in school reorganization in their own counties. The new schools listed are Ellis, Henning, Cheneyville, Collinson, Harrison, Jamaica, and East Lynn. They each include from three to six former districts, enroll from 32 to 92 pupils, hire two to four teachers, have assessed valuations of from $560,434 to $1,000,899, and levy tax rates for educational purposes of from 64c to $1. The first, fourth, sixth and seventh districts were organized under Section 121a of the School Law.

Quoting from Tuggle's letter — "By these consolidations, 23 rural schools have been eliminated forever. We feel that while these consolidations employ only two, three or four teachers, that the advantages of the children having classmates, playmates, and the opportunity to have friendly rivalry in the class work, will make the situation a million times better than little one-room schools with one, two, three or four pupils in them.

"While I would rather have consolidations that would require at least four teachers or more, I feel that our plan in Vermilion county has been a mighty good start. The patrons, teachers and pupils like the system very much. I feel quite sure there are great possibilities in Vermilion county of future consolidations because of the farm-to-market roads throughout our county.

"The good folks of our rural areas and small towns are more and more beginning to like each other and are very friendly in my meetings with them to talk matters over, even though many times they do not agree with the promotion of consolidation at the present time."

It is interesting to note that two of the oldest men in point of service, not in age, in the state have had outstanding success in assisting rural people in securing better educational opportunities through school district reorganization. Superintendent Tuggle of Vermilion and Superintendent McIntosh of Piatt were tied with seven consolidations each within the past two years and up until their letters came into this office.

LA SALLE

W. R. Foster, county superintendent in La Salle county, reports that there

have been no reorganizations within his county within the past two years. In regard to the possibility of future reorganizations Foster says, "I feel that our county is ripe for a readjustment of districts, but most of our rural people are opposed to 'longhaul' consolidation, over-sized classes, and to subjecting their children to town temptations and distractions." La Salle county, one of the largest counties in the state, is reported to have more one-room schools than any other county.

MARSHALL

County Superintendent C. W. Swanson of Marshall county reports two consolidations in his county within the past two years; Sparland, the first, and all the eight schools in LaPrairie township, the second. The Sparland consolidation was around the village of Sparland and took place under Section 121a of the School Law. LaPrairie voted under Section 84a and carried by approximately a 159 to 35 vote. It has about 65 pupils. Since the LaPrairie consolidation, the adjoining township of Saratoga has met to discuss the possibilities of reorganizing.

"I do not know if any lowering of taxes is possible in the new districts as compared with the tax rates in the old districts, but the people do feel that their children will have better and broader educational advantages in these new districts.

"There is a considerable amount of interest in reorganization throughout Marshall county and there is a possibility of additional new districts being formed in the future."

ST. CLAIR

County Superintendent Clarence D. Blair states that there has been no reorganization of school districts in St. Clair county for a good many years. He says that although there is a definite need for reorganization of schools, it is difficult to convince rural populations of this need. He further states, "We have had quite a number of rural schools to close and to transfer their pupils to an adjoining school district. However, they still want to maintain the school district and have no idea of consolidating. The main reason for not wanting to consolidate is that the district can get by with a much lower tax rate by paying tuition to an adjoining school district.

"It is hardly advisable in St. Clair county to have rural consolidated districts. If you will observe on the map you will note that there are quite a large number of small villages scattered throughout the county. It seems to me that any plan of reorganization would have to be built around these trading centers."

WHITE

Hubert H. Sutton, county superintendent of White county, says that although there has been some talk of reorganization in White county, and some closing of school buildings, there has been practically no actual reorganizing of districts or attempts at such within the past two years. He adds, however, that some non-high territory has been annexed to existing high school districts within the last six years.

DE WITT

Wayne Dickey, county superintendent in DeWitt county, reports that in a recent election in the Weldon vicinity where 10 districts voted on reorganizing around the village of Weldon, six districts voted in favor and four against, thereby killing the proposed merger. He states that taxes could have been lowered as a result of combining the 10 schools and employing four teachers rather than the 12 now employed in the same districts. He says that transportation problems are the big stumbling block. He adds that they are having difficulty in finding teachers for all the rural schools in that area and that some will close for lack of pupils and some for lack of teachers. Quoting Dickey, "Further reorganization of schools in DeWitt county will probably have to be delayed until a school survey has been made and considerable more publicity and education of the rural people for larger and better school units has been accomplished."

WHITESIDE

R. M. Robertson, county superintendent of schools in Whiteside county, reports as follows: "Whiteside seems to have been a rather conservative county. Up to the present time only nine rural one-room schools have been closed. However, the reports of your organization and that of our county committee have not been without influence. Boards of directors are thinking more and more about the impossible situation confronting them with low enrollment, teacher shortage, and lack of sufficient funds.

"Three of our one-room schools have recently agreed to combine for next year. All three districts are able to enroll only seventeen pupils. I hope many more will follow this example. It looks now as if we may have six or eight fewer schools than last year. It would appear that local districts must have a great deal of help and encouragement if reorganization of districts is to move forward."

The two most frequently mentioned obstacles in the way of needed school district reorganization are (1) poor roads and (2) lack of education on the part of the public as to the deficiencies and extravagance of the present system and the possibilities of improvement in the serviceability of schools that are more nearly adapted to meet the needs of this present day.

A partial answer to the first obstacle is the secondary road bill just passed by the state legislature, calling for the expenditure of $15,000,000 on the surfacing of secondary roads throughout the state and with special preference being given to school bus routes and mail routes. Some counties have already made long strides in building their own county road program. Some have grouped townships into districts for road maintenance purposes, buying only one set of machinery for the district instead of for each township and thus having additional money to spend on the roads where it is needed. Also there is a Governor's commission to be appointed to study the secondary road situation and to develop a long range plan for road improvement. So considerable help should be forth-coming on that score if rural people are united in their demand for such help.

In regard to the lack of information on the part of the public, a favorable consideration of the County School Survey Act (recently passed by the state legislature) when the school board members of the county are called together on or before Dec. 1, 1945, will have unlimited possibilities in that respect.

If the board members of the county agree to make the school survey, then they elect a county committee of nine members (which committee will be predominantly rural) who will study the present school problems and possible remedies of existing defects in our school program. The people, after public hearings in each community affected, are called upon to vote upon proposals of the county school committee in only one election. They can vote for or against the proposals, but in the meantime they will have a more thorough knowledge of the needs of the schools and how those needs can be met on a voluntary basis without state domination.

VOTE SCHOOL SURVEY

Edwards county got off to a head start in making plans for their county school survey. At a meeting on Aug. 9 at Albion, the vote was 48 to 0 in favor of the survey.

The meeting of school board members of the county was called together by Virgil Judge, county superintendent of schools of Edwards county, in compliance with the new School Survey Act recently passed by the Illinois General Assembly.

This progressive action on the part of the school board members of Edwards county is the first of 102 actions to be taken for or against the proposition before Dec. 1, 1945.

PIATT DOES LIMESTONE JOB!

By C. M. LINSLEY,
Asst. Prof. of Soils Extension,
University of Illinois

PIATT COUNTY farmers realize that hard farming to grain crops with little or no clovers is causing their crop yields to slip downhill.

They know that they have to get back to clover in the rotation and for real clover stands much of the land needs both limestone and phosphate. But these materials have been hard to get during the war. However, Piatt county farmers will be sure of at least 50,000 tons of limestone this year in spite of war and weather difficulties that held their tonnage down to a bare 11,000 tons in 1943. This did not just happen. Farm Adviser E. O. Johnston and the Farm Bureau directors were determined to get the limestone that their farmers wanted and needed for soil improvement and were willing to tackle the many tough problems of organizing and carrying out such a project.

This county has contracted for 100 cars of limestone a month for nine months in good weather and bad. The limestone is being stock piled at ten convenient shipping points in the county. A fleet of 18 limestone trucks hauls and spreads this limestone when the weather is favorable and the fields are ready.

The buying of limestone by the farmers' cooperative has solved problems other than those directly due to the war. When the individual farmer ordered his own limestone, he was frequently forced to cancel the order because of bad weather or, if he did not cancel, he often had to pay demurrage because the fields were too wet. Buying a large tonnage under contract and providing a trucking and spreading service also make it possible to insure a good quality limestone and a more dependable spreading service.

Piatt county has not stopped with the limestone problem. Farm Adviser Johnston and the Farm Bureau directors have recognized that much of their soil is seriously in need of phosphate, as well as limestone, for clovers and alfalfa. Here again, testing the soil and advising farmers to use this material, but sitting back and complaining that phosphate is hard to obtain, will not get any phosphate on the land. To make it possible for farmers to follow out the recommendations of the farm adviser and the University of Illinois Extension Service, the Piatt County Farmers Cooperative has ordered 90 cars of rock phosphate.

Farm Adviser Johnston and his farm leaders realize that there is not much point in urging farmers to improve their soil if they cannot get the limestone, phosphate, and potash that is needed to do the job.

Illinois is the leading state in the use of limestone — three to four million tons a year — and has made worthwhile progress in the use of clovers, phosphate and potash. However, there is still a tremendous job ahead in building up and maintaining the fertility of Illinois soils, and there is a desperate need to speed up this program if it is to be accomplished before it is too late. With wartime prices, farmers want to put their extra money into the "soil fertility bank" as a security measure for the years to come. So now is the time to get the soil-building job done, but it cannot be done unless the materials can be made available.

The bottleneck of short supplies of phosphate and potash is much more serious than in the case of limestone. The Illinois Farm Supply Company is tackling this problem and has made some real headway. New sources of rock phosphate have been uncovered for Illinois farmers, and in spite of war difficulties, the supply company has been able to get an allocation for this year of about 7,300 tons of muriate of potash for Illinois farmers. This material is badly needed on many farms and is one that has been very difficult for the farmer to buy.

Making good-quality limestone and plant food conveniently available at reasonable prices is a field of service that is wide open and offers the farmers' cooperative an opportunity to make an outstanding contribution to Illinois agriculture.

Piatt county has done an outstanding job in handling limestone. Picture No. 1 shows a tractor scoop being used to load limestone from stock pile at Mansfield. Picture No. 2 shows stock piling at Galesville, one of the 10 shipping points in the county. Picture No. 3 shows one of the fleet of 18 trucks spreading limestone on the Geoff Beazley farm near Mansfield. Farmers appreciate this service.

☆Peace OF MIND

PIATT DOES LIMESTONE JOB!

By C. M. LINSLEY,
Asst. Prof. of Soils Extension,
University of Illinois

PIATT COUNTY farmers realize that hard farming to grain crops with little or no clovers is causing their crop yields to slip downhill.

They know that they have to get back to clover in the rotation and for real clover stands much of the land needs both limestone and phosphate. But these materials have been hard to get during the war. However, Piatt county farmers will be sure of at least 50,000 tons of limestone this year in spite of war and weather difficulties that held their tonnage down to a bare 11,000 tons in 1943. This did not just happen. Farm Adviser E. O. Johnston and the Farm Bureau directors were determined to get the limestone that their farmers wanted and needed for soil improvement and were willing to tackle the many tough problems of organizing and carrying out such a project.

This county has contracted for 100 cars of limestone a month for nine months in good weather and bad. The limestone is being stock piled at ten convenient shipping points in the county. A fleet of 18 limestone trucks hauls and spreads this limestone when the weather is favorable and the fields are ready.

The buying of limestone by the farmers' cooperative has solved problems other than those directly due to the war. When the individual farmer ordered his own limestone, he was frequently forced to cancel the order because of bad weather or, if he did not cancel, he often had to pay demurrage because the fields were too wet. Buying a large tonnage under contract and providing a trucking and spreading service also make it possible to insure a good quality limestone and a more dependable spreading service.

Piatt county has not stopped with the limestone problem. Farm Adviser Johnston and the Farm Bureau directors have recognized that much of their soil is seriously in need of phosphate, as well as limestone, for clovers and alfalfa. Here again, testing the soil and advising farmers to use this material, but sitting back and complaining that phosphate is hard to obtain, will not get any phosphate on the land. To make it possible for farmers to follow out the recommendations of the farm adviser and the University of Illinois Extension Service, the Piatt County Farmers Cooperative has ordered 90 cars of rock phosphate.

Farm Adviser Johnston and his farm leaders realize that there is not much point in urging farmers to improve their soil if they cannot get the limestone, phosphate, and potash that is needed to do the job.

Illinois is the leading state in the use of limestone — three to four million tons a year — and has made worthwhile progress in the use of clovers, phosphate and potash. However, there is still a tremendous job ahead in building up and maintaining the fertility of Illinois soils, and there is a desperate need to speed up this program if it is to be accomplished before it is too late. With wartime prices, farmers want to put their extra money into the "soil fertility bank" as a security measure for the years to come. So now is the time to get the soil-building job done, but it cannot be done unless the materials can be made available.

The bottleneck of short supplies of phosphate and potash is much more serious than in the case of limestone. The Illinois Farm Supply Company is tackling this problem and has made some real headway. New sources of rock phosphate have been uncovered for Illinois farmers, and in spite of war difficulties, the supply company has been able to get an allocation for this year of about 7,300 tons of muriate of potash for Illinois farmers. This material is badly needed on many farms and is one that has been very difficult for the farmer to buy.

Making good-quality limestone and plant food conveniently available at reasonable prices is a field of service that is wide open and offers the farmers' cooperative an opportunity to make an outstanding contribution to Illinois agriculture.

Piatt county has done an outstanding job in handling limestone. Picture No. 1 shows a tractor scoop being used to load limestone from stock pile at Mansfield. Picture No. 2 shows stock piling at Galesville, one of the 10 shipping points in the county. Picture No. 3 shows one of the fleet of 18 trucks spreading limestone on the Geoff Beazley farm near Mansfield. Farmers appreciate this service.

WHAT IS THIS GATEWAY AMENDMENT?

By CRESTON FOSTER

ILLINOIS voters will have an opportunity at the general election in 1946 to ballot on a proposed change in the amending process of the state constitution. On the face of it, this may appear to be a technical question which is of no great concern to the average voter.

However, the issue is vital and far-reaching. For all practical purposes, Illinois has a constitution which is difficult if not impossible to amend under the present system of voting. This means that almost insurmountable barriers stand in the way of amending the state constitution to meet the current and changing needs of the people. Here are a few examples of amendments held up by the constitution's cumbersome amending formula.

For several years the Illinois Agricultural Association has strongly urged an amendment to the revenue article of the state constitution which would permit the General Assembly to classify property for taxation and modernize our tax system. Farmers have a major interest at stake in this matter.

The IAA also has agreed to the need for a change in the reapportionment article of the constitution. The present provision is unworkable and impractical. This is clearly evident from the fact that although the constitution provides for a reapportionment after each census, no reapportionment has been made since 1901.

However, until the amending process of the constitution is changed, it is nearly impossible to secure any merited revisions.

Why is it almost impossible to change the constitution? It doesn't take long to explain. To secure adoption of an amendment to the constitution, it is necessary that a majority of all the people voting at the election vote for the amendment. It sounds simple, but it isn't. There is always a large number of people who vote on the candidates, but who do not vote on the amendments. By not voting on the amendments, these persons in effect are counted as voting against the amendments.

Let's look at the amendment proposed in 1942 to remove the sales tax from food. There were 979,000 who voted "yes" on this question, and 346,000 who voted "no." Thus the count on those who actually voted on the amendment was almost 3 to 1 in its favor.

But there were 1,723,000 *other persons who cast ballots in that general election, who did not vote on the sales tax amendment. These votes were counted against the amendment and when added to the* 346,000 *who voted "no", resulted in defeat of the amendment by a margin of* 2 *to* 1.

Thus from 1891 to 1943, only two of the 12 proposed constitutional amendments were adopted, although all but two amendments received a majority of the votes cast on the respective propositions. The amendments were defeated by those who were not sufficiently interested in constitutional matters to vote on the questions involved.

The Gateway amendment which the people of Illinois will be asked to vote on in 1946 will change this procedure so that in future elections an amendment will be adopted if it secures a "yes" vote from two-thirds of those who actually vote on the amendment. It also provides that the General Assembly may submit amendments to the voters on as many as three articles of the constitution instead of one as at present.

Adoption of the Gateway proposal *would not make amendment of the constitution easy, but it would make it reasonably possible.* It would give the people of Illinois the opportunity and privilege in the future of amending basic articles of the constitution to meet current needs, if such amendments are submitted to the electorate by two-thirds vote of each House of the General Assembly, and if two-thirds of those voting on the proposal vote "yes".

However, the vote on the Gateway amendment itself in 1946 will be on the same basis which has spelled defeat of four Gateway amendments in past years. Unless sufficient interest can be aroused among the electorate so that everyone who votes at the election, votes on the Gateway amendment, it will be defeated.

The IAA in the recent session of the General Assembly made a strong fight to give the Gateway amendment a fair chance at the polls by sponsoring the so-called party circle bills. The bills would have permitted the use of the party circle method of voting so that straight tickets would count for the Gateway proposal if the voter's party had endorsed the proposition in state convention. It also provided that if the voter was not in accord with the position taken by his party, he could vote directly on the proposition in any manner he chose.

The IAA pointed out that it was supporting the party circle method of voting only for use in adopting the Gateway amendment. The wording of the Gateway amendment, if adopted, is such that it will forever close the door to the use of the political convention or party circle voting in the consideration of any amendment later submitted to a basic article of the constitution.

The party circle bills passed the Senate by a vote of 40 to 1 and the House by a vote of 127 to 3. Notwithstanding the importance of the bills, as reflected by the very large favorable vote, Governor Green killed the bills and his veto message was a lengthy and rather bitter denunciation of the legislation.

Many of Governor Green's statements in his veto message were not in keeping with his attitude during early consider-

Farm Adviser H. N. Myers, DeWitt county, operates a machine he invented to cut strips of building paper into 4-inch rolls for chinch bug barriers. These rolls, soaked in creosote, will be placed edgewise in the soil to stop chinch bugs from crawling into corn fields. (Pantograph Photo)

ation of the legislation in the Senate and brought keen disappointment to the Illinois Agricultural Association as well as to other organizations interested in needed constitutional reform.

In his veto message, Governor Green said in part, "It is an unusual, new, and tricky method of securing the approval of a constitutional amendment."

The party circle bills DO NOT APPEAR to be "unusual," "new" or "tricky" when it is remembered that five amendments of the present constitution submitted before 1891 were adopted by the party method of voting.

Prior to 1891, a party could and did print upon its ticket a statement approving a proposed change in the constitution. All such ballots which were left unchanged in this respect by the voter were counted according to the position of the party.

In terming the party circle bills "tricky", Governor Green also said that if such a method of balloting were used, many voting in the party circle would do so without realizing that they were casting a vote for or against a constitutional proposal.

Let's consider that statement. Under the present system of voting, how many voters realize that when they fail to vote on a constitutional amendment, they are counted as voting against it? On the other hand, under the party circle method, the voter could plainly see the position his party has taken on the proposal, and if he wanted to vote against such a position, he could do so, with full knowledge of how he is voting.

Which system of voting should be called "tricky"? Under present restrictions, the will of the majority sufficiently interested to vote on constitutional amendments has been defeated time after time by those not sufficiently interested to even vote on such proposals. The best recent example of that fact was the outcome of the vote on the proposal to remove the sales tax on food.

In spite of all these developments, it becomes the interest of the people generally to have the cooperation of all groups, including the leaders of the major political parties, in acquainting the electorate with the importance of the Gateway amendment so as to afford hope for its passage by the voters at the next general election.

Farm Bureau leaders and men who are interested in cooperative grain marketing in the ten counties flanking the Illinois River between Ottawa and Peoria should mark the date Sept. 18. That is the date of an area grain meeting, time and place to be announced later.

How's Your Health?

(*Continued from page 5*)

tion and staffing of county health departments under prevailing conditions.

County health departments do not always provide efficient and effective service. Their efficiency and effectiveness depends primarily upon the ability and attitude of the employees, and especially upon the chief health officer. This depends in turn upon the type of persons appointed to the county board of health and this in turn upon the character of the county board of supervisors (or commissioners). From this it may be concluded that a county health department can be just about what the local people want. If they are careless about public affairs in general, and permit or encourage inefficiency and waste in the conduct of other local public affairs, the county health department very likely would reflect these same characteristics.

On the other hand, in counties where the citizens demand honesty and efficiency in the county government, their schools, and in other local public affairs, it is very likely that the operations of a county health department would be characterized by efficiency and a high quality of service.

In conclusion, it appears that the organization of county health departments offers a means whereby the people of many counties can provide for themselves needed public health service under the control of the people being served.

AT 97 HE SHOWS HOW TO WIN PRIZES AT FAIR

THERE are few if any farmers who can say that they helped to produce food for four wars, but that's the record set up by Warren Beebe, charter member of the Greene County Farm Bureau.

This 97-year-old Farm Bureau member who has done his job on the home front in the Civil War, Spanish - American War and World Wars I and II, recently took five first premiums and two second premiums at the Greene County Fair. First prizes were given him for his exhibit of cabbage, potatoes, turnips, white onions and on a single ear of corn. Second prizes were awarded to his red onion display and group ear corn. He attended the first Greene County Fair 90 years ago. His "younger" brother, Frank, who was 81 in July, accompanied him to the 1945 fair.

Warren Beebe

During the Civil War Mr. Beebe was rejected from the armed forces as physically unfit and he worked with his father to produce food during the Civil War. Today he is still farming on the same 85-acre farm near Eldred with the help of his brother.

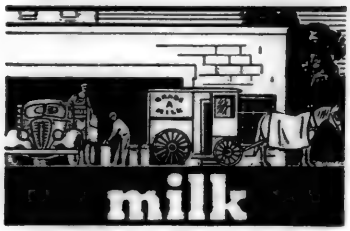
Mr. Beebe is up-to-date on his farming methods and has shown considerable interest in soil conservation practices. Recently he accompanied a group of 125 farmers of the county on a pasture tour. In addition to his grain farming, Mr. Beebe and his brother are raising a drove of hogs.

About the only old-fashioned thing about Mr. Beebe's life is his mode of travel. He and his brother still make their trips into Carrollton by horse and wagon.

Mr. Beebe was recently recognized by the Greene County Farm Bureau through receipt of a lifetime honorary membership by action of the executive board of the Farm Bureau.

Warren Beebe, 97, right, and his brother, Frank, 81, show some of their garden stuff.

More money for farm pr



By WILFRED SHAW

Illinois dairymen should obtain from their County Farm Bureau a copy of the recently issued University of Illinois Bulletin No. 511 entitled, "Cost of Producing Milk in Northern Illinois," by R. H. Wilcox and C. S. Rhode.

In this bulletin are the cost of milk production figures in 99 dairy herds for the year 1937. The importance of good cows, good management and feeding are translated into their influence upon cost of production of milk in this bulletin.

R. J. Mutti, of the agricultural economics department of the University of Illinois, recently reported that of all milk produced in Illinois in 1943, 25% was utilized in the manufacture of butter; 13% was made into cheese; 11% was manufactured into evaporated and condensed milk; and 6½% was manufactured into ice cream.

Illinois butter production in 1943 was 72,164,800 pounds and was manufactured in 150 plants. Our cheese production was 69,745,051 pounds and was manufactured in 138 plants. Our Illinois evaporated and condensed milk production was 272,199,391 pounds, produced by 32 plants, and our ice cream production in Illinois for 1943 was 25 million gallons, produced by 1,194 plants.

E. W. Tiedeman, manager of the Central Grade "A" Cooperative, Appleton, Wis., W. O. Perdue, manager of the Pure Milk Products Cooperative of Fond du Lac, Wis., and A. H. Lauterbach, general manager of Pure Milk Association of Chicago, were members of a panel discussion upon dairy marketing at the Illinois Milk Producers' Association directors' meeting July 31 in the IAA offices, Chicago. "Ed" Tiedeman was president of Sanitary Milk Producers of St. Louis before going to Wisconsin three years ago and "Bill" Perdue was market administrator at Quad-Cities before accepting his Wisconsin cooperative work.

The newly appointed American Farm Bureau Federation's dairy marketing committee held its first two-day meeting in Chicago, July 26 and 27. The committee is composed of three representatives selected by the Farm Bureaus in each of four regions of the United States, plus four AFBF directors. This committee is to act as an advisory committee to the AFBF board of directors upon dairy problems in the United States. Frank White, president of the Minnesota Farm Bureau, and vice-president of Land O'Lakes Creameries, was selected chairman of the committee, and P. C. Turner of Maryland was selected vice-chairman. Mid-West regional members of the dairy committee are Frank White, Minnesota, E. W. Tiedeman, Wisconsin, and Wilfred Shaw, Illinois.

The following are the blended prices received by producers supplying the respective Illinois markets. All are July prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.46
Canton	2.75
Champaign	2.65
Chicago	3.04
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.76
Galesburg	2.65
Harrisburg	2.65
Jacksonville	
Kewanee	2.55
LaSalle	2.68
Moline	2.794
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.02
Springfield	2.85
St. Louis	3.58
Streator	2.40

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for June unless otherwise noted:

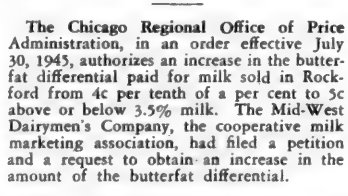
Baltimore	$3.82
Boston	3.32
Chicago (70 Mile Zone) (July)	3.04
Cleveland	3.18
Detroit	3.24
Indianapolis	2.82
Kansas City	3.14
Louisville	3.04
New York City	3.44
Seattle	3.04
St. Louis (July)	3.58
St. Paul and Minneapolis (July)	3.04
Toledo	3.12
Terre Haute, Ind.	2.80
Washington, D. C.	3.94

Pure Milk Association, Chicago, had a total membership of 13,023 in July, a new high in membership.

Sanitary Milk Producers, St. Louis, reported that its check testers had run the 3,000,000th test on members' milk. Check testing, re-testing, and scale checks are among the services rendered members during its past fifteen years of marketing.

A "Carlinville Milk Producer" asks if butter cannot be obtained in exchange for milk without payment of points. The Chicago Regional Office of Price Administration advises us the answer is "no", or, as they state it, "Consumers may not acquire butter without the surrender of points without exception."

The Chicago Regional Office of Price Administration, in an order effective July 30, 1945, authorizes an increase in the butterfat differential paid for milk sold in Rockford from 4c per tenth of a per cent to 5c above or below 3.5% milk. The Mid-West Dairymen's Company, the cooperative milk marketing association, had filed a petition and a request to obtain an increase in the amount of the butterfat differential.



By S. F. RUSSELL

A 1944 cost report recently compiled by R. H. Wilcox and J. R. Harris, U. of I. College of Agriculture, throws some light on why we have so many empty feed lots.

The farm cost data analyzed by Wilcox and Harris from a group of farms in east central Illinois show that for 1944 the average cost of producing 100 pounds of pork, including feed, labor, use of equipment, and other costs, was about $14. Returns for each 100 pounds of pork averaged about $13. That's a loss of $1 per hundred.

And here's more. It cost $177 a head to produce feeder cattle which returned $155 a head. That's a loss of $22 for each steer fed. Poultry and dairy figures showed a similar trend.

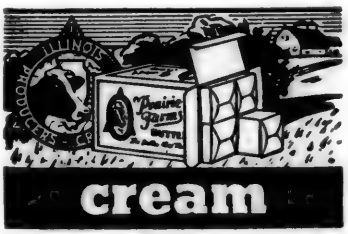
Annual fall outlook meetings got underway during August throughout the state and will continue through September. The meetings cover a discussion of the economic situation and information on stocker and feeder cattle and feeding lambs. Representatives of the U. of I. College of Agriculture, livestock marketing department of the IAA, and cooperative marketing agencies are appearing on the programs. Consult your farm adviser for the time and place of the outlook meeting being held in your area.

Some of the outlook meetings were held in August and the first part of September. Remainder of the meetings starting with

Sept. 11 include: Sept. 11, Iroquois, Menard, Madison, Vermilion and Williamson. Sept. 12, Woodford, Logan, Edgar and Jefferson. Sept. 13, McLean, Macon, Monroe and Clark. Sept. 14, Livingston, Piatt, Randolph and Crawford.

Sept. 17, Wayne; Sept. 18, Whiteside, DuPage, St. Clair, Jersey and Lawrence. Sept. 19, Henry, McHenry, Peoria, Macoupin, Edwards. Sept. 20, Richland, Bureau, Ogle, Fulton, Morgan-Scott and Gallatin-White.

Sept. 21, McDonough, LaSalle, Stark, Cass, Pulaski-Alexander and Pope-Hardin-Massac. Sept. 25, Hancock, Carroll, Will, Bond and Hamilton. Sept. 26, Henderson, JoDaviess, Ford, Montgomery and Saline. Sept. 27, Mercer, Stephenson, DeWitt, Effingham and Jasper. Sept. 28, Rock Island, Winnebago-Boone, Mason, Christian and Washington.



By F. A. GOUGLER

The board of directors of Prairie Farms Creamery of Carlinville has authorized the sale of additional Class "A" preferred stock. This new issue is to be used to construct a new building and to purchase needed new equipment. For the time being, says Manager F. A. Gourley, total outstanding stock will be limited to $125,000.

The amount that can be sold to any one individual, according to board action, is $500. However, each member of the family may purchase this amount. Only persons who are directly interested in farming and are known to be interested in cooperative effort may purchase stock.

The board anticipates that the stock will be over-subscribed, therefore, the board reserves the right to accept or refuse any or all stock.

Manager Gourley reports a gain of 18 new patrons during June and 5 lost, making a net gain of 13.

Prairie Farms Creamery of Carlinville contributed $660.40 to the American Dairy Association this year, which was deducted from patrons' checks June 1-15 inclusive at the rate of 1c per pound butterfat purchased.

Manager Frank Mleynek, Prairie Farms Creamery of Olney, has an excellent short article on quality milk in his July issue of Prairie Farms News, as follows:

"A pie cooled in a cow barn might not be a very attractive dish, depending upon how many straws, bits of hair, flies and other things like that got into it.

"It seems as though the milk to make the pie should be given as much care as the pie. The fact is, the milk is more sensitive, more easily damaged by bacteria, than is the pie.

"Like field crops, some bacteria are helpful. Like weeds in a garden, some bacteria are a nuisance. And like poison ivy and nettles, some bacteria are very dangerous. Most kinds of bacteria found naturally in milk are undesirable, and in milk we can't separate them, so we try to keep the number of all kinds as small as possible. In all milk, the fewer bacteria, the better.

"This is accomplished by using clean utensils, having healthy cows and cooling milk immediately after milking and keeping it cold until your driver picks it up. Cleanliness in milking methods and practicing sanitation throughout means few bacteria and good high quality milk."

Since the subsidy payment for butterfat in milk is about equal to that paid for fat in cream, it appears that many producers who formerly sold milk are now separating. Farmers Creamery Company of Bloomington shows a slight gain in volume during June this year over June last year. This is one of the nine creameries that did not install equipment to handle milk and as a result during war years volume has dropped.

Production per patron also shows a marked increase. Manager Fairchild reports that during the week of July 18, the average production per patron was 15½% above the same week a year ago and was practically the same as the average production per patron in 1943.

Prairie Farms Creamery of Mt. Carroll is now operating full blast in its new creamery. During the last half of July, Herbert Johnson of Prairie Farms Creameries assisted Manager Sailer with installation of a new roll dryer and other new equipment. Manager Sailer will now turn his attention to procurement problems. The Farm Bureau boards of JoDaviess, Stephenson and Ogle counties, have given permission to the state Company to allocate these counties to Prairie Farms Creamery of Mt. Carroll. These are heavy milk producing counties and give this plant a splendid opportunity to build volume. That's the next problem for Manager Sailer and we will assist him in every possible way.

Prairie Farms Creamery of Carbondale will be in a position to receive milk by early this fall. The new boiler room which will house two large boilers is completed and the second boiler is being installed. When this steam plant is completed it will be second to none of our cooperative plants.

Work will start immediately in rearranging the interior of the plant to provide a receiving room for handling both milk and cream. Milk will be received, pasteurized and some will be sold to other dairies for bottling and the balance will be processed in the plant for various uses.

Illinois ranks fifth among all states in total acreage of crops harvested.

By G. H. IFTNER

A number of elevator companies in Illinois are now engaged in the process of reorganizing under the Illinois Cooperative law of 1923. This development is in line with modern cooperative procedure. It is simply a matter of keeping good corporate repair, without which cooperatives grow old and die.

Most recent company to start re-organization procedures is the Rees Farmers Elevator in Morgan county. The local Farm Bureau and the legal department of the Illinois Agricultural Association are assisting with the work.

The director of this department has tentative dates with at least eight other companies which contemplate re-organization.

Several weeks ago a form letter was mailed at the Bloomington, Illinois, post office to the farmer elevator companies in this state. The letter cited a recent court case in a western state wherein it was held that farmer stock companies operating as profit business could not legally reorganize and become co-ops. The effect of the letter was that directors receiving it doubted the legality of such reorganization in this state. For the benefit of those companies which have perfected their reorganization and of those who might otherwise be concerned, it is recommended that the letter be disregarded.

Ursa Farmer's Elevator Company in Adams county got two river-going barges for the movement of the July wheat harvest. These were the first barges the Ursa Company had been able to get for reasons that have never been explained. Word may have gone out that the statewide merchandising program contemplates the development of cooperative companies to operate river houses on the Illinois and Mississippi rivers.

Rapid developments in the Farm Bureau sponsored grain and feed programs have placed a strain on management. There is a dire need for experienced men who believe in the Farm Bureau, what Farm Bureau stands for, and what Farm Bureau can do to keep Illinois agriculture in a strong position economically, socially and politically. Right now there are opportunities for young men recently discharged from the armed services to work into a secure position for their life work.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. BRISSENDEN

A TOTAL of 114,503 members was on the rolls of the Illinois Agricultural Association as of June 30, 1945, the end of the third quarter of the fiscal year.

Cancellations totalled 6,026. Of this number 464 were transfers to the two new organizations, Hamilton County Farm Bureau and Perry County Farm Bureau, leaving a net cancellation of 5,562 for comparative purposes. The cancellations for the same period last year were 4,775. There are 14,145 new members as compared with 14,365 last year. This represents 161.7% of the yearly new member quota of 8,745. The net gain for the nine months period was 9,446.

Eighty-two counties in the state had attained or exceeded their new member goals and twenty-one of these had completed more than 200%. Only six were below 75%. This should be the year when all counties make their new member quotas.

The 105% dues income quota was attained by 19 county organization directors during the period.

Long range goals set by the county committees had been attained in 34 counties and many have definite programs for completion by Sept. 30. Almost all plan on having the job done by annual meeting time.

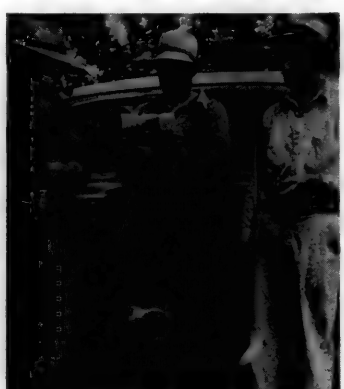
In addition to the good work done on acquisition, the program of maintenance has been intensified in many counties. An all-out effort is being made to carry services to each and every member. Analysis of the services that are being used by each member is the first job in this program. And then comes the follow-up by both members of the Farm Bureau personnel and leadership. A recent article in "CLIC" entitled "Give Every New Member a Chance to Buy", is an example of the interest and cooperation the organization forces are receiving from other departments in this program.

John C. Bigelow, county organization director of Marion County Farm Bureau, reported the largest percentage of the new member quota during the nine months' period. Some 170 new members were reported on a quota of 55 or 309%.

A. B. Culp, county organization director in McLean county, reported the largest number of new members. He reported 322 on a quota of 180.

The Jackson-Perry County Farm Bureau started the year with 891 members, later divided into two county organizations, whose combined membership was 1149 as of June 30, making a net gain of 258, which was the largest numerical net gain in total membership. Carl Robinson, who served as COD for the dual organization, continues in Jackson county and Bernis Provart is now COD for the new organization in Perry county.

Franklin-Hamilton County Farm Bureau was also reorganized during the year into two separate county organizations. The percentage net gain of 40.9% in the total membership for the two counties was the highest in the state. Carl Cox is COD in Franklin county and B. H. Wainstreet, an aggressive volunteer worker in past membership drives, now serves the new organization in Perry county as COD and general agent of insurance.



Earl Groves, center, Brouillett Creek township, has just signed a Farm Bureau agreement to become the 1500th member of the Edgar County Farm Bureau. H. Zeis Gumm, COD, is at the left, and Leo Swinford, president, is at the right.

Five years ago, Greene County Farm Bureau had a membership of 480. In April of this year, William Shuts of Patterson township became the thousandth member in that county. Dale Sponsler, Farm Bureau member of long standing in Greene county, is now serving as county organization director.

T. R. Drone, a salesman of many years' experience, is the new county organization director in Gallatin county succeeding James S. Potter, who resigned to enter soil conservation work.

Arnold Ziegler, who has served well as county organization director in Effingham county, has resigned and is being succeeded by Glen A. Percival, who started work on Aug. 13.

Gathman of Williamsville is the new general agent and county organization director for the Scott County Farm Bureau. Gathman was a farmer and a special agent for Country Life Insurance Company in Sangamon county prior to his employment in Scott county.

One-day "Refresher" meetings in 12 districts, featuring pointers on effective speaking and salesmanship, will be offered to employees of Farm Bureaus and subsidiaries during September by W. P. Sandford, IAA director of sales service.

lockers

By FRANK A. GOUGLER

The first annual meeting of the Piper City Locker Association was held in the Piper City High School Aug. 15. Despite the fact that it was V-J Day, a fair attendance was had.

Manager Clarence E. Pierson, in his report to the shareholders, from the audit, showed that during the first 4½ months of operation, the company experienced a slight loss. A small profit was made during July and it was the manager's belief that by the time the company had operated a full year the loss would be liquidated.

George Fickling, president of the board, reported that patrons are demanding slaughter and other services which the board plans to provide as soon as possible.

Several thousand dollars have been subscribed for additional stock, some of which can be used to build a slaughter plant. The board plans to build an addition to the locker plant for installing slaughter facilities. It is estimated this addition, with equipment, will cost about $6,000.

The board-members and officers re-elected were as follows: Geo. Ficklin, president; W. R. Crandall, secretary-treasurer; Wm. F. Weber and Harry Van Antwerp, all of Piper City.

L. R. Downs, Piper City, asked to be relieved of his duties on the board because of the extensive expansion program of the seed company. Those present voted unanimously their appreciation for the splendid service Downs had given the locker company.

V. A. Krueger, Chicago, a discharged veteran, started work in August as manager of the Coles County Locker Service. Krueger has had extensive experience in the meat business and also worked in this line during three and one-half years in the Army. His wife, Mrs. Mildred Krueger, will serve as bookkeeper for the Coles Locker Service. She served as office secretary in Adams county and in 1937 came to the IAA offices in Chicago where she worked as secretary for several IAA department heads. For the past two years she was secretary to President Earl C. Smith. IAA associates wish the Kruegers the best of success in their new positions.

All of our cooperative locker plants are grading beef, veal, lamb and mutton according to OPA requirements. There is some variation as to the method due to the fact that district officials do not issue uniform regulations. At least one district has not required that patrons' meat be graded, provided it is point free meat and the patron is a producer and is entitled to it. Other districts now allow the patron to designate an employee to do the grading for him. Some managers are having all the beef, veal, lamb and mutton graded by a federal grader. Either the association pays the federal grader or it is charged direct to the patron. OPA permits this charge to be made to

the producer and has established a ceiling price therefor as follows:

Effective July 30, 1945, the ceiling price that can be charged to patrons for grading is 12½c per 100 pounds of meat graded, computed to the next highest multiple of 5c.

"For example", the ruling states, "if a farm slaughterer requests the locker plant to grade 150 pounds of meat, the ceiling price for grading this meat would actually figure out at 18¾c. Adjusted to the next highest 5c multiple, however, the final ceiling price would be 20c on this particular operation."

According to published reports, meat rationing will be lifted within the next few months and it is assumed that grading of meats processed in locker plants will not be required if meat becomes point free.

By JOHN R. SPENCER

According to recent soil tests of the Ford County Farm Bureau laboratory 45 per cent of the samples needed two tons or more of limestone per acre, 80 per cent needed rock phosphate and only 15 per cent of the samples showed adequate amounts of potash present.

About 75 per cent of the fertilizer that will be handled by Illinois Farm Supply Company in the next fiscal year will be "straight materials" (carrying one plant food element) such as rock phosphate, muriate of potash and superphosphate. This will seem to be carrying out the three fundamental principles in a rational program for soil fertility restoration or crop fertilization of economy, sufficiency and permanency as recommended by A. L. Lang of the U. of I. College of Agriculture.

A trucker in Fayette county is developing, with the active help of the Farm Adviser J. B. Turner, an elevated hopper bottom rail car unloading device for limestone. It is in a building formerly used by the Vandalia light plant in which coal was unloaded from rail cars. A sizable covered storage in the building will be utilized to facilitate handling of dry material during wet weather periods.

About three-fourths of all the Illinois farm land or 24 million acres needs phosphate, according to soil tests, reports C. M. Linsley of the U. of I. College of Agriculture.

"The critical shortage of phosphorus in most Illinois soils is not receiving the attention it deserves" he said.

Soils that test low in available phosphorus can produce from 50-60 per cent of a maximum clover or alfalfa crop. This means low yields of corn and other crops, because a 60 per cent clover crop supplies only about 60 per cent of the nitrogen and organic matter that the soil needs for other crops.

Organic matter binds soil particles together like hair in plaster, which enables the particles to resist the action of run-off water.

As of last July the list of county soil testing laboratories, according to Hugh Brock, chairman of the soil committee of the Farm Advisers Association, was the following:

Set up or authorized	55
Contemplating	10
Doubtful	6
Potash test in adjoining county	1
Acidity and phosphorus with potash test made at University	19
Counties not heard from	7
	98 counties

"This development probably puts the extension service in the best soils position of any group in the U. S.", he said.

Three-fourths of the 62 quarries sampled by the IAA soil improvement department in May, June and July were producing agricultural limestone with a fineness of grinding of 80 per cent or more passing an 8 mesh screen (64 openings per square inch). For effective neutralizing power in the soil agricultural limestone depends upon its fineness as well as its purity. Farmers in purchasing this essential material should insist on a fineness of grinding 80 per cent or more passing an 8 mesh screen. It is possible for *all* quarries to produce this grade of liming material.

PEORIA PRODUCERS MANAGER DIES

W. R. Hembrough, manager of the Peoria Producers Commission Association since Jan. 1, 1923, died July 31 at the Methodist hospital, Peoria. He had been a patient in the hospital since June 5.

W. R. Hembrough

Funeral services were held at the Ashbury Methodist church and burial was made in Ashbury cemetery.

A loyal supporter of the cooperative ideals for many years, Mr. Hembrough witnessed the inception of the producer cooperative sales movement Jan. 1, 1922, at the St. Louis National Stock Yards. In June, 1922, he went to Peoria and helped to organize the Peoria Producers. He served as hog salesman until Jan. 1, 1923, when he became general manager and cattle salesman, a position he held throughout the years until his death.

Well known in livestock circles throughout the state, Mr. Hembrough was generally conceded to be a past master in the knowledge of cattle, their value and importance in the agricultural program.

The cooperative idea implanted in his mind in St. Louis more than 23 years ago never wavered throughout the years.

LaSALLE MAN JOINS PUBLICITY STAFF

James C. Thomson, formerly of LaSalle county and since 1942 employed by the Chicago bureau of the Association Press, has been hired as assistant editor of the Illinois Agricultural Association Record and assistant in the IAA publicity department. He started work Sept 1.

James Thomson

A graduate of the University of Illinois School of Journalism in 1935, Thomson had wide experience on downstate Illinois newspapers prior to joining the Associated Press staff. During 1935-36 he edited two weeklies, the Lemonter at Lemont, and the Herald at Lockport. He was later employed by the Decatur Herald and Review, and in 1937 began work as a reporter for the Daily Republican Times in Ottawa. He later worked as farm page editor on the Times.

While attending the University of Illinois, Thomson worked on the Daily Illini at Champaign for three years and during part of this time reported news from the College of Agriculture. In his senior year, Thomson edited the Y.M. C.A. paper at the University.

Thomson spent his early life near Ottawa and attended a rural school a mile south of that community. He was graduated from Ottawa High School in 1931.

Thomson is married and has two daughters. His wife is the former Dorothy Schinz of Ottawa.

Since the resignation of C. M. Seagraves, director of advertising, in May, 1945, the personnel of the publicity department has consisted of the director and two secretarial employees. Seagraves resigned from the IAA staff to join a Chicago advertising agency.

Lt. Merrill Gregory, editor of the IAA Record, is on leave of absence. He has been in the Army since the fall of 1941 and according to latest reports was stationed at Pilsen, Czechoslovakia. Prior to assignment to the European front in January of 1945, Lieutenant Gregory was stationed in the Southwest Pacific.

The influence of the Indianapolis market on the movement of Illinois grains has been moving steadily westward for some time. This year that influence was felt as far west as Morgan county. The Indiana Grain Cooperative was responsible for a stronger demand for west central wheat this past harvest.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. BRISSENDEN

A TOTAL of 114,503 members was on the rolls of the Illinois Agricultural Association as of June 30, 1945, the end of the third quarter of the fiscal year.

Cancellations totalled 6,026. Of this number 464 were transfers to the two new organizations, Hamilton County Farm Bureau and Perry County Farm Bureau, leaving a net cancellation of 5,562 for comparative purposes. The cancellations for the same period last year were 4,775. There are 14,145 new members as compared with 14,365 last year. This represents 161.7% of the yearly new member quota of 8,745. The net gain for the nine months period was 9,446.

Eighty-two counties in the state had attained or exceeded their new member goals and twenty-one of these had completed more than 200%. Only six were below 75%. This should be the year when all counties make their new member quotas.

The 105% dues income quota was attained by 19 county organization directors during the period.

Long range goals set by the county committees had been attained in 34 counties and many have definite programs for completion by Sept. 30. Almost all plan on having the job done by annual meeting time.

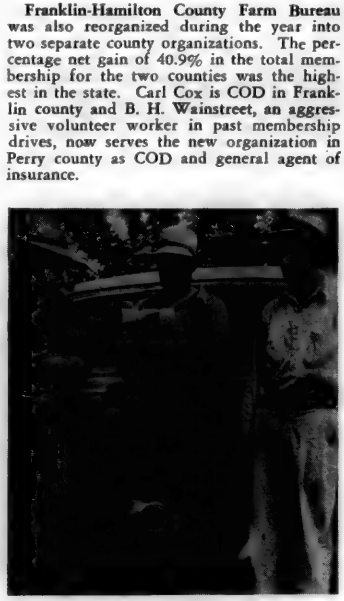
In addition to the good work done on acquisition, the program of maintenance has been intensified in many counties. An all-out effort is being made to carry services to each and every member. Analysis of the services that are being used by each member is the first job in this program. And then comes the follow-up by both members of the Farm Bureau personnel and leadership. A recent article in "CLIC" entitled "Give Every New Member a Chance to Buy", is an example of the interest and cooperation the organization forces are receiving from other departments in this program.

John C. Bigelow, county organization director of Marion County Farm Bureau, reported the largest percentage of the new member quota during the nine months' period. Some 170 new members were reported on a quota of 55 or 309%.

A. B. Culp, county organization director in McLean county, reported the largest number of new members. He reported 322 on a quota of 180.

The Jackson-Perry County Farm Bureau started the year with 891 members, later divided into two county organizations, whose combined membership was 1149 as of June 30, making a net gain of 258, which was the largest numerical net gain in total membership. Carl Robinson, who served as COD for the dual organization, continues in Jackson county and Bernis Provart is now COD for the new organization in Perry county.

Franklin-Hamilton County Farm Bureau was also reorganized during the year into two separate county organizations. The percentage net gain of 40.9% in the total membership for the two counties was the highest in the state. Carl Cox is COD in Franklin county and B. H. Wainstreet, an aggressive volunteer worker in past membership drives, now serves the new organization in Perry county as COD and general agent of insurance.



Earl Groves, center, Brouillett Creek township, has just signed a Farm Bureau agreement to become the 1500th member of the Edgar County Farm Bureau. H. Zeis Gumm, COD, is at the left, and Leo Swinford, president, is at the right.

Five years ago, Greene County Farm Bureau had a membership of 480. In April of this year, William Shuts of Patterson township became the thousandth member in that county. Dale Sponsler, Farm Bureau member of long standing in Greene county, is now serving as county organization director.

T. R. Drone, a salesman of many years' experience, is the new county organization director in Gallatin county succeeding James S. Potter, who resigned to enter soil conservation work.

Arnold Ziegler, who has served well as county organization director in Effingham county, has resigned and is being succeeded by Glen A. Percival, who started work on Aug. 13.

Gathman of Williamsville is the new general agent and county organization director for the Scott County Farm Bureau. Gathman was a farmer and a special agent for Country Life Insurance Company in Sangamon county prior to his employment in Scott county.

One-day "Refresher" meetings in 12 districts, featuring pointers on effective speaking and salesmanship, will be offered to employees of Farm Bureaus and subsidiaries during September by W. P. Sandford, IAA director of sales service.

lockers

By FRANK A. GOUGLER

The first annual meeting of the Piper City Locker Association was held in the Piper City High School Aug. 15. Despite the fact that it was V-J Day, a fair attendance was had.

Manager Clarence E. Pierson, in his report to the shareholders, from the audit, showed that during the first 4½ months of operation, the company experienced a slight loss. A small profit was made during July and it was the manager's belief that by the time the company had operated a full year the loss would be liquidated.

George Fickling, president of the board, reported that patrons are demanding slaughter and other services which the board plans to provide as soon as possible.

Several thousand dollars have been subscribed for additional stock, some of which can be used to build a slaughter plant. The board plans to build an addition to the locker plant for installing slaughter facilities. It is estimated this addition, with equipment, will cost about $6,000.

The board members and officers re-elected were as follows: Geo. Ficklin, president; W. R. Crandall, secretary-treasurer; Wm. F. Weber and Harry Van Antwerp, all of Piper City.

L. R. Downs, Piper City, asked to be relieved of his duties on the board because of the extensive expansion program of the seed company. Those present voted unanimously their appreciation for the splendid service Downs had given the locker company.

V. A. Krueger, Chicago, a discharged veteran, started work in August as manager of the Coles County Locker Service. Krueger has had extensive experience in the meat business and also worked in this line during three and one-half years in the Army. His wife, Mrs. Mildred Krueger, will serve as bookkeeper for the Coles Locker Service. She served as office secretary in Adams county and in 1937 came to the IAA offices in Chicago where she worked as secretary for several IAA department heads. For the past two years she was secretary to President Earl C. Smith. IAA associates wish the Kruegers the best of success in their new positions.

All of our cooperative locker plants are grading beef, veal, lamb and mutton according to OPA requirements. There is some variation as to the method due to the fact that district officials do not issue uniform regulations. At least one district has not required that patrons' meat be graded, provided it is point free meat and the patron is a producer and is entitled to it. Other districts now allow the patron to designate an employee to do the grading for him. Some managers are having all the beef, veal, lamb and mutton graded by a federal grader. Either the association pays the federal grader or it is charged direct to the patron. OPA permits this charge to be made to

the producer and has established a ceiling price therefor as follows:

Effective July 30, 1945, the ceiling price that can be charged to patrons for grading is 12½c per 100 pounds of meat graded, computed to the next highest multiple of 5c.

"For example", the ruling states, "if a farm slaughterer requests the locker plant to grade 150 pounds of meat, the ceiling price for grading this meat would actually figure out at 18¾c. Adjusted to the next highest 5c multiple, however, the final ceiling price would be 20c on this particular operation."

According to published reports, meat rationing will be lifted within the next few months and it is assumed that grading of meats processed in locker plants will not be required if meat becomes point free.

By JOHN R. SPENCER

According to recent soil tests of the Ford County Farm Bureau laboratory 45 per cent of the samples needed two tons or more of limestone per acre, 80 per cent needed rock phosphate and only 15 per cent of the samples showed adequate amounts of potash present.

About 75 per cent of the fertilizer that will be handled by Illinois Farm Supply Company in the next fiscal year will be "straight materials" (carrying one plant food element) such as rock phosphate, muriate of potash and superphosphate. This will seem to be carrying out the three fundamental principles in a rational program for soil fertility restoration or crop fertilization of economy, sufficiency and permanency as recommended by A. L. Lang of the U. of I. College of Agriculture.

A trucker in Fayette county is developing, with the active help of the Farm Adviser J. B. Turner, an elevated hopper bottom rail car unloading device for limestone. It is in a building formerly used by the Vandalia light plant in which coal was unloaded from rail cars. A sizable covered storage in the building will be utilized to facilitate handling of dry material during wet weather periods.

About three-fourths of all the Illinois farm land or 24 million acres needs phosphate, according to soil tests, reports C. M. Linsley of the U. of I. College of Agriculture.

"The critical shortage of phosphorus in most Illinois soils is not receiving the attention it deserves" he said.

Soils that test low in available phosphorus can produce from 50-60 per cent of a maximum clover or alfalfa crop. This means low yields of corn and other crops, because a 60 per cent clover crop supplies only about 60 per cent of the nitrogen and organic matter that the soil needs for other crops.

Organic matter binds soil particles together like hair in plaster, which enables the particles to resist the action of run-off water.

As of last July the list of county soil testing laboratories, according to Hugh Brock, chairman of the soil committee of the Farm Advisers Association, was the following:

Set up or authorized	55

"This development probably puts the extension service in the best soils position of any group in the U. S.", he said.

Three-fourths of the 62 quarries sampled by the IAA soil improvement department in May, June and July were producing agricultural limestone with a fineness of grinding of 80 per cent or more passing an 8 mesh screen (64 openings per square inch). For effective neutralizing power in the soil agricultural limestone depends upon its fineness as well as its purity. Farmers in purchasing this essential material should insist on a fineness of grinding 80 per cent or more passing an 8 mesh screen. It is possible for *all* quarries to produce this grade of liming material.

PEORIA PRODUCERS MANAGER DIES

W. R. Hembrough, manager of the Peoria Producers Commission Association since Jan. 1, 1923, died July 31 at the Methodist hospital, Peoria. He had been a patient in the hospital since June 5.

W. R. Hembrough

Funeral services were held at the Ashbury Methodist church and burial was made in Ashbury cemetery.

A loyal supporter of the cooperative ideals for many years, Mr. Hembrough witnessed the inception of the producer cooperative sales movement Jan. 1, 1922, at the St. Louis National Stock Yards. In June, 1922, he went to Peoria and helped to organize the Peoria Producers. He served as hog salesman until Jan. 1, 1923, when he became general manager and cattle salesman, a position he held throughout the years until his death.

Well known in livestock circles throughout the state, Mr. Hembrough was generally conceded to be a past master in the knowledge of cattle, their value and importance in the agricultural program.

The cooperative idea implanted in his mind in St. Louis more than 23 years ago never wavered throughout the years.

LaSALLE MAN JOINS PUBLICITY STAFF

James C. Thomson, formerly of LaSalle county and since 1942 employed by the Chicago bureau of the Association Press, has been hired as assistant editor of the Illinois Agricultural Association Record and assistant in the IAA publicity department. He started work Sept 1.

James Thomson

A graduate of the University of Illinois School of Journalism in 1935, Thomson had wide experience on downstate Illinois newspapers prior to joining the Associated Press staff. During 1935-36 he edited two weeklies, the Lemonter at Lemont, and the Herald at Lockport. He was later employed by the Decatur Herald and Review, and in 1937 began work as a reporter for the Daily Republican Times in Ottawa. He later worked as farm page editor on the Times.

While attending the University of Illinois, Thomson worked on the Daily Illini at Champaign for three years and during part of this time reported news from the College of Agriculture. In his senior year, Thomson edited the Y.M.C.A. paper at the University.

Thomson spent his early life near Ottawa and attended a rural school a mile south of that community. He was graduated from Ottawa High School in 1931.

Thomson is married and has two daughters. His wife is the former Dorothy Schinz of Ottawa.

Since the resignation of C. M. Seagraves, director of advertising, in May, 1945, the personnel of the publicity department has consisted of the director and two secretarial employees. Seagraves resigned from the IAA staff to join a Chicago advertising agency.

Lt. Merrill Gregory, editor of the IAA Record, is on leave of absence. He has been in the Army since the fall of 1941 and according to latest reports was stationed at Pilsen, Czechoslovakia. Prior to assignment to the European front in January of 1945, Lieutenant Gregory was stationed in the Southwest Pacific.

The influence of the Indianapolis market on the movement of Illinois grains has been moving steadily westward for some time. This year that influence was felt as far west as Morgan county. The Indiana Grain Cooperative was responsible for a stronger demand for west central wheat this past harvest.

Rural Youth

By
ELLSWORTH D. LYON

Washington county announced launching of a publication with "Starring First Issue Rural Youth." It was well done with succeeding issues of the same high caliber. Enrollment — 160 members.

Logan believes in the early form of locomotion of the human race. A hike to Pattsville Park led by Doris Gehlbach was rewarded by games and a big watermelon treat.

St. Clair celebrated its birthday at the first annual meeting on July 29 at Shiloh Valley Grange. President Russell Flarreich presided with Farm Adviser B. W. Tillman and Organization Director E. R. Keim addressing the group. Present goals — larger membership and greater achievements.

LaSalle's volunteers — 14 girls and 18 boys — worked all day July 4 to help clean up two demolished farms in the June tornado area near Prairie Center. A softball tourney and sport's festival (attendance — 95) have been two interesting summer projects.

Hamilton was favored by an outdoor party in August on the lawn of Farm Adviser and Mrs. Glen F. Sons.

More than 100 attended the Edgar's Rural Youth roller skating party at Terre Haute, July 10. The sale of tickets netted $18.22 for the treasury.

Bond County has been holding summer meetings at the homes of some of the members.

Secretary Mary Gavin of Warren reports that one of the big summer events was a barn dance attended by 125 members.

Two interesting educational features were included in the summer program of the McHenry County Crystal Lake Wildcats. They were "Two Family Farm Business" and "The Banquet." The latter is a discussion of table etiquette. Two big dances have been included, also. The Hebron group held a July picnic at Linn Pier, while the Harland Club enjoyed a hayride and a weiner roast. All eight clubs sponsored the annual youth picnic on July 22.

Woodford is among the counties which ranks high in community service. A contribution of money to Mayo hospital at Galesburg to assist in buying furnishings for the sun porch will mean much to the servicemen.

Ogle's recent double feature should mean much in terms of practical education: slides on soil conservation and a demonstration on cake decorating. Then came cake and ice cream for refreshments.

Edwards county is in the process of organizing a new group at West Salem. Best wishes. Possibilities appear encouraging.

Randolph heard David Conn, state's attorney, in a very interesting talk on law as part of the summer activity. A fun event was the Sports Festival attended by 90 members.

Clark is working for a better organization. They have recently studied and presented the history of Rural Youth in Illinois and discussed future plans. Prediction: Success.

Christian's August meeting was planned as a home-coming event.

Stephenson held an overnight camp in Krape Park, Freeport, July 21 and 22. Chairman Evelyn Damier reporting upon the camp says it was a big success with 150 registered from five counties — Stephenson, Lee, Ogle, Winnebago, and Carroll.

Herbert Kile, Edgar county, a veteran of the South Pacific campaign, was recently discharged from the Army.

Pfc. Donald Dickenson spent a 30 day furlough in Edgar county in July and August after serving in the European theater. Don received the Presidential Citation while serving between Aachen and Cologne.

Pfc. Ernest L. Eastham, who has been in the European theater of operations since December, attended the July Rural Youth meeting of Edgar county.

Rowland Miller, of Belleville was wounded June 18 on Mindanao Island of the Philippine group. Miller is St. Clair's first wounded Rural Youther.

Lt. Milo Thurston, B-24 pilot and former Pulaski-Alexander Rural Youther, has been discharged from the Army under the point system.

NEWS and VIEWS

Set Goals For War Memorial

ONE of the most ambitious programs Illinois 4-H club members have ever attempted — the establishment of a war memorial 4-H club camp — is getting underway throughout the state.

"By thy rivers gently flowing. . . . o'er thy prairies gently flowing" — this will be the setting for the proposed camp, dedicated to clean, healthful living for Illinois youth.

It will be centrally located in the state — a great monument to the services and sacrifices of former 4-H club members who have served in World War II. The camp will be the kind of memorial they would have wanted — these honored dead and victorious living — activated by and devoted to the achievements of youth.

War memorial 4-H club camp will be financed by funds raised through 4-H club organizations, and many counties throughout the state already have set their goals.

The initial amount to be raised over a two-year period is $100,000, with $50,000 during 1945. More than $13,000 remaining from the radio school fund will be applied to the memorial fund as a substantial step toward meeting the quota.

Rock Island county has set its goal at $1.50 per member; Menard county's 22 clubs will raise $300; Lake county promises $1 for each of its 600 4-H'ers; Whiteside county will contribute around $500; Bond county — new in organization — is contributing $150.

Illinois 4-H club members have a proud record in the great war just ended. Since May 30, 1945, five ambulances have been purchased for use of the armed forces. Three were purchased with funds raised by individual clubs all over the state, and one each by McHenry and Greene counties. In addition, McHenry county has given more than $1000 to Army hospitals for convalescents.

Added to the contribution of ambulances is the radio equipment presented to the Mayo General Hospital at Galesburg, and two Gulbranson spinet pianos given by Hancock county members. For the radio school project, 4-H clubs all over the state raised $1,764.82 through scrap drives, dances, parties, auctions, and donations. They gave the convalescing veterans the particular type of school they wanted. The pianos are now giving welcome recreation and enjoyment, while the radio school furnishes instruction to the boys.

Other contributions to victory made by Illinois 4-H club members include collection of milkweed floss in 1944 for use in life jackets; 1944 production of 3500 dairy calves, 10 million pounds of pork, 3,500,000 pounds of beef, 161,300 quarts of food canned and purchase or sale of $500,000 worth of War Bonds.

This is a view of the remodelled kitchen taken from the living room door.

New Home Bureau

Richland County Home Bureau recently organized to become the 81st county organization in the state. There are 334 charter members on the rolls.

Officers elected to head the group are: president, Mrs. Elva Drewes; vice-president, Mrs. Laura Betebenner; treasurer,

Here is a kitchen remodelling job done in the farm home of Mr. and Mrs. J. Sandrock, Lee county. At the left is the kitchen as it appeared before remodelling, and at the right, the "after" picture. Recently the water heater was moved to the basement. More and more women are revamping kitchens with cabinets.

for HOMEMAKERS

Mrs. Lester Delzel; secretary, Mrs. Albert Linder, and 4-H chairman, Mrs. Margaret Bill. All are from Olney with the exception of Mrs. Delzel who is from Noble.

More New Records

Another record in Home Bureau attendance has been reported to our "News and Views for Homemakers" department.

The report comes from Home Adviser Orla Kemper, Marshall-Putnam.

Mrs. Wilbur Casey of the Lacon-Hopewell unit in the Marshall-Putnam Home Bureau has attended every unit meeting in 23 years, or ever since Home Bureau was organized in these counties. She has always attended her own unit meeting.

And then there is Mrs. Otis McClary of the same unit who has attended every unit meeting for 23 years, but has had to visit other units several times to keep this record unbroken. During this time, Mrs. McClary has operated a beauty shop and has raised a family.

Both of these women have held offices in their unit and Mrs. Casey has served on the county executive board. These are indeed fine records, and we would like to hear from some more Home Bureau women who have similar stories.

ELFIN SET FOR BABY COMBINES PINK AND BLUE

You'd be happy, too, if you were all tricked out in a comfy jacket and cap set. Knitting directions for Baby's Double-Knit Sacque and Cap, No. 551, are available to you, free of charge. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 SOUTH DEARBORN, CHICAGO 5, ILL.

Recipe Treats

DROP BISCUITS

2 c. sifted enriched flour
3 tsp. baking powder
1 tsp. salt
2 to 4 tblsp. shortening
1 c. milk

Sift together flour, baking powder, and salt. Cut or rub in shortening. Add milk to make a thick batter, stirring only until flour is well moistened. Drop by spoonfuls on ungreased baking sheet or in greased muffin pans. Bake in hot oven (450° F.) 8 to 10 minutes.

Yield: About 18 biscuits.

FROGGY THREESOME FOR A TOT

It's always open season for gifts to kiddies. These frogs who "would a-wooing go" are perfect pets for the youngsters. Big, Middling and Little Frog are all crocheted from the same simple directions. Directions for crocheting THREE FROGS, NO. 3940, are available to you, free of charge. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn St., Chicago

Recipe for these drop biscuits is printed above in the recipe column.

EDITORIAL

The Objectives of Peace

THE solemn pride of Americans who have given up much in the cause of victory is equalled by the deep conviction that the objectives for which we fought remain to challenge our ability and strength. That our war dead shall not have made a futile sacrifice, that the suffering and heartache of millions, the toil of young and old, and the lavish expenditure of national resources shall not go for naught, we must dedicate ourselves to the winning of the peace.

Farm people have literally given of their all in this war. The gold stars on service flags of Farm Bureaus throughout Illinois and in the farm homes of America bear silent testimony to the devotion of our sons and daughters. May their loved ones, who are bowed in grief today, be comforted by the thought that they will live forever in our hearts, young, glorious and immortal. Their sacrifices overshadow all else. . .the endless toil in the fields, the splendid accomplishment of producing food and fiber that helped win the war and that will reduce the suffering of stricken peoples in the awful aftermath of conflict, the courage and determination with which farm people everywhere faced up to the stern demands of global war. Yet these, too, will be remembered with solemn satisfaction, as vital contributions to total victory. No group did more. Farm people would have scorned to do less in the great national effort.

And now victory — final and complete, has come. What will we do with it, to justify in small measure the sacrifice of our sons and daughters? Will the peace we now enjoy prove but another Armistice, the prelude to an all-destroying Third World War? Will the objectives for which America and her Allies fought — democracy, religious and political liberty — prove only sham and hypocrisy? Then indeed we shall have destroyed civilization as surely as if we had dropped a million atomic bombs.

It is our task to win the peace.

Farmers, who have learned so much in working cooperatively with their neighbors, feel that nations, too, can learn to work together in the ways of peace. Therein lies the last, best hope of human kind. It was with this thought that the leading farm organizations proclaimed their support of the United Nations Charter. It was realized that the Charter did not represent perfection, but it marked one step forward toward international cooperation.

Farmers know, too, that it will take cooperation to win the peace at home. They realize that if our domestic economy is to prosper it will require the proper recognition of the interrelationship of all groups, business, labor and agriculture. Farmers stand willing to work with these groups to achieve a common goal — national well being.

If agriculture is to make its full contribution, we must have national policies which will maintain farm income at a stable and reasonable level and thus bring about the largest possible production and consumption of the products of both agriculture and industry.

To maintain this stable farm income, it will be necessary to have overall national policies whereby government in cooperation with farmers sees to it that surplus reserves of basic soil crops are not permitted to unduly depress market prices.

With the assurance of sustained agricultural prices and income, farmers' demands for the products of industry will reach a volume that will surprise the nation. At least for many years, there is practically no limit, except the limitations of purchasing power, on the volume of manufactured commodities farmers will require and will purchase for the improvement of farms and farm homes.

There is also another reason for maintaining stable farm income. The value placed on agricultural commodities determines to a considerable extent the value of our new raw wealth and the level of our national income.

Only through the maintenance of a high national income can a tax structure be erected, sufficiently productive to meet the obligations of the government; only by maintaining such a tax structure can the solvency and integrity of our government be assured; and only through maintaining such solvency and integrity can real democracy be made to work.

Democracy and liberty are more than catchwords to farm people: they are the very breath of life to them. As our nation moves forward in reconversion, farmers will exercise unceasing vigilance to keep intact the freedom handed down to us by our forefathers.

The ancient liberties which were at stake in World War II are very real to farm people. Freedom of speech, and assembly, freedom of worship — these are ingrained in the very soul of America, and nowhere more cherished than among rural folk.

We must not fail. . .this time. . .to win the peace. Farm people proved and tested in the crucible of war, join with all other Americans in the great task of building a better, finer world. . .a world of peace, of understanding, of cooperation, and above all, a world of freedom.

We All Make Mistakes

THIS, believe it or not, happened in an Illinois county in 1945:

Farmers, members of Farm Bureau, purchased a feed mill which had been operated as a private enterprise, and set up a cooperative. A county official was much perturbed, because he "didn't like to see the county lose the property taxes which had been paid in the past," and of course (he thought) the cooperative would ask for tax exemption. "Farm cooperatives don't pay taxes," he worried.

Fortunately, he soon met a person who said, "Go right on extending the taxes as you have in the past. Our farmer cooperatives pay property taxes just like anyone else."

The county official was both relieved and pleased.

Doesn't it beat all how some ideas get around?

Is it necessary to say again that our local farm cooperatives are not tax-exempt, either as to local or state taxes, and only are their annual earnings exempt to the extent that such earnings are returned to the members where they become taxable? Our local farm cooperatives recognize and willingly assume every legal tax obligation.

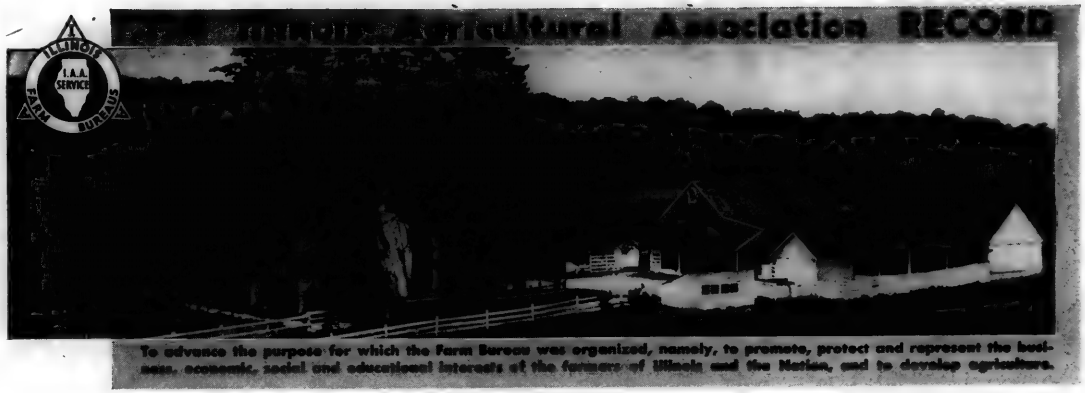
HOW GOOD A *Lawyer* ARE YOU?

WOULD YOU LIKE TO MATCH LEGAL WITS WITH THIS MAN?

Peace of mind is worth nearly as much as protection against actual loss. To say "no" to Farm Bureau auto and liability insurance is to say "yes" to your self-confidence in being able to handle any situation of a legal nature involving liability. Don't risk it! Play safe!

When you see an accident do you get a chill? When you've had a narrow escape do you shudder and shake? When you think you're in for a peck of trouble — as for example should someone threaten to sue you — are you calm or do you have the jitters? In short, how would you like to give up farming for a month or so and be left alone to match your wits (legally) with seasoned, experienced, and trained legal minds like the man pictured in our ad? Be much better to entrust this job to someone who has made it his life study, wouldn't it? Be better to just say, "see my lawyer," or "see my Farm Bureau insurance man"! When you protect yourself with Agricultural Mutual insurance you are doing just that . . . dumping these highly specialized problems into the laps of men who are not only ready to serve you, but whose responsibility it will be to shoulder the financial loss as well. If you've no ambition to become a court lawyer and just want to remain a successful farmer, call in your Farm Bureau insurance man now.



To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

This Month . . . by Earl C. Smith

THE American public is hearing from many sources various suggestions and recommendations for the revision of national agricultural policies. It is natural that farmers are concerned as to any contemplated changes, and of even greater importance, farmers are wondering how effectively the government will carry out present laws to maintain price support programs for farm commodities for a two-year period after the official end of the war.

Some months ago the American Farm Bureau Federation appointed a committee to formulate postwar policy programs. After weeks of study, the committee on Aug. 28 presented its report to the board of directors. The board approved this report, and as the October issue of the IAA RECORD goes to press, this postwar policy committee, of which I am chairman, together with President O'Neal will be conferring in Washington with President Truman and Secretary of Agriculture Anderson on these important matters.

The report of the postwar policy committee states that there is no necessity for any substantial change in present laws to carry out the price support assurances authorized by Congress.

This conclusion was reached only after careful study of the provisions of present laws as related to the peculiar requirements of every agricultural commodity affected by price control authority.

For instance, in the case of corn the so-called ever-normal granary is empty and even though the 1945 crop comes up to government estimates, any surplus resulting above current requirements can easily be withheld from unduly depressing market prices by authorized corn loans.

Should for any reason market demands decrease in a following year, there is adequate authority for the government to call on farmers to cooperate in making reasonable adjustments in production so as to keep current market supplies in reasonable balance with demand.

Should there occur any temporary surpluses of meat, there is adequate authority for the purchase of any price-depressing surplus and moving it in many channels such as food supplies this nation will be furnishing distressed peoples of many nations.

Speaking generally of commodities and general price levels, there is also adequate authority as supplies come into balance with demand, for the removal of price ceilings, elimination of rationing, the adjustment of subsidies and the movement of surpluses into abnormal channels such as the one indicated above.

Secretary Anderson Meets Farm, Business Leaders

By CRESTON FOSTER

SOME Illinois farmers had their first chance to size up the new secretary of agriculture, Clinton P. Anderson, as he made his first speaking appearance in the state Sept. 20 at Decatur.

Secretary Anderson made a good first impression. Farmers liked his forthright way of talking. They liked especially his statement that the government intended to make good on its price support program where it asked for increased production. They also liked his assertion that he intended announcing programs well in advance so that farmers could make their plans.

Secretary Anderson also spoke close to the farmers' hearts when he told of his difficulty in getting farm labor for his own farm.

The occasion for the new secretary's visit to Illinois was to address the east central Illinois regional conference sponsored by the agriculture-industry committee of the Illinois State Chamber of Commerce in cooperation with the Decatur Association of Commerce, Macon County Farm Bureau, and Farm Bureaus, Granges and local Chambers of Commerce in 14 east central Illinois counties. Some 642 persons attended the meeting with representation being equally divided between farmers and business men.

The matter of the government's price support program, which is uppermost in the mind of most farmers at this time, was given further consideration during the panel discussion following Secretary Anderson's address.

This question was submitted to Earl C. Smith, president of the Illinois Agricultural Association, who served as a member of the panel:

"How can crop and livestock surpluses or gluts be prevented if government support at parity prices makes their production highly profitable?"

President Smith first pointed out that the question was incorrectly worded. The government is committed to support prices at 90 per cent of parity and not at 100 per cent of parity. He said that if a business man were asked to operate at 10 per cent less than a fair price, he would not be inclined to continue to increase production.

Therefore, with price supports at 90 per cent of parity and not full parity, President Smith said he saw no reason why there should be crucifying surpluses as the result of the two-year support price commitment. He also asserted that he believed that if farmers are intelligently advised in sufficient time on what amounts to produce, they would respond.

President Smith then explained the American Farm Bureau Federation's interpretation of the government's two-year price support program.

The AFBF's interpretation is that the government is obligated to make good on its assurance of 90 per cent parity support for one year after the war's end, and on all agricultural commodities in which the government asked for increased production. Price supports in the second year after the official end of the war could be modified only to the extent that farmers might fail to meet the government's request for adjusted production.

Secretary Anderson declared that he was delighted to hear President Smith's report of the Farm Bureau's interpretation on the price support program. The secretary said that he had not heard all of the proposal before, but he liked it. He added that this was not an endorsement of any agricultural organization or leader, but he saw wisdom in the interpretation and would be glad to cooperate with progressive leadership as shown in the statement.

In his prepared address, Secretary Anderson declared that "Farmers can-

Participating in the panel discussion at the Decatur agriculture-industry conference, left to right, were: Earl C. Smith, IAA president; Secretary of Agriculture, Clinton P. Anderson; Leonard J. Fletcher, Caterpillar Tractor Co., chairman of the Illinois Chamber of Commerce agriculture-industry committee, who served as moderator; A. E. Staley, Jr., President, A. E. Staley Manufacturing Co., Decatur; Louis Ware, president, International Minerals & Chemical Corp., Chicago, and E. A. Eckert, Master, Illinois State Grange, Mascoutah.

Dean H. P. Rusk of the University of Illinois College of Agriculture chats with Secretary of Agriculture Clinton P. Anderson at the Decatur conference.

Chatting together during the Illinois Agriculture-Industry Conference in Decatur, Sept. 20, are, left to right: B. B. Burns, president of Association of Commerce, Decatur; Macon County Farm Adviser J. R. Gilkey; Macon County Farm Bureau President H. B. Munch; Secretary of Agriculture Clinton Anderson; Mayor J. A. Hedrick, Decatur; Secretary Henry Bolz, Decatur Association of Commerce.

not be prosperous unless the whole economy is prosperous, and urban business cannot thrive unless agriculture thrives too. . .The city population is the most indispensable part of the farmer's market, but the farmers are also a mighty important part of the city worker's market. If farmers are prosperous, they can buy tractors, trucks, clothing and furniture that industries in the cities produce, contributing to the employment by their spending."

This recognition of the importance of farm prosperity to the prosperity of the country also was reflected by A. E. Staley, Jr., president of the A. E. Staley Manufacturing Company, Decatur, in a statement he made during the panel discussion. Staley said he thought that parity prices for agricultural products was a step toward maintaining full employment. He declared that the key to a profitable processing business is to have reasonable and adequate returns to the farmer with prices at least at parity levels. When the farmer suffers low prices, processors of his products suffer likewise, he added.

Another question of great interest directed to President Smith in the panel discussion was: "What will happen to prices when consumer subsidies are removed?"

The IAA president answered that the price effect to the producer or consumer in the removal of subsidies will be determined largely by the timing of the removal of price ceilings, elimination of rationing, and adjustment of subsidies as related to the supply and demand picture.

Secretary Anderson said that he believed that "with very few exceptions all hold-the-line subsidies could disappear by next June 30."

On the question of "What is the hired labor situation on farms since V-J Day?", Secretary Anderson declared that the situation is more difficult than ever before. He said that he had sent a letter to General Hershey, head of the Selective Service, asking that no more farm labor be drafted this year. He also reported that he had advised Secretary of War Patterson that prisoners of war should not be removed until this year's crops are harvested.

E. A. Eckert, master of the Illinois State Grange, a member of the discussion panel, was asked the question: "How can farmers be assured of low interest rate working capital for production purposes, if the Production Credit Bank of the Farm Credit Administration is done away with?"

Mr. Eckert declared that he thought there was a place for both the private bank and the Production Credit, asserting that competition is the life of trade.

Harper Sibley, former president of the U. S. Chamber of Commerce, when asked his opinions on foreign agriculture competition, said he believed the pre-war balance of export and import of agricultural products will be regained.

He explained that hand labor of many of the foreign countries obviously cannot compete with our farm machinery, that what corn is shipped to our seaboards is not enough to worry about, and that hoof and mouth disease extends throughout the Argentine livestock industry.

A healthy atmosphere of willingness to learn about the other fellow's problems prevailed throughout the agriculture-industry conference. Mr. Sibley compared the conference to the early New England town meetings, which he said, represented democracy in action because policies were formed at the bottom and worked to the top, instead of being formed at the top and passed back to the people.

Some 842 persons attend the agriculture-industry conference at Decatur.

This Month

(Continued from page 3)

The report of the AFBF postwar policy committee also states: "There is a definite obligation of the government to support prices to the end of the marketing season on all crops under production on January 1 following the proclamation announcing the termination of hostilities.

"Beyond that period, the government is obligated to the extent that farmers respond to requests for adjustment in production."

In other words, the committee's report states that the government is obligated to make good on its assurance of 90 per cent parity support for one year after the war's official end, and on all agricultural commodities in which the government asked for increased production. Price supports in the second year after the official end of the war could be modified only to the extent that farmers might fail to meet the government's request for adjusted production.

Summarized in one paragraph, after careful review of all present laws relating to agriculture, it is the belief not only of the postwar policy committee, but of the board of the American Farm Bureau Federation, that with one or two minor exceptions, present laws are adequate to protect agriculture against any serious price declines. It is also their belief that final results will depend very largely upon the intelligent understanding exercised by responsible administrative officials of government in timing their actions affecting individual commodities and the effective use of not only the authorities given in the laws, but the mandates of Congress.

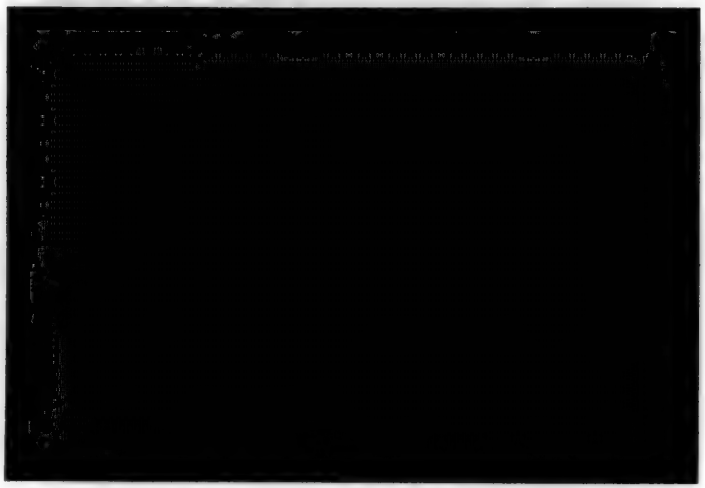
L. H. SIMERL



CHARLIE Johnson stopped his tractor at the mailbox. From it he took a daily paper, a farm magazine, and an official looking letter. After reading the newspaper headlines he opened the letter. It was from the county tax collector and contained Charlie's property tax bill.

Charlie examined the bill for a moment. Then he exploded like a miniature atomic bomb. A summary of Charlie's remark would be "how is a man expected to raise a family and pay his debts with the prices of farm products going lower and *taxes getting higher every year?*"

This may sound odd now but a lot of Illinois farmers may find themselves in Charlie's shoes a few years hence. The increase in taxes may come about as a result of new laws which have been enacted by the Illinois General Assembly. These laws will permit large tax increases in almost every county in the State. After the expiration of temporary limitations on such tax increases, in many counties the new laws will permit tax increases of 50 to 100 per cent, while in a few counties the tax increases may amount to 150 per cent or even more. In view of these facts, taxpayers should take every precaution to insure that unjustified tax increases will not be made.

The main provisions of the new tax laws, which go into effect January 1, 1946, are as follows:

I. Property assessments will be increased so that they will average 100 per cent of actual sale value in each county.

II. All important existing tax rate limitations, whether established by the state legislature or local referendum, will be reduced by one-half, (except as indicated in III below).

III. The effects of I and II above are modified by several provisions establishing alternative tax ceilings and floors.

A. Special tax ceiling provisions limit tax increases for a five-year period beginning with 1946.
   1. Increases in taxes (i.e., tax extensions) may not exceed 15 per cent of the maximum legal amount in 1942; and in any one year the increase in effective tax rates may not exceed 5 per cent of the maximum effective rate in 1942.
   2. Increases in taxes extended under rates authorized by a referendum held before 1946 may not in any one year exceed 5 per cent, nor in the entire five-year period exceed 15 per cent, of the maximum taxes extendable for 1942 or for the year in which the referendum was held, whichever is later.

B. Special tax floor provisions limit the application of the general reduction of 50 per cent in maximum tax rates.
   1. No tax rate or tax extension shall be limited to less than sufficient to establish eligibility for state grants for poor relief or educational purposes.
   2. Tax rates authorized by a referendum shall not be reduced to less than sufficient to produce the amount legalized in the year the referendum was held.
   3. For a five-year period beginning with 1946 no tax rate shall be limited to less than sufficient to produce the amount available on the basis of the 1942 assessment and maximum tax rates legal in 1945 or authorized for by referendum before 1946, with adjustment for actual changes in cash value of the taxable property after 1942.

C. During the five years beginning with 1946 the legal voters of any taxing district may establish a tax-rate limit either higher or lower (by not more than 25 per cent) than that otherwise provided by law.

The increase in assessments in each county will depend largely upon the assessment ratio (per cent of actual value used in assessments) previously used in the county. The maximum increase in taxes will also depend upon the county assessment ratio. The accompanying table shows for each county: (1) the 1944 assessment ratio, (2) an estimate of the probable increase in property assessments, and (3) an estimate of the maximum increase in taxes permitted by the new legislation.

The limitations on tax increases as outlined under (III. A) above provide some temporary protection for taxpayers. However, these limitations must be supplemented by effective local action if proper control is to be maintained over the expenditures of local public funds.

In order to insure against unwarranted tax increases it is suggested that local taxpayers take positive action along three principal lines:

(1) Trustworthy citizens should be maintained in or elected to all property tax levying bodies.
(2) Full and complete publicity should be given to the official actions of all local government officers responsible for the levying and spending of tax money.
(3) If necessary, maximum tax-rate limits should be reduced by referendum to offset the increase in property assessments.

At the present time relatively few people appear to be concerned about property taxes. This is due in part to the many current events of great interest, and in part to the fact that farm prices and farm incomes are relatively high. The time will come, however, when money will be less plentiful and farm property taxes will be more burdensome. For this reason farmers and others concerned with local public affairs should give careful attention to the spending of public money by county and local tax spending bodies. Unless this is done, excessive increases in property taxes are certain in many Illinois counties. Remember, it's your money.

What's Ahead For Agriculture?

By JIM THOMSON

PRICES of farm products are expected to decline somewhat but not far from their wartime levels during the next few months, farmers were advised in 85 annual fall livestock outlook meetings held during the past month throughout Illinois.

In discussions led by extension specialists from the University of Illinois college of agriculture and cooperative marketing agency representatives, both joined later by stockmen from the audience in round table discussions, farmers were advised that the near future calls for careful planning of crops and sensible buying of feeder cattle to avoid the risk of some downward adjustment in prices.

Harry Russell

Harry Russell, livestock specialist at the University of Illinois college of agriculture who spoke at 14 of the outlook meetings, pointed out the following as the major uncertainties in the outlook:

1. What will be the policy of the government in continuing subsidies and price ceilings?
2. How long and how severe will reconversion unemployment be?
3. Will we have an early frost and resulting soft corn crop?

Ending of subsidies without increases in or elimination of price ceilings will result in lower returns to farmers and an extended period of widespread unemployment and reduced consumer income would undoubtedly result in a substantial decline in the prices of farm products. He made it clear, however, that this situation is not expected.

Russell outlined several reasons to support the belief that prices will tend to remain steady in the immediate post-war months and cited the following: "Supplies of food have been scarce in relation to the demand. Prices have been kept down by ceilings. No general food surplus is in sight in this country before the 1946 crops are harvested. Food needs for relief feeding in foreign countries will remain large until at least the middle of 1946. Both the United States military and civilian demand will continue to be great.

Walter Howe

At the Woodford county meeting, cattle feeders were told by Walter Howe of Chicago Producers that they had nothing to fear if their prospects were for a plentiful supply of feed. Howe also thought it would be wise to get orders in now for feeder cattle but cautioned stockmen to be careful in their buying.

To cattle feeders who are uncertain in their plans because of anticipation of removal of the government's 50-cent subsidy some time during the summer or early fall of 1946, Howe suggested that it would be better to proceed as usual with confidence that the government will remove the subsidy at the most suitable time.

A moderate tightening up of the feed situation is in prospect for the country as a whole in the 1945-46 feeding year, but much depends on the outcome of the 1945 corn crop, extension specialists said. There will be a wide variation, however, with extremely short supplies in some sections of Illinois as well as in other areas of the country.

It was further explained that feed grain requirements for the 1945-46 feeding season will not differ greatly from those of 1944-45 although they may be increased by the attractiveness of feeding margins. With the end of the war, industrial consumption of all grains should decline, but distillers will shift from the use of other grains to corn when it is freely available.

The number of grain-consuming animal units on January 1, 1946 will be about the same as a year earlier depending upon the size of the 1945 fall pig crop and the extent of cattle marketing this fall.

Present livestock-feed price ratios are above the long-time average for hogs, beef steers, dairy products and eggs. It is possible they reported, that

Farmers planning for post-war years saw hints of agricultural trends in these charts used by state university extension specialists at annual farm outlook meetings.

Typical of 85 outlook meetings held last month, this group at Eureka, Woodford county, listens attentively to the speaker.

these will become less favorable in 1946 as food supplies become more plentiful and demands slackens.

At the Douglas-Champaign county meeting Dr. L. J. Norton, acting head of the department of agricultural economics, University of Illinois, foresaw "enough uncertainty to require caution in long-term commitments," but he left to the feeders themselves to decide whether a freely predicted weakness in market prices will come within six, nine or 12 months, the usual cattle feeding period.

He felt, however, that the prices of the better grades of feeder cattle should continue to be strong in the fall and winter of 1945-46 but may weaken in the spring of 1946 as civilian meat supplies become more plentiful.

Marketing of grass cattle will be large this fall and prices are expected to decline from the late summer levels. From the standpoint of numbers, the cattle industry is in a less sound position than other livestock enterprises to meet the uncertainties of the postwar period and cattle men look for heavier liquidation.

Hog prices are likely to remain near the ceilings most of the coming winter but may weaken in the spring and early summer of 1946. University extension speakers also advised Illinois farmers to try to market their 1945 fall pig crop as early as possible in the spring of 1946.

Most favorably situated to meet postwar readjustment, it was stated, were sheep raisers with their stock numbers at the lowest level since 1928, but stocks of domestically produced wool are large and are still accumulating. Lower wool prices are to be expected when the government discontinues its wool-purchasing program. Total stocks of all apparel wool in this country on January 1, 1945 amounted to 635 million pounds, which is equal to approximately a year's pre-war mill consumption.

Because of the 3½ percent reduction in the 1945 lamb crop and the heavy marketings of Texas and California lambs, the supply of feeder lambs will be smaller than in 1944. The severe drought in parts of the southwest may cause lambs from this area to be light in weight.

Although the demand for dairy products will continue to be strong through 1945 and early 1946, returns to the dairyman may be lower in 1946, extension specialists said. Relief shipments to foreign countries will be great for several months, but military purchases will decline and more of the total milk production will go into manufactured products.

Prices of eggs will likely remain strong in the fall of 1945 but are expected to weaken in the spring months of 1946 as egg production increases seasonally and meat supplies become more plentiful.

At the McLean county meeting, Farm Adviser O. L. Welsh summed up the opinion expressed by many of the farmers who attended the outlook meetings when he commented that he was not at all pessimistic about the outlook for the next several months although he expected it would call for more careful planning and a bit of readjustment.

RECOMMENDS RETAINING CONTROLS

Farmers should support a continuation of price and wage controls until scarce goods become more abundant, Dean H. P. Rusk, of the University of Illinois college of agriculture declared at a Cost of Living conference in Springfield, Sept. 19.

Dean Rusk presented agriculture's side of the question at the conference sponsored by the labor and agricultural advisory committees of the Office of Price Administration at Springfield.

During subsequent discussion periods in which representatives of civic, labor, agricultural, women's, government and educational organizations took part, O. D. Brissenden, organization director of the Illinois Agricultural Association, re-emphasized the position of the IAA on the question of the cost of living by citing the resolution on price controls adopted by the organization at its 1944 convention, which reads as follows:

"We recommend the continuation of price controls and rationing until scarce goods become available in sufficient quantities to prevent demand from exerting inflationary pressure on price ceilings.

"These controls should be flexible enough to meet changing conditions and they should be abandoned as supplies in relation to demand reach proportions that remove the dangers of inflationary prices."

After a review of some of the shortcomings of price control, Dean Rusk said: "On the whole, however, we must admit that, while price controls did not work perfectly and no doubt limited gross agricultural income, they did undoubtedly have a very favorable effect on the overall national economy; and agriculture has just as big a stake in a sound national economy as does industry, labor or any other segment of our society."

What's Ahead For Agriculture?

By JIM THOMSON

PRICES of farm products are expected to decline somewhat but not far from their wartime levels during the next few months, farmers were advised in 85 annual fall livestock outlook meetings held during the past month throughout Illinois.

RECOMMENDS RETAINING CONTROLS

Farmers should support a continuation of price and wage controls until scarce goods become more abundant, Dean H. P. Rusk, of the University of Illinois college of agriculture declared at a Cost of Living conference in Springfield, Sept. 19.

Dean Rusk presented agriculture's side of the question at the conference sponsored by the labor and agricultural advisory committees of the Office of Price Administration at Springfield.

During subsequent discussion periods in which representatives of civic, labor, agricultural, women's, government and educational organizations took part, O. D. Brissenden, organization director of the Illinois Agricultural Association, re-emphasized the position of the IAA on the question of the cost of living by citing the resolution on price controls adopted by the organization at its 1944 convention, which reads as follows:

"We recommend the continuation of price controls and rationing until scarce goods become available in sufficient quantities to prevent demand from exerting inflationary pressure on price ceilings.

"These controls should be flexible enough to meet changing conditions and they should be abandoned as supplies in relation to demand reach proportions that remove the dangers of inflationary prices.

After a review of some of the shortcomings of price control, Dean Rusk said: "On the whole, however, we must admit that, while price controls did not work perfectly and no doubt limited gross agricultural income, they did undoubtedly have a very favorable effect on the overall national economy; and agriculture has just as big a stake in a sound national economy as does industry, labor or any other segment of our society."

A New Law for ILLINOIS Drivers

A NEW Illinois Safety-Responsibility law to encourage safe and responsible motor vehicle operation becomes effective Jan. 1, 1946.

Because the provisions of this law are of concern to every motorist of the state, the IAA RECORD editors are herewith printing the answers to a number of questions dealing with the new regulation. The questions and answers were prepared by the Committee on Highway Safety to be used in a booklet that will be given wide distribution during October throughout the state.

It is recommended that readers pass on these questions and answers to their neighbors.

Concerned over the rapid increase in highway accidents in Illinois since the end of wartime driving restrictions, Governor Dwight H. Green has proclaimed the week of October 1 to 7 as "Mobilization for Highway Safety Week in Illinois."

The text of the Governor's proclamation follows:

"Whereas the end of wartime restrictions on driving has resulted in a serious increase in highway accidents in Illinois, endangering the lives of our people, and

"Whereas war-worn automobiles and tires must continue to be used in the current emergency, necessitating the utmost care by drivers and the public:

"Now, therefore, I, Dwight H. Green, Governor of Illinois, hereby designate the week of October 1 to 7 as Mobilization for Highway Safety Week in Illinois, and I urge all public officials, the press and the motoring public to co-operate in a program to promote proper inspection of equipment, the proper release of tires unable to pass inspection, the immediate repair of highways and highway lighting, and the provision of full information to the public concerning the new Motorists' Safety Responsibility Law which takes effect January 1, next."

If the death toll on the highways is to be held to a minimum, motorists will not only need to cooperate in the observance of the special safety week, but every week of the year.

As a first step in achieving greater highway safety, motorists can study the questions and answers printed below so as to become acquainted with the new state law.

---

1) Q. What is the new Safety-Responsibility Law?

A. It is a new state law enacted to protect the public on Illinois highways by removing irresponsible drivers and thus to provide compensation for the innocent victims of highway accidents.

2) Q. Why was the new Safety-Responsibility Law adopted?

A. For many years past the automobile accident problem has been growing more serious and many solutions for it have been studied and considered. To help in this problem, this new law was passed without a dissenting vote by the last Illinois legislature.

It is intended that this law should encourage motorists to be careful and responsible, increasing safety on the highways and providing for the protection of automobile accident victims.

3) Q. What is meant when reference is made to a "responsible motorist"?

A. Under the law a "responsible motorist" is one who is able to post cash or other security to guarantee the payment of damages for which he may be legally liable as a result of an automobile accident, or who is covered by adequate insurance.

4) Q. What does this new law require me to do if I am involved in an automobile accident?

A. The first thing you must do is to send a report of the accident to the Department of Public Works and Buildings, Springfield, Illinois, if more than $50 damage was done to either your car or to other property, or if anyone was injured or killed.

5) Q. When must I make this report?

A. If anyone was injured or killed you must make the report within twenty-four (24) hours. If only property was damaged you must make the report within ten (10) days.

6) Q. Must I make a report to the Secretary of State?

A. No. The report is to be sent to the Department of Public Works and Buildings at Springfield.

7) Q. Must I make the report if the accident was not my fault?

A. Yes. The law requires every driver involved in the accident to make a report regardless of who was to blame.

8) Q. Where can I get the report form?

A. The Department of Public Works and Buildings will make these forms available without charge throughout the state in public offices and private concerns dealing with the motoring public.

9) Q. Suppose someone else was driving my car, must I still make the report?

A. Yes, if the driver cannot make a report. You must also make a report if the Department of Public Works and Buildings asks you to do so, even though the driver has made this report.

10) Q. What happens after I file my report?

A. The Department of Public Works and Buildings examines all of the reports dealing with the accident to determine whether you must establish your "ability to pay" or whether you are exempt under the law from further requirements. The Department of Public Works and Buildings does not determine who was at fault for the accident. That finding is to be made only by the courts when a lawsuit is brought.

11) Q. Suppose I am not exempt from further requirements after filing my accident report?

A. If you are not exempt you will be required to establish your "ability to pay" the claims which other parties may make against you. It is not necessary to actually pay these claims until the court has found that you were at fault. You must, however, show that you are able to pay such claims because it is possible that a court may find that you are liable for the accident.

12) Q. How may I meet the requirement to show my "ability to pay"?

A. Under the new state law you may establish your "ability to pay" by depositing cash or other security, satisfactory to the Secretary of State, available to pay judgments which other parties may obtain against you growing out of the accident, or by showing that you were covered by insurance or proper bond to meet such claims. If these requirements are not met you will lose your operator's license and all car registrations unless you settle the case with the other parties.

13) Q. Am I required to deposit security if the accident was not my fault?

A. The law requires security to be deposited by both parties in the accident regardless of who was at fault. Neither the Department of Public Works and Buildings nor the Secretary of State determines who was at fault for the accident. As indicated in Question 10, that finding is to be made by the courts when a lawsuit is brought.

14) Q. What is the greatest amount I will be required to deposit?

A. The law may require you to deposit as much as $11,000 if the accident injured two or more people and caused damage to property.

15) Q. If I deposit cash or other security will it be returned to me?

A. The deposit made will be returned to you if no lawsuit is brought against you within one year, if in a lawsuit a court determines you were not at fault or if you settle the claims with the other parties.

16) Q. Does this new law mean that I must carry liability insurance?

A. No. However, in most cases unless you are able to take care of damages out of your own funds you will loose your right to drive if you are not insured.

National Farm and Home Hour has returned to the air in a new series on a coast-to-coast network at 12 noon to 12:30 p.m. central standard time.

HOW DOES IT FEEL TO BE A *Tycoon?*

● You read about a man who has built an industry in town. He is referred to in print as a "tycoon." Say, did you ever stop to take inventory of the investment an aggressive Illinois farmer has? His fertile acres, buildings, fences, improvements, and livestock investment run into a tidy sum. Surely twenty-five thousand dollars . . . often fifty or sixty thousand dollars. Man, that would be quite a sizeable factory in town. Yes, you're a tycoon all right. In your old straw hat and blue overalls you're dressed as correctly for your job as is the executive of that factory in the city.

If the thought of actually being a tycoon pleases your vanity, remember that it carries with it also a responsibility. And that is to insure that those you leave behind will be able to carry on should you be removed. They'll need help without you. Provide the means to carry on . . . safeguard the business you would leave. A tycoon never neglects these things . . . and we don't believe you will, either!

Bigger Corn Yields Depend On Soil Building

FURTHER increase in corn yields is more dependent on improvement of the soil than in the improvement of hybrids. Hybrids are doing just about as much as the soil can do.

Such was the opinion expressed by Prof. J. C. Hackleman, agronomy department, U. of I. College of Agriculture, at the recent Farm Bureau-Farm Management tour held on the Gerald Smith farm, LaSalle county.

This was one of the many farm management tours held during the past months over the state under the sponsorship of county Farm Bureaus and the U. of I. Extension Service.

The Smith farm tour which attracted more than 500 farmers from LaSalle, DeKalb, Kendall, Grundy, Bureau, Marshall-Putnam and Lee counties indicated the tremendous interest of producers in increasing operating efficiency as they head into the postwar adjustment period.

Professor Hackleman advised farmers to make an inventory of their soil through mapping and testing. "Get the land in shape," he said, "so that you can grow alfalfa anywhere. Alfalfa is the best crop a livestock producer can grow. Since seed is a little tight, stretch it with sweet or red clover."

Professor Hackleman also cited the tremendous progress made in oat varieties which equals that of corn. Increase in oat yields from improved varieties is something like 20 per cent as compared with a 25 per cent increase in hybrid corn yields over open pollinated.

The university has found it necessary to work out an allocation plan for Clinton oats seed, Professor Hackleman said. Some 200 acres of Clinton oats were seeded in 1945. Clinton seed will be allocated to counties on a historic acreage basis, and then allocated within the county to those who have made applications. Clinton oats will only be available to the counties with dark soils to which it is best adapted and not to the southern counties.

Those attending the tour to the Smith farm of 160-acres near Leland were presented with some amazing figures. The farm is probably best known for its pork production records. For the last seven years 8.1 pigs were weaned per litter with an average of 64 litters per year. This is almost two pigs more per litter than other farm record keepers, according to M. P. Gehlbach, fieldman for the Illinois Valley Farm Bureau-Farm Management Service.

How does Smith do it? Here are some of the important reasons for his record:

He studies his records and his business.

He selects gilts for breeding stock with great care noting carefully the size of litter, uniformity of pigs, rate of gain, the type of finished market hog, and also the disposition of the sow.

Boiling lye water is not spared in scrubbing of houses. Pigs are farrowed in these clean individual houses on clean alfalfa pasture.

Good pasture and balanced rations enable Smith to produce pork with a lower feed cost and his hogs are ready for market at an earlier age thus enabling him to get a higher price than is received by the average of account keepers. During the past six years, part of which had price regulation, Smith received on the average 60 cents more per hundred pounds for all hogs sold than the average of account keepers.

Corn yields from 1941 through 1944, a four-year period averaged 102 bushels per acre as compared with yields ranging from 79 to 94 bushels per acre from 1938 through 1940.

Other farms visited on the Illinois Valley tour where efficient operations were studied included Edward H. Safford farm, west of Sycamore; Chase Brothers farm, north of Princeton; Howard Fiedler farm, near Tonica; and Chester H. Rasmusen farm, north of Millington.

Keen interest is manifested by farmers at the Illinois Valley Farm Bureau-Farm Management tour to the Gerald Smith farm in LaSalle county.

Visitors study the swine sanitation program carried on by Gerald Smith on his farm near Leland in LaSalle county. This was one of many such tours.

Growing Interest Shown In Terracing, Contouring

Farmers listen intently to soil conservation technicians during terracing demonstration at Roelf farm near Rantoul.

ACROSS the face of the old college of agriculture building at the University of Illinois runs the legend: "The Wealth of Illinois is in her Soil and her Strength Lies in its Intelligent Development."

Charles Britt

Growing interest of Illinois farmers in contour plowing, terracing and other soil conservation measures bears out the acknowledged truth of this inscription as never before.

During the past month, several thousand farmers were present at conservation demonstrations throughout the state which featured the construction of terraces and plowing on the contour. Several methods of terracing were shown with the use of various implements.

Further attention was focused on the nation-wide importance of soil conservation in the national premiere showing of the film, "In Common Cause," at Freeport in Stephenson county where the scene of the film was laid. The picture, produced under the sponsorship of the soil conservation service of the United States department of agriculture, illustrates average conditions in one of 1,300 soil conservation districts throughout the nation.

Accepting contour plowing as commonplace, the Ford county soil conservation district and the agricultural extension service sponsored the first state contour plowing contest near Gibson City. One thousand spectators watched Floyd Underwood of Melvin win first place and a $50 war bond.

The Ford county soil conservation district reported 10,000 acres being farmed on the contour this year with that figure expected to be doubled in 1946.

In the terracing demonstrations at both Randolph and Champaign counties it was emphasized that although there are a number of excellent tools available for terrace construction, satisfactory results can be obtained with a plow without additional help or equipment.

During the three-day exhibition on the Ralph Roelf farm east of Rantoul, 500 persons watched the terrace building and other soil conservation measures with disc, tiller, plow, soil scoop and disc terracer.

Outlining the methods and aims of the soil conservation district in presenting the demonstration were J. E. Harris, Champaign county farm adviser; Charles Britt, chairman of the Champaign county soil conservation district board, and Paul J. Warrick, technician of the Champaign county district.

It was explained that erosion had reduced fertility on the Roelf farm considerably and drastically curtailed income over what it would be if the soil had been conserved over the years. It was estimated that close to 18 inches of topsoil was lost on the pasture where the main demonstration was made.

During the field demonstration spectators watched four tractors throw up a terrace 12-24 inches high and 18 feet wide following the contour across the pasture sloping to the south. The terrace, designed to slow up the movement of water across the pasture, was cut across and below the top third of the field and was also designed to conserve the upper third of the field for cropping. Cropping of the lower two-thirds of the pasture is considered impractical for several years until the soil is grassed and built up.

Visitors also watched the transformation of two small tributaries of the main gully across the lower pasture into saucer-shaped depressions also designed to slow up the flow of water. These depressions will be grassed to bind the soil.

Spectators, who viewed the badly eroded field, were thoroughly impressed by the practical efforts to save the farm's topsoil as evidenced by the numerous questions asked of the technicians and demonstrators.

Tractors swing around twisting terrace during soil conservation demonstration on Roelf farm near Rantoul in Champaign county. Terrace was designed to slow up flow of water from upper part of field at right to prevent further erosion.

IAA Annual Meeting Scheduled for Nov. 26-29

THE 31st annual meeting of the Illinois Agricultural Association and associated companies will be held Nov. 26-29 in the Hotel Sherman, Chicago.

Difficulty in obtaining housing accommodations, due to crowded conditions in Chicago, is expected to keep attendance far below normal.

As in past years, the associated companies will hold their annual meetings during the first two days of the convention, Monday and Tuesday, Nov. 26 and 27.

A program of entertainment will get underway at 7:30 p.m. Tuesday, Nov. 27, and the IAA general sessions will open Wednesday morning.

Group conferences are scheduled for Wednesday afternoon and a general session will be held Wednesday night. The convention will be adjourned Thursday after a meeting of business delegates.

A complete calendar of events for the convention will be published in the November issue of the RECORD. Following is the program, not quite complete, as the October RECORD went to press:

Monday, November 26

Presidents' and Farm Advisers' conference and luncheon starting at 10 a.m.

Farm Bureau presidents' conference meeting at 3:30 p.m.

Scheduled tentatively to meet at 7 p.m. are these associated companies: Illinois Farm Bureau Serum Association, Illinois Cooperative Locker Service, Illinois Grain Corporation and Illinois Agricultural Auditing Association.

Tuesday, November 27

Planning to meet at 9:30 a.m. are these associated companies: Illinois Agricultural Holding Company, Illinois Wool Marketing Association and Illinois Milk Producers Association. Meeting at 10 a.m. are Farmers Mutual Reinsurance Company and Illinois Farm Supply Company.

Rural Youth at 10 a.m.

Opening their meetings at 1 p.m. are the Illinois Livestock Marketing Association, Illinois Agricultural Mutual Insurance Company, Illinois Producers' Creameries.

General insurance conference later in afternoon.

General entertainment starting at 7:30 p.m.

Wednesday, November 28

General session, IAA, starting about 9:15 a.m.

Group conferences at 1:30 p.m. including public relations, organization and publicity, soil improvement and marketing.

District conferences and caucuses at 4 p.m.

IAA general session opening at 7:30 p.m.

Thursday, November 29

Business session.

Adjournment.

The American Farm Bureau Federation will hold its annual convention Dec. 17-20 in Chicago. Headquarters will be at the Hotel Sherman.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES

By O. D. Brissenden

THE 115,000th member was signed in the Farm Bureau in Illinois during the month of August.

It is not possible to determine just who was the 115,000th member, but the fact that 115,000 persons belong to the Farm Bureau in Illinois furnishes a point for study.

It emphasizes the fact that farmers do believe in organization. It demonstrates the faith farmers have in the Farm Bureau, its programs and its leadership. It proves that non-members are signing up daily upon the invitation of their neighbors who have built Farm Bureau.

It gives confidence that the Long Range Goals will be reached in all counties in the near future and that a total of more than 118,000 members in the state will be realized.

Above everything else it impresses the leadership with the responsibility of the future development and maintenance of a program of service to agriculture and to the nation comparable with the problems and opportunities ahead.

Wade Nuttal who has given many years of faithful service as county organization director and general agent of insurance in Lawrence county retired at the end of September. He says he expects to catch up with his fishing in the days ahead. Jasper DeMonbrun, former special agent in Menard county, succeeds Mr. Nuttal.

McLean county's annual membership campaign kickoff, was held Oct. 1. Asa B. Culp, director of organization, had every detail of his program on paper before the drive was launched.

C. E. Carrier got Macon county off to a good start on Oct. 1 with his campaign organized on the school district basis. Macon county is headed for a membership of 2000.

An enthusiastic membership acquisition campaign known as "The Spaghetti Handicap" netted the Edwards County Farm Bureau 63 new members in the period of Sept. 1 to 15. The member goal of 500 was exceeded by 19. The "Evens" led by "Rube" Works were the winners in the contest by the narrow margin of 33 to 30. High honors in signing the largest number of members went to Harold Shepherd, captain of the losing side, who signed 16 members. Losers ate spaghetti and winners ate steaks.

Scott county started its workers off Sept. 6 on a contest between the young men and old men. There were about 50 present. Thirty new members were reported by the Sept. 13 meeting with the older men winning the contest by a 2 to 1 majority. Thirteen new members are needed for the long range goal of 600. Organization workers are pledged to secure them.

Jo Daviess County Farm Bureau went over the 1100 mark as a result of a recent membership drive. Forty-one new members were signed.

Harry Humphrey has been employed by Sangamon County Farm Bureau as organization director.

We are sorry to hear of the illness of J. S. Smith, Adams county organization director, and hope he has a speedy recovery.

At a new member meeting held Sept. 19 in Champaign county, some 400 new members and their wives and organization workers were in attendance. On Aug. 28, 325 membership workers and their wives celebrated the achievement of 2900 paid up members with a fish fry and barn dance.

Paul Laffey has been employed by Marshall-Putnam Farm Bureau as assistant adviser and organization director. Paul who is 26 and a graduate of the U. of I., was born and reared on a farm near Carthage in Hancock county. A former bomber pilot in the 15th Air Corps, Paul was in service for three years and received his honorable discharge July 15, 1945.

Lee county staged a kickoff meeting Aug. 27 on a contest basis. The older men, that is 45 years and above, were pitted against those under 45. At a report meeting Sept. 1, 44 new members were reported signed. Reports from the county failed to name the contest winner.

McDonough county had a kickoff meeting Sept. 24, report meeting Oct. 1 and a new member meeting Oct. 8.

Bureau county started a drive Sept. 24.

Whiteside county held a kickoff meeting Oct. 2 and was scheduled to have a report meeting Oct. 5.

Brown county has a drive scheduled for Oct. 9.

NOW IMPROVED MOTOR FUELS

Here's good news for owners of tractors, trucks and cars. Full victory has lifted restrictions and we are happy to furnish you with motor fuels which incorporate technical advances developed during the war. These motor fuels now have more pep, more power, and more "go," assuring you of *improved efficiency* for tractor, truck and car. There will be less knock in motors, more power in the fields, and more "go" on the road.

Your Farm Bureau Service Company salesman now has these improved fuels available for delivery. He also has a complete supply of modern lubricants for your farm machinery and tractors. A phone call will bring him to your farm.

These improved motor fuels include:

Magic Ethyl — A premium fuel that meets the highest requirements of modern high compression motors. Better starting, quicker pickup, smoother running.

Magic Aladdin — Our "Regular" grade with increased octane rating. A dependable, well refined gasoline that assures smooth performance in modern motors. Economical—popular with farmers who prefer a balanced quality motor fuel.

KLEER MOTOR — U. S. Motor Grade—an economical gasoline for use in tractors and older model cars. A clean, well refined product.

FS/50 — Tractor Fuel—Has all the vim and vigor you need for your tractor. Provides quicker governor response and smoother acceleration under variable load conditions. This fuel is most efficient in medium and low compression tractors.

T-40 — Tractor Fuel—Especially designed for economical operation in low compression tractors. This fuel is uniformly refined to meet high quality standards.

Your Farm Bureau Service Co. Is a "GOOD CITIZEN."

It is owned by farm people within your county. It pays taxes like all other business—real estate taxes—personal property taxes—state, municipal license fees—federal excise taxes—social security, old age benefit and unemployment taxes, etc.

Service companies pay income taxes on profits paid as dividends to preferred shareholders and also on profits earned on non-member business. Patronage refunds are not taxable income to service companies. No income tax is paid on these by service companies but refunds become members' income and are taxable there.

Annual Meeting Day—when service companies pay patronage refunds, is usually a busy day for merchants on Main Street.

Illinois Farm Supply Company, Chicago 5, Ill.

A good school means a good community.

School Survey Act To Undergo Tests Soon

By JOHN K. COX

THE school survey act, reported by many informed people to be the most outstanding piece of school legislation out of the 56 school bills passed and signed by the governor during the last legislature session, will undergo 102 tests by Dec. 15 of this year.

The act provides that on or before Dec. 1, 1945, the county superintendent in each county shall call the school board members of the county together and have the provisions of the school survey act explained, after which an opportunity for discussion will be afforded. The meeting may be adjourned until later, but they must reach a decision on whether a school survey committee shall be established in the county in accordance with the act mentioned, by or before Dec. 15. In most cases the decision will be made the night of the first officially called meeting of all the board members.

The board members of the county decide whether there will be a survey. Rural people have preponderant representation in the meeting where board members decide for or against the survey. If the vote is favorable, then rural people will have preponderant representation on the county school committee.

Any proposals made by the school committee are submitted at public hearings in each community affected. Following these hearings, the county committee will attempt to take full cognizance of local people's wishes and at the same time make proposals that would be for the best interests of the various communities during these modern times as well as in the next decades to come.

When the final plans are submitted to the people for a vote, the people have the last word. If the vote is favorable, in any particular proposed district, then those people have a new school district. If it is unfavorable, the local people have recourse under the regular school law to make changes more suitable to them.

The school survey act provides local people an opportunity to make needed changes in their school systems on a voluntary basis.

The main purposes of the act are:

1. To stimulate thinking on the part of rural people on school improvement.

2. To take stock of ourselves educationally and make positive, progressive, suggestions as to how our schools can be improved.

3. To provide state leadership which may be accepted or rejected but which should improve our chances for making wise adjustments in our school plans.

In one township in northern Illinois a representative number of school patrons were asked for an appraisal of their schools, both good and bad. There was a general reaction of indifference or mild acquiescence in the present state of things.

When asked what was the best thing that could be said about their school, these responses were among the answers: (1) Don't know anything against it, (2) Nothing to say, (3) Good as any country school, and (4) It's easy to reach.

When asked what was the worst thing that could be said about their school, these responses were included in the answers: (1) children go backward, (2) need a new building, (3) poor teacher, and (4) building is filthy, ventilation is poor, school is not properly heated.

Of course, there were a few favorable remarks made about the schools. However, the remarks indicated a depressing situation so far as community life was concerned. It is no wonder that when asked whether they intended to make their homes on the farm, one girl answered: "Heck no, not me. Don't see any young folks that do. I like the city better than the country. Better opportunities, better times, better pay, more conveniences." A boy from the same township when asked the same question answered: "No, I don't like the farm. I'd sooner live in town. There's nothing here except hard work."

A poor school system will allow a community to erode just the same as poorly planned farming will allow erosion on hill-side land. The eroded community or the eroded land suffer from a loss of the more productive elements of human nature or soil, the part that can give life to, add color and bear fruit. And both erosions result from lack of far-sighted planning on the part of local people.

A good school system generally indicates a broad-minded, progressive community and vice versa. There are many good country schools and there are many that cannot be as good as they ought to be without some fundamental changes.

A good school is one that takes into consideration the needs of the community and tries to meet them. It is that kind of school that elevates community life and reveals the challenge in life on the farm. Many farming communities are being drained of their most intelligent, ambitious, and adventurous youth today.

The farm community and the county farm organization greatly need the leadership which the most able farm sons and daughters can give. The best point of approach to improving community life and placing a proper emphasis on the advantages in living on the farm is the rural school.

LIST CHANGES IN FARM ADVISERS

Hugh D. Triplett, Ford County farm adviser for the past 11 years, has resigned to become a distributor for a rock phosphate company in western Missouri and eastern Kansas. He will make his home in Liberty, Mo. His resignation took effect Oct. 1.

He was graduated in agriculture in 1923 from the University of Missouri and has since spent 16 years in farm advisory work, including three years in Kentucky. He was assistant farm adviser for two years in Adams county before going to Ford county.

During Triplett's tenure as adviser Ford county won the American Farm Bureau trophy in 1936 for the best community unit program and in 1937 for the best county-wide extension service. He also assisted in the establishment of the first soil conservation district in east central Illinois and helped to organize other educational projects.

Triplett will be succeeded by Arnold Rowand, Washington county farm adviser, according to an announcement by J. C. Spitler, associated director of extension and state leader of farm advisers for the University of Illinois college of agriculture.

Rowand has served as Washington county farm adviser since October, 1941. He is a 1933 graduate of the state university college of agriculture and formerly served with the soil conservation service at Sparta.

CHURCHILL GOES TO JO DAVIESS COUNTY

Wayne Churchill, assistant farm adviser in Sangamon county for the past 7½ years, has been named farm adviser for Jo Daviess county succeeding Homer E. Kearnaghan. He was scheduled to assume his new duties Oct. 1.

Kearnaghan, also a former assistant farm adviser in Sangamon county, resigned to take a job as fieldman for a commercial dairy products company in northwestern Illinois.

Churchill is a former instructor in vocational agriculture at Bardolph. He has been especially successful in Sangamon county with his 4-H club program.

Paul V. Curtis, associate farm adviser of McLean county since May 1, 1941 and county 4-H club leader, has tendered his resignation to the McLean County Farm Bureau advisory committee effective Dec. 1.

He will leave the Farm Bureau to become associated with Frank R. Hubert of near Saybrook, a former county Farm Bureau president, in raising hogs on the Hubert farm. Hubert will retire from active management of the farm but will continue to live there. The farm produces between 2,000 and 3,000 hogs annually.

PRODUCERS REPORT SUCCESSFUL YEAR

A successful year was reported by the Producers' Crop Improvement Association, Ford county, at the recent annual meeting.

According to the financial report issued, total net worth at the end of the fiscal year was $116,777.10.

Total sales for the year amounted to $217,407.83 and total dividends and patronage refunds declared amounted to $27,197.04. Net profit for the year amounted to $32,669.67.

The cooperative is now building a new warehouse near their seed corn processing plant in Piper City.

Illinois farmers produce and harvest corn with about seven man hours of labor an acre.

In 1880 the average Illinois farm worker produced 23 acres of harvested crops. Now the average production is more than three times as much.

The Erie Cooperative Elevator is the 12th true cooperative owned and controlled by farmers to serve Whiteside county farmers. Officers and directors are: Arthur E. James, president; Seth Wilson, vice-president; Floyd Adams, secretary-treasurer; Harry Eddy, George Hoerler, Frank Joslin, and Kenneth Cocking, directors.

NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL MUTUAL INSURANCE COMPANY

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Mutual Insurance Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 27th day of November, 1945, at 1:00 o'clock P.M. to receive and if approved, confirm the report of the Board of Directors of the Company for the fiscal year ending September 30, 1945; to consider and if approved, ratify and confirm all the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the members of the company; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Charles B. Shuman, Secretary

NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Sherman Hotel, Chicago, Illinois, on the 28th day of November, 1945 at 9:00 o'clock A.M. for the following purposes:

To consider and vote upon the approval and ratification of the reports of the president, secretary and treasurer of the Association and the acts of the Board of Directors and officers in furtherance of the matters therein set forth, since the last annual meeting of the members of the Association.

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein.

To secure consent and authorization to acquire on behalf of the Association, by purchase, certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein.

To elect seven members of the Board of Directors for a term of two years.

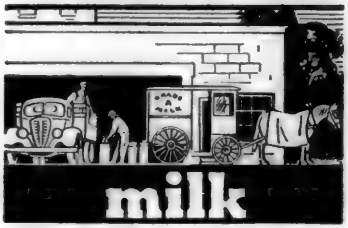
To elect a president and vice-president, who shall also serve as directors, for a term of one year.

To consider such proposed amendments to the Articles of Association or of the By-Laws of Illinois Agricultural Association as may be properly submitted.

For the transaction of such other business as may properly come before the meeting.

Paul E. Mathias, Secretary

More money for farm pr



By WILFRED SHAW

A very acute milk shortage is being experienced by the major Illinois city markets, which started early in September. Although milk production for city markets is seasonably lower than in June, July and August, milk receipts on these markets are substantially above that of September for recent years.

The milk shortage currently experienced in Illinois markets is due to the substantial increase in sales of bottle milk, cream, ice cream and other dairy products. Between Aug. 22 and Sept. 1 most of the wartime government restrictions upon dairy product sales, including bottle milk, over 19% cream, were removed and as a result an immediate additional broad increase in sales of milk and dairy products resulted.

Following are comparisons of milk receipts and sales in some of the markets for August 1945 as compared with August 1943.

The Chicago market received 12.14% more milk in August of this year than in August 1943 and Class I and II (milk, cream and ice cream) sales in August of this year were 8.97% above those of August 1943.

The St. Louis market received 10.46% more milk (local production) in August this year than in August 1943. Class I (milk and cream) sales in August this year were 7.25% above those of August 1943.

The Quad-Cities market (Rock Island, Moline, East Moline and Davenport, Iowa) received 29.25% more milk in August this year than in August 1943. Class I and II sales in August this year were 12.94% above those of August 1943.

The Rockford market received 16.26% more milk in August this year than in August 1943. The Class I and II sales were 14.24% higher than in August 1943.

Effective Sept. 1 practically all of the wartime regulations imposed upon the dairy industry by WFA, OPA and ODT were withdrawn except for the OPA price controls and ceilings upon dairy product consumer prices, and upon producers' milk prices. The bottle milk, cream and by-product quotas upon the larger city markets were withdrawn. The ice cream quotas, butter set-aside, cheese set-aside were cancelled by WFA. The ODT restrictions upon deliveries of milk and upon farm-to-market deliveries are also lifted.

The following are the gross blended prices received by producers supplying the respective Illinois markets. All are August prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago	3.11
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.78
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.65
Kewanee	2.55
LaSalle	2.68
Moline	2.857
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.10
Springfield	2.85
St. Louis	3.61
Streator	2.45

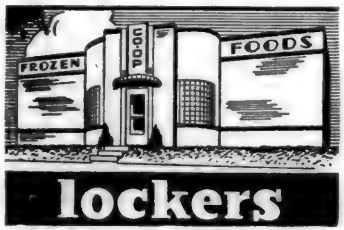
The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for July unless otherwise noted:

Baltimore		$3.85
Boston		3.53
Chicago (70 mile zone)	(August)	3.11
Cleveland		3.29
Denver	(August)	2.94
Detroit		3.30
Evansville		2.85
Indianapolis	(August)	3.18
Kansas City		3.25
Louisville	(August)	3.42
Milwaukee	(August)	3.00
New York City		3.72
Pittsburgh		3.30
St. Louis	(August)	3.61
Terre Haute	(August)	2.80
Washington, D. C.	(August)	4.01

The price paid for milk by Northern Illinois evaporated milk companies since September of 1944 has been at the rate of $2.60 per cwt. for 3.5% milk. Effective, however, for the first half of September of this year the paying price for evaporated milk was lowered by several of these companies to $2.50 per cwt.

The legal minimum butterfat standard for ice cream reverted back, in early September. 12% minimum butterfat content ice cream standard was by government regulation, and by change in the State law, reduced to 10% butterfat content. In Illinois our law governing the minimum butterfat content of ice cream which provides for a 12% minimum butterfat content was amended to provide that for the wartime emergency when government regulations controlled the ice cream standards that the Illinois minimum be 10% butterfat. Since September 1st and the cancellation of the government regulation, our Illinois ice cream law requires a minimum butterfat content of 12% butterfat.

Managers of the member milk marketing cooperatives of Illinois Milk Producers' Association met in Chicago at the IAA offices Sept. 26. Developments and changes resulting from the elimination of most of the wartime government dairy regulations were considered. Prof. P. H. Tracy, of the dairy manufacturers department of the U. of I. college of agriculture, and Russell Spaulding, of the dairy division of the Chicago OPA regional office, addressed the meeting.



By F. A. GOUGLER

Producers' Locker Assotiation of Carbondale held its first annual meeting Sept. 21, in the First Presbyterian Church.

President Heininger presided at the meeting and E. D. McGuire, secretary, acted in that capacity. McGuire who also is treasurer gave the financial report which showed that the association finished its first year with a substantial net profit.

Manager Harold Brackett reported that all of the 750 lockers installed were rented and that he had a waiting list of 150.

President Heininger explained that the board intended shortly to build a slaughter plant if the shareholders approved. This expansion would be of sufficient size so present chill rooms and other space in the locker plant could be converted into a locker room to provide for 300 additional lockers. By unanimous vote, the shareholders approved the expansion project.

Hancock Frozen Foods Cooperative is expanding its operations. A branch plant has been opened up at Colusa, Ill., and the Carthage plant is being enlarged to accommodate 400 more lockers and to provide ample space for curing and smoking. The 20 x 30 room formerly built for a slaughter room will provide space for the above mentioned services. A new and much larger slaughter room is being built. All of these services will be in the same building.

Kendall County Cold Storage Company will soon start construction of a slaughter-

processing plant. A 30 acre tract of land has been purchased on the hard road three miles east of Yorkville. In order to provide facilities for slaughtering for the entire county and to take care of the processing for five plants, Dana Cryder is of the opinion that this will require an expenditure of from 40 to 50 thousand dollars. Definite conclusions have not yet been reached, states Cryder, as to how elaborate the construction.

The Pope-Hardin Farm Bureau has named an organization committee of seven members to organize the Pope-Hardin Locker Service. The committee has been organized into a temporary board of directors and steps are being taken to incorporate.

If sufficient interest is manifested in the territory and ample stock is subscribed, the board will construct a combined locker-slaughter plant. It is the board's opinion that 500 lockers will be needed.

cream

By F. A. GOUGLER

Manager F. A. Gourley, Producers' Creamery of Carlinville, reports that since the spring of 1943, the doors of the creamery have never closed. The creamery since then, has operated on the round the clock basis by operating three eight-hour shifts.

In the spring of 1943, the plant handled 60,000 pounds of milk daily, 1944 volume increased to 70,000 pounds daily and the peak day's volume this year was 102,000 pounds.

Recently a new milk route and truck has been purchased from C. F. Tucker who has operated the route in the Raymond territory. Elmer Bartow of Raymond has been employed to operate the truck and continue the route. Elmer has given six years of service to his country and has earned his discharge. The patrons on this route can be certain that they will receive the best possible service.

Manager Forrest C. Fairchild in a recent issue of Prairie Farms Producer, pays high tribute to an outstanding employee. She is Mrs. Tessie Sievers and her picture appears in the publication. The following tribute is made in her behalf:

"Mrs. Tessie Sievers completed her tenth year as an employee of Farmers Creamery Company on June 24, 1945.

Tessie wraps butter in the print room and assists in the cream testing laboratory.

Farmers Creamery Company has always appreciated the work Tessie has done and we believe she in turn has appreciated the friendship and cooperation she has had from her co-workers in the plant.

May she serve for many more happy years."

Jimmie Cramer, Manager of Galesburg Producers Creamery, reports that Ivan Kipling who worked in the receiving room of the creamery for more than a year and who more recently operated a cream route in South Warren county has resigned. He will be associated with his brother in the hatchery business.

Floyd Lybarger of Roseville is taking over where "Kip" left off. Floyd is well acquainted in the territory and patrons should experience no inconvenience as a result of the change.

Producers Creamery of Carbondale has just completed the installation of new double-effect Buflovak milk evaporator. With this equipment concentrated, whole milk, skimmilk and various products will be produced for the market. Heavy users of these products are ice-cream manufacturers, bakeries and candy makers.

At the present time, the second unit of boiler is being installed. A large water cooling tower has recently been completed. The new garage 34 x 50 which has recently been constructed is being enlarged to three times its present size.

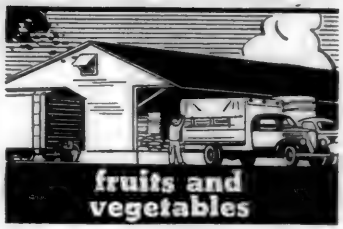
By early spring, the expansion program should be completed and milk will be received as well as cream.

An increase of 1,182 frozen food locker plants in the 48 States between July 1944 and July 1945 is reported by the U. S. Department of Agriculture. The 1945 count is 6,464 locker plants, in active operation, according to information furnished the department through state extension services. It is probable that some plants, especially the newer ones, have not been reported. The distribution by states ranges from 2 in West Virginia to 600 in Iowa. Minnesota is second with 477 and Wisconsin a close third with 473.

The increased demands for dairy products are attributed to a number of factors in addition to the increased national income by Prof. P. H. Tracy, of the dairy manufacturers department of the U. of I. college of agriculture. Tracy points out that recent American dietary changes include more dairy products; dairy products are convenient, available, and require no labor in preparation; a larger urban consuming population; improved dairy product merchandising methods; wider recognition of nutritional value of dairy products; greater acceptance of quality safety in dairy products; and improvement in the quality of dairy products.

Butter is known to have been made 2,000 years before Christ.

Marco Polo in writing of his travels around the world mentioned dried milk.



fruits and vegetables

By L. L. COLVIS

Final plans for the Illinois Fruit Growers' Exchange cold storage building at Carbondale have been completed and the contract was scheduled to be let late in September. Construction was expected to begin shortly after the letting of the contract with hopes the building will be ready for use early next year.

In addition to storage capacity for about 60,000 bushels of fruit, the new structure also will house the offices of the Illinois Fruit Growers' Exchange and Fruit Exchange Supply Company.

The building is designed to take care of later expansion as other units can be added as the need arises. Financing is being done largely by members of the Exchange.

Illinois will have approximately 2½ million bushels of apples according to present estimates. Many Illinois growers think even this figure is a bit on the optimistic side.

While not having large crops this year, apple growers are enjoying unusually good demand. The fruit is moving readily at ceiling price ($3.85 per bushel to the grower). Apparently much less than the usual amount is going into cold storage.

Grimes, Jonathans and Golden Delicious showed the best prospects in Illinois, while late varieties, especially Winesaps, are extremely short.

The nation produced a record peach crop in volume this year. Illinois moved close to 2,500 cars and a little more than 1½ million bushels. This compares with 1,470,000 bushels last year and a 10-year average of 1,239,000 bushels.

The Illinois Fruit Growers Exchange marketed in excess of a quarter million bushels for its members this year. This is a record volume of peaches handled by the organization.

The quality of the Illinois crop was not nearly as good as appearances indicated before harvest. Excessive rains during harvest season caused a great deal of brown rot resulting in considerable damage and loss to the growers.

The holidays celebrating V-J Day and the elimination of points from canned goods came right at the peak of the peach harvest. The market never recovered from the double shock and declined from the ceiling price of $3.64 per bushel to the grower to $3 and under for the remainder of the season.

Rural Youth

By
ELLSWORTH D. LYON

Short courses have proven quite successful in attendance as well as in interest and participation by Rural Youth. The attendance figure stands at 235 from 45 counties with one more meeting scheduled at Oregon Oct. 16.

With the summer drawing to a close there were many outdoor picnics, potluck suppers, lawn parties, hay-rack and truck rides in many of the counties during late August and the early days of September. CLAY and LASALLE had a picnic with a watermelon bust. McDONOUGH had a potluck supper followed by folk games. SALINE conducted a lawn party at the home of Freda Hall. CHRISTIAN sponsored a truck ride followed by a business meeting at Dan Large's home. CLARK staged a hay-rack ride and watermelon bust. TAZEWELL combined a hay-rack ride, watermelon bust, and square dance. OGLE enjoyed a hay-ride to White Pines state park. KNOX and WARREN joined in a hay-rack ride. MARSHALL-PUTNAM enjoyed its annual outdoor meeting, featuring a treasure hunt. KANE reveled in a moonlight cruise on Lake Michigan. A number of counties have been getting down to brass tacks on county talkfests. PEORIA held a talkfest school. The Twin City Ripples of WHITESIDE got off to a good start with nine Rural Youth members speaking in its unit talkfest. BROWN had 15 members participating in the county talkfest.

HAMILTON engaged in a big Youth Night program with the 4-H carrying half the program Sept. 14 at Broughton. This meeting was sponsored by the Broughton Township Farm Bureau unit and was attended by 150 young people.

CHRISTIAN'S homecoming, Aug. 30, provided an opportunity for renewing old acquaintances and meeting new members in the Rural Youth organization. Candlelighting in honor of members in the services was an impressive and serious part of the meeting.

WHITESIDE recently studied hobbies under the leadership of Miss Barbara Herlin, former home adviser, but now serving in the same capacity in Lee county.

MARSHALL-PUTNAM served at the Streator Red Cross Canteen late in September.

RANDOLPH elected a complete list of officers at the September meeting as follows: Russell McConachie, president; Carl Uchtmann, vice-president; Lavone Craig, secretary; and Florine McConachie, treasurer. The educational feature consisted of instruction and plans for the county talkfest as well as annual reports by the two Rural Youthers serving as representatives on the Farm Bureau board of directors, and the livestock marketing committee annual reports.

The educational feature of a recent meeting of McHENRY'S Crystal Lake Wildcats was a discussion of the theme "All Men Are Brothers," led by Glen Geiske. This group meeting took place at the home of Jimmy Oestoson.

Ray W. Brown (third from left), general agent for IAA in Will county, is shown with six of the seven 4-H Club members who exhibited champions at the recent 4-H Club show at Peotone. Presentation of billfolds to each champion was made by Brown. Left to right: Robert Heisner, Manhattan 4-H Boosters; Rose Brankey, Homer Husky Hustlers; Ray Brown; Gordon Smith and Robert Walker, Frankfort-New Lenox club; Robert Leitz, Peotone Pep Pushers, and Donald Stephen, Frankfort-New Lenox club.

LA SALLE Rural Youthers, with a busy schedule of activities, are helping to carry the ball in the drive recently begun to raise $150,000 to provide a 4-H-Rural Youth Home in the county. Bob Temple is secretary of the finance committee. Ninety of the 140 Rural Youthers worked at the snack bar to help feed the 5000 people attending the county 4-H show, August 27 to 29.

DE KALB held its ninth birthday party on Sept. 13 with a potluck supper. Guests were present from KANE, OGLE and LA SALLE. Many happy returns, DE KALB.

Capt. Ray French, assistant farm adviser in Champaign county on leave of absence, has returned to the United States after 34 months service overseas. He saw action in North Africa, Sicily, France, Belgium, Holland and Germany.

Roy Rife, president of JoDaviess County Farm Bureau, presents trophy to Beulah Bahr, at the 16th annual Club Merit Sheep Day program for having conducted the best five-year sheep project.

'46 STATE FAIR SET FOR AUGUST

Illinois will have a state fair in 1946. General Manager William V. Ward has already set the dates for Aug. 9-17 in Springfield. This will be the first state fair held in Illinois since 1941. The fair grounds have been occupied during the war by an Army Air Forces supply depot.

The Illinois General Assembly in its recent session voted $1,878,000 for a two-year program of permanent improvements for the fair grounds.

In addition to their work in the Milan Lucky Leaf 4-H club of Macon county, these young girls are giving their time and effort to war bond drives, waste paper collection, waste fat salvage, etc. under the leadership of Mrs. Curtis Camic and Mrs. Helen Lillpop. The girls are: Betty Hartwig, Janice Stocks, Isabelle Freeland, Shirley Noland, Rosemary Merold and Mary Freeland. Not shown are: Berneice Barrett, Joan Still and Jackie Woolum.

By JOHN R. SPENCER

Present figures indicate an over-all supply of 12,500,000 tons of fertilizing materials for the 1945-46 fiscal year. Agricultural agencies estimate that only two-thirds of it, or 8,000,000 tons, can possibly be delivered from Jan. 1 to June 1, 1946. This means that 4,500,000 tons, if available to the consumer, must be accepted and delivered before December 31, 1945, reports A. L. Lang, associate chief, soil experiment fields, university of Illinois college of agriculture.

About the only restriction on fertilizer distribution for the fiscal year 1945-46, made mandatory by a new War Food Order 5, Amendment 2, is on grades. The list of grades approved for Illinois is the same as that approved for 1944-45.

Illinois farmers are urged to increase the mineral-supplying power of their soil insofar as possible by applying large quantities of phosphate and potash material while prices of agricultural products are sufficiently high to permit such purchases. It is possible that prices may go down in the future and it will be less advantageous to buy fertilizers. Under those conditions it will be necessary to have a highly productive soil capable of withstanding high production without fertilization for the period of lower prices.

Of all common field crops, wheat is one of the most consistent in responding to soil treatment.

Pasturing soft corn in the field has not proved satisfactory.

NOTICE OF ANNUAL MEETING
ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 27th day of November, 1945, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1945; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association and for the transaction of such further and other business as may properly come before the meeting.

S. F. Russell, Secretary

STATE LEADS IN LIMESTONE

Illinois, which leads all states in Farm Bureau membership, also led the other 47 in the use of agricultural limestone in 1944. The total amount applied was 4,214,600 tons, according to the State Geological Survey. This is 31 per cent more than the total tonnage used in 1943 and establishes another new high record. Other leading states in the use of limestone are Iowa and Wisconsin, each with approximately 2,500,000 tons.

The liming material was produced by approximately 135 quarries in and adjacent to the state of Illinois. In fact, the figures indicate that 92½ per cent was produced within 48 counties of the state in 1944. It appears that Lee county and LaSalle county, each with 125,000 tons, are the leaders. Bureau county, second with 101,300 tons; Henry county, third, with 90,000; Livingston county, fourth, with 87,700 and Whiteside county, fifth, with 85,000 tons.

This remarkable record was achieved in spite of serious labor shortages both in producing quarries, in distributing facilities and the shortage of help on farms. While Illinois farmers produced approximately 35 per cent more total crops last year, this limestone tonnage, plus the new records in use of rock phosphate and fertilizer usage, would indicate that they are taking good care of their soils.

MORGAN BUREAU BUYS HOME

Added to the growing list of Illinois Farm Bureaus which have purchased their own quarters in the past few years is Morgan county which has bought the north section of the former American Bankers building at Jacksonville for a permanent home.

The building, occupied by the Farm Bureau for the past 12 years, was purchased from the Rockford Life Insurance company and will undergo considerable rearrangement and refinishing. The main office and the office of Farm Adviser E. H. Garlich are being planned for greater efficiency and attractiveness.

The Washington County Farm Bureau has purchased a large brick hotel just outside of Nashville for a permanent home. Planning and remodeling is now under way.

Farm Adviser J. B. Turner, Fayette county, right, shows Gene Phelps, of the Fayette County Soil Conservation District, a soil shaking machine that Turner made. Twenty-eight soil samples are shaken at one time in the apparatus. Advantages of the machine are that samples are thoroughly shaken, all samples shaken uniformly for comparative tests, and time and labor are saved in the operation.

Here is Mercer County Farm Bureau's new soil testing laboratory. Testing is Miss Maribelle Boultinghouse. Watching the process are Farm Adviser E. M. Edwards and Lyman T. Smith. Prof. C. M. Linsley, U. of I. says, "We need to test a million acres of soil a year if we are to make headway in our state soil program."

SPECIAL DISCOUNT

Substantial savings can be made on oil and grease orders placed now. Delivery will be made according to your needs between now and next spring.

Place your order early so we can arrange to deliver your Blue Seal products with as little delay as possible.

BLUE SEAL MOTOR OIL AND GREASES

are made from high quality base stocks blended especially for use on Illinois farms. These oils have the following characteristics:

MASTER

—A heavy duty motor oil for hard working motors.

BLUE SEAL

—A triple-filtered paraffin base oil that withstands high heat.

PENN BOND

—Highest quality 100% pure Pennsylvania—has great stability.

DAVIS JOINS FARM SUPPLY COMPANY STAFF

Ted Davis, former farm adviser for Pulaski-Alexander counties, has joined the staff of Illinois Farm Supply. He will help develop special educational training programs for feed and plant food employees.

Ted Davis

Davis is a 1933 graduate of the University of Illinois college of agriculture. He taught vocational agriculture for seven years and served as Pulaski-Alexander farm adviser from 1941 until 1944 when he became district supervisor for the university extension service emergency farm labor program in southern and later western Illinois.

Davis was reared on a farm in Franklin county near Ewing. He is married and the father of two children.

NOTICE

ILLINOIS AGRICULTURAL ASSOCIATION

ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of October and November, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During October, annual meetings will be held in Adams, Brown, Clay, Fayette, Hancock, JoDaviess, Macon, Madison, Marion, Menard, Montgomery, Pike, Pope-Hardin, Pulaski-Alexander, Scott, Washington, and White Counties.

During November, annual meetings will be held in Bond, Cass, Clinton, Cumberland, Franklin, Gallatin, Hamilton, Henry, Lawrence, Logan, Macoupin, Massac, Peoria, Schuyler, Shelby, St. Clair, Warren and Williamson Counties.

PAUL E. MATHIAS
Corporate Secretary

Sept. 24, 1945

YES SIR! Fall is hog cholera time. But there are simple rules that will upset Old Devil Hog Cholera's plans. Here they are:

1. Tests at the University of Illinois indicate that pigs raised on good green pasture in the fall continue to thrive in the winter. "When pigs had access to rye pasture during the pre-weaning period, evidently certain needed factors were stored, enabling the pigs to grow and gain economically during the post-weaning period in dry lot, even on a ration not satisfactory for pigs fed continuously in dry lot."

2. Keep lots clean and sleeping quarters dry and free from draft.

3. Feed a balanced ration.

4. Immunize pigs against cholera by vaccinating with fresh, potent Farm Bureau serum and virus.

Remember: *The smaller the shoat*
The cheaper the shot

NEWS and VIEWS

Begin Search For 4-H Memorial Site

GROUNDWORK for the State Memorial 4-H Club Camp moves into second gear as the committee begins investigating sites with a view to choosing a suitable location. This phase of the work will take time, as there are many angles to be considered in locating a $100,000 enterprise such as the Illinois State Memorial Camp will be.

Plans for the camp were discussed at a recent meeting of the State 4-H club advisory committe, made up of farm and home advisers representing all areas of the state. The committee feels justified in starting the work of choosing a site, since pledges of financial support have been coming in with gratifying regularity.

The deadline for setting this year's quotas has been moved ahead one month and is now Feb. 1, 1946. This action was thought advisable since letters were late in going out and a busy season has made many demands on 4-H club work.

The proposed State Camp will be used primarily for 4-H groups — local, county and district as well as state — for 4-H club conferences and events, and for other groups sponsored by the Extension Service. A section of the camp will be open the year round.

As the best technique for preparing gold star lists, individual county committees are urged to take their 4-H club enrollment lists to the county clerk's office for checking with official records. The complete roll of gold star members from all counties will be placed in a permanent setting at a suitable place on the Memorial Camp grounds.

County quotas unpublished to date are: Madison county girls promise $140; Greene county has $1000 now ready for the fund (this figure represents $1.50 for each 4-H member); Coles county will give $1 per member; Scott county has paid its quota of $100 and will repeat this figure in 1946; Piatt county girls are giving $185; Champaign county girls $500.

Livingston county is at the top of the heap pledging $1200; Kankakee county also pledges a substantial $1000 to $1200; Marshall-Putnam promises $1.50 per member, which amounts to $537; Stark county pledges $100 per year for two years; Mercer county will give $1.45 per member or $542.30.

Iroquois county's boys' agricultural clubs will give $1.00 per member. Bureau county is high on the quota list with the promise of $2300 over a two-year period. This is $1.50 per member each year; Cook county will contribute $200.

Miss Marcia Lucille Gove, Windom, Minn., went to Iroquois county as home adviser. Oct. 1. Miss Gove graduated from the University of Minnesota, worked as county home demonstration agent in Iowa for five years and since 1941 has been doing county home demonstration work in New Jersey.

Mrs. Grace Whittington Graham, formerly home adviser in Kankakee county, is substituting in Warren county until a home adviser can be secured.

Recipe Treats

BAKED INDIAN MEAL PUDDING

1 quart milk	½ c. cream
½ c. white corn meal	1 tsp. salt
½ c. pure New Orleans molasses	2 tsps. ginger
	1 tblsp. butter
	1 egg, beaten

Scald one quart of milk, add to it the molasses, butter, salt, ginger and meal. Cook for twenty minutes in a double boiler. Before turning into a buttered pudding dish, add the egg, cream and three cups cold milk. Bake for four hours in a slow oven. Stir often while baking. Serve hot, with vanilla ice cream.

SMART DICKEYS FOR SMART GIRLS

Business girls, school girls know the importance of owning a number of smart-looking dickeys. Made in several styles from different fabrics, they spice the appearance of a limited number of suits and sweaters. Directions for making the ruffled dickey (above) No. E170 are available to you free of charge. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago.

Mrs. Mildred K. Wellman has resigned as home adviser of Rock Island county to join the resident staff of the home economics department, University of Illinois. Mrs. Wellman will work on research in family management and study toward a Master's degree.

for HOMEMAKERS

Three New Counties Organize Home Bureaus

THREE more Illinois counties organized for Home Bureau work in August, bring the total in the state to 83. Cass county homemakers met at Presbyterian Church, Virginia, Aug. 16, and completed their Home Bureau organization. Plans are already under way for an intensive campaign to increase their membership.

Mrs. Mary Ligon, home adviser-at-large, and Mrs. Stanly Castle, state president of the Home Bureau Federation of Illinois, assisted in organization and extended greetings from other organized counties of the state. Officers were elected as follows: Mrs. R. B. Rohrer, Beardstown, chairman; Mrs. W. R. Campbell, Ashland, vice chairman.

Menard county's Home Bureau organization was completed Aug. 15 and its meeting was held at the Farm Bureau auditorium. Mrs. Castle was the speaker at the meeting. Mrs. Hazel Becker, Petersburg, was elected chairman, and Mrs. Don Austin, Petersburg, vice chairman.

Jasper county's organization meeting was held Aug. 17, and Mrs. Castle made the address. Officers elected were: Mrs. Nita Heady, Newton, chairman, and Mrs. Rose Apple, Newton, vice chairman.

Menard-Cass counties set up separate Home Bureau organizations Aug. 15. Miss Gailie McDougall will continue as home adviser in Menard county.

Miss Catherine M. Sullivan began work as Richland county home adviser Sept. 1. Miss Sullivan is a graduate of the University of Illinois and was supervisor of girls' 4-H club work in Knox county for several years. From March to October of 1944 she was youth director in Whiteside county. Last year she was research assistant, working on time and energy studies at the University of Illinois.

Mrs. Georgianna L. Haynes began her work as home adviser in Woodford county Sept. 17. Mrs. Haynes' home is in East Lynn, Ill. She is a graduate of Illinois State Normal University and taught vocational home economics for two years in Newark Community High School, Newark, Ill.

LACE SWIRL FOR TABLE TOP BEAUTY

Wheels of handmade lace can change your table from an eyesore to a bright and beautiful sight. Crisp and fresh, it is easy to make in mercerized crochet cotton. Directions for making the CROCHET DOILY No. 3010 are available to you free. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago.

APRON TRIO FOR KP GLAMOUR

Smart, thrifty girls looking for kitchen glamour pick their aprons with care and often make their own, like this smart set in cotton. The above marketing, dusting and hostess model instructions are available to you free of charge. Write to the WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago.

Farm-Home Bureaus Entertain 4-H Clubs

"Let's make this an annual affair," was a recurring comment as 4-H club guests of Lake county's Farm and Home Bureau left the Victory Memorial Dance at Libertyville Township High School, Aug. 30. About 700 people attended and enjoyed the folk dancing, games, and modern dancing that were in progress through-out the evening.

A contest to encourage collection of waste paper by individuals and clubs resulted in six truck loads or approximately 18,000 pounds of paper. Sale of the paper netted $127.33, which will be added to Lake county's contribution to the 4-H Club State Memorial Fund.

Banners were awarded to Mill Creek and Libertyville Homemakers for the largest amounts of paper collected by the clubs. Dorothy Funke, Libertyville Homemakers; Emil Lee Jackson, Jr., North Prairie; and Norman Laner and Tom Pryer, Mill Creek, received individual awards for the large amounts of paper they collected.

National 4-H To Meet Dec. 2-6

The 24th National 4-H Club Congress will be held Dec. 2-6 in Chicago, G. L. Noble, managing director of the National Committee on Boys and Girls club work, has announced. Headquarters will be in the Stevens hotel.

A 10-point post-war 4-H program will be launched during the congress which will be attended by about 1,200 delegates from 46 states and Canada. Delegates for the all-expense paid trip to Chicago are selected for their wartime contributions, particularly in food production.

EDITORIAL

It Must Not Happen Again

IN HIS recent message to Congress on reconversion, President Truman made this statement:

"One of the most magnificent production jobs in the war has been done by the farmers of the United States. They have met the unprecedented demands of the war . . . No other group in America labored longer or harder to meet the war demands put upon them . . .

"The Government now must be prepared to carry out the Nation's responsibility to aid farmers in making their necessary readjustments from a wartime to a peacetime basis . . .

"After the first World War farm prices dropped more than 50 per cent from the spring of 1920 to the spring of 1921. We do not intend to permit a repetition of the disaster that followed the first World War. The Secretary of Agriculture has assured me that he will use all means now authorized by the Congress to carry out price-support commitments."

President Truman also declared that there was need for additional measures to strengthen the machinery for carrying out price-support commitments, and for laying the basis for broader peacetime markets for agricultural products.

President Truman's statement in regard to agriculture is reassuring to farmers. It gives recognition to the responsibility of the Nation for placing agriculture in a position so that it can make its full contribution to a prosperous economy in the postwar world.

The Farm Labor Problem

FARM LABOR is harder to get today than it was during the war. In spite of the fact that the end of the war has resulted in wide-scale layoffs in war plants, farmers are finding it almost impossible to get help for the fall harvest.

As a matter of fact, V-J day instead of easing the labor situation has made it more critical. Some farm workers who considered themselves more or less "frozen" to their jobs during the war quit when the Japs were defeated. In one county 18 hired men left in the first two weeks after V-J day. Similar reports have come in from other counties. One hired man told his employer that he was quitting and going to town to get some of "that soft money" that others had been getting during the war. Another said he was quitting because there was too much work on the farm.

Also contributing to the scarcity of farm labor is the reluctance of displaced war workers with farm experience to return to the farm. Unemployment compensation, originally intended to aid workers while they were finding new jobs, has caused some to be less inclined to seek employment when they first find themselves unemployed. In some cases the unemployment compensation payments amount to nearly as much as a worker would receive in cash as a farm laborer, although farm wages have increased considerably during the war.

Agricultural processing plants also have reported difficulty in securing help. A corn processing plant in Illinois had this experience. An interviewer called at the doors of 500 women laid off from a war plant and tried to get them to work at the canning factory. Of this number, only three women took jobs.

These incidents reveal something of the farm labor picture in the state. The farmer finds himself in the same position as he did during the war when he had to compete with the attractive offers made by war industries. With war industries operating on a cost-plus basis, it was in a powerful bargaining position in the labor market. Agriculture could not meet this wage competition as prices of its products were limited by ceilings. Farmers did the job with old men, boys and women. Every member of the farm family worked hours that taxed the limit of human endurance.

As we enter the reconversion period, industry is talking about higher prices for its products and labor is asking an increase in hourly wage rates to make up for the loss of overtime pay caused by the return to a shorter work week. At the same time, non-agricultural interests are assuming as a matter of course that agricultural prices will decline. All this does not make for an encouraging outlook.

What will 1946 bring to the farm labor picture? It is expected that the prisoners of war and foreign laborers will be returned to their respective countries. Without questioning the wisdom of this action, it nevertheless will reduce the farm labor supply considerably. According to the September farm labor report of the United States Department of Agriculture, prisoners of war working on Illinois farms number 2,802. Mexicans, Jamaicans and Bahamans employed in Illinois agriculture number 1,201. This makes a total of 4,003. The number of foreign workers does not tell the full story of their productive capacity. They have been used as a mobile force and shifted about the state to meet demands in critically short labor areas. Regular farm laborers cannot be used in this manner of following the harvests around the state.

Farmers can only hope that the present farm labor situation is of a temporary nature. One factor which would ease the labor pinch would be the return of farm workers from the armed services. Many farm boys went directly from the farm to the services of their country. These boys, for the most part, will want to return to the farm. It is to be hoped that officials of government will make a realistic approach to the demobilization of men from the armed forces.

CHICAGO, ILL.

IT *may* be *your* story. And the words will leap to life as you read, and remember that never-to-be-forgotten day: "A hint of *smoke* rides on a swift wind across the field of dry, rustling corn. 'Anne is burning leaves,' you think, and pick on. And then you remember! Anne is in town shopping. The ear in your hand falls to the ground as you turn and see a red smudge behind the hill. You head the team for home at a gallop — but there is no home when you get there; just four balls of flame — the house, the garage, the barn, the granary. The wind shifts, for a moment, and a hot blast scorches your face and you turn away —." But read on. That last line that lifts your chin and puts "starch" back in your shoulders. That's it: "The loss was fully covered by insurance." Because you were wise, over 100,000 Illinois neighbors will help you and Anne rebuild.

SEE YOUR FARMERS MUTUAL MAN TODAY

Learn today how little it costs for COMPLETE coverage against loss by fire. Yes, peace of mind is deeper, security greater, the cost less, when you are insured with Farmers Mutual Reinsurance Company. Be careful, yes. But be prepared, too. It CAN happen to YOU.

NEW State Law
every motorist must know

HERE'S A BRIEF EXPLANATION OF THE NEW STATE LAW WHICH AFFECTS EVERY MOTORIST

1 The law becomes effective Jan. 1, 1946.

2 The law requires every motorist to show his ability to pay for any damage done upon the highway.

3 The law requires motorists to report all accidents to the Department of Public Works and Buildings, Springfield, Ill., within 24 hours if accident results in death or personal injury and within 10 days if damage to property including your own is in excess of $50.

4 The law permits cash, bonds, or insurance policy to be used to show financial responsibility. IF YOU ARE INSURED WITH THE ILLINOIS AGRICULTURAL MUTUAL INSURANCE COMPANY AND KEEP YOUR PREMIUMS PAID, YOU WILL NOT HAVE ANY WORRIES. For full information on the cost of insurance and the new state motor law, see your Farm Bureau Insurance representative.

AGRICULTURE SUFFERS LOSS IN DEATH OF HOWARD LEONARD

FARM leaders and many farmers in Illinois experienced a deep sense of loss in the death of State Director of Agriculture Howard Leonard, former president and treasurer of the Illinois Agricultural Association, October 21 in Springfield.

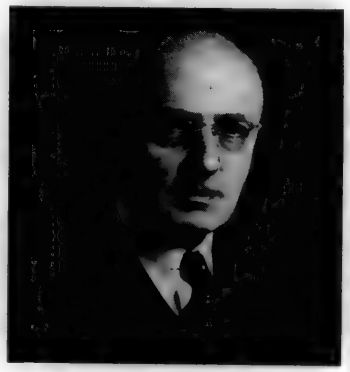
His death, after an operation and illness of several months, brought memories to early Farm Bureau members of the absorbing if difficult days of Farm Bureau organization three decades ago. Mr. Leonard was one of the early pioneers and founders of the Farm Bureau movement in Illinois.

As the first president of the Woodford County Farm Bureau in 1915 and as a delegate to the first IAA organization meetings at Urbana and Ottawa in 1916 and later at the Peoria reorganization meeting in 1919, he had much to do with laying the foundation of the Illinois Agricultural Association as it is known today.

In fact, Mr. Leonard was a member of the committee at the preliminary organization meeting in Urbana in 1916 which decided on the name "Illinois Agricultural Association" for the new organization. This committee on preliminary organization presented a general outline of the purposes, functions and financial needs of the IAA pending a later meeting when a formal constitution and set of by-laws could be worked out and the new Association put on a permanent basis.

At Ottawa on March 15, 1916, the delegates from 17 counties met to put finishing touches on their new federation. This is considered to be the first annual meeting of the IAA. As a committee member, Mr. Leonard took a prominent part at this session where the declaration of purposes of the organization was written into the 1916 constitution. It was at this meeting that Mr. Leonard was elected as first treasurer of the IAA.

Those were the days when the infant IAA flexed its muscles and gave diligent thought to its potentialities. And while many delegates to the 1917 meeting were openly skeptical of the hopes and dreams of a handful of their friends, Mr. Leonard was one of the small group of pioneers which never lost faith.



Howard Leonard

At the historic reorganization meeting of the IAA in 1919 at Peoria, Mr. Leonard served as convention secretary and also as a member of a special committee which worked out a plan for farmers to hold direct membership in the IAA with annual dues of $5 a year. After some debate and discussion, the delegates approved this report of the committee. The years have proven the wisdom of this plan as it has been demonstrated that successful farm organizations and cooperatives need to be soundly and adequately financed to serve members.

Many men deserve credit for the parts they played in the reorganization of the IAA and Mr. Leonard is deserving of special recognition for his able service as convention secretary at the 1919 meeting.

Following the 1919 meeting, an office was opened in Chicago for the Association and in 1920 Mr. Leonard was elected president. He served as president for three years, a period considered as one of the most difficult in early IAA history.

From 1920 through 1923 Mr. Leonard was a director of the American Farm Bureau Federation and helped organize the National Livestock and Meat board, serving as its first chairman in 1923. When Gov. Dwight Green took office in 1941, he appointed Mr Leonard state director of agriculture.

Mr. Leonard was born on a farm near

DIRKSEN, CANNON TO ADDRESS IAA ANNUAL MEETING

Hon. Everett M. Dirksen

Hon. Clarence Cannon

PROUD of their remarkable record of accomplishment and major contribution to the war's victorious conclusion, Illinois Farm Bureau members will gather Nov. 26-29 at the Hotel Sherman in Chicago for the 31st annual meeting of the Illinois Agricultural Association and associated companies.

Principal speakers will be two of the most prominent and effective members of Congress, Congressmen Clarence Cannon of Missouri and Everett M. Dirksen of Illinois.

Assembling for their first peace-time meeting in four years, Farm Bureau members are fully aware that a host of problems confronts agriculture; some engendered by the world-wide conflict, others aggravated by post-war adjustments, and all demanding immediate attention.

Consideration of these serious situations facing the farmer in the post-war era will take the spotlight at the 31st annual IAA meeting.

President Earl C. Smith will make his address at the Wednesday morning session, Nov. 28. Reports of officers will be presented during the same session.

As in past years, the associated companies will hold their annual meetings during the first two days of the convention, Monday and Tuesday, Nov. 26 and 27. A general program of entertainment has been planned for Tuesday night starting at 7:30.

The IAA is indeed fortunate in being able to secure two such prominent legislators as Congressman Cannon and Dirksen to address the general session on Wednesday night. It is not easy for these men to find time from their busy schedules to fulfill speaking engagements. Because of their high ranking positions in the national scene, the addresses of these men will be of great interest to Farm Bureau members. Rep. Cannon is chairman of the powerful House committee on appropriations, a committee which at this time is concerned with the grave matter of the nation's fiscal policy. Previous to his advancement to this important post he served for many years as chairman of the subcommittee on agricultural appropriations. Topics of the message that Rep. Cannon will bring to the IAA meeting is "Trends in Government."

Rep. Dirksen who recently made a 32,000-mile trip through 21 countries will discuss the "World We Live In Today." This address should be of interest to those who are concerned about America's foreign policy and America's place in world affairs.

Annual Meeting Program

MONDAY, NOVEMBER 26

A.M.
10:00 Presidents' and Farm Advisers' Conference.
12:00 Presidents' and Farm Advisers' Luncheon.

P.M.
3:30 Farm Bureau Presidents' Conference.
7:00 Illinois Cooperative Locker Service.
Illinois Grain Corporation.
Illinois Agricultural Auditing Association.
7:30 Illinois Farm Bureau Serum Association.

TUESDAY, NOVEMBER 27

A.M.
9:30 Illinois Agricultural Holding Company.
Illinois Wool Marketing Association.
Illinois Milk Producers Association.
Rural Youth.
10:00 Farmers Mutual Reinsurance Company.
Illinois Farm Supply Company.

P.M.
1:00 Illinois Livestock Marketing Association.
Illinois Agricultural Mutual Insurance Company.
Prairie Farms Creameries.
2:45 General Insurance Conference.
7:30 General Entertainment.

WEDNESDAY, NOVEMBER 28

A.M.
9:15 IAA General Session.
Reports of Officers and President Smith's Address.

P.M.
1:30 Group Conferences:
Public Relations.
Organization and Publicity.
Schools.
Soil Improvement.
Marketing.
4:00 District Conferences and Caucuses.
7:30 IAA General Session.
Address: Hon. Clarence Cannon, Congressman from Missouri.
Address: Hon. Everett Dirksen, Congressman from Illinois.

THURSDAY, NOVEMBER 29

A.M.
9:30 IAA Business Session.

Rep. Dirksen who has been a member of Congress from the 16th Illinois district since 1932 is one of the ranking minority members of the House committee on appropriations and is recognized as one of the most effective speakers in the House of Representatives. Rep. Dirksen was graduated from the University of Minnesota college of law and served overseas in World War I. He maintains his home in Pekin.

Both of these distinguished gentlemen who will appear on the IAA annual meeting program have for years been recognized as among the most effective supporters of constructive farm legislation. Rep. Cannon in 1941 was awarded the American Farm Bureau Federation's medal for distinguished service to agriculture.

Because of the critical housing shortage in Chicago, which has become worse since the end of the war, attendance is expected to be below normal this year. Hotel accommodations, if not already reserved, will be practically impossible to obtain.

REPORT ON FLOOD CONTROL PROJECT IN ILLINOIS VALLEY

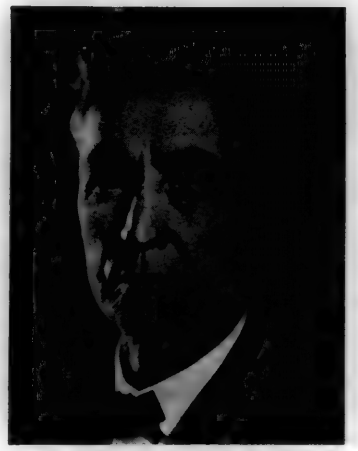
A report on the progress of a flood-control project for the upper Illinois river valley was made to Farm Bureau representatives and municipal officials of LaSalle, Livingston and Ford counties at a meeting in Pontiac Oct. 3.

Lt. Col. R. A. Thompson, army engineer, said federal engineers for the past several months had made a survey of the area as part of a program which would eventually embrace the entire Illinois river valley.

The plan for the Vermilion river includes the widening and deepening of the river above Pontiac and the construction of a levee at Streator. This development, according to Lt. Col Thompson, would eliminate 90 per cent of the danger of flooding approximately 30,000 acres of farm land between Pontiac in Livingston county and Piper City in Ford county.

Consideration is also being given to flood control reservoirs at the mouth of the Vermilion river and the upper Fox river in northern La Salle county for the purpose of reducing Illinois river flood conditions.

Cost of the project estimated at $1,659,000 is to be borne by the federal government with the exception of $112,500, the estimated cost to local interests of providing the right of way. Actual construction is not expected to get underway for at least one year.



Charles Marshall

FORMER IAA BOARD MEMBER DIES

Charles Marshall, 82, a member of the board of directors of the Illinois Agricultural Association for 13 years, died Sept. 25 at his home near Belknap.

Mr. Marshall was among the first members of the Johnson County Farm Bureau to which he devoted much of his time.

From 1926 until 1929 and again from 1930 until 1939 he served as a director of the Illinois Agricultural Association. He also served as president of the First National Bank at Vienna for several years.

He was born Sept. 18, 1863 at Washington, Ky., and studied civil engineering at Lebanon, O., before coming to Illinois at the age of 21, to manage his grandfather's farm north of Belknap, where he remained for the rest of his life.

Mr. Marshall was married in 1890 to Effie Williams who died three years later. They were the parents of two children, Mrs. Elizabeth Judson, St. Joseph, Mo., and Dr. Robert Marshall, Albuquerque, N. M.

In 1898 he married Clara Evers, who survives. A son, William Marshall of Greenville, was born to this marriage. Also surviving are two brothers, Logan Marshall, Weslaco, Tex., and Dr. Robert Marshall, San Antonio, Tex., and four grandchildren.

Clyde Sash, 57, general agent for Country Life insurance in Brown county since August 1, 1936, died Oct. 16 after an operation. He formerly served as organization director for the Brown County Farm Bureau.

HOWARD LEONARD

(*Continued from page 3*)

Tremont in Tazewell county, September 14, 1879, and moved as a small boy with his parents to a farm near Eureka in Woodford county where he maintained his home for the rest of his life.

On the death of his father, young Leonard left Eureka college in his junior year to run the family farm. Besides his activities in the interests of agriculture, he served on the Eureka high school board, the Eureka college board, as chairman of the Woodford county board of supervisors and as a member of the county board of review.

He was married in 1901 to Clara McGuire. Four children, three daughters and a son, were born to the marriage. Surviving are his widow, the son, Raphael Theodore of Georgetown, Ohio, and one daughter, Mrs. John Dorward of Watseka, Illinois.

Funeral services were held at the official residence of the director of agriculture in Springfield and at the Christian Church in Eureka followed by burial in Olia cemetery. Representing the IAA at the services in Springfield were: Earl C. Smith, IAA president; F. E. Morris, IAA director from the 21st district; K. T. Smith, IAA director from the 20th district; Paul Mathias, IAA corporate secretary; and O. D. Brissenden, IAA director of organization. Many farm advisers attended the services as well as representatives from the Extension Service and U. of I. College of Agriculture. R. A. Cowles IAA treasurer, attended the services held in Eureka.

SUBSIDY TO CONSUMERS ON BUTTER IS REMOVED

Effective Oct. 31, the 5-cent butter subsidy was removed. OPA permitted creameries and wholesalers to increase their ceiling prices by the amount of the subsidy, or 5 cents per pound. Since this compensation is allowed them, creameries will be able to pay farmers the same rate for cream as before. Retail ceiling increases allowable are from 5 to 6 cents per pound effective Nov. 8.

FARM ADVISER RESIGNS

Lloyd Wilken, assistant farm adviser of Livingston county, resigned his post Nov. 1 to become manager of sales service for a Pontiac seed corn company. He was graduated from the University of Illinois college of agriculture and had served as assistant farm adviser since July, 1943.

Postwar Farm Program Offered by AFBF

★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★

TO DISCUSS the nation's farm program for the postwar period, a delegation of Farm Bureau leaders met with President Harry S. Truman in late September and later the same day with Secretary of Agriculture Clinton P. Anderson.

The group included American Farm Bureau Federation President Edward A. O'Neal and Earl C. Smith, Vice-president of the AFBF and president of the IAA, chairman of the delegation.

In a statement read by Mr. Smith, the Farm Bureau group commended President Truman for his views on agriculture contained in his message to Congress.

President Truman was reported to have been most cordial in his welcome and to have shown great interest in the recommendations submitted to him.

The statement, read by Mr. Smith, indicated that farmers want to keep the 15 basic laws now on the statute books for stabilizing agriculture.

"With only minor changes, the program made possible by these laws, properly administered, is considered by our group as adequate to meet the situation."

Specific recommendations were made as follows:

1. It is the responsibility of the federal government to give price-support to all agricultural commodities where the government asked for increased production, whether it was by proclamation or by official program planning.

2. There is a definite obligation of the government to support prices to the end of the marketing season on all crops under production Jan. 1 following termination of hostilities. After the first year, the government is obligated to support prices to the extent that farmers respond to requests for adjustment in production.

3. The Marketing Agreements Act should be revised to permit growers of any farm commodity to operate under marketing agreements, and also to permit the Secretary of Agriculture to approve a marketing agreement without waiting for the price of the commodity involved to fall below parity.

We consider existing legislation pertaining to basic crops is adequate to handle the postwar price-support programs for the coming year (1946).

Corn

1. Commodity loans at 90 per cent of parity, as provided under existing legislation should be used.

2. There should be no governmental program of acreage adjustment for 1946.

Wheat

1. Commodity loans at 90 per cent of parity should be used to support the Government's commitment to maintain prices.

2. Wheat quotas will probably not be needed for the coming year.

3. Legislation is adequate if quotas are needed.

Cotton

1. There is adequate legislation to meet the support price program for cotton.

2. Government loans should be continued at 92½ per cent of parity.

3. The export subsidy program on cotton should be retained.

4. It is impossible at the present time to say whether marketing quotas on cotton will be necessary for the forthcoming crop year.

Soybeans

1. The Secretary of Agriculture should call a conference of representative soybean growers throughout the major soybean producing area and representatives of the Department of Agriculture. In this conference the representatives of the Department of Agriculture will be asked to anticipate the over-all and competitive situation affecting soybeans for the next year. Out of this conference a program will be developed and support prices for the coming year should be announced. It is anticipated that the acreage planted in 1946 will be largely determined by the level of support prices.

Fruits and Vegetables

1. There should be developed an established policy in regard to foreign trade outlets. This includes a program of Government purchase for resale abroad, and also means for opening the channels of trade to private enterprise.

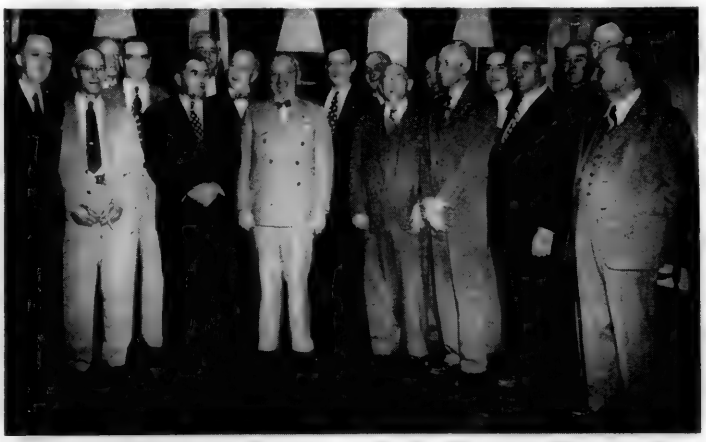
2. A purchasing disposal program should be developed by the Government whereby they can effectively control and prevent seasonal gluts upon the market.

3. Marketing agreements should be modified to provide for research and other facilities which the industry may use to develop and recapture domestic markets lost during the war through the Government's requisition.

Annual Crops

1. The government should be prepared to conduct a purchase and disposal program in order to take care of seasonal gluts.

2. Wherever practicable marketing agreements should be used in order to



Members of the AFBF delegation to Washington are shown during their visit with President Truman. Left to right: W. R. Ogg, AFBF; Flake Shaw, N. C.; R. E. Short, Ark.; IAA President Earl C. Smith; Ransom Aldrich, Miss.; H. L. Wingate, Ga.; AFBF President O'Neal; President Truman; H. E. Slusher, Mo.; Herbert Voorhees, N. J.; H. J. King, Wyo.; AFBF Secretary R. B. Corbett; W. W. Hawley, N. Y.; Allen Kline, Ia.; Donald Kirkpatrick, AFBF; Frank White, Minn.; Hassil Schenck, Ind., and J. F. Porter, Tenn. They also visited Secretary of Agriculture Clinton P. Anderson.

bring about an orderly flow of these products to market.

3. There should be a conference called of people selected by the AFBF to meet with representatives of the USDA. The purpose of this conference is to formulate a program for the orderly disposal of accumulated stocks, to analyze the forthcoming needs of the armed forces, and the anticipated requirements for foreign relief purposes. This conference should also give attention to developing both foreign and domestic outlets which have been disrupted by war.

Dairy Products

1. Continuance of support prices until consumer subsidies are removed and corresponding price increases permitted.

2. Comparable prices for dairy products in line with parity prices for basic commodities.

3. Support of the Dairy Products Marketing Association until it can be taken over by the dairy industry.

4. Government should dispose of surplus powdered milk, probably to war-ravaged countries.

Cattle

For beef cattle, they recommended removal of the overriding price ceiling of $18 per cwt. on live cattle, raising compliance rate paid by packers on A and AA grades of cattle by 50 cents a hundred, and early withdrawal of subsidies with corresponding increases in ceiling prices.

Hogs

For hogs they urged lifting the present ceiling of $14.75 to $15 on good and choice hogs, and to $14 on all others, extension of present price floor of $13 to Dec. 31, 1946 and deduction from packer subsidies of two cents for each cent taken off the farmer's price if average drove cost falls below $14 a hundred.

Wool

For wool, they recommended that the government take over all privately-owned foreign wool and become the sole buyer of any additional wool needed, foreign wool to be sold at same price as domestic wool, and government to remain sole buyer of all wool as long as Britain continues her purchase program.

They also recommended a gradual adjustment in price until price of domestic wool comes down to parity with duty-paid foreign wool.

Poultry and Eggs

For poultry and eggs, they suggested equitable distribution of protein feed supplies, a review of the commitment of Congress as to poultry and eggs to determine support levels, and early planning to meet anticipated difficulties in price-supporting programs.

Secretary Anderson and the Farm Bureau group discussed in detail the recommendations made by the Farm Bureau. He indicated his agreement with the Farm Bureau on most issues, notably on the need for planning for production on the basis of volume that can be consumed, and on the need for getting rid of consumer food subsidies at the earliest possible moment.

The conferences in Washington took place after weeks of study by a committee to formulate postwar policy programs, appointed some months ago by the American Farm Bureau Federation. On Aug. 28 the committee presented its report to the board of directors which approved it.

Nineteen charter members of the Kankakee County Farm Bureau (above) attend dinner in their honor as county farm organization marked end of one-third of a century of achievement. Left to right, seated: B. F. Hertz, Willard Smith, Fred Kinney, W. W. Holmes, Sen. Louis E. Beckman and Peter Baron. Standing: R. G. Wilcox, John Peterson, W. O. Webster, E. J. Fecke, Percy Reed, Fred Holmes, Jess Shear, Edward Payne, Walter G. Bratton, Lawrence Boone, Charles Butz, Gerald Mark and Albert Goepper. Dinner recalled early days of organization.

Yes, the war is over; but this G. I. on the operating table hasn't stopped paying for it. Should you? You're not asked to give an eye or a leg, just dollars which will be returned with interest. One of the nation's biggest expenses will be the care and rehabilitation of veterans. Let's give our wounded the best care money can buy! Support the Victory Loan. Buy Bonds!

WOMEN TO HEAR STASSEN

Commander Harold Stassen, former governor of Minnesota, will be the principal speaker at the annual vesper service of the AFBF Associated Women in Chicago, Dec. 16.

KANKAKEE HONORS FARM BUREAU CHARTER MEMBERS AT THIRD OF A CENTURY

Marking the attainment of one-third of a century of growth and achievement, the Kankakee County Farm Bureau honored its charter members with a banquet in Kankakee Oct. 10.

The dinner recalled the beginnings of farm organization in Illinois when a group of 50 to 60 farmers founded the Kankakee County Soil and Crop Improvement Association on June 1, 1912. The association was the forerunner of the Farm Bureau in the county.

Principal speaker at the meeting was O. D. Brissenden, organization director of the Illinois Agricultural Association, who talked of the importance of soil conservation for the future welfare of Illinois agriculture.

Nineteen of the original members of the county farm organization were present. Two of their number, Senator Louis Beckman and B. F. Hertz, spoke of the early struggles and later achievements of the Farm Bureau.

It was recalled that Kankakee and DeKalb counties in Illinois were the first in the United States to set up a farmer's organization to carry the responsibility of Farm Bureau work.

The first board of directors included: C. E. Robinson, president; C. H. Rumley, secretary; L. B. Bratton, treasurer and member of the board for 26 years; Len Small, later governor of Illinois; H. E. Taylor, A. C. Radeke, H. A. Magruder and D. E. Styles.

Only survivor of the original committee of the organization, E. F. Beebe, was unable to attend the dinner.

WHY A SCHOOL SURVEY?

By JOHN K. COX

IAA Director of Rural School Relations

IF YOU have difficulty deciding whether your county should vote for the School Survey, perhaps the following questions may help you to decide. Are there reasonable changes that can be made in your school organization and thus achieve more efficiency in administration, more economy in operation, a broader school program better adapted to the needs of the community, and a better bargaining position for the most talented teachers?

With a little serious thought, planning, and reorganization would it be possible to provide a fairer distribution of the tax load, so that all the schools could be soundly financed and no one would be greatly burdened to meet the cost? If the answer is yes, then it becomes the duty of all civic minded people to try to bring about the improvements they desire. The employment of the provisions of the School Survey offers the best method of approach to solving these problems in a democratic, voluntary way.

Too often people who have a good deal of taxable property and no children do not assume any responsibility for the school program in that community for other people's children. This is a natural, though somewhat selfish and short-sighted reaction. District No. 73 in Drummer township in Ford county is an exception to that. Here the residents of the district had no children of school age, no tax rate, and yet they were strongly in favor of cooperating with other districts in setting up a larger school district and erecting a school building for the welfare of their community.

Also, in Edgar county, district No. 16 has a very low school tax, but it is reported that popular approval favors its merging with other districts that have higher tax rates. There are many examples of such progresive, unselfish actions.

What are the reasons given for this praiseworthy attitude on the part of local people. They recognize that a good school system is an asset to a community and it is their civic duty to promote and help to support those things which make their community life more wholesome, safe, and productive. Also it is hardly necessary to add that a good school system adds to the value of property within any negotiable distance.

In spite of the many reasons for good schools, handicaps to reasonable improvements are always present. The main handicaps are a lack of knowledge of what constitutes a good school and a lack of interest in what the school does. Some people think that any school, just so it is near at hand and has some kind of teacher, is good enough. Many school board members will drive 1500 miles to get just the right bull that fits in with their herd, but will hire a school teacher who is suposed to guide and educate our own children without so much as calling up the county superintendent to check her teaching record.

And yet, now and then; some person will say, "We mustn't undermine the rural school." Rural schools in too many cases are already undermined, neglected, and all but forgotten. How many voters attended your school election last Spring? How many the year before? How many people know anything about the school district finances? How many know anything about the ideals, attitudes, interests, and background of the teacher? We need to take out insurance against some of the things our children are subjected to in some schools. And we need a

Other groups than the Illinois Agricultural Association have worked diligently for school improvement in Illinois for decades. The County School Survey Law is considered by a number of these groups as offering the best opportunity to improve schools, particularly rural schools, that has been advanced in many years. Under this plan the local study and effort would largely determine the quality of our school program for years to come.

The three following quotations were contributed to this issue of the IAA RECORD and express the opinion of the representatives of three organizations.

Robert M. Cole, Executive Director Illinois Association of School Boards

"The County School Survey permits an opportunity for the people in a local community to really evaluate their school. It provides an opportunity to provide an adequate, sound financial basis for the establishment of educational improvements for all children. This survey should bring a better educational program to the children in all schools — rural or village schools and high schools. For these reasons the Illinois Association of School Boards sincerely hopes that the people in every county will elect to make their own school survey."

Irving F. Pearson, Executive Secretary, Illinois Education Association

"How many rural communities meet school problems created by smaller number of pupils, higher per capita costs, scarcity of qualified teachers, and inadequate courses of study?

"Inevitably the consideration of this question involves cooperation with neighboring districts. Certainly it in-

lot of education and understanding to improve such situations.

Some reorganization of school district boundaries is necessary today to enable the school organization, its program and its services, to be more nearly adjusted to the needs of modern communities. Situations unforeseen when most of these districts were set up in 1855 have developed, causing great inequality of educational opportunities as well as severe inequalities in the matter of local taxes needed for the support of the many and varied school systems.

When most of the districts were set up, it was not intended that 234 pupils in Vermilion county would sit lonesomely and without competition or companionship in 234 different grades, or 130 in Winnebago county. These situations result in many childhood tragedies, such as inability to get along well with other children or with their school work when subjected to stiff competition in a larger school. Unless they have had reasonably strong competition all along the road, they have soft places in their training and personalities and are not properly conditioned for difficulties ahead.

Also when these districts were set up, it was not intended that railroads or industries would pay 95% of the school taxes collected in one district and nothing to the support of the school in the adjoining district. Nor was it intended in 1855 that rural schools would have to compete for the services of a 4-year college graduate to teach in their schools and thus bid against city schools with better housing facilities, less work, fewer classes, more pay, and opportunities for professional advancement. Surely the education of our children is important enough that we need a thorough-going review of our school system at least once each century.

Nor was it intended in 1855 to perpetuate indefinitely schools whose planners were forced to consider mud roads and horse drawn vehicles.

Rather, it was intended that those schools should serve the purpose for which they were needed. They were adjusted to a community that had large families of children, very bad roads, slow means of transportation, and where a general education was all that was needed. They got the rest of their education battling the wilderness. They became lawyers by reading law books in the courthouse and getting a license to practice. They became doctors by going with and handing instruments and a wash pan of warm water to the practicing physician.

They don't make doctors and lawyers that way today. We need not only general information today but specific information. Occupationally, we are a nation of specialists with numerous outside interests.

Thinking people today will have to decide if the school is adjusted to the needs of this modern day. The best interests of the children should always be kept uppermost in our considerations. In estimating the school and its program today we might use the following yardstick:

1. Does the school provide the time and skilled professional help which will enable the child to master the fundamentals of reading and mathematics? Many one-room teachers of considerable ability, bewildered by a multiplicity of classes and a shortage of time for each, have expressed thorough dissatisfaction with the job they were able to do in teaching the fundamentals of learning. What about the poor teachers?

2. Does it enable the child to realize the fullest development of his talents and capacities in music, public speaking, group leadership, sports, hand work, etc.?

3. Does it prepare the child through school experiences to live happily and effectively with others? If the school fails there, it has failed in its main duty.

4. Does the school offer an opportunity, particularly if a high school, for the pupil to gain some skills necessary to the earning of a living?

5. Does the school provide the background that would enable the child to develop a sense of responsibility and secure practice in the use and appreciation of democratic methods, so that he will be an efficient, worthwhile citizen?

The school program which fills the above mentioned needs can be said properly to serve the community in which it is located. The support of such a school program is everyone's responsibility, whether he has children in school or not. The better the school, the better the community.

---

volves mutual consideration of such problems as pupil transportation, spreading the tax load, providing economical and efficient administrative, supervisory, and special teaching services, and securing courses of study and school services rural communities need.

"The county survey affords rural people the best opportunity to study their own school problems toward mutual satisfaction. Each county should elect to inaugurate a county school survey."

Paul S. Conklin, President Illinois Association of County Superintendents

"About 100 years ago when Illinois was largely populated on farms a school system was set up to serve the people of that day. Times and things have changed tremendously this past century and although many, many improvements have been made in our schools we are still operating on the system of years ago under which it will never be possible to eliminate many of the difficulties we now have.

"The revision of our state school system is imminent. We must set down the conditions which should exist in our schools and then proceed to establish a reorganization which will expedite those advances.

"The purpose of the County Survey, as I see it, is to do just that. Each county which elects to conduct the survey simply says, 'Yes, we will examine the schools situation in our county, list undesirable and desirable features, propose improvements, and state what we believe would be an advisable procedure to establish conditions as we want them'."

BRAZILIAN COMES TO ILLINOIS TO STUDY SOY BEAN CULTURE

Just below the equator at Recife where the Brazilian bulge reaches farthest into the warm South Atlantic, a young employee of the Brazil department of agriculture heard something about Illinois farmers being pretty good at raising soy beans. Shortly thereafter,

his government requested him to spend a year in Illinois studying soy bean culture.

Today, Francisco Targino de Si-Queiro, the 30-year-old Brazilian, is learning everything he can about the beans under the tutelage of Prof. W. L. Burlison, head of the department of agronomy at the University of Illinois college of agriculture in Urbana.

Frank, as his name has been Anglicized by his friends, doesn't spend all of his time hanging around college halls and laboratories. Since early summer he has spent much of his time at the Berl Wilson farm 2½ miles north of Champaign watching the cultivation and growth of soy beans.

During the soil conservation demonstration on the Roelf farm at Rantoul, Sept. 6, he was an interested spectator at the terracing exhibition, but was especially interested in a soy bean field which was planted on the contour.

Speaking fluent English, the affable Brazilian said he was looking forward to an old-fashioned cold, snowy Illinois winter before he goes back home next spring. He explained he once saw a little snow on a hillside in southern Brazil but here he expects to see the real thing.

We'll wager he won't be disappointed.

This two-ton litter of 16 pigs, weighing 4,044 pounds after 180 days, may be the nation's heaviest. The National Duroc Association notified J. H. Carnicle of Brown county that his champion litter was the heaviest reported this year.

BROWN COUNTY MAN RAISES TWO-TON LITTER

One of the nation's heaviest litters of hogs was raised this year in Brown county by J. H. Carnicle of Mt. Sterling. At 180 days the 16-pig litter weighed 4,044 pounds.

The National Duroc association reports it is the heaviest litter for 180 days reported so far for this year's contest. The pigs have gained an average 1.4 pounds since birth.

The largest hogs, two boars, weighed 291 pounds and the average weight of the 16 was 252.7 pounds after the 180-day period.

A long-time Farm Bureau member, Mr. Carnicle has a widespread reputation as a breeder of fine hogs during the past 30 years. He carries on a swine sanitation program keeping each sow and litter in separate lots on clean ground.

His champion litter was kept with the sow and he kept the litter under close daily observation supplementing the feeding with the bottle.

Mr. Carnicle believes "concentrated effort" is the secret of his success as a hog raiser. Asked to explain exactly what he meant by concentrated effort, he said: "I would rather keep a few sows and give them good personal attention and raise them all than have too many and lose one-third of them."

CARL NEUREUTHER DIES AFTER LONG ILLNESS

Carl A. Neureuther, 45, for 23 years a director of the Bureau County Farm Bureau, one of the organizers and officers of the La Salle-Peru Milk Producers for 17 years and for 10 years a director of the Producers Creamery at Galesburg, died Oct. 2 in Spring Valley after a long illness.

He was born in Peru, Ill., May 13, 1900, attended La Salle-Peru schools and the University of Illinois and was married in 1928 to the former Adele Hillman of La Salle.

Mr. Neureuther was prominent in agricultural, business and Masonic affairs. Besides his work with the Producers Creamery and the Farm Bureau, he was for 17 years secretary-treasurer of the La Salle-Peru Milk Producers Association.

He also held a directorship in the National Sheet Metal company of Peru and was secretary of the board at the time of his death. He served as master of the Peru Masonic lodge and was commander of the order of Knights Templar.

Mr. Neureuther was a veteran of World War I and a member of the American Legion.

He is survived by his widow and two daughters, Duane and Carol, a brother, Aaron, and a sister, Mrs. Leroy Steepe, both of Peru.

Among the 175 persons attending the Pope-Hardin-Massac county sponsored tour of the Dixon Springs experimental station in late September was this delegation (left) from Lawrence county and (right) a group of farm advisers, soil conservation supervisors and University of Illinois college of agriculture extension specialists.

COUNTRY LIFE STARTED AS THE FARMER'S OWN COMPANY IN 1927.....

IT GREW BECAUSE ITS POLICIES WERE WRITTEN FOR FARMERS...

AND GREW BECAUSE IT PAID GENEROUS DIVIDENDS TO POLICYHOLDERS

AND GREW BECAUSE OF CONFIDENCE IN ITS STRONG FINANCIAL POSITION...

AND GREW UNTIL TODAY IT HAS $245 MILLION IN POLICIES IN FORCE..

What'll You Have...

in your new HOME FREEZER?

By F. A. GOUGLER, IAA Director of Produce Marketing

MANY surveys have been made to find out the potential demand for home freezers. These surveys indicate that when freezers are available they will be purchased by a high per cent of both rural and urban families. It is reported that nearly 200 manufacturers throughout the United States will manufacture such freezers and there will be literally thousands of distributors and salesmen.

Every progressive purchaser should take ample time before purchasing a freezer in order that he may be certain that it will satisfy his needs, that it will be durable, how it will be serviced and what will be its annual upkeep and power cost. Since there will be so many makes, sizes and types, to give such information about each would be out of the question in a brief article. However, all makes can be classified into four general sizes and information can be catalogued for each of the four sizes. The table gives this general information on the next page.

Freezer compartments in domestic refrigerators, of course, will vary in size, two cubic feet probably being the average of the 0° space. Ice cube space would be in addition. The estimated average cost is about $85 above the same refrigerator without the zero freezer compartment.

The daily freezing capacity of each size should be noted in particular. Freezing only 5 to 10 pounds of food daily would not be very practical for freezing a beef carcass or one or two hogs, especially in mid-summer. It is generally believed that owners of home freezers will still find it more practical to have their animals slaughtered, processed and sharp frozen in a locker plant and use their home freezer only for storage.

The freezing of small quantities of fruits and vegetables gathered fresh from the garden offers a practical use for the home freezer. In this manner, a volume can be accumulated in the freezer and taken to the locker in bulk, thus eliminate numerous trips to the locker plant.

Again referring to the table, it should be noted how the size of unit increases the kilowatt consumption annually, ranging from 360 to 1800 kilowatts. Likewise the annual operating costs range from $22.94 to $192.50.

Of these four groups, the only unit it appears, that would be practical for the producer who would want to do his own slaughtering, processing, freezing and storing would be group four or the walk-in type. The initial cost would be $800 to $1500 and the annual cost near $200.

This drawer-type model is the 16 cubic foot size and is also available in half the size. Food is fast-frozen in the two top compartments and is stored in the six lower drawers.

This walk-in type farm freezer has 138.6 cubic feet of space including a 12-cubic-foot compartment for quick freezing. It stands 89 inches high and was designed principally for farm use.

The four cubic foot cabinet model home freezer (below) will be available to the public shortly after Jan. 1, 1946. It is capable of maintaining a zero or below temperature in a 110-degree room.

TYPES	Zero Space Cu. Ft.	Frozen Food Capacity 50% Veg. 50% Meats Pounds	Freezing Capacity Daily Pounds	Power Consumption Annual Estimated K.W.	Sale Price Estimated	Annual Operating cost Int. 5% Dep. 10% Power 2.5c K.W.	Four Groups
Compartment in Domestic Refrigerator	2	40	5	360	$ 50.00 to $ 150.00	$ 22.94	I
Small Chest Type Unit Top Opening	5	135	10	700	$ 150.00 to $ 250.00	$ 45.00	II
Large Chest Type Unit Top Door Opening	16	432	20	1500	$ 200.00 to $ 600.00	$ 82.50	III
Combination Low-High Temperature Compartments Walk-In Cooler	40	1080	40	1800	$ 800.00 to $1500.00	$192.50	IV

In addition, the farmer would have to perform all of the services rendered by a locker plant. If the producer desires to be relieved of this type of work, then very likely the most practical home freezer to purchase is one of the smaller type which will include a small sharp freeze compartment for freezing fruits and vegetables gathered from the garden and a storage compartment for holding enough of these and other products to reduce the number of trips to the locker plant.

Another classification can be made of present manufactured home freezers, namely, those with top-door openings and side-door openings. The side openings are the ones with shelves inside for storage or with drawers to be pulled out.

The relative merit of top versus side opening doors, is worthy of consideration. Since cold air settles down, top openings will not lose so much cold air as do side openings or drawer type cabinets. The latter, however, are more convenient.

Space available for housing a home unit should be given consideration; also if the size to be purchased can be moved thru doors or perhaps to the basement. The larger makes, such as walk-in type can be assembled at point of permanent location.

Knowing the annual amount of frozen food consumed by a family of five might be useful as a guide in determining the size of freezer to purchase. An average family of five will consume of such foods that can be frozen, about 3135 pounds annually. About one-half or 1500 pounds of this will be consumed fresh, therefore, only about 1500 pounds will be stored in the unit annually. Having the unit in the home permits a rapid turnover of food and with careful management, a 12 cubic foot cabinet will accommodate 1500 pounds of food a year.

If the home unit owner still plans to rent a locker or lockers and purchases services from a locker plant, then a smaller home freezer will satisfy his needs.

The choice between a small and a large frozen-food unit may depend on the difference in the sales price, its annual upkeep cost, place where it is to be located and to what extent the purchaser desires to do slaughtering, lard rendering, curing and smoking, processing and freezing on the farm.

★

This dual-temperature model in six cubic foot size includes two cubic feet of low temperature space which can hold 80 pounds of frozen food. Note elimination of bothersome coils in storage space.

NEW CLIC EMPLOYEE

Guy Hawkins, formerly of the Illinois Livestock Marketing association and recently manager of the Wood Land Co-op, has joined Country Life Insurance company as field man for southern Illinois. He will continue to make his home in Sparta. Hawkins is a former organization director for the Ogle County Farm Bureau and was graduated from the University of Minnesota.

NEW ELEVATOR MANAGER

John Crist, formerly of Princeton, has taken over the management of the Macoupin Elevator Company at Carlinville. He formerly distributed Blue Seal feeds in Bureau county. The elevator company was set up by a Macoupin County Farm Bureau committee which authorized the purchase of the elevator properties last summer from the Carlinville Grain Company.

REGIONAL FSA DIRECTOR

George Reuss, former instructor in farm management at the University of Illinois, has been appointed regional director of the Farm Security Administration for Ohio, Illinois, Indiana, Iowa and Missouri with headquarters at Indianapolis, Ind. Reuss was graduated from the University of Illinois college of agriculture in 1928. He is a native of Bethany, Ill., and formerly served as FSA director in Illinois before entering the armed services.

A buying crowd estimated at 2,000 watches the sale of a carload of 378-pound Hereford heifer calves owned by Ray Adams of Maple Hill, Kans., during the first Chicago Feeder Show and Sale Oct. 15-16 at the Chicago Stock Yards. Highest bid on this lot was $15.50 per cwt. by A. L. Goodenough of Morrison, Ill. The sale was handled by the Chicago Producers Commission Association.

SEVEN COUNTIES ENTER BUSHNELL JUNIOR HOG SHOW

Seven counties were represented in the annual Bushnell Junior Market Hog Show and Sale in Fulton county which selected Robert Churchill's 235-pound Chester White barrow as grand champion.

The 12-year-old member of the Happy Go Getters 4-H Club from near Ipava in Fulton county also exhibited the grand champion pen of barrows while his brother, Max Churchill, 14, won the reserve grand championship in the same category.

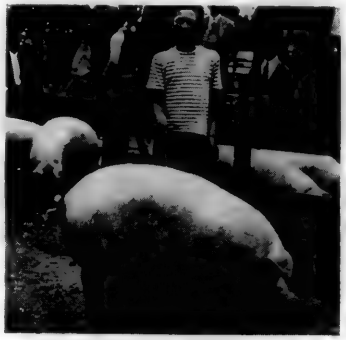
About 60 4-H and vocational agriculture boys exhibited and sold 175 market hogs. Churchill's grand champion barrow was sold to Harry Sparks for $1.10 a pound. He donated the animal to the tuberculosis sanatorium at Bushnell.

Counties represented were McDonough, Fulton, Warren, Knox, Hancock, Adams and Schuyler.

The top placings in each of the show classes, in order of their placing, were as follows:

Class I (single light barrow) — Robert Churchill, Ipava, Ipava 4-H; William Hambley, Augusta, Augusta FFA; Glen Davis, Mendon, Mendon FFA; Don Kessler, Bushnell, Bushnell Busy B's; Ward Vass, Dallas City, Dallas City FFA; Roland Patch, Smithshire, Roseville FFA; Gordon Ray, Berwick, Berwick 4-H and Avon FFA; Leon Tice, London Mills, London Mills FFA, Avondale Beavers 4-H; Wayne Howe, Bushnell, Bushnell Busy B's 4-H; Dick Higbee, Berwick, Avon FFA.

Class II (single heavy barrow) — Harry Postin, Ellisville, Fairview FFA and North Fulton 4-H; Curtis Hillman, Canton, North Fulton 4-H; Max Churchill, Ipava, Go-Getter 4-H; Bob Mustain, Sciota, Macomb FFA; Charlotte Hensley, Blandinsville, Blandinsville Blue Ribbon 4-H; Vernon Shawgo, Ipava, Happy Go Getter 4-H; Gordon Ray, Berwick, Berwick 4-H and Avon FFA; Keith Gills, Sciota, Sciota Prairie Ramblers 4-H; Russell Lawson, Macomb, Macomb FFA and Indel Jolly Juniors 4-H; Paul Ogle, Augusta, Augusta FFA.



Robert Churchill, 12-year-old member of the Happy Go Getters 4-H Club of Fulton county, poses with his 235-pound Chester White barrow which was chosen grand champion of the annual Bushnell Junior Market Hog Show and Sale. The barrow later sold for $1.10 a pound.

Class III (light pen of three) — William Hambley, Augusta; Gordon Ray, Berwick; Lanore Emory, Prairie City Livewires 4-H; Leon Tice, London Mills; Robert Talcott, Mendon.

Class IV (heavy pen of three) — Robert Churchill, Ipava; Max Churchill, Ipava; Harry Postin, Ellisville; Robert Mustain, Macomb; and Paul Ogle, Augusta.

Farmers having timber in the home woods, suitable for building, may save money by having it sawed and cut to size at a local mill.

FOUR IAA STAFF MEMBERS RETURN FROM ARMED SERVICES IN OCTOBER

Carl A. Petersen, Donald Teare, D. V. Maxfield and B. K. McBeath, members of the IAA Staff who left their jobs in the Chicago office to join the armed services, have resumed their duties in the insurance departments.

Petersen is actuary with Illinois Agricultural Mutual Reinsurance Company, Teare is chief underwriter in Farmers Mutual Reinsurance Company, Maxfield is an accountant for the insurance companies, and McBeath is with CLIC.

Teare, who came to the Chicago office from Champaign and Edwards counties, joined the army medical corps as a private in January, 1944 and went overseas in July, 1944 after service at Camp Ellis and Camp Grant.

In southern England he served with the medical corps and returned to the United States in July, 1945 as a technician, fifth grade. He was discharged at Camp Shelby, Miss., on Oct. 3. While in England he paid a visit to his birthplace on the Isle of Man.

Petersen, who came to the IAA after graduating from the University of Iowa in 1937, entered the army as a reserve officer in July, 1942 with the rank of first lieutenant in the air forces.

He left Fort Dix, N. J. for England where he served from September, 1942 until July, 1944 when he returned to the United States with the rank of major. He also took part in the invasion of Europe.

Maxfield, who graduated from the University of Illinois in 1936 and came to the Chicago office of the IAA in 1939, joined the army in October, 1941 as a second lieutenant. He trained at Fort Knox, Ky., and Camp Chaffee, Ark., before being sent overseas.

He arrived in England on D-Day plus seven, and four days later was in France as a member of Gen. Patton's Fourth Armored division. He was seriously injured in a peep collision near the German lines in August, 1944 suffering a fractured skull and injuries to the legs.

He remained in hospitals until Oct. 1, 1945 when he was retired as permanently disabled.

Back at his job in the Chicago office of Country Life after 3½ years service in the navy is recently discharged Aviation Machinist's Mate 1/c McBeath.

After five years in the Chicago office, McBeath joined the navy in March of 1942. He received his basic training at the Great Lakes Naval Training Center and later taught aviation mechanics at Navy Pier in Chicago.

In 1944 he was transferred to the naval air transport service at Alameda, Calif., where he served as a mechanic.

lockers

By F. A. GOUGLER

Citizens of Ursa, Adams county, and vicinity will have a locker plant to service their community or they are going to know the reason why. Some time ago a small group of leaders undertook to collect advance locker rentals and $10 membership fees with the understanding that REA would assist in financing the project. After nearing their goal, they were advised that REA funds could no longer be used to assist with financing locker plants.

The Adams County Farm Bureau was called upon for assistance and a meeting was held after which it was agreed to finance the project through the sale of stock. The committee is of the opinion that facilities should be provided for a complete locker plant at Ursa, including slaughter facilities. Also branch plants should be established at Lima, Mendon and Lorraine. To properly finance this complete project will require approximately $75,000.

The Cooperative Locker Service of Champaign county held its annual meeting Sept. 28. The association operates plants at Champaign, Rantoul and Fisher. A new plant is to be constructed soon in Sidney.

The new board of directors and officers are Howard Love, Sidney, president; Burdette Griffith, Dewey, vice-president; Bert Grindley, secretary-treasurer, Champaign. Other directors are F. W. Jordan, H. G. Scoggin, William Zenke, John Ehmen.

Manager Ellis Kugler in his report showed the total poundage handled by the three plants to be as follows: Champaign — 428,833 pounds; Rantoul — 204,000 pounds; Fisher — 176,881 pounds. The Fisher plant had operated only eight months.

The various products handled by each plant is as follows:

	Champaign	Rantoul Pounds	Fisher
Beef	151,586	86,245	66,562
Pork	133,476	82,491	57,250
Mutton	682	179	294
Veal	1,639	1,375	166
Poultry	13,795	7,462	3,366
Fruits & Vegetables	25,640	6,795	3,366
Meat Cured	52,691	16,089	19,361
Lard Rendered	23,245	7,992	9,766
Scraps Sold	24,732	15,740	10,283
Miscellaneous	1,347	191	131

Thursday evening, Oct. 25, the Edgar County Locker Service held its first annual meeting. A good attendance was had of both men and women.

President Leo Swinford gave a brief report on the accomplishment of the association during the past year. He stated that the association had expended approximately $55,000 for a new building and equipment. Some 912 lockers were already installed and in use. Another 112 will be installed shortly, making a total of 1024. These additional lockers will not accommodate the waiting list. The President also reported that a location had been secured for a slaughter plant.

Secretary David B. Long reviewed the various actions taken by the board during the 30 some odd meetings held during the year.

Manager C. W. Allen gave a very interesting report of the operations of the plant from its start, July 25, 1945, to date.

Leo Sharp, assistant farm adviser of Macoupin county since June 1943, has assumed his new duties as farm adviser of Massac county. He attended Southern Illinois university at Carbondale from 1938 until 1941 before enrolling in the University of Illinois college of agriculture from which he graduated in 1942.

Charles E. Twigg, Clinton county farm adviser for the past 10 years, resigned his post effective Nov. 1 to take employment in Michigan. Mr. and Mrs. Twigg were given a farewell party by their Farm Bureau friends at the American Legion hall in Breese, Oct. 2. Both were presented with gifts by the Farm Bureau and Home Bureau memberships.

THREE STEPS To *Successful Swine Production*

For efficient pig production and more profits it is sound planning to have a well-defined program based on these points:

1. Feed a balanced ration of grains and supplements with pasture in season and green alfalfa in winter.

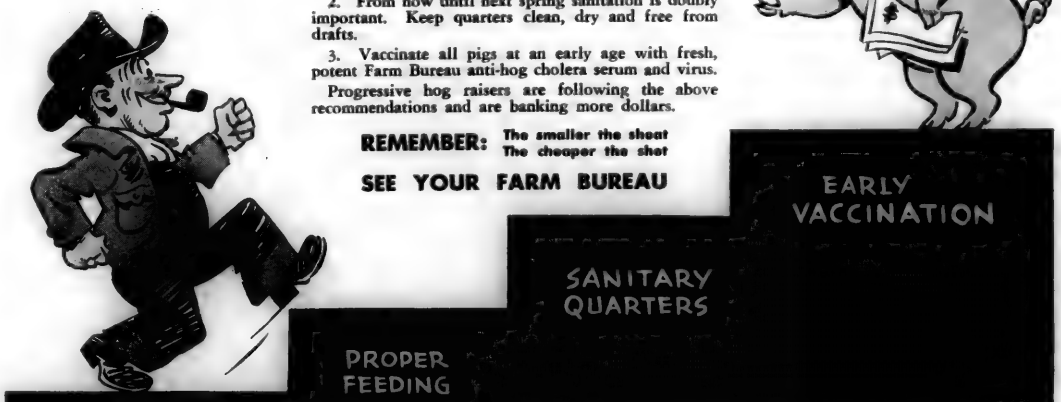
2. From now until next spring sanitation is doubly important. Keep quarters clean, dry and free from drafts.

3. Vaccinate all pigs at an early age with fresh, potent Farm Bureau anti-hog cholera serum and virus.

Progressive hog raisers are following the above recommendations and are banking more dollars.

REMEMBER: The smaller the sheat
The cheaper the shot

SEE YOUR FARM BUREAU



Summary of National Fertilizer Program

(Editor's Note: Many inquiries have been received regarding the American Farm Bureau Federation's fertilizer program. That there may be full understanding, we are reprinting the "Summary of National Fertilizer Program" which appeared in the Oct. 17 issue of the AFBF official news letter.)

I. THE NATIONAL PLANT FOOD PROBLEM.

1. The depletion of the mineral plant foods, especially phosphorous and potassium, from American farm soils is going on at an alarming rate. Over-all the annual application of soluble phosphatic and potassic materials must be more than doubled if productive soils are to be maintained.
2. Within the United States there are very large natural reserves of raw phosphate and potash material which should have adequate exploration, proper development and reasonable conservation for American agriculture.
3. Fertilizer plant capacity to produce and manufacture the needed and concentrated phosphates is woefully inadequate and non-strategically located. Regardless of location, existing plant capacity for all types of phosphatic fertilizers will produce not to exceed one-half of the requirements. Additional domestic potash plant capacity must be obtained by very large imports of potash from other countries.
4. Highly concentrated materials and mixed fertilizer should be available to the farmers so that unnecessary costs can be eliminated and that needed requirements on a net cost basis be decreased in many areas from 25% to 35%.
5. Research by the United States Department of Agriculture and by the experimental stations in the land grant colleges should be greatly expanded. A substantial farm test demonstration program should be made available to the states and counties desiring such an educational program. It is probable that there are 2,000 counties that should carry on test demonstrational programs that would justify the distribution of test fertilizer materials.

Assistant county agents under Federal and state extension would supervise such demonstrations, help crystalize into action the results of research and assist especially the operator of the family sized farm to intelligently utilize the proper fertilizer materials in an economic farming program involving soil conservation.

6. The existing fertilizer industry needs the wholesome competition of farm cooperatives. These cooperatives should control modest raw material reserve, operate efficient processing plants and direct economic distribution. Such competition will minimize unlawful restraints in industry and tend to prevent monopoly.

II. PROPOSED SOLUTION. THE HILL-BANKHEAD AND FLANNAGAN BILLS ARE IDENTICAL. THESE BILLS, IF ENACTED INTO LAW WITHOUT SUBSTANTIAL REVISION, WOULD ATTEMPT TO MEET THE PROBLEM IN THE FOLLOWING PARTICULARS:

1. The Congress would declare it to be the national policy that the natural reserves of phosphate and potash are to be conserved primarily for agriculture.
2. A Grass Roots Committee would be created to advise the Congress and the Secretary of Agriculture what measures should be taken, within the law, to improve and maintain soil fertility.

   The programs within states and counties would be carried out by the experiment stations and extension service, so as to have only one program in each community under the county agent's direction.
3. The Department of Interior would be charged with the development of an experimental phosphate plant in the inter mountain country on phosphatic reserves now controlled by the Department of Interior.

   The Department of Interior would also be charged with the development of a potash plant upon the potash reserves controlled by the Department of Interior. On or before five years, these experimental plants at fair appraised values, are to be sold to federated farmer cooperatives with adequate supporting reserves. If not purchased by cooperatives they must be sold to others or closed.
4. The Tennessee Valley Authority is charged with the construction of an experimental phosphate plant in the Mobile area to draw the raw materials from Florida. Adequate phosphate reserves are to be acquired by the Tennessee Valley Authority. On or before five years, this experimental plant and the reserves, at a fair value, are to be sold to a federated farmer cooperative or others and if not sold shall be closed.
5. The Congress would authorize, subject to annual appropriation, funds for the extension of educational demonstration supervision and demonstrational material to be equitably allocated to the states.

   The state extension is to have authority to determine in what manner the demonstrational work is to be carried on within the state and the counties of the state.

   This demonstrational work educational program would probably cost $20,000,000 per year for such number of years as it may be needed to get a program of soil management that will be economic and permanent.
6. The Farm Credit Administration will have authority, under the limitations of the act, to make loans on a reasonable basis to federated farmer cooperatives which would purchase the experimental plants from the Tennessee Valley Authority and from the Department of Interior.

   The Farm Credit Administration would have authority to make loans on a reasonable basis for the acquisition of additional plants, including a nitrogen plant, by cooperatives and for the acquisition of needed reserves.

   If the cooperatives do not take over the experimental plants within the five year period then the plants will be offered for sale to the public or closed.
7. The American Farm Bureau Federation is of the opinion that the program contemplated in the act would step up the application of needed mineral plant foods within a period of ten years.

   To accomplish this objective, the existing fertilizer industry must expand its plant capacity, must retain its existing facilities and must maintain its mixing and distribution system. There are 1,100 fertilizer mixing operators within the United States.

   These operators, under the con-

templated program, would use in large measure, concentrated materials doubling or tripling the plant food units in mixed fertilizers and in phosphatic materials but without greatly expanding the mixing machinery or other facilities needed in getting the materials to the farmer.

III. PROJECTED RESULTS OF PROPOSED PROGRAM.

1. Measured in the terms of phosphoric acid, there is now being applied to the land approximately 1,500,000 tons. The Land Grant College Committee reports that this volume should be increased to a tonnage of 3,400,000 tons.

   Such a quantity of phosphatic material will require all existing super phosphate and approximately thirty additional triple super phosphate plants of capacity to 50,000 tons.

   The industry, therefore, in addition to any plants contemplated in the proposed measure must develop and operate over thirty new plants of 50,000 tons capacity.
2. The existing eleven hundred mixers of fertilizer materials must continue to carry on their mixing operations to utilize existing super phosphate facilities and also to utilize and distribute the proper additional tonnage of concentrated material. It is probable that the number of mixing plants must be increased especially in the Middle Western area.
3. Under the proposed educational program the farmer will be able to obtain information as to the analysis of his soils, the needed fertilizer materials and an interpretation of research and extension men of the effect of new materials upon his soil and his crops.

   The operator of a family sized farm will be able, for the first time, to have translated adequately to him what his soil needs are and what the effect of fertilizer materials are upon his soil and crops.
4. Under the proposed program the land for the first time, looking at it from a national viewpoint, will have along with other conservation measures a restoration of soil fertility and a program that under right management will maintain soil fertility.
5. The projected program will make it possible for the average farmer to adjust his production in line with effective demand and utilize land as occasion may require for producing cash crops or for producing soil building crops.
6. The educational program will help farmers use their acres in a sound land use program by producing more economic crop units through higher yields of better quality crops on fewer acres. This will give an opportunity for better soil conservation on erosive land and also prevent a general soil deterioration.
7. The projected program, if carried into action, will guarantee to the people of the United States an adequate supply of food and fiber and will assure the consuming public improved nutritive diets.

The Savoy Grain and Coal Company will provide a fire protection for the village of Savoy when it completes a proposed 12,000 gallon reservoir. The company, which operates one of the largest and most modern grain elevators in Illinois is undertaking the project solely to furnish fire protection, according to President L. G. Johnston, Champaign.

Patronage dividends amounting to $5,000 have been paid to members of the Champaign County Grain Association. Russell Maddock is manager. On nearly a half million bushels of grain, there was a shrink of only 42 bushels, which is buying and selling grain on a very close margin.

GALVANIZED STEEL
LIVESTOCK EQUIPMENT

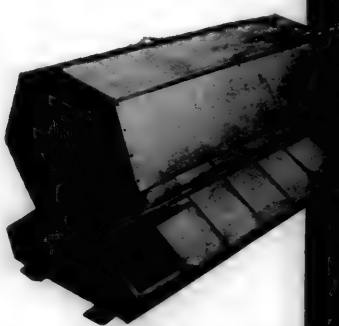
HOG TROUGHS

Special non-tip design of 16 gauge galvanized steel. 6 ft. long with cross braces at 1 ft. intervals. Ideal for colony hog houses.

2 ft. size for individual pens; 20 gauge galvanized steel.

HOG FEEDER

Well designed galvanized steel feeder available in 6 ft. size. Separate compartment for supplement. 12 feeding doors. Adequate feeding space for 60 hogs.



HEAVY DUTY STOCK TANKS

Round and heavy galvanized steel tanks, 20 gauge corrugated side and 18 gauge bottoms. Packed seam construction. Available in standard sizes.

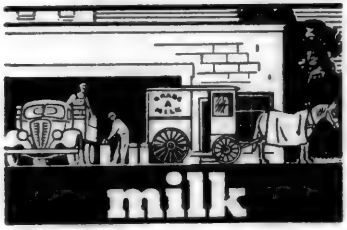
More money for farm pr



By WILFRED SHAW

Secretary of Agriculture Clinton P. Anderson, in a recent statement, reports interest in the further increased use of fresh whole milk in the United States because of its unexcelled nutritional value. In this connection he urges the retention by the dairy industry of the economies in milk distribution developed during the war. One of the wartime economies in milk distribution developed during the war was every-other-day deliveries. This practice made possible substantial savings in the cost of milk deliveries, which practice, if discontinued, would entail increased operating expenses by plants.

The 8th annual meeting of the Kewanee Milk Producers Association was held Tuesday evening, Oct. 2, in the First Methodist Church, Kewanee, with 150 in attendance. Dean Radford, secretary-treasurer, reported a 14% increase in production for the past year, with an average per farm shipment of 140 pounds of milk per day, from the 60 active members. Wm. Breeden, Art Kuster, Charles Little, Elmer Ouart and Harry Charlet were reelected as directors. The principal speaker at the meeting was Dr. Lawton, rector of the Episcopal Church of Kewanee. Short talks were given by Edwin Gumm, president of Illinois Milk Producers Association, H. K. Danforth, Henry county farm adviser, and Wilfred Shaw of the IAA.

Total collections of Dairy Products Promotion in Illinois for the June 1-15 collection period now are approximately $49,000. Eighty percent of these funds are turned over to the American Dairy Association for use in their national dairy promotional activities, while 20% are retained by the state unit of A.D.A. for their state use in dairy promotion.

Dairy farmers of 37 states are participating this year in the American Dairy Association program and a fund of almost a million dollars will be used by the association to advertise and promote the sales, welfare, and interests of the dairy industry under the direction of the American Dairy Association.

The consumption of milk in the United States in all products will average 200 quarts per capita in 1945, or 26% more than the per capita consumption in 1935-1939, according to the U. S. Department of Agriculture, Bureau of Agricultural Economics.

Wm. Beard was employed Sept. 1 as check tester for the LaSalle-Peru Milk Producers Association. Beard succeeds Ben Allman, LaSalle, who has served the organization for the past 12 years as tester. Ben is moving to his farm near LaSalle. Beard is a local farm boy and an ex-serviceman with three years overseas experience.

Mrs. Emma Linbeck, who has been office secretary of the Mid-West Dairymen's Company for the past 12 years, has resigned to return to her houshold work, and Miss Edith Lundahl has been employed as her successor.

George Potter is the new plant superintendent of the Danville Producers Dairy. Potter was born and reared near Danville and is a graduate of the dairy department of the U. of I. College of Agriculture, and until assuming his new duties, has been plant manager of a large Aurora Dairy company.

The following are the blended prices received by producers supplying the respective Illinois markets. All are September prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.45
Canton	2.75
Champaign	2.75
Chicago	3.09
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.79
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.75
Kewanee	2.55
LaSalle	2.69
Moline	2.906
Peoria	2.89
Pontiac	2.406
Quincy	2.36
Rockford	3.085
Springfield	2.85
St. Louis	3.58
Streator	2.50

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for August unless otherwise noted:

Baltimore	$3.85
Boston	3.64
Chicago (70-mile zone) (Sept.)	3.09
Cleveland	3.40
Denver (Sept.)	3.08
Detroit	3.36
Indianapolis (Sept.)	3.44
Louisville	3.42
Milwaukee (Sept.)	3.00
New York City (Sept.)	3.76
Pittsburgh	3.40
St. Louis (Sept.)	3.58
Terre Haute	2.80
Washington, D. C.	4.01

By G. H. IFTNER

R. L. Davis, manager of the White Hall Cooperative Elevator Company is recovering from a serious injury sustained from a fall down a 25-foot elevator shaft at Alsey. Davis had previously broken an arm while inspecting the same elevator. Henceforth, Davis will carry a luck charm when he goes over to Alsey.

County Farm Bureaus are moving ahead with grain and feed programs, a year end survey shows. Here is the picture.

New county grain companies, Farm Bureau type, have been organized in Grundy, McDonough, Macoupin and Hancock counties.

County Service Companies have entered the grain and feed service for local Farm Bureaus in the following counties: Henry, Bond, Montgomery, Stark, and Clay counties.

Four local elevators have reorganized and become county-wide Farm Bureau type grain and feed companies. They are, Columbia Farmers Cooperative Grain Company, Rushville Farmers Grain and Livestock Company, Farmers Grain Company of Dorans, and Jersey County Grain Company.

County-wide grain companies have existed in Lee, Champaign, and Moultrie counties for several years. These three companies were sponsored by the local Farm Bureaus.

It may be a shock to many RECORD readers to learn that since June, 1944, a total of 26 farmers' elevator companies have been liquidated. This is what happened to them:

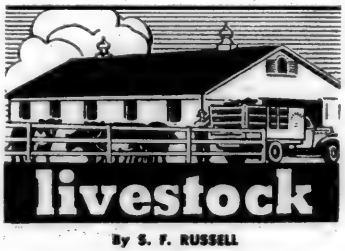
Seven were taken over by Farm Bureau subsidiaries at Speer, Verona, Butler, Farmersville, McClusky, Greenville and Bushnell. These were saved as cooperatives for the community and county. One elevator was purchased by a farmers' stock company; two locked the doors and quit business; one was torn down and carted away; 15 were sold or leased, most of them sold to independent operators. To offset their loss, Farm Bureau subsidiaries picked up elevators from independent operators at Coal City, Carlinville, Louisville, Osco and Orion. One new cooperative was organized at Erie. There was a net loss of 13 farmer operations.

Farmers in parts of five southern Illinois counties were afforded an opportunity to market their wheat cooperatively. Arrangements were made by the Franklin County

Service Company to use the Illinois Farm Supply Company's elevator at Benton. About 85,000 bushels of wheat were marketed through the St. Louis office of Illinois Grain Corporation. This time, farmers sold the crop on test weight and grade and not by guess, and b'gosh. They liked the arrangement, too.

The first of a series of schools for new managers, their assistants and field men was held at the Farm Bureau in Bloomington on Oct. 12. Special emphasis was placed on corn and soybean grades and grading. Other schools are contemplated within the next few months. This is in keeping with a policy of hiring Farm Bureau minded young men and developing them along the lines of grain marketing and feed service. Interested parties should call at the local Farm Bureau office.

The following farmers' elevators have completed reorganization and are now operating under the 1923 Cooperative laws of Illinois. Belleville Cooperative Grain Company, Farmers' Square Deal Grain Company, Morris; Secor Elevator Company; Paxton Farmers Grain Company; Hamel Cooperative Grain Company; Dorchester Cooperative Elevator Asociation; Bunker Hill Cooperative Company and Earlville Farmers Cooperative Elevator Company. Several other companies are in the process of reorganization.



By S. F. RUSSELL

Effective Oct. 1, 1946, hog support price will be reduced according to a graduated scale ranging upward from $10.75, the U. S. Department of Agriculture has announced.

Under the new price support program, seasonal variations are being applied to hog prices for the first time. During the first week in October, 1946, the price, Chicago basis, for good and choice butcher hogs will be $12.75 and thereafter at weekly intervals, the support price will drop 25c until a low of $10.75 is reached by the end of November, 1946.

Starting the second week in January, 1947, the price will be raised progressively until a high of $13.25 is attained in September, 1947. Present support price is $13 and will remain in effect until Oct. 1, 1946.

According to the USDA officials the program is designed to stimulate marketing of swine during the periods when slaughter is usually light and prices high.

The new support prices will apply to hogs bought by federally-inspected slaughterers throughout the United States based on geographical differentials above and below Chicago's weekly average support prices. These differentials will be the same as those used by the OPA.

U.S.D.A. officials assert an average support price of $12 at Chicago will reflect at least 90 per cent of parity to farmers for the country as a whole, according to the Sept. 15, 1945 index of prices paid by farmers. USDA support of hog prices at not less than 90 per cent of parity is required under the Steagall amendment.

Chicago weekly average support prices for the marketing year beginning Oct. 1, 1946 are:

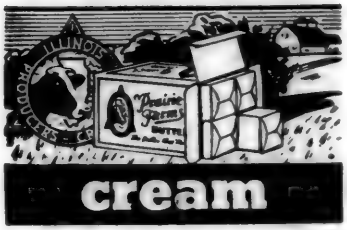
Days of September 29 and 30, 1947 -- 13.00



By F. A. GOUGLER

Creamery annual meetings in November and December include: Producers creamery of Olney, Nov. 17; Producers Creamery of Mt. Carroll, Dec. 1; Producers Creamery of Mt. Sterling, Dec. 5; Producers Creamery of Carbondale, Dec. 11; Producers Creamery of Champaign, Dec. 12; Producers Creamery of Galesburg, Dec. 13; Farmers Creamery Company, Bloomington, Dec. 15; Prairie Farms Creamery, Chicago, Nov. 27.

All patrons and shareholders of producer owned creameries should attend their annual meetings this year, not only to hear the reports of a successful year's operation, for all member creameries have had a good year, but also to learn something about what the future holds for the man who milks the cows.

Good speakers will be secured for these annual meetings and to be sure, they will give their views as to what the future holds for the dairy industry.

Prairie Farms Creamery of Henry is progressing with its building project. The lower story of the building is completed, both floors have been laid and the walls of the upper story are rapidly being built. The boiler room is completed and the boiler is being installed. Several pieces of new equipment have arrived and the remainder will be on hand by the time the building is completed.

The contractor assures the board that he will have his job completed by early December. In that case, Herb Schumacher, president, and Bert Mullooly, manager, are certain they will be churning in the new plant by Jan.1, 1946.

Discussion was recently had at a creamery managers' meeting as to the advantages resulting from the use of standard truck bodies used in assembling milk and cream. Therefore, two committees were named to study such possibilities. The members of the cream committee are: Forrest Fairchild, chairman; Robert Erikson; Jim Cramer; Bert Mullooly, and the members of the milk committee are: Cliff Huppert, chairman; Fletcher Gourley; Frank Mleynek; Ray Sailer; Harold Brackett.

It is expected that when agreements are to be reached as to a standard body that not only will truck bodies be uniform, but they will be more attractive and savings can be had from quantity purchases.

Nice day —

FOR A FROZEN RADIATOR!

We'll soon be having a lot of days like this and we hope that your car, truck, and tractor are ready.

Just in case you haven't "reconverted" for winter, here are a few pointers on things to be done:

- ✔ **Tighten loose connections.**
- ✔ **Replace defective hose.**
- ✔ **Examine radiator and heater fittings.**
- ✔ **Is head gasket tight?**
- ✔ **Is the motor block warped or cracked?**
- ✔ **Does the motor draw in unclean air because of loose air or oil seals?**
- ✔ **Does thermostat work?**
- ✔ **Is fan belt in good condition?**
- ✔ **Is the motor properly timed?**

After checking the above points carefully, necessary adjustments and repairs should be made before installing anti-freeze.

The following steps should be followed for proper installation of anti-freeze:

1. **INSPECT COOLING SYSTEM**
   Be sure cooling system is free of rust, scale, and grease.
2. **DRAIN COMPLETELY**
   Be sure both block and heater are drained and all drain cocks are closed.
3. **DETERMINE COOLING SYSTEM REQUIREMENTS**
   Your Blue Seal Salesman has charts which will give cooling system capacities of all makes of cars, trucks, and tractors, and quantities needed for adequate protection.
4. **INSTALL ANTI-FREEZE**
   Pour two or three quarts of water into the cooling system first, then add the anti-freeze. Finish filling with water to within four inches of overflow tube.
5. **RUN ENGINE IMMEDIATELY**
   To be sure anti-freeze is thoroughly mixed with water, run engine until normal temperature is reached. This insures opening of the thermostat so that any trapped air may escape.
6. **CHECK DEGREE OF PROTECTION**
   Have your Blue Seal Salesman make this test if you don't have the proper type of tester. If level of solution is too low for testing, because of trapped air loss, add water to within three inches of overflow and recirculate.

Blue Seal Perma-Type is the ideal anti-freeze for all cooling systems. It is an ethylene-glycol type material and will not boil away. It protects against rust and corrosion. One fill lasts all winter.

If your Blue Seal Salesman's supply of Perma-Type is exhausted, ask for "XYZ" Anti-Freeze. This is a good quality ethyl-alcohol type anti-freeze suitable for passenger cars and most tractors — except those operating with a hot manifold using distillates.

ILLINOIS FARM SUPPLY COMPANY

608 SO. DEARBORN STREET **CHICAGO 5, ILL.**

By JOHN R. SPENCER

Soil conservation measures building the fertility of our farm lands can do more to improve the nation's postwar health standards than all the pills and drug store panaceas put together, according to a statement made public here by the Middle West Soil Improvement Committee.

"Human health depends on the soil," the statement points out. "If the soil is fertile, then the crops it produces will build strong bodies and sturdy physical characteristics. If the soil is poor, the crops it produces will be deficient in vitamins, minerals and proteins necessary for insuring healthy humans.

"This was forcibly demonstrated in draft examinations for military service in World War II. In one Midwestern state where the rich prairie soils have been a mainstay for our increasing population, seven out of ten selectees were accepted for the draft, whereas in one of the Southern states where soil fertility has been largely exhausted, only three out of ten were taken.

"The prevalence of deficient teeth in some parts of the country in contrast to healthy ones in other areas is another manifestation of the effect of soil fertility on human health. The advent of sterility at a startling early age and numerous other health ailments suggest that these disabilities are caused by malnutrition via poor quality crops from poor soil.

The remedy lies in putting essential minerals in the form of fertilizers into Nature's hands so that she can fabricate them into health-building foods for the human body. By feeding the soil necessary plant foods containing nitrogen, phosphorous and potash, farmers will enable that soil to provide high quality crops that not only yield more food per acre, but better food at that."

Testing of a large acreage of Illinois land shows that about three-fourths of the farm land or 24 million acres, needs phosphate in addition to lime for clover and alfalfa.

LOCAL CONTROL STRESSED IN 1946 AAA PROGRAM

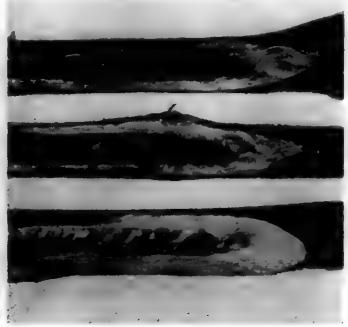
Farmers, with the help of their AAA committeemen, will have more responsibility in selecting practices to be carried out on their farms under the 1946 AAA program, according to an announcement from the state AAA.

According to the state committee, participating farmers may sit down with their neighbor committeemen and select the practices — from a list approved for the county — which their farms need most. Their selections will finally be approved by their county committeemen within the funds allocated for the county's conservation program.

The localized approach to the problem of conservation is expected to speed up the efficient reconversion of the nation's farmland from the strain of war production to longer-range soil-building and water conservation.

Animal pathologists at the University of Illinois have prepared and are using a new type of fowl pox vaccine. Results show a high percentage of "takes." Qualified veterinarians have full directions.

Bud blight is one of the relatively new diseases of soybeans in Illinois. One of the symptoms is a spotting and necrosis of the pods. Such pods are often poorly filled and many of them usually drop off before maturity.



These pictures illustrate symptoms of the new brown rot soybean disease now widely distributed in Illinois. Left: Light-colored areas between veins show earlier stages of progressive premature drying up. Dead tissue later makes plant appear as though frosted. Right: Cross section of stem shows dark discoloration of pith and woody area of diseased plants alongside healthy plant pictured at bottom.

Mr. and Mrs. Jack Meyer of Coles County won't soon forget the kindness of these neighbors (above) who followed the Golden Rule to the letter. Last summer when Mr. Meyer was incapacitated after a serious operation, 16 neighbors with their tractors came in to plow 77 acres. Others at later intervals came to continue with the plowing, planting and cultivating thus assuring the Meyers one of the finest crops in their community, for which they have expressed sincere gratitude.

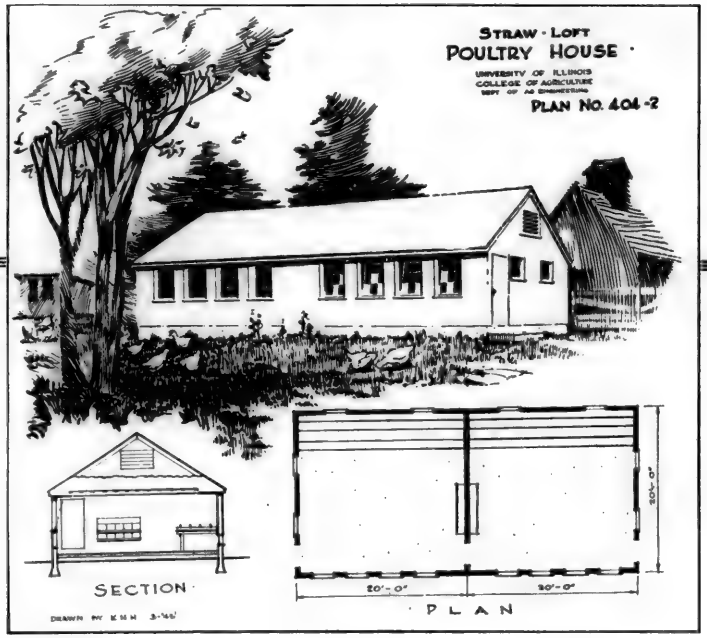
Mr. and Mrs. Jack Meyer of Coles County won't soon forget the kindness of these neighbors (above) who followed the Golden Rule to the letter. Last summer when Mr. Meyer was incapacitated after a serious operation, 16 neighbors with their tractors came in to plow 77 acres. Others at later intervals came to continue with the plowing, planting and cultivating thus assuring the Meyers one of the finest crops in their community, for which they have expressed sincere gratitude.

FARM BUILDING PLANS



THE department of agricultural engineering, University of Illinois College of Agriculture, recommends the straw-loft poultry house as the best type of house for your flock. It is a one-story, tightly enclosed laying house with a concrete floor and straw-loft.

One good feature of the Illinois plan for the straw-loft house is that the length can be adapted for size. The plan provides for a house 20 feet wide. A 20 by 20 house is about right for a 100-hen flock; a 20 by 30 house will hold 150 hens; 20 x 40, 200 birds. For 400 to 500 layers the length could be increased to 80 or 100 feet. Of course, for very large flocks, the house might also be wider or consist of two stories.

The plan allows four square feet of floor space for each hen, one nest for every five hens, 10 inches of roost space, and two inches of mash feeder space for each bird. Droppings boards are provided under the roosts but the plan can be easily adapted for droppings pit or roost rack.

Enough windows are included in the plan to provide light for the birds to find their way about the house, and for the operator. The ordinary window is

Here is one design in a series of farm building plans being issued by the U. of I. College of Agriculture in 1945-46. It is plan No. 404-2 of a straw-loft poultry house. Blueprints for this and other plans may be secured for 20 cents by writing the department of agricultural engineering, U. of I. College of Agriculture, Urbana, Ill. Persons interested in plans of other farm buildings may secure free a list of blueprint plans from the agricultural engineering department or by consulting their farm adviser.

not too important in adding warmth to the house or letting in ultra-violet light. In most poultry houses windows can be adjusted to regulate the amount of air. The straw-loft house does a good job of insulating overhead and allowing moisture to escape. If the house is insulated with commercial insulation, there must be escape ducts for moist air or the house will become wet. In most parts of Illinois, the single board wall for the sides is sufficient, but it is a good plan to insulate the sidewalls too; a double wall, or a layer of 1-inch insulation board, makes the house warmer.

More complete description on the straw-loft poultry house can be secured from Circular 525 made available by the U. of I. College of Agriculture at Urbana, or the circular may be secured from the county farm adviser.

Let's not forget economy in our farm building construction, says D. G. Carter, U. of I. College of Agriculture.

Farm building improvements are being planned now in greater volume as the war's end promises some increase in materials.

Six points stressed by Carter in farm building are:

Fit buildings to the farm. For example, too many machinery sheds are too small, poultry houses are too narrow, and many barns built for horses are too large in stable and hayloft.

Let's make buildings more adaptable, such as planning a barn or shed that can be rearranged or made adaptable for several different uses. It should be at least 18 feet wide in order to be suitable for beef cattle, sheep, horses, or even for a row of dairy cows.

Let's use more movable, temporary and emergency buildings.

Make permanent buildings durable against the elements.

Plan the buildings to save labor and conserve products.

Be conservative on cash expenditures.

During war years, farm fuel *supply* was the important consideration. To make our "Keep Filled" program effective, Farm Bureau Service Companies made additional fuel storage available by selling thousands of farm storage tanks. More tanks could have been sold but the supply was limited.

In their nineteen years of operation, Farm Bureau Service Companies have saved farmer members about $20,000,000 on their purchases of quality petroleum products. During this time, also, the price level on petroleum fuels has come down with the reduction in handling margins.

$20,000,000 would buy a lot of tanks! — skid tanks — underground storage — above-ground — any kind of storage that safety and convenience would require. Yes, we could have kidded our people. These tanks could have been given away "free" or leased at a "nominal price." There would have been enough tanks for more than 100,000 Farm Bureau members, and there would still be millions of dollars left over.

In business it is seldom possible to "get something for nothing." In the final analysis the customer pays all the bills. A good, modern farm fuel storage unit costs less than one tractor tire. The average farm with one tractor, a truck, and a car, uses several hundred gallons of fuels per year. At current prices on gasoline and tractor fuel, the savings made by cooperative purchases through Farm Bureau Service Companies will justify the purchase of a necessary storage unit. Tenant farmers may prefer to use above-ground storage equipment that is movable.

Before tying up in any deal for your petroleum needs, contact your Farm Bureau Service Company representative about gasoline and tractor fuel prices, savings, and the economy of owning your own storage.

MOTOR OILS

Highest quality motor oils for car, truck and tractor—delivered to your farm in BLUE SEAL Tank Trucks. Ask about Special FALL Discount Plan.

GREASES

BLUE SEAL Greases include "Luco Lube" and "Aluminate Gun" — also "Hi-Temp Bearing" for high speed bearings, "Harvester Gun" for cold weather use—and "Graph-Seal" — a good quality gun grease containing graphite.

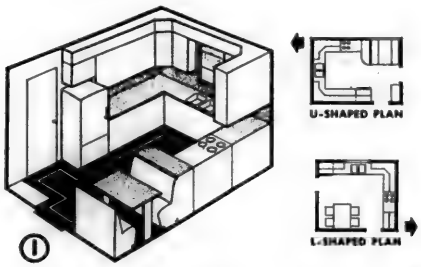
NEWS and VIEWS

Your Postwar Kitchen

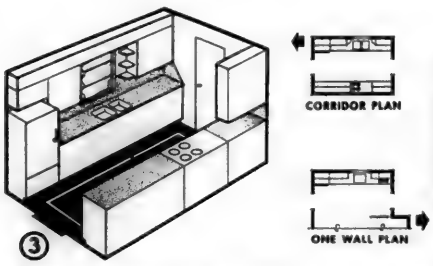
AS THE war's end recedes into the past and building materials become more and more plentiful, many farm families are giving serious thought to home building or remodeling. Of outstanding interest to the women of the family is the exciting efficiency of the modern kitchen with special attention given to provide the greatest convenience in operation.

There are five basic arrangements recommended for the kitchen working area. The arrangement of the work center depends on the plan of the home and may take the form of one of the designs illustrated below.

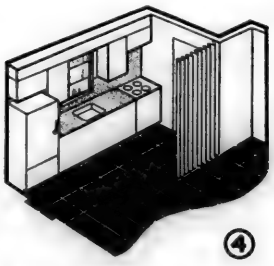


1. THE U-SHAPED KITCHEN is an ideal arrangement from the standpoint of food preparation. The work surface is continuous around three sides of the room, and the kitchen unit is kept free of traffic. The sink is usually placed at the bottom of the U with the refrigerator and range centers forming the two wings.

2. THE L-SHAPED PLAN has a continuous work surface along two sides of the room, and the grouping of the refrigerator, range and sink should be made as compact as possible. The remaining two walls may be used for door openings and other windows and for convenient location of dining space.



3. THE CORRIDOR-TYPE KITCHEN is best adapted to a narrow room with a door at each end. The sink center should be located on the outside wall, with the range center on the opposite side. The refrigerator may be satisfactorily placed on either side. The plan is often used for small home or apartment kitchens.



4. ONE WALL KITCHENS are adaptable to living room-kitchen combinations. The one-wall plan may be located in an alcove off the living room separated by a folding wall or screen. A continuous work surface can be obtained by locating the refrigerator and range at opposite ends of the assembly.

Recipe Treats

CHERRY TEA SQUARES

2 c. flour
4 tsps. baking powd.
1 tsp. salt
¾ c. sugar
¾ c. milk
1 egg, beaten
2 tblsp. melted shortening
1 c. canned cherries
Confectioners Sugar Icing, if desired

Sift together flour, baking powder, salt, and sugar. Add milk to egg. Mix well. Add melted shortening and add all to flour mixture, stirring only enough to moisten flour. Spread in paper-lined pan, 7 x 11 inches. With knife handle or fingers press hollows in dough 1½ inches apart. Fill hollows with cherries. Bake in moderately hot oven (375°F.) 25 minutes. When cool, drizzle with Confectioners Sugar Icing, if desired. Yield: 1 coffee cake, 7 x 11 inches.

HONEY RAISIN MUFFINS

2 c. flour
2 tsps. baking powd.
1 tsp. salt
1 tblsp. sugar
½ c. raisins
1 egg
1 c. milk
¼ c. honey
3 tblsps. melted shortening

Sift together flour, baking powder, salt, and sugar. Add raisins. Beat egg, add milk, honey, and shortening. Blend thoroughly. Add to flour mixture, stirring only until flour is moistened. Fill greased muffin pans 2/3 full. Bake in moderately hot oven (425°F) 20 minutes.
Yield: About 1½ dozen 2-inch muffins.

BROWN SUGAR SPICE CAKE

1 c. butter
2 c. brown sugar
2 whole eggs and 2 egg yolks
2½ c. flour
1 tsp. each soda, baking powder, cloves, cinnamon
1 tsp. salt
1 c. buttermilk or sour milk

Topping
2 egg whites
1 c. brown sugar
½ c. nutmeats

Cream butter, add sugar gradually and cream thoroughly. Combine whole eggs and egg yolks, and beat well. Add to creamed mixture. Sift flour, soda, baking powder, spices and salt together; add alternately with buttermilk or sour milk. Pour into greased and floured pan. Beat egg whites 'till stiff; add brown sugar, beating it in. Spread on top of cake batter, sprinkle with nuts and bake in a moderate oven (350°F.) 45 minutes to one hour, depending on depth of mixture in the baking pan.

Worn chairs and davenports can be made attractive and comfortable again by reupholstering that can be done at home, says Miss Dorothy Iwig, home furnishings specialist, U. of I. College of Agriculture. Your copy of "Reupholstering Furniture" will be mailed on request to the University of Illinois College of Agriculture, Urbana, Ill.

for HOMEMAKERS

Plan 4-H Club Home

One of the most ambitious 4-H club projects, which is being watched with considerable interest throughout the state, is the campaign by more than 50 4-H clubs in La Salle county to raise funds for the construction of a permanent country home and 4-H club center.

A tract of land for the home already has been purchased by the La Salle County Farm Bureau and will be leased by a new corporation named "The La Salle County 4-H Club Home."

After two years of study, standing committees of the Farm Bureau recommended the acquisition of the 22½-acre wooded tract a half mile west of Ottawa for the construction of "safe and permanent" buildings.

Individuals and business firms are being solicited in the county to raise the $150,000 deemed necessary to develop the home.

Tentative plans call for the erection of:

1. A large livestock show pavilion approximately 80 x 140 feet.

2. A girls' 4-H exhibit building, fireproofed and heated, which will serve also as a 4-H camp center and recreation pavilion, approximately 80 x 140 feet.

3. Livestock barns to house show entries: Cattle barn, 52 x 150 feet (closed). Hog and sheep barns (2), 40 x 150 feet (open).

4. Automatic pressure water system with drilled well and pump house, lavatories with running water and adequate sewage disposal.

5. Landscaping of grounds and development of picnic and sports areas.

The 4-H home will be open to other farm organizations and the general public. Other organizations using the grounds will be charged rentals in order to defray the cost of maintenance.

Some of the uses of the home contemplated are picnics, sports festivals, stock shows, judging contests, summer camps, displays, educational programs, farmers' institutes, and regular organization meetings.

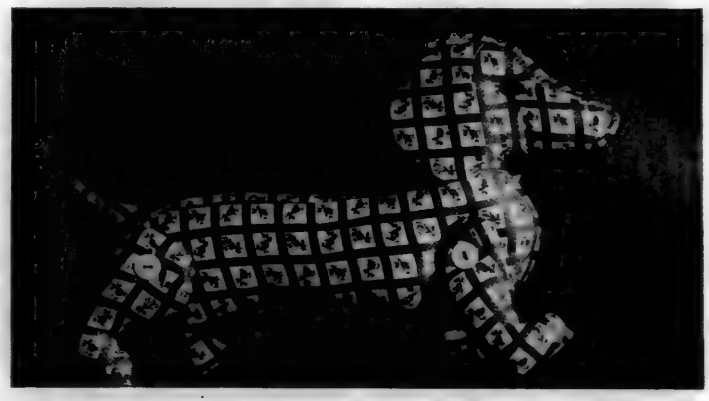
MATCHING SETS FOR SUB-DEBS

The circular knit beanie has a patterned crown the design of which is repeated in the base of the bag. The deep bonnet ties on with velvet ribbons and matches the bow-trimmed muff. Instructions for the wool accessory sets are available to you free. Write to the WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago. Enclose self-addressed stamped envelope.

JACK AND JILL MAKE DELIGHTFUL TOYS

Jack and Jill are crochet-fashioned in bright, washable cotton or wool, depending on the size doll you want. Directions may be obtained free of charge. Please print name. Write to the WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago. Enclose self-addressed stamped envelope.

HAVE DAISY DACHSHUND READY FOR CHRISTMAS



Daisy Dachshund, as cuddlesome a toy as a tot could wish for, is a blue ribbon winner in her calico coat brightly printed with rosebuds. Floppy ears, movable legs, a wonderful tail that doubles for a handle, and coal-black eyes are her chief assets. Write for directions free of charge of Daisy Dachshund No. E-251 to the WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago. Enclose self-addressed stamped envelope.

★★★ AN EDITORIAL ★★★

FARMERS are concerned over the epidemic of strikes now sweeping the country. Farmers are sympathetic with labor's legitimate demands to secure fair wages and healthful working conditions. On the other hand, farmers have no sympathy for the type of labor union practices which attempt to advance the selfish interests of a selected group at the expense of others.

Some of the claims of the leaders for current strikes will bear careful examination. In many cases the strikers are asking for a 30 per cent increase in hourly wage rates. This is equivalent to asking for 48 hours pay for 40 hours of work.

One of the leaders of an automobile workers union claims that the company could grant the wage increase demanded, lower the price of cars and pay larger dividends to stock holders at the same time. This claim appears to be fantastic. However, we suspect that it might be true to some extent *if* . . . We suspect it might be true *if* some union leaders would permit their members to deliver a full day's work for each day's pay . . . if some labor unions would not insist on having three men employed to do the work of two . . . and . . . if some labor unions would permit wider use of labor saving machinery and methods.

Union men often ask why so many farmers are not more sympathetic with labor unions. Farmers do not oppose labor unions as such, but they do oppose practices which restrict production and interfere with industrial progress. Farmers and farm organizations have devoted their attention primarily to making two blades of grass grow where one grew before. Some labor unions, on the other hand, appear to devote themselves primarily to making two jobs out of one. This approach to the labor problem is very shortsighted. It retards economic progress and perpetuates a low level of production and a low standard of living.

Another claim of some labor leaders which will bear examination is that high wage rates for labor are of great benefit to farmers. Here again this claim is true if . . . It is true if high wage rates are universal . . . and if high wage rates are accompanied by a high output per worker.

Farmers have continuously supported working people, in unions and otherwise, in all legitimate attempts for the improvement of wages and working conditions. They will continue to do so, but farmers also will continue to insist on policies and programs that give equitable treatment to all classes of citizens or groups of people. Farmers believe that the best interests of farmers, workers, investors and in fact all classes of society require a sound economic balance in the fields of prices, wages and profits.

S/Sgt. Vern E. Rusch (above), Rural Youth member from Fulton county, is happy to be back in the U. S. after action as a paratrooper in Europe where he lost his left foot when he stepped on a land mine. He hopes to get home by Christmas but will be glad to hear from his friends. He is in Ward 14A of Lawson General hospital, Atlanta, Ga.

Rural Youth

By
ELLSWORTH D. LYON

Fall programs are attracting new members. Counties reporting most recent acquisitions are Montgomery, Christian, Edwards, Macoupin, Will, Clark, Morgan, Fulton (two of them veterans), Bond, Knox, Rock Island (reporting an all out drive for new members and even changing the meeting night to the third Tuesday of the month to accommodate a great number of young people), Ogle, Warren, Edgar, and Tazewell.

Rural Youthers make use of experiences in state camp, district schools, or visits to children's homes and to hospitals by bringing educational material back to local groups through reports, the teaching of parliamentary procedure or the new games learned and by making helpful suggestions for the local county programs. Some examples of such activity come from La Salle, which was able to use nearly all of the material brought back from the district Rural Youth school at Yorkville; Bond which taught new games learned at state camp; Tazewell which had reports on state camp and the district school at Bloomington; Montgomery which reported on state camp, district school at Carlinville, and visits to the camp and hospital council at Scott Field; and Will which reported on state camp and district meeting at Yorkville.

Rural Youthers over the state are digging into good educational material. Lois Carlson, secretary of the Prophetstown-Tampico Warriers, in reporting recently of the year's work said "We had more and better educational features." Clark county has just reported a meeting which shows they got down to brass tacks on the discussion of the theme "Rural Youth in Post-War America," by considering the following subjects: "Land Prices and Taxes," "Improvements in Home Economics," and "Improved Methods of Agriculture." The Forreston club of Ogle county studied and demonstrated "Table Etiquette." The Polo club of Ogle considered homes of the future under four headings: "Uses of Glass in Modern Homes" by Harriet Schnulle, "The Cost of the House" by Edwin Dew, "Heating" by Glyndon Stuff, "Insulation" by Harold Avey. Pictures of and an address on "Mexico" was of interest to Morgan youth. Henry county saw two movies, "As You Sow So Shall You Reap," and "Helpful Henry." Fulton heard Farmer Bill of Station WMBD on the theme "Radio and People." Richland, the Hebron group of McHenry, and Will discussed "Two-Family Farm Business." At the Will county meeting the majority of the young men present requested a meeting at a later date with representatives from the University to which meeting they would bring their fathers. A former Rural Youther and veteran of the Hartland club of McHenry, Harold Menge, gave an interesting talk on his travels while in the service. Edwards heard a veteran from Wabash county who spoke on his experiences while serving in the armed forces; Whiteside's Newton Notions heard a veteran speak on his experiences in Arabia, Egypt, and Italy. Schuyler enjoyed Rural Youth slides for 1944. Rock Island discussed "Race Relations and Racial Equalities."

Massac County Rural Youth was introduced to the new farm adviser and wife at the October meeting — Mr. and Mrs. Leo Sharp, formerly of Macoupin county.

Wayne has selected the three-act comedy "Let Me Grow Up" to be given in the near future. Half the proceeds will be contributed to a local hospital. Montgomery meets part of its civic responsibility by decorating 250 Christmas packing boxes for soldiers stationed at Scott Field. Saline took part in a fall Farm Bureau meeting by providing a speaker (Freda Hall) and demonstrating square dancing. Bond served a dinner for the R.E.A.

A tractor maintenance short course will be held Dec. 10-15 at the University of Illinois college of agriculture and will offer instruction in all phases of tractor repair and care with special emphasis on the use of proper fuels and lubricants. Enrollment for the course must be made through your farm adviser.

EVEN WHEN YOU WIN... YOU LOSE!

Let's say you've reached retirement age — never bought five cents worth of fire insurance, and never had five cents worth of fire loss. You gambled the cost of an insurance policy against the chance of having a fire. Congratulations, you won! Or DID YOU? Let's see: Ever shiver when lightning struck close to the barn? And when you left the farm for a day, did the thought of *fire* come along to haunt you now and then when you were trying to *forget* the farm? Did you really WIN? Most farm folks would say "NO." You see, when a farmer buys fire insurance he hopes he'll never have to collect. What he is buying is *PEACE OF MIND!* And you buy more PEACE OF MIND for LESS when you take out a FARMERS MUTUAL POLICY.

★★★ AN EDITORIAL ★★★

FARMERS are concerned over the epidemic of strikes now sweeping the country. Farmers are sympathetic with labor's legitimate demands to secure fair wages and healthful working conditions. On the other hand, farmers have no sympathy for the type of labor union practices which attempt to advance the selfish interests of a selected group at the expense of others.

Some of the claims of the leaders for current strikes will bear careful examination. In many cases the strikers are asking for a 30 per cent increase in hourly wage rates. This is equivalent to asking for 48 hours pay for 40 hours of work.

One of the leaders of an automobile workers union claims that the company could grant the wage increase demanded, lower the price of cars and pay larger dividends to stock holders at the same time. This claim appears to be fantastic. However, we suspect that it might be true to some extent *if* . . . We suspect it might be true *if* some union leaders would permit their members to deliver a full day's work for each day's pay . . . if some labor unions would not insist on having three men employed to do the work of two . . . and . . . if some labor unions would permit wider use of labor saving machinery and methods.

Union men often ask why so many farmers are not more sympathetic with labor unions. Farmers do not oppose labor unions as such, but they do oppose practices which restrict production and interfere with industrial progress. Farmers and farm organizations have devoted their attention primarily to making two blades of grass grow where one grew before. Some labor unions, on the other hand, appear to devote themselves primarily to making two jobs out of one. This approach to the labor problem is very shortsighted. It retards economic progress and perpetuates a low level of production and a low standard of living.

Another claim of some labor leaders which will bear examination is that high wage rates for labor are of great benefit to farmers. Here again this claim is true if . . . It is true if high wage rates are universal . . . and if high wage rates are accompanied by a high output per worker.

Farmers have continuously supported working people, in unions and otherwise, in all legitimate attempts for the improvement of wages and working conditions. They will continue to do so, but farmers also will continue to insist on policies and programs that give equitable treatment to all classes of citizens or groups of people. Farmers believe that the best interests of farmers, workers, investors and in fact all classes of society require a sound economic balance in the fields of prices, wages and profits.

S/Sgt. Vern E. Rusch (above), Rural Youth member from Fulton county, is happy to be back in the U. S. after action as a paratrooper in Europe where he lost his left foot when he stepped on a land mine. He hopes to get home by Christmas but will be glad to hear from his friends. He is in Ward 14A of Lawson General hospital, Atlanta, Ga.

Rural Youth

By
ELLSWORTH D. LYON

Fall programs are attracting new members. Counties reporting most recent acquisitions are Montgomery, Christian, Edwards, Macoupin, Will, Clark, Morgan, Fulton (two of them veterans), Bond, Knox, Rock Island (reporting an all out drive for new members and even changing the meeting night to the third Tuesday of the month to accommodate a great number of young people), Ogle, Warren, Edgar, and Tazewell.

Rural Youthers make use of experiences in state camp, district schools, or visits to children's homes and to hospitals by bringing educational material back to local groups through reports, the teaching of parliamentary procedure or the new games learned and by making helpful suggestions for the local county programs. Some examples of such activity come from La Salle, which was able to use nearly all of the material brought back from the district Rural Youth school at Yorkville; Bond which taught new games learned at state camp; Tazewell which had reports on state camp and the district school at Bloomington; Montgomery which reported on state camp, district school at Carlinville, and visits to the camp and hospital council at Scott Field; and Will which reported on state camp and district meeting at Yorkville.

Rural Youthers over the state are digging into good educational material. Lois Carlson, secretary of the Prophetstown-Tampico Warriers, in reporting recently of the year's work said "We had more and better educational features." Clark county has just reported a meeting which shows they got down to brass tacks on the discussion of the theme "Rural Youth in Post-War America," by considering the following subjects: "Land Prices and Taxes," "Improvements in Home Economics," and "Improved Methods of Agriculture." The Forreston club of Ogle county studied and demonstrated "Table Etiquette." The Polo club of Ogle considered homes of the future under four headings: "Uses of Glass in Modern Homes" by Harriet Schnulle, "The Cost of the House" by Edwin Dew, "Heating" by Glyndon Stuff, "Insulation" by Harold Avey. Pictures of and an address on "Mexico" was of interest to Morgan youth. Henry county saw two movies, "As You Sow So Shall You Reap," and "Helpful Henry." Fulton heard Farmer Bill of Station WMBD on the theme "Radio and People." Richland, the Hebron group of McHenry, and Will discussed "Two-Family Farm Business." At the Will county meeting the majority of the young men present requested a meeting at a later date with representatives from the University to which meeting they would bring their fathers. A former Rural Youther and veteran of the Hartland club of McHenry, Harold Menge, gave an interesting talk on his travels while in the service. Edwards heard a veteran from Wabash county who spoke on his experiences while serving in the armed forces; Whiteside's Newton Notions heard a veteran speak on his experiences in Arabia, Egypt, and Italy. Schuyler enjoyed Rural Youth slides for 1944. Rock Island discussed "Race Relations and Racial Equalities."

Massac County Rural Youth was introduced to the new farm adviser and wife at the October meeting — Mr. and Mrs. Leo Sharp, formerly of Macoupin county.

Wayne has selected the three-act comedy "Let Me Grow Up" to be given in the near future. Half the proceeds will be contributed to a local hospital. Montgomery meets part of its civic responsibility by decorating 250 Christmas packing boxes for soldiers stationed at Scott Field. Saline took part in a fall Farm Bureau meeting by providing a speaker (Freda Hall) and demonstrating square dancing. Bond served a dinner for the R.E.A.

A tractor maintenance short course will be held Dec. 10-15 at the University of Illinois college of agriculture and will offer instruction in all phases of tractor repair and care with special emphasis on the use of proper fuels and lubricants. . . . "ON THE PROPER WAY TO *Lay* AN *Egg!*"

● No rooster ever laid an egg, yet they all crow! And when "Biddy" finishes her day's work, she too, tells the world! Now a farmer, by temperament and tradition, is not inclined to crow or cackle about the job he is doing. Yet his story must be told if he is to receive proper recognition. This is one of the functions of the Farm Bureau — to help keep a busy nation aware of the importance, the needs, the problems of the farmer. More and more, in the postwar period, the voice of the Farm Bureau must have greater volume, greater prestige, greater power. The Farm Bureau finds its strength in numbers — in increasing numbers of aggressive, alert Illinois farmers. There's a neighbor near you who does not know how much Farm Bureau is doing for him. Get him to join and you'll both be stronger.

SIGN HERE John Doe (Signature of person making report is required) R#1 Lincoln (Address) Jan 4 1946 (Date of Report)

INSTRUCTIONS

If the driver is physically incapable of making the report, any occupant of the vehicle is required to do so.

The purposes of this report are to obtain information necessary to the administration of the Safety-Responsibility and Illinois Traffic Acts, and to obtain data useful in accident prevention.

The Illinois law provides protection against the use of all reports as evidence in any trial.

Supplementary reports are required when original reports are incomplete. Avoid making a second report by making the first one correctly.

Print all names and addresses.

Give information clearly and completely.

If a doctor's statement of injuries or a garage estimate of the cost of repairs is available, give this information. Otherwise give your own careful estimate.

If more space is required, use a second report form or another sheet of paper the same size.

Sign the report.

FORM S. R. 456 (1058—2-5000—11-45)

ATTENTION MOTORISTS

This is a sample form for reporting motor vehicle accidents after Jan. 1, 1946, in the State of Illinois. The driver of a vehicle which is in any way involved in an accident in which damage to the property of any one person, including himself, in excess of $50 is sustained, shall send a written report to the Illinois Division of Highways, Accident Report Office, Springfield, Ill., within 10 days. If death or personal injury results, the driver must send the report within 24 hours. Failure to report is grounds for suspension of license. Forms may be obtained at city and state police offices, sheriffs' offices, from notaries public, garages, filling stations, and County Farm Bureaus. Drivers involved in accidents resulting in damage to other persons or their property in excess of $50 must show financial responsibility. The law permits cash, bonds or certificate of insurance to be used to show financial responsibility.

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

Resolutions committee for the 1945 IAA annual meeting are shown here. Left to right, seated, H. P. Ash, Macon; Fred Hawkins, Jefferson; Edw. M. Niehaus, Montgomery; G. G. Pape, Madison; C. J. EARL C. SMITH RETIRES AFTER 20 YEARS AS PRESIDENT — CHAR

By CRESTON FOST

Rep. Everett Dirksen emphasizes a point during his address

Members and delegates register as they arrive for first session

Treasurer Cowles reports on the state of IAA finances for past year

ONE of the most dramatic meetings in the history of the Association — that's the best way to describe the 31st annual sessions of the Illinois Agricultural Association and its associated companies held in November of 1945 at the Hotel Sherman, Chicago.

Years from now, when older Farm Bureau members are talking about historic annual meetings of the Association, the 1945 sessions will probably be the most vividly remembered. It will be remembered as the year in which Earl C. Smith retired as president of the IAA, the greatest state farm organization in the United States. It will be remembered as the year in which Charles B. Shuman, of Sullivan, Moultrie county livestock farmer, who had served on the IAA board for five years, was elected to the presidency. At 38, Mr. Shuman is just a few years younger than Mr. Smith was when he succeeded Sam H. Thompson as Association president.

It will be remembered as a year when Vice-President Talmage Defrees retired as vice-president, after 11 conscientious years in that position, and was succeeded by Floyd E. Morris, of Buffalo, Sangamon, a member of the board of directors.

It will be remembered as the year in which three directors. Alvin O. Eckert, Belleville; Albert Hayes, Chillicothe and W. A. Dennis, Paris, all of whom had long and distinguished records of service, retired from the board of directors.

Announcement of the retirement of the beloved farm leader after 20 years of outstanding service came like a bombshell. Monday morning, the opening day of the preliminary sessions, Mr. Smith informed the board of directors and officers of his intention to withdraw from active leadership. Prior to that time, the only person Mr. Smith had consulted was his wife.

At the closed meeting of County Farm Bureau presidents and farm advisers, Mr. Smith issued the official announcement of his retirement. The leaders were stunned at his words. The news travelled rapidly throughout the convention halls. A news release was given to the press wire services and that afternoon and the next day, rural people of downstate Illinois read the startling news.

Just before the noon recess on Wednesday morning, the first day of the general sessions of the IAA, Mr. Smith discussed his retirement with the annual meeting delegates.

The IAA retiring president declared that he had come to a time of life when

IAA President Charles B. Shuman receive

his calm, deliberate judgment overwhelmingly told him, that the good of the organization would be best served by his retirement from active leadership. It was a time, he said, when he felt he had sufficient vigor left to assist his successor in getting a hold of the reins of leadership and when he could be of some counsel to the board of directors.

"I have great reverence for graying hairs," he added, "but I know, as every man knows, and I can speak without being misunderstood, that young men usually furnish the initiative and zeal for driving ahead. It takes great vigor as well as sympathetic understanding to inspire people to do things." He reassured the delegates that he was not running away from any responsibility and would be available at any time to the Association, board and officers, for counsel and advice. He added that the Farm Bureau people had built the IAA to its present position. "And," he added, "when this convention comes to a close and you go to the quiet of your home, I want you to go with a feeling that this institution is in splendid hands, because it is. . . You have men so well grounded in the principles of Farm Bureau philosophy, so devoted to the causes of rural life, that they won't let this organization go down sidetracks. I know these men are going to pull together as one of the finest teams that ever stepped out for an organization. So let's go with that feeling, as that is the way I am going. . . .With the assurance that the policies are well grounded in the institution, with you leaders well acquainted with one another, and with the benefits of your county, district and state meetings, I have nothing but confidence and great happiness as I look forward to much better days for the Illinois Agricultural Association. Through you I want to thank all my friends for all the wonderful support and cooperation I have received. It is beyond anything I have ever known a man to receive."

Just before Mr. Smith turned the gavel of office over to President Shuman on Thursday afternoon, he again gave further explanation of his future plans. It was an answer to the question in the minds of many, "What is Smith going to do?"

The IAA retiring president said, "Smith is going to do just exactly what he has told you folks he is going to do. And if my word has been worth anything in 20 years, I hope you know I am equally true now when I say that Earl Smith isn't going to go into any line of big business, he is not going into politics, and he is not aspiring to any kind of further honors. I have

been given all the honors that any one could possibly want or desire — the honor of representing this great body of the finest people on earth, the farmers of Illinois. And I think to take any other kind of position would be to belittle the wonderful position of leadership and the opportunities for service I have enjoyed here.

"I am retiring to be in the first row of the ranks of the membership in my county and in my district and in my state and to support as best I can the leadership of the American Farm Bureau Federation. . .

"I am deeply concerned about the trends in America. . . I hope that with some relief from the arduous duties of daily administration of affairs I can give more time to my reading and study of some of the trends and the great questions of public policy of this country. And I may be afforded from time to time the opportunity of free expression, and especially after an interim of a few months, when no one could connect properly any remarks I might make with the organization or consider that I am speaking officially for anyone."

Mr. Smith said that he did not want to be misunderstood because he knew that his influence in national affairs had been due the fact that he was speaking for a great group and that he would no longer be speaking for a group. However, he said that if there is a great need for free expression that is well grounded in the ideals for which American boys fought, and if he could help furnish an answer, he would be proud to make that contribution.

In leaving office, the farm leader spoke of the beautiful clock that the membership had given to him and Mrs. Smith at the annual meeting two years ago and of the bound volume of testimonials which had been arranged at that time by the board of directors. He issued an invitation to members to stop in his home at Detroit in Pike county to see the book and look at the clock and hear its chimes.

He concluded by saying, "With the help of God, I can assure you to my dying day, I hope I will never do anything that will cast other than honor on the years of service I have been permitted to give to this organization."

As Mr. Smith presented the gavel of office to President Shuman, he said, "Charlie, in handing you this gavel in token of the great honor and the tremendous responsibilities of leadership, I say to you, sir, just about what Sam Thompson said to me 20 years ago when he was about my age, and I was coming in as a young man about your age. Charlie, I've known you for years. You've got it in you. We are behind you. You can do the job.

"I knew you before you were on the board of directors. I have ridden with you to meetings and you have presented me to farm meetings. I have seen you in conferences of various kinds. I know you are a stalwart son of the soil. I don't question for one moment your devotion to the people of the earth, the rural people of this great state and nation. I anticipate for you the opportunities of broadening and expanding your natural abilities in greater service than has ever been yet given by a leader of the Illinois Agricultural Association.

A. E. Burwash nominates Charles B. Shuman for president of IAA

"I pledge to you, sir, every ounce of support and cooperation that you may desire and, not only to you, but to your board of directors, in the immediate months ahead.

"God bless you, sir. You have a great opportunity — the greatest organization of rural people ever put together in any commonwealth of this great country. I know you are going to make a success."

President Shuman responded by declaring that he fully appreciated the great responsibility placed upon him in his election to office. "Mr. Smith left a big pair of shoes to fill. I will need your loyal support and cooperation.

"I don't think there is any more solemn pledge than the one made by Mr. Smith when he assumed the duties of president in 1926. I repeat, to the best of my strength and ability, I will endeavor to serve what I believe to be the best interests of the farmers of Illinois."

President Shuman has the well wishes of all, and the support he received from the delegates in electing him was a positive indication that the

Shirley Dickinson sings to audience in Hotel Sherman ballroom

Art Page interviews Chester Thomason, Morgan, on Dinnerbell Hour

choice of the new president was a popular one. A. E. Burwash, Champaign county, long active in Farm Bureau work, placed President Shuman's name in nomination for the presidency. It was seconded by H. P. Ash, Macon, and Dwight Hart, Christian. The only other nomination for presidency was that of E. E. Houghtby, Shabbona, former IAA board member who had served for 10 years as a director.

Vice-President Morris was the only nominee for that office and was unanimously elected.

Mr. Smith's address given Wednesday morning was one which displayed great statesmanship. It is reprinted in full in this issue of the RECORD and the membership no doubt will give it great and careful study. The resolutions adopted in the closing sessions Thursday morning are also printed in full in this issue of the RECORD and likewise deserve careful consideration.

In the public relations conference held Wednesday afternoon, delegates heard reviewed and discussed the 100 per cent assessment program of the state, public health districts, the Gateway amendment, road improvement and financing, and price control. These subjects are covered in Mr. Smith's annual address.

Two of the most outstanding addresses made by guest speakers during the meeting were those of Congressman Everett M. Dirksen of Illinois and the Rev. George M. Gibson of Chicago. Congressman Clarence Cannon, who was scheduled to speak Wednesday night, was unable to keep his engagement because of a hearing before the House Appropriations committee of which he is chairman.

Congressman Dirksen justified his reputation as one of the most effective speakers in Congress. His address on "The World We Live in Today" was one of the best ever given before an IAA convention. Prior to his address he paid tribute to Earl Smith as farm leader, declaring that in both the House and Senate, he was held in the highest esteem, and in appearances before committees he showed he had the best perspective on the whole agricultural picture and its relationship to the country's economy.

As farm people returned to their homes from the convention, there was one sentence of Congressman Dirksen's address that rang in their ears. It was the query of a wounded soldier in a government hospital put to a chaplain. His query was, "Padre, will anything ever come of it?" This was a question in the minds of many, Congressman Dirksen said, as the world witnesses the turmoil in the world following the close of the war.

The Illinois Congressman who recently returned from 32,000 miles of travel in 21 countries, said he had several specific conclusions and general ones to make from his trip. The specific conclusions were, first, distance not only has been annihilated, but the space between world events. Second, human life means so little in so many places of the world, and third, techniques in so many countries are archaic, but the people have a capacity to learn if given the opportunity.

The Congressman's general conclusions were: communism is on the march, it is still the strong hand against the weak, oil is the seed of war, and there is still so little freedom in the world. The answer to many of our world questions, he said, lies in a personal appreciation of these problems.

In his address on "Seven Lamps of Character," based on Ruskin's "Seven Lamps of Architecture," Dr. Gibson of the United Church of Hyde Park, discussed the spiritual aspects of the modern cultural problem.

In a magnificent and scholarly style, Dr. Gibson said in part: "We need not lose heart in seeking a better America and a better world. Depressions, panics and wars have been the lot of our generation, and have brought a feeling of cynicism bordering on despair. Men ask, why after we have spoken for two thousand years, of peace and justice, do these things still happen. But in the long course of history, the whole Christian era is but a day-break and a beginning. Give it time. Give God and man more time. And with patient impatience, we may press forward hopefully."

President Edward A. O'Neal of the AFBF, who addressed the convention Thursday morning, lauded Illinois Farm Bureau members for their splendid record of progress and warned that the threat of inflation is another "atomic bomb." He also said that farm organizations have a job to do in the days ahead to exert their stabilizing influence in a strike-torn country.

Five new directors were elected to the IAA board. Two of these new directors were named to succeed President Shuman and Vice-President Morris when they were named officers. These were: Milton W. Warren, Mansfield, Piatt county, who succeeds Shuman, and Dan L. Clarke, New Berlin, Sangamon county, succeeding Morris. The other three new directors were: J. King Eaton, Edwardsville, St. Clair county, succeeding Alvin O. Eckert; John T. Evans, Hoopeston, Vermilion, succeeding W. A. Dennis, and R. V. McKee, Varna, Marshall, succeeding Albert Hayes.

Introduced at the annual meeting was Arnold P. Benson, Batavia, the new state director of agriculture. He was assistant state treasurer prior to his appointment to his new position. In introducing Director Benson, Mr. Smith reviewed his Senate record and declared he believed Benson was qualified for his new post.

Texts on the addresses of Congressman Everett M. Dirksen and Rev. George M. Gibson are not available at press time. Persons wishing copies of these speeches later may write the IAA Publicity Dept., 608 South Dearborn St., Chicago 5, Ill.

Representing an assortment of counties is this group chatting in lobby during IAA convention. Left to right: R. E. Yung, Macon; L. S. Griffith, Lee; W. H. Droste, St. Clair; T. R. Isaacs, Mason; G. W. Dirreen, IAA; C. E. Humphrey, Henry.

SMITH DEMANDS SOUND NATIONAL POLICIES

. . . IN AGRICULTURE, BUSINESS AND IN GOVERNMENT. ADDRESS OF EARL C. SMITH REPORTED

IT IS with more than usual pleasure and satisfaction that I am permitted to extend official welcome to the delegates and representative leaders attending the 31st Annual Meeting of the Illinois Agricultural Association. It is an especial pleasure because only a few weeks ago I was very fearful that because of governmental limitations, we would not be permitted to have a full meeting of the delegates where proper consideration of the tremendous problems confronting agriculture and the Nation might be given adequate attention. My more than usual satisfaction is prompted by the feeling of a job well done by the Association, even though it was forced to operate under serious limitations and handicaps.

The year of 1945 is destined to be recorded in history as epochal in the memory of every living citizen, and, I believe, in the history of our Country. We have experienced the successful culmination of a war to the East and to the West that for a time threatened to engulf the world. We have daily read long lists of those who gave their lives and of the hundreds of thousands of those wounded on the field of battle. We are all witnessing among those returning from the war, the tremendous number who come home seriously maimed or otherwise handicapped in becoming adjusted to the affairs of a peaceful Nation. Since the firing ceased, there is scarcely an American home that has not looked forward to, and many have received, word from their loved ones that brought us almost from the depths of despair to a feeling of confidence and genuine hope for their early return. It is with a deep feeling of pride and satisfaction that we recognize the immeasurable sacrifices and the outstanding gallantry of our men in arms in bringing to a successful conclusion the most gigantic war of all time.

Meet Many Problems

For the first time in American history

during a period of war, death removed from the helm of government a President of the United States. I do not believe that ever before in the history of man have the people of a great nation so many times been moved from the depths of despair into periods of hope and from bitter disappointment finally into a deep consciousness of a gigantic task magnificently done, as have the people of America during 1945.

Although entirely different from the war itself, there have been the tremendous economic disturbances, if not chaos, resulting from war that we have all been forced to meet in the affairs of government, of institutions and of men. In the light of these circumstances and experiences, it is hard for me to see how any one can yet doubt that an unseen hand was guiding the destinies of America through trials, tribulations and our own mistakes. When I stop to think only of the experiences in the administration of the affairs of our organization and the manner in which what appeared to be almost insurmountable difficulties have been faced and solved, I do not hesitate to say that I would have been overwhelmed with concern if not dismay could I have anticipated in their entirety the problems the Association would have to meet and overcome.

It is with a feeling of deep appreciation that I recognize the devotion to duty, the ability and the fine cooperation I have received from my associates on the Board of Directors, the officers and the entire staff in making possible the report of the stewardship of the affairs of your organization which it is my privilege as well as duty to give on this occasion.

Organization Forges Ahead

I am sure you were pleased to learn that the Association closed its fiscal year with a membership of 115,651, which is an increase of 10% over the membership of the previous year. The Treasurer has reported on the financial condition of the Association, which reflects in a practical way the conservative manner in which the affairs of the Association have been handled and its sound financial position as it faces the many and increasing problems that lie ahead. The Field Secretary has already reported very briefly on the affairs coming under his administration and more detailed records will be found in the printed Annual Report of the Association on all phases of departmental activities. Without exception, the several business service corporations have made substantial progress. While I would like very much to deal with their accomplishments and continuing problems at some length, I can here only mention very briefly the measure of their successes.

Illinois Agricultural Auditing Association

The Illinois Agricultural Auditing Association completed 448 audits for 439 members. This work required 35,885 hours of auditing time and 58,078 miles of travel. The Association filed 393 income tax and capital stock tax returns, 168 information returns and secured two letters of tax exemption for its members. The taxes paid by these cooperatives approximated $186,820.00. When appraised from the standpoint of available experienced personnel and limitations of travel, the record of the Auditing Association during 1945 is outstanding.

Farmers Mutual Reinsurance Company

The Farmers Mutual Reinsurance Company had $400,202,671.00 of insurance in force at the close of its fiscal year, September 30, a net gain for the year of $60,539,436.00. It paid loss claims totaling $734,167.48, paid dividends to its policyholders in the amount of $585,510.24 and added $617,668.97 to its surplus, which at the close of the year was $2,458,059.58.

Illinois Farm Bureau Serum Association

The Illinois Farm Bureau Serum Association purchased for its members 42,410,075 cubic centimeters of serum and virus during the year. After the payment of 7% dividends on $50,000.00 of outstanding capital stock, the Association returned $65,832.03 in patronage dividends and added $1,318.32 to its surplus.

Illinois Agricultural Mutual Insurance Company

The Illinois Agricultural Mutual Insurance Company again had a very successful year. On September 30, it had outstanding 145,894 policies and 92 bonds in force, which together show an increase of 10,238 for the year. Total loss payments during 1945 amounted to $1,352,924.79. During the yearly period, $990,249.59 was paid to policyholders in the form of regular and special dividends. It is interesting to note that since the Company went on a dividend paying basis in 1935, the regular and special dividends returned to policyholders now amount to $4,605,632.62.

Illinois Farm Supply Company

Although constantly faced with serious curtailment of available merchandise, the Illinois Farm Supply Company had the highest sales of record. It purchased and distributed 132,148,985 gallons of petroleum products, an increase of 6½ per cent over the previous year. Its Feed Division distributed 55,144 tons of Blue Seal feeds and ingredients, an increase of 40.2 per cent. It handled 36,350 tons of plant food, including 15,836 tons of rock phosphate. The Company had a net income of $1,247,310.31. After the payment of $51,784.02 upon its outstanding capital stock, $1,075,973.66 was distributed on a patronage basis to its 165 member companies. The records disclose that from the operations of this Company and its member companies, $2,083,410.73 was paid to Farm Bureau members of Illinois in the form of patronage dividends during the last fiscal year of their operations.

Country Life Insurance Company

Country Life Insurance Company again had a most outstanding year. 10,783 new policies of life insurance totaling $27,728,317 were issued. At the close of business on September 30, 138,005 policies were in force covering $243,614,220 of life insurance. At the close of its fiscal year, the Company had total assets of $28,508,149.40, an increase for the year of 17.7 per cent. During the year claims totaling $748,426.56 were paid and $503,340.58 was paid in dividends to policyholders. $439,257.12 was added to the unassigned surplus of the Company which on September 30 totaled $3,026,761.40. On September 30, the Company's entire bond portfolio had a market value of $24,817,514.93 which was $954,407.61 in excess of the amount at which these securities are being carried on the books of the Company.

Illinois Agricultural Holding Company

The Illinois Agricultural Holding Company, which continues to hold all of the stock of Country Life Insurance Company and which is controlled by a directorate interlocking with that of the Illinois Agricultural Association, received $165,007.25 in dividends on this stock in 1945. After the payment of $8,750.00 upon its outstanding stock, the Holding Company distributed $141,683.15 to holders of special policies and to Farm Bureau member policyholders of Country Life Insurance Company.

Illinois Livestock Marketing Association

The Illinois Livestock Marketing Association handled 200,886 head of livestock during its last fiscal year. This is about the same volume as that handled during 1944. After the payment of all operating expenses, it had a net income of $9,711.53. After the payment of $1,815.00 in dividends upon its capital stock and the return of $4,905.83 in the form of patronage refunds, $2,880.35 was added to the surplus of the Company. When one considers the large increase in the number of direct buying stations set up by packers during the past year, all of which entered into direct competition with the operations of this Company, the record of the Association can be better appreciated.

Prairie Farms Creameries

During the year, the Illinois Producers Creameries changed its name to Prairie Farms Creameries. Its ten members, located in strategic areas throughout the State, purchased 6,596,376 pounds of butter fat, an increase of 6.52 per cent over the previous year. These creameries manufactured 6,338,175 pounds of butter, of which 97.37 per cent was 90 score quality or better. They manufactured 3,791,405 pounds of milk powder, an increase of 47.12 per cent and 601,740 pounds of cheese, an increase of 147 per cent over the volume of last year. From its net earnings, the Company paid $1,848.00 in dividends on its outstanding capital stock, $32,691.56 as quality premiums and patronage dividends and $12,572.98 was added to the surplus of the Company. Since the organization of Illinois Producers Creameries in 1933, farmers have invested $656,169.44 in the stock of its ten member plants. During this period, the ten creameries have returned to stockholders and producer members in the form of stock dividends and patronage refunds, $532,414.03. When one considers the highly competitive field in which this Company operates, its measure of success is very satisfactory.

Illinois Grain Corporation

The Illinois Grain Corporation had its most successful year ending June 30. It handled approximately 25,000,000 bushels of grain during this period. After meeting all operating expenses, the Company's earnings amounted to $180,807.86. After payment of taxes, the Company paid $15,971.79 in dividends on its outstanding capital stock and returned $147,252.69 in the form of cash patronage dividends to its members.

Illinois Wool Marketing Association

The Illinois Wool Marketing Association handled 213,354 pounds of wool for its members. While this volume is not large, the activities of the Association had a decided influence in making effective the floor under the market in the country where buyers bought wool much more freely than they did a few years ago. Its earnings were adequate, after the payment of all operating expenses, to pay its obligations on outstanding capital stock. The Association is prepared to protect its members with an expanded program at any time the government may discontinue its wool buying and pricing programs.

The operations of all the business corporations on which I have reported very briefly, continue under the management of the Illinois Agricultural Service Company. The relationships existing between these organizations

and the coordination of their activities with the general program of the Farm Bureau of Illinois were never better. The purpose of these service organizations is to serve Farm Bureau members and that they are measuring up fully to this responsibility is proven by their steady and substantial growth in volume, in earnings and in the steady improvement of their financial positions. All observations seem to indicate that the valued service they are performing is gaining attractiveness and is contributing materially to the increase in the membership of the County Farm Bureaus and the Illinois Agricultural Association.

Illinois Milk Producers Association Illinois Fruit Growers Exchange and Illinois Cooperative Locker Service

Relationships with the Illinois Milk Producers Association, Illinois Fruit Growers Exchange and the Illinois Cooperative Locker Service continue on a very cooperative and satisfactory basis. While these organizations are not operated or managed by the Management Service provided by the Illinois Agricultural Association, their interests and activities are closely associated with those of the I.A.A. and are generally regarded as being a definite part of the Farm Bureau program in Illinois. Reports of their respective activities during the year appear to be very satisfactory to those they serve and one could not ask for more cordial understanding and relationships than those existing between these companies and the Illinois Agricultural Association.

While the Farm Bureau members in Illinois appear to be rightfully proud of the outstanding success the Farm Bureau service organizations have made, and I find great personal as well as official satisfaction in their outstanding achievements, yet I feel that the enlarged Farm Bureau membership requires some improvement, some expansion and strengthening in at least some of these business operations. Thoughtful people and forward looking institutions are laying plans so as to better meet some of the acute problems that seem to lie ahead. This is particularly true in the fields of grain and livestock marketing. The appropriate Boards of Directors have given a great deal of thought to these two subjects during the past year.

Studies seem to reveal the desirability of organizing and developing a grain merchandising program. Such a program should supplement, but in no wise displace, any of the merited services performed by the Illinois Grain Corporation. Any worthwhile grain merchandising program will require very substantial capital, a large portion of which must, of necessity, come from the farmers within the interested areas of the State. Experience discloses the hazards as well as the opportunities in this field of operation and I admonish very careful investigation and consideration of all factors involved before launching upon such a program. There must be adequate interest in a sufficient number of areas to assure at least the minimum volume of grain necessary for a successful State-wide merchandising operation. Plans are fully developed for such a program if and when a sufficient amount of local interest is manifested in a very definite and material way.

Study Marketing Problems

Problems in livestock marketing call for effective coordination of all cooperative livestock marketing operations serving Illinois farmers. A Special State-wide Livestock Marketing Committee was selected early in the year to study this problem and to make recommendations to the Illinois Agricultural Association on policies necessary to accomplish this purpose. There is yet some difference of opinion regarding the essential features necessary to assure volume of livestock, economy in operation and the type of bargaining power an organization must have to fully protect the rightful interests of livestock producers and feeders offering their livestock for sale. To say the least, the problems are difficult, as they involve institutions as well as men. My confidence in farmers generally and the leaders who have been developed in the field of cooperative livestock marketing, as well as experience in the development of business service corporations, justifies my anticipating that in the early future a program of the character mentioned will be agreed upon.

Only when this is done can the livestock farmers of Illinois really expect to secure the full value of their livestock in a highly competitive market when the controls of government are removed.

Turning to the field of public relations, the record fully justifies my saying that never before has the Illinois Agricultural Association been more effective in representing the interests of farmers before the law-making body of our State than during the recent session of the 64th General Assembly. Recognizing that little if any legislation is proposed that does not have an indirect if not direct effect upon rural interests, it was necessary for the representatives of your Association to review the 1,507 bills that were introduced during this Session. While there is little glamour or appreciation resulting from successful efforts to amend or defeat legislation, yet I believe the greatest value of the legislative effort of organized farmers of Illinois lies in that field. It would be impossible for me to enumerate here the many bills that were amended or defeated as a result of I.A.A. influence.

Support Gateway Amendment

Among the most important legislation sponsored by the Illinois Agricultural Association that was enacted into law was the submission of the Gateway Amendment to the voters at the next general election, constructive rural school legislation, a secondary road program that for the first time places on the State some responsibility for assisting in the all-weather surfacing of township roads, and legislation that calls for a review and constructive changes in regulations necessary to assure better livestock disease control.

As I feel sure you well know, the Gateway Amendment provides that the General Assembly may at one session submit amendments to as many as three articles of the Constitution instead of one as permitted at the present time, and of greater importance, is the provision that two-thirds of those voting on a proposition to amend the constitution will be sufficient for its adoption instead of the present requirement of a majority of all those who vote in the election for candidates for office. It will be exceedingly important for the Farm Bureau in every county and every township to become very active when this amendment is before the voters, because to secure its passage will require a majority of all those who vote in the election. To meet this almost insurmountable requirement, the Association supported the so-called "Party Circle Bills". They were passed by the General Assembly over the strenuous opposition of a coalition of the State administration with the Chicago City Hall machine and certain of the metropolitan newspapers, only to meet with veto by the Governor. A full report of this legislative issue was given to all of the members in the I.A.A. RECORD. If the Governor of Illinois and the Mayor of the City of Chicago are to be consistent in their support of the Gateway Amendment, because of their strenuous opposition to the Party Circle Bills, they must accept the very great responsibility of assuming leadership in all efforts to secure the adoption of the Gateway Amendment at the next general election. The importance of the Gateway Amendment is immedi-

Insurance Companies REPORT NEW GAINS

THE high esteem in which Illinois Farm Bureau members hold their own insurance companies is reflected in the annual published reports presented and interpreted at the insurance meetings held in conjunction with the Illinois Agricultural Association's annual convention in Chicago.

Reports of the operations of the companies for the fiscal year ending Sept. 30 reveal that farmers have increased insurance in force on their lives and property through Country Life Insurance Company, Farmers Mutual Reinsurance Company and Illinois Agricultural Mutual Insurance Company to more than a half billion dollars. This represents a net gain of more than 82 million dollars over 1944.

Illinois Agricultural Mutual Insurance Company on Sept. 30 had 145,894 policies and 92 bonds in force. Together, this is an increase of 10,238 over the previous year. Illinois Agricultural Mutual policies cover automobile, cargo and accident risk and employers liability.

During the past year, IA Mutual returned $990,249.59 to policyholders in the form of special dividends, according to the report made by Manager A. E. Richardson. Operations for the year show that the Company had earned premium of $3,059,229.65 which was $304,726.62 higher than in 1944.

Total loss payments made during the year amounted to $1,352,924.79. The recent rapid growth of this 18-year-old Farm Bureau insurance cooperative is reflected in the report for the period Oct. 1, 1941 to Oct. 1, 1945 which shows an increase in business of 46.9 per cent.

Actuary Dirk Heezen, Lt. Col. J. E. Boland laugh at Dave Mieher's joke during Insurance Conference.

Country Life Insurance Company continued its steady growth during the year when total volume of business increased $21,554,522 and now stands at $243,614,220.

Dividends paid to policyholders during the past year amounted to $441,072.56. Country Life Insurance Company provides that with the exception of a seven per cent dividend payable on its capital stock, all other surplus earnings available for dividend distribution go back to the policyholders.

Death claim payments amounted to $760,755.20 during the 1944 fiscal year. This item was increased considerably because the company had a large number of contracts without war restrictions on young men in the armed forces. Of the total paid, $298,085.08 represented war casualties which is 39 per cent of the total claims paid.

During the year, $27,728,317 in new business was sold representing the second largest amount sold in any year by Country Life. Manager Dave Mieher attributed the remarkable growth of Country Life to the willingness on the part of farm people to buy from their own company and to keep their policies in force.

Farmers Mutual Reinsurance Company, also an IAA affiliate, increased insurance in force by $60,539,436 during the fiscal year. This brought total insurance in force at the end of the fiscal year to $400,202,671. Loss claims paid total $734,167 and refunds to policyholders amounted to $585,510.24.

During the year dividends were paid or credited to members in the following amounts: Fire and extended coverage, $67,350.31; windstorm, $9,206.13 and hail on crops, $508,283.49.

Due to the unusual number of storms near tornado intensity in Illinois in 1945 and the higher costs of labor and materials, windstorm claims paid out were greatly increased over the previous year, according to Manager J. H. Kelker. Fire losses for the company were slightly lower than they were in 1944.

Here is the board of directors of the Farmers Mutual Insurance Company for 1945. Left to right are: E. B. Reeves, Claude Heistand, George F. Hayes, George W. Lenhart, George F. Tullock, L. E. Lingenfelter, James M. Beckett, Clifton Davis and John E. Miller. At the annual meeting, Lyman Bunting, Ellery, and Homer Curtiss, Stockton, were elected from the IAA board.

RESOLUTIONS

Adopted By Board of Delegates at 31st Annual Meeting in Chicago, Nov. 29, 1945

FOREWORD

Turning from the problems of war to face a world seeking peace, the farmers of Illinois give thanks to Almighty God that the most terrifying war known to mankind has at last ended. We are thankful that America still stands as a strong nation. We are thankful that our fertile fields, our cities and our homes have escaped destruction. We are thankful that we were given the strength to meet the great task.

We honor and pay homage to the brave young men who left our farms and our homes to strike down the enemy. In memory of those who fought and died for our security we dedicate ourselves and our organization to the building of a world with the strength, tolerance, equity and justice to forever rid itself of the disease of war. May God grant to all the grace and power for this greater task.

I. AGRICULTURAL ADJUSTMENT ACT

We favor the continuation of a well-administered Agricultural Adjustment program. We also favor the principle of a high level of useful production, and call for a program that will facilitate full production through our entire economy.

The Agricultural Adjustment program must be available to prevent the production of unneeded surpluses of agricultural products. We will support programs designed to reduce production in order to bring about a reasonable balance between supply and demand for agricultural products. We believe that many needed adjustments in agricultural production can be brought about through the application of proper soil conservation practices. We urge that to the largest extent possible, emphasis be placed upon obtaining the proper use of the land, rather than simply reducing acreage. Soil conservation is a sacred obligation of each generation to future generations. All agricultural programs must provide for meeting this obligation.

II. PARITY FORMULA

The parity formula in the Agricultural Adjustment Act is the yardstick for determining currently prices for basic agricultural commodities that are necessary to give to these commodities a fair exchange value with industrial commodities in the markets of the country. When written into law in 1933, it applied only to the basic commodities, corn, wheat, cotton, rice and tobacco and through the years has proven to be not only fair, but effective in its application to these commodities. Other laws enacted in more recent years have authorized the application of the principle of this formula to many other farm commodities, but in carrying out these mandates of law, many commodities have not been given equitable treatment.

We will oppose any change in the parity formula as applied to the basic soil crops, at least until such a time as proposals may be made that are equally fair, equally defensible and as effective as the present formula has proven to be. We urge, however, that every effort be made to secure for livestock, livestock products, dairy products and any other major farm commodity not fairly protected under the present parity formula, a change in the administration of present law, if necessary, a legal formula that will give to these commodities treatment equal to that afforded the basic crop under the parity formula of 1933.

III. TAXATION OF COOPERATIVES

Many charges and countercharges are being made relative to alleged tax exemption advantages of, or tax exemption abuses by, cooperative organizations. It is charged that some agricultural cooperatives having complete exemption from Federal income tax have retained their earnings in their capital structure and have not paid patronage dividends to their patrons or members. They have received exemptions upon the theory that these earnings belong to the members. Many of these cooperatives have been very successful and competing private business contends that exemption from Federal income tax gives these cooperatives an unfair advantage. To withhold current earnings from the patron member without his knowledge or consent and to treat the savings so withheld as the property of the cooperative to the exclusion of the patron, is unwise. In such a case current earnings are not taxed either to the patron or to the tax exempt cooperative.

In Illinois generally it has been the policy to provide adequate capitalization through the sale of capital stock at the time cooperatives are organized or their operations expanded. This has made it possible to pay patronage dividends currently and it has not been necessary to build a large capital structure from current earnings.

We authorize the Illinois Agricultural Association to support such changes in the Internal Revenue Law and Regulations as may be necessary to require agricultural cooperatives to annually report their operations and earnings and to provide that they shall have income tax exemption or deduction from taxable income on only that portion of their earnings which is distributed to their members or patrons.

The Association will not oppose the extension of similar privileges to private business corporations. It is believed that this policy extended to private business corporations would encourage a much larger distribution of the corporation's profits to stockholders. Such income so distributed to stockholders would become taxable in the hands of stockholders, would materially add to the purchasing power of the public and would be of substantial benefit to those forced to depend upon investment income.

IV. PRICE STABILIZATION

Inflation is one of the many perils of war. During the war, the nation was moderately successful in preventing extreme inflation. History indicates, however, that the period immediately following war is one in which there is likely to be rapid inflationary price increases. History also indicates that inflationary increases in prices are followed by periods of price collapse which result in long periods of maladjustment with prices for farm products very low in relation to prices paid by farmers for the products of others.

We reaffirm our position in favor of a program to control inflation. Such controls as are necessary under such a program during reconversion should be equitably applied to industrial prices, farm commodities and wages.

This program should be administered in such manner as to avoid unnecessary delays in reconversion and in the production of industrial commodities, adequate supplies of which will be one of the most effective means of controlling inflation. All controls should be revoked as rapidly as supplies come into a reasonably normal balance with demand.

We reiterate our opposition to consumer subsidies in lieu of fair prices in the market place for agricultural products. These subsidies should be removed as rapidly as possible, and price ceilings should be adjusted accordingly.

V. UNEMPLOYMENT COMPENSATION

The unemployment compensation system was designed to provide for the needs of unemployed persons while they seek other employment. In practice and in operation, as presently administered, many persons receiving unemployment compensation benefits do not seek and refuse to accept employment. Employers alone are taxed to provide funds for unemployment compensation benefits. The benefits paid almost equal the prevailing wage rates in many areas. Farmers and other employers are unable to obtain help, while at the same time many persons are unemployed and are receiving unemployment compensation payments.

We oppose the extension of the unemployment compensation system to agriculture. We do not believe this system is feasible or practical for agricultural labor. Any system which encourages unemployed persons to take governmental assistance and to remain idle in lieu of seeking or accepting employment at prevailing wage rates, is unsound, not in the public interest and should not be extended. If the unemployment compensation system is to command public respect and serve the need for which it was created, its administration must be greatly improved and compensation paid only to those who are seeking and unable to obtain unemployment.

VI. OLD-AGE AND SURVIVORS' INSURANCE BENEFITS

The Federal old-age and survivors' insurance program under the Social Security Act, provides a type of assistance which is highly regarded and desired by a large majority of the persons covered under such system. Farm labor and employees of agricultural organizations not for profit are not included under this system. Such employees should be entitled to the same benefits as employees of business and industry and the coverage of this program should be extended to these employees wherever practicable.

We approve the extension of the Federal old-age and survivors' insurance program to include regularly employed full-time farm labor and employees of agricultural organizations not for profit. We will not oppose the extension of this program to occasional, part-time farm labor when a practical, workable method for including such labor under this system is presented.

Bill Thomas (Whiteside County) Rural Youth Representative.

VII. ECONOMY IN GOVERNMENT

We call upon the Congress of the United States and the General Assembly of the State of Illinois to give greatly increased and continuing attention to achieving efficiency and economy in governmental services. State appropriations have been greatly increased during recent years. Expenditures of the federal government have been multiplied many times in order to meet war emergencies and for other purposes. It is a well-known fact that governmental agencies tend to persist for many years after the need for their services has passed. Many persons are placed or continued upon governmental payrolls primarily because an appropriation has been made and the money is available. As a result, there is much needless duplication of activities in governmental services and much needless expenditure of governmental funds.

Rigid governmental economy is necessary at this time in order that adequate funds will be available for essential services. Economy is necessary to maintain the financial standing of the government. Economy is required in order to permit the reduction in taxes on labor and business necessary to allow a high level of employment and production. Economy in government is necessary so that the treasury may be able to meet future financial emergencies. For all these reasons, we demand that Congress and the General Assembly make every practicable effort to eliminate all non-essential governmental services and expenditures.

VIII. GATEWAY AMENDMENT

The Gateway Amendment to the State Constitution to be submittted to the voters in November, 1946, if adopted, will permit the General Assembly to submit amendments of not to exceed three articles, instead of one article, of the Constitution to the voters at the same election. It also provides that constitutional amendments may be adopted by the favorable vote of two-thirds of those voting on the proposition instead of by a majority of all votes cast in the election. It provides that in voting upon future amendments the votes shall be cast directly upon the proposition. These changes are needed in order that our State Constitution may be modernized and adapted to meet present conditions. They will not make amendment of our State Constitution easy but they should make the adoption of amendments possible.

The Association pledges its wholehearted support of the Gateway Amendment. It urges the Board of Directors of the Association and the County Farm Bureaus to use every proper influence of the organization to secure the adoption of this amendment.

IX. FARM-TO-HIGHWAY ROADS

Of the approximately 105,000 miles of road in this State, more than 75,000 miles are township and road district roads, financed entirely by local property taxes. The proceeds of the gasoline tax and motor vehicle license fees are used only for state and county roads and city and village streets. The $15,000,000 from state funds appropriated at the last session of the General As-

sembly for use on township and road district roads constitutes the first allocation of state funds for these farm-to-highway roads. These state funds must be expended in the manner that will secure the maximum mileage of serviceable all-weather roads. The standards of design and specifications for these roads must be held to a minimum. They cannot be the standards of design and specifications required for state and county roads which carry heavy traffic at high speeds.

We urge the Association to use every proper influence in endeavoring to have State requirements for these roads held to the minimum. Standards or design and specifications for these roads should be left largely to the discretion of the several county superintendents of highways and local road comissioners who are familiar with local conditions and needs. We request the Division of Highways to undertake experimental work to determine the types of construction and specifications for farm-to-highway roads which are most economical and practicable.

We further request the Board of Directors to develop and sponsor methods and plans for obtaining continued assistance from state funds for the construction and improvement of these farm-to-highway roads.

Some changes in the organization and administration of our road system may be necessary in order to obtain the maximum benefits from the money provided for roads. We request the Association to give attention and study to this problem.

X. PROPERTY ASSESSMENT

Legislation effective January 1, 1946, providing for the assessment of property in each county at an average of 100% of its full fair cash value already is resulting in confusion and misunderstanding and undoubtedly will lead to much litigation. A few governmental units will not receive sufficient funds. In the majority of instances, over a period of years, there will be substantial increases in taxing power. Bonding power has been greatly increased. State controls over tax levies are rendered much less effective and responsibility for local tax levies is placed squarely upon local officials. It is important that Farm Bureaus be on guard to protect the interests of their members. The law provides that the maximum rates to be levied in any governmental unit may be established at higher or lower levels by referendum. This provision affords taxpayers an opportunity to control local tax levies.

We urge that each County Farm Bureau establish a tax committee which will keep informed concerning local conditions, needs and practices and advise its membership and the public in order that local tax levies may be held to the amounts reasonably necessary.

XI. SCHOOL SURVEYS

The Association is pledged to assist local committees in studying and solving their local school problems. There is wide-spread interest in and support for improvement of our schools. Official county school survey committees have been established in many counties. These committees have an opportunity to blueprint school reorganization and to develop plans for the improvement and strengthening of our school system. The Association should give all feasible assistance to these committees.

We urge the County Farm Bureaus in the counties where school survey committees have been established to take an active interest in the work of these committees, to make suggestions for the improvement of local schools and to assist the survey committees in working out a constructive long-range program for the improvement of the school systems of their respective counties.

XII. EDUCATION IN COOPERATION AND FARM ORGANIZATION

We believe that the education of all citizens should include instruction in the fundamentals of rural life. Publicly supported educational institutions, and especially those responsible for the training of future rural citizens, should give much more attention to the instruction of students in the principles of cooperation and rural organizations. Such instruction should be begun in the elementary schools and continued through high school. Students in Vocational Agriculture classes should receive thorough instruction in the fundamentals of cooperation and in the purposes and methods of rural organizations as well as instruction in crop and livestock production.

We believe that all teachers in rural elementary and high schools should have as a part of their qualifications for teaching, at least one course in rural life. Teachers of Vocational Agriculture, Agricultural Extension workers and all agricultural college graduates should be required to have completed courses in cooperation and rural organizations. We request the appropriate authorities of the State of Illinois, of the University of Illinois, of the other teacher training institutions, and of all rural elementary and high schools of the state to give this subject their careful consideration.

In order to create greater interest in education for services in rural areas, we ask college authorities to call to the attention of veterans and other students, the opportunities available to dependable and well-trained young men in the field of agricultural cooperation. We also call upon the managers and directors of farmers' cooperatives and other farm organizations throughout the State to bring to the attention of veterans and agriculture students the opportunities available in their respective organizations.

XIII. HEALTH AND MEDICAL CARE

Many proposals have been made dealing with the problems of rural health, medical care and hospital facilities. Some of these proposals have been very constructive, while others have gone so far as to advocate socialized medicine.

We express our uncomprising opposition to any laws or policies directed toward the socialization of medicine.

We will support in every reasonable way sound plans for the extension of hospital facilities and medical care to the end that the people of all areas may have access to greatly improved health services.

THE UNFINISHED TASK

In a little more than a quarter of a century the Illinois Agricultural Association has grown to be one of the largest of the state farm organizations. Today a very high percentage of agricultural producers within Illinois are its members. Upon the horizon can be seen the limitation to further substantial membership increase. The organization has reached an early stage of maturity. The well laid policies of its founders and early leaders have ripened into wisdom. Emphasis has shifted gradually and almost imperceptibly from promotion to stewardship and service.

The job is far from complete. On the contrary, the farmers of Illinois today are faced with larger responsibilities. New problems and new service demands require of the organization a greater versatility, a greater energy and a greater ability. We must consolidate our gains and revitalize our democratic processes within our organization. From the rank and file must rise new leaders. Their qualities of leadership must be enhanced through an aroused membership consciousness at all levels of our organized agriculture.

This responsibility within our ranks is of the essence of the responsibility that lies with all groups and all peoples if, under God, the world is to know Christian principle and Christian peace.

Russell V. McKee (16th Dist.) | John T. Evans (18th Dist.) | Milton W. Warren (19th Dist.) | Dan L. Clarke (21st Dist.) | J. King Eaton (22nd Dist.)

Elect Five New Directors

TO ACQUAINT Farm Bureau members with the five new directors elected to the IAA board of directors at the 31st annual meeting held in Chicago, the following short biographies are printed.

RUSSELL V. McKEE, Varna, Marshall county, was elected to represent the 16th Congressional district, succeeding Albert Hayes, Chillicothe. The 16th district includes the following counties: Peoria, Tazewell, Stark, Marshall, Putnam and Bureau.

Mr. McKee is president of the Illinois Farm Bureau Serum Association, an IAA affiliate. He was elected to the board of that cooperative in 1934 and named president in 1937. He is also president of the Marshall-Putnam Farm Bureau and the Marshall-Putnam Oil Company. He was elected to the board of his local Farm Bureau in 1929 and named president in 1938. He has served continuously on his Farm Bureau board since 1929, with the exception of one year. He has also served as president of the Marshall-Putnam Locker Service. Mr. McKee has two children: Mrs. Verna Wasson, Cincinnati, and Bert, who operates the family farm. Mr. McKee owns 172 acres and is renting another 80. He has a herd of Purebred Jerseys and also raises a large number of hogs. Mr. McKee is active in the Christian Church of Washburn.

JOHN T. EVANS, Hoopeston, Vermilion county, was elected to represent the 18th Congressional district, succeeding W. A. Dennis, Edgar, Piatt county. The 18th district includes the following counties: Vermilion, Iroquois, Kankakee, Edgar, Clark and Cumberland.

Mr. Evans has served as president of the Vermilion County Farm Bureau for eight years and was elected to his Farm Bureau board in 1933. He joined the Vermilion Farm Bureau shortly after it was organized. He farms a 400-acre grain and livestock farm, and specializes in hogs, sheep, and beef cattle, having his own breeding herds. Mr. Evans is single and the farm on which he lives has been in the Evans family since 1867. Living on the farm with him is Gladys M. Evans, a cousin, co-owner of the farm, and a brother, Richard K. Evans. Mr. Evans was born in Reading, Pa., and came to Illinois with his uncle, Thomas Evans, when he was 11 years old. Mr. Evans is secretary of the Red Top rural school district, and active in the Hoopeston Presbyterian Church. He served as a township AAA committeeman in the early days of its operation.

MILTON W. WARREN, 47, Mansfield, Piatt county, was elected to represent the 19th Congressional district, succeeding Charles B. Shuman, Sullivan, Moultrie county. This district includes the following counties: Champaign, Piatt, DeWitt, Macon, Shelby, Moultrie, Coles and Douglas.

Mr. Warren has served eight years as director of the Piatt County Farm Bureau and 12 years as its president. He operates a 440-acre grain and livestock farm. He was born Oct. 3, 1897 in Mansfield and was graduated from the University of Illinois College of Agriculture in 1921. Among his cooperative activities are services as director of the Champaign Production Credit Association from 1935 to 1939, and in past years as a township AAA committeeman. He has also served as a member of the Mansfield Co-op Locker board of directors. In his community, he is president of the Mansfield Community High School board, and is a member of the Mansfield Lions Club.

DAN L. CLARKE, 57, New Berlin, Sangamon county, was elected to serve as representative of the 21st Congressional district, succeeding Floyd E. Morris, Buffalo, Sangamon county. This district includes the following counties: Sangamon, Christian, Montgomery and Macoupin.

Mr. Clarke, who operates a 450-acre grain and livestock farm, is president of the Sangamon County Farm Bureau.

Clarke has served as president of the Sangamon County Farm Bureau for the past four years and previously served as vice-president for two years. He has also been a member of the Farm Bureau board as a director from Cartwright Township.

Born June 9, 1888, in Pleasant Plains, on the farm which he operates today and on which his grandfather settled in 1830, Mr. Clarke attended Whipple Academy in Jacksonville and later the University of Illinois for three years from 1908 to 1911. After graduation he returned to the home farm and has operated it since that time, adding acreage until he now has 450 acres. It is a testimony to his belief in good soil practices that the land which his grandfather and father farmed has held up in production.

Mr. Clarke raises large numbers of hogs and certified soybeans and oats, in addition to his regular grain operations. He is a progressive farmer and has built up his land with lime and phosphate, clovers, manure and crop rotation.

In civic and community affairs, Mr. Clarke serves on the official board of the Methodist Church at Ashland, and has been active in Red Cross, Community and War Fund drives and Victory Bond campaigns.

Mrs. Clarke is the former Coral Furr. Her brother, Paul Furr, who has been vocational agricultural teacher at DeKalb High School for many years, is well known to farmers throughout northern Illinois.

J. KING EATON, Edwardsville, Madison county, was elected to serve as representative from the 22nd Congressional district, succeeding Alvin O. Eckert, Belleville, St. Clair county. This district includes the following counties: Madison, St. Clair, Monroe, Washington and Bond.

Mr. Eaton is a former president of the Sanitary Milk Producers and has served its board since its organization in

(*Continued on page 46*)

sembly for use on township and road district roads constitutes the first allocation of state funds for these farm-to-highway roads. These state funds must be expended in the manner that will secure the maximum mileage of serviceable all-weather roads. (*Continued on page 46*)

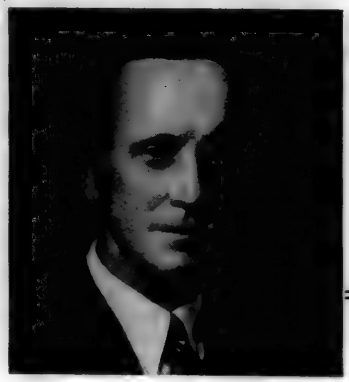
50-50
Partner

MEET YOUR NEW OFFICERS

President
Charles B. Shuman

Vice-President
Floyd E. Morris



CHARLES B. SHUMAN, Sullivan, Moultrie county livestock farmer who comes in as president of the Illinois Agricultural Association, is admirably fitted by experience, ability and background to discharge the duties of this high office. He is a progressive farmer, well-grounded through practical working knowledge and education in agriculture, well-versed in Farm Bureau and cooperatives through service on these boards and with business and administrative ability developed through managing his own farm and by his five years of service on the IAA board.

Mr. Shuman has demonstrated by his work on the board of directors of the Association that he is able to weigh facts calmly and deliberately and make sound decisions. He has also demonstrated his capacity to grow and develop as new responsibilities are placed upon his shoulders.

His biography supplements and confirms these statements. Mr. Shuman was born on a farm east of Sullivan, the son of Grace Baker and Bliss Shuman, April 27, 1907.

Mr. Shuman attended the Purvis country school, where he later served as a board member, and the Sullivan High School from which he was graduated in 1924. He entered the University of Illinois in the fall of 1924 and received his bachelor's degree from the College of Agriculture in June, 1928, graduating with honors. He earned his master's degree in agronomy from the College in February of 1929. While working for his master's degree, his minor study was agricultural economics. During his college career, Mr. Shuman was a member of Alpha Zeta, agricultural scholastic honorary, Farm House social fraternity, Sigma Xi, scientific fraternity, and the scholastic journalism fraternity at the University. He was elected to the latter fraternity in recognition of his service on the business staff of the Agriculturist, College of Agriculture student publication.

Mr. Shuman married Ida Wilson in 1933. She was a native of New Richmond, Ind., and was born and reared on the Charles Meharry farm near there. She was teacher of mathematics in Sullivan High School when she met Mr. Shuman.

When Mr. Shuman left College in 1929, he returned to the home farm of 456 acres which he operated with his father. In 1933, he bought a 46-acre farm adjoining the home place and he and Mrs. Shuman moved to this farm shortly after they were married. When Mr. Shuman's grandmother, Mrs. Mary Shuman died, he bought her farm of 230 acres from the estate and has been renting it out. He has continued to operate his 46-acre place and the 456-acre home farm with his father. The latter is a general livestock farm which has been in the family since 1853.

Mr. Shuman has purebred Angus and Duroc-Jersey herds and raises some hybrid seed corn. The Angus cow herd of 50 cows and calves is maintained to use up the grassland on the place. Mr. Shuman used to feed from 80 to 100 steers a year, but last year he fed only a few cattle. About 200 hogs are raised per year, but in the last few years this number has been reduced.

In all his farming operations, Mr. Shuman has followed a good soil building program. All but 10 acres of the land he operates has been limed and about 50 per cent of it has had rock phosphate applications. He has also established several grass waterways on the land.

Since graduation from College, Mr. Shuman has been very active in Farm Bureau, cooperative, and community affairs. He served as a director of the Moultrie County Farm Bureau from 1932 to 1933 and as president from 1934 to 1938. He was elected to the IAA board of directors in 1941 to represent the 19th Congressional district and served until his election to the presidency of the IAA. During his period as a board member he served on the finance and marketing committees.

Other cooperative activities of Mr. Shuman include: directorship on the Shelbyville and Charleston Production Credit Associations from 1933 to 1935, and from 1935 to 1941, respectively; and as president of the Charleston PCA from 1936 to 1938.

Mr. Shuman served as vice-president of the Coles-Moultrie Electric Cooperative in 1939 and as president since 1940; on the executive committee of the Coles, Douglas, Moultrie Wheat Control Association, 1933-34, and as president in 1935; and as director and secretary of the Moultrie Shipping Association, 1932-45.

In the community, Mr. Shuman has been deeply interested in school affairs. He served for many years as a director of the Purvis school, and now is president of the Community Consolidated District No. 3. The Purvis school district was one of five districts merged in the consolidated district. This reorganization, which was worked out by the local people, was outlined in a story appearing in the February, 1944, issue of the Illinois Agricultural Asso-

The vow, "till Death do us part" was more than a marriage compact. It was a social and a business alliance. To share in joys and troubles. She has kept a wonderful home, raised your children, been your counsellor and your refuge. On the farm, too . . . tended a flock of chickens, made the purchases, tended garden, run the tractor, helped milk the cows. Yes, it's truly a 50-50 partnership arrangement. And you, in your way, have worked hard to uphold your end of the bargain. But have you given sufficient thought to the problems that would face her if you were removed? The children to educate . . . the farm to finish paying for . . . loans to repay. After payment of obligations would she have enough to carry on as you would want her to? Most probably you already have life insurance. But do you have *enough*? How much is needed, in your instance? Well, our advice is to get together with your Farm Bureau insurance man and your 50-50 partner and discuss the whole matter courageously. If you have enough, you'll feel better. If you *don't*, now is the time to remedy the deficiency before you get a single year older.

ciation Record. In the reorganization of the five districts, two school buildings were closed and three were kept open. One building houses the first and second grades, another the third, fourth and fifth grades, and the third houses the sixth, seventh and eighth grades. Plans are now under way to build a modern rural school to house all eight grades under one roof.

Mr. Shuman also has been a teacher of a Sunday School class of high school age youths in the Sullivan Methodist Church for the past 15 years, and has been a leader of the Brushy Bend Gang 4-H club for the past 16 years.

Mr. and Mrs. Shuman have four children: Charles W., 10; John and Paul, 8-year-old twins, and Janet, 3½ years old.

The new vice-president of the IAA, Floyd E. Morris, Buffalo, Sangamon county, has been active in Farm Bureau work for a number of years. He was elected to the IAA board to succeed Dwight Hart, Christian county, in 1944, representing the 21st Congressional district. During his term on the board he has served ably as a member of the organization-information committee.

Mr. Morris was elected to the Sangamon County Farm Bureau board in 1936, and has served as vice-president for the past four years.

Mr. Morris was the first secretary of the county corn-hog program and later was elected county AAA chairman. Several years ago he served as a member of the committee. He operates a 330-acre livestock and grain farm.

The new vice-president is probably best known over the state for his work as a member of the IAA schools committee and as a member of its subcommittee. Mr. Morris was especially fitted for the IAA schools committee work having served as a director of both the grade and high school boards of Buffalo. He was on the board of the Buffalo High School at the time of its consolidation with the Tri-City High School.

Mr. Morris' other activities include chairmanship of the rural division of the Sangamon county war fund drive in 1943 and services of several years as a member of the FSA farm loan committee of his county.

Mr. Morris is married and has four children, two daughters and two sons. They are: Mrs. Kathryn Dale, Kansas City Mo., formerly in the Army Nurse Corps; Jean, freshman at the University of Illinois; Robert, SOM 3/c, U. S. Navy, stationed in the Pacific; and Donald, 10.

NEW MOTOR LAW EFFECTIVE JANUARY 1

THE new Illinois Motor Vehicle Safety Responsibility Law becomes effective on January 1, 1946. There are two main features of this law which every motorist should keep in mind.

1. REPORTING OF ACCIDENTS

The law requires all motorists to report all accidents to the Department of Public Works and Buildings, Springfield, Illinois, within 24 hours if the accident results in death or personal injury and within 10 days if damage to property, including the driver's own car, is in excess of $50.00. (A copy of this report is shown on the front inside cover page of this issue of the RECORD. The Editors suggest that you take a look at it now.)

2. PROOF OF FINANCIAL RESPONSIBILITY

The new law requires every motorist involved in an accident resulting in injury, death or property damage in excess of $50.00 to post cash or other security with the State in an amount determined by the Department of Public Works and Buildings unless such person carries public liability and property damage insurance in a company licensed to do business in the State of Illinois. If such person does have insurance then his insurance company will file with the State a form known as "SR 21" certifying to them that there is public liability and property damage insurance on the motor vehicle. The security provision of the law does not apply to accidents involving less than $50.00 worth of damage, nor to owners of legally parked cars, nor to owners of cars used without permission, nor to the operators or owners of a car involved in an accident wherein injury or damage was caused to no one but themselves.

The administration of the law is divided between the Department of Public Works and Buildings and the office of the Secretary of State. The Department of Public Works and Buildings will receive and analyze each report to determine how much security is required and then certify to the Secretary of State, the name of the person and the amount of security required, if such person does not carry insurance. The deposit required may be in any amount between $50.00 and $11,000 — from $50.00 for a dented fender to $1,000 for greater property damage, up to $5,000 for injury to or death of one person and up to $10,000 for injury to or death of more than one person. Illinois Agricultural Mutual Insurance Company policies all provide for at least $15,000, which is in excess of the amount required by law.

When this new law becomes effective on January 1st it will be more important than ever that motorists make certain that their premiums on auto insurance are paid on time. To be on the safe side, A. E. Richardson, Manager of the Illinois Agricultural Mutual Insurance Company, is advising policyholders to pay their auto insurance premiums when they receive the first notice that the premium is due and not to wait until they receive the red-colored final premium notice.

Here is the main reason why you should keep your insurance premium paid up. If you have an accident with your car and the damage to others amounts to more than $50.00, you will have to show that you are able to pay for the damages. If your insurance premium is due and is not paid at the time of the accident, the insurance company won't be able to file a certificate showing you have insurance. In that case, you will have to make a deposit in cash, bond or such other security as is acceptable to the Secretary of State in an amount to cover damages caused by the accident *whether you are liable for such damage or not.* If your liability insurance is paid up, certification of that fact by your insurance company to the Secretary of State will meet the law's requirements.

The new Safety-Responsibility Law is designed to make the motorist who uses the highways of Illinois financially responsible. It will do much to remove from the highway the irresponsible motorist who "hits and runs" from financial responsibility incurred by an accident.

Four IAA Veterans Retire

MANY years of services and devotion to the cause of Farm Bureau and to the farmers of Illinois are represented in the careers of men who retired from the Illinois Agricultural Association board of directors at the 31st annual meeting in Chicago.

Talmage Defrees, Greenville, Bond county, who retired as vice-president, was first elected to the IAA board in 1932 and served a two-year term as representative from the 22nd Congressional district. In 1935 he was elected as vice-president and has served continuously in that capacity since that time.

A charter member of the Bond County Farm Bureau, Mr. Defrees has been a builder for Farm Bureau and Farm Bureau cooperatives. Operator of a 240-acre farm east of Greenville, Mr. Defrees was a founder and early director of the Illinois Fruit Growers Exchange, an IAA affiliate located at Carbondale. At the present time he is vice-president of the Exchange. He also served as president of the Bond County Farm Bureau for five years in its early days.

As a young man, Mr. Defrees was awarded an appointment to the U. S. Naval Academy at Annapolis, but circumstances arose that made it impossible for him to attend. His only brother, who went in his place and was graduated in 1900, has had a long and notable career in the Navy and served during World War II as an admiral.

Mr. Defrees attended Greenville College near his home and later was educated at Drake University, Des Moines, and at the University of Chicago.

As one of the outstanding farmers of southern Illinois, Mr. Defrees was awarded the Master Farmer medal by Prairie Farmer in 1930. An able platform speaker, Mr. Defrees has addressed Farm Bureau and civic groups throughout the state, and through his efforts has contributed materially to the growth of Farm Bureau in Illinois. In announcing his retirement, Mr. Defrees indicated that he was planning on catching up on his fishing, but at the same time he also planned to continue his efforts in the interest of Farm Bureau.

Alvin O. Eckert, Belleville, St. Clair county, who retired as director representing the 22nd Congressional district, is another man who has given freely of his time and efforts to Farm Bureau. He was first elected to the IAA board in 1921 and served a two-year term, and in 1923 was named vice-president to serve with Sam H. Thompson, Quincy, Adams county. In 1934, Mr. Eckert was re-elected to the IAA board, and has served continuously since that time. He has made a major contribution to the IAA program through his service as chairman of the marketing committee.

Talmage Defrees

Mr. Eckert assisted in organizing the St. Clair County Farm Bureau and the Illinois Fruit Growers Exchange, of which he is now president, and served seven years as president of his Farm Bureau. He also was on the board of the Federated Fruit Growers of America. He has a 1000-acre farm, 500 acres of which is in orchard. He also feeds hogs and cattle and operates a roadside stand which has become famous throughout Illinois.

Mr. Eckert has three sons who are partners with him in the farming business. Cornell is a first lieutenant in the Army and has been in service for more than four years. Before entering the services, Cornell managed the orchard. Curt Eckert manages the livestock operations of the farm, and Vernon runs the market.

Mr. Eckert has served as president of the Illinois State Horticulture Society and is a holder of the Master Farmer medal awarded by Prairie Farmer, and was president for several years of the Master Farmer Club of America. He has served as director of the Belleville Chamber of Commerce.

Albert Hayes, Chillicothe, Peoria county, who retired as director from the 16th Congressional district, has been long active in Farm Bureau and served on the IAA board continuously from 1934 through 1945. During his period of service on the board he was a member of the finance committee for 10 years.

Mr. Hayes' interest in Farm Bureau in the early days was recognized by his election as township director and later as secretary and treasurer of the Peoria County Farm Bureau. He also was first president of the Peoria Service Company.

Mr. Hayes has held numerous offices in civic and cooperative affairs including directorships on the boards of the First National Bank of Chillicothe, Peoples Building and Loan Association of Chillicothe, and Peoria County National Farm Loan Association. He also served as township supervisor for 13 years, as chairman of the board of trustees of Mossville Methodist Church, trustee of the Peoria Methodist Hospital, director of Peoria County Tuberculosis Sanitarium District, member of Agricultural committee, Peoria Association of Commerce, chairman of agricultural committee of Peoria district OPA. Mr. and Mrs. Hayes have three sons, two of whom are in the European zone of occupation serving their country, and one at home on the farm. Mr. Hayes operates a 194-acre grain and livestock farm and is a hybrid seed corn grower. Mr. Hayes was awarded the Prairie Farmer Master Farmer award in the '30s.

W. A. Dennis, Paris, Edgar county, who retired as director representing the 18th Congressional district, served on the IAA board from 1930 to 1934 and from 1938 through 1945. A graduate of Harvard University in 1911, Mr. Dennis has been a Farm Bureau member for 30 years, and has served as secretary, vice-president and president of the Edgar County Farm Supply Company, and as

EARL C. SMITH . . . *the Man, the Leader, the Realist, the Forward-Looker*

A PRACTICAL ESTIMATE OF HIS WORK — BY ONE WHO WORKED WITH HIM

★ ★ ★ ★ ★

★ ★ ★ ★ ★

IT CAN safely be predicted, that as the years go by, the stature of Farl C. Smith as a farm leader in the state and nation will grow rather than lessen. As the shock experienced at his retirement diminishes, there will come time for reflection upon his contributions and services to the farmers of America.

The printed word can add little to the true estimate of the man which is already written in the hearts of those who have come to know him during the past 20 years. But it is appropriate at this time to recount briefly something of his achievements in the interest of better farm life.

While much has been written in the nation's press about Earl Smith as a farm leader in business and legislative fields, less attention has been given to him as an individual. This in itself is no small tribute to the man.

Perhaps to best understand the man it is necessary to go back to the first words he spoke upon assuming the presidency of the Illinois Agricultural Association in 1926. As he accepted the gavel from the hands of Sam Thompson, he said, "To the best of my strength and ability, I will serve what I believe to be the best interests of the farmers." Earl Smith has been doing just that for the past 20 years. There is no other job he would have rather done. As he has often said, "It's true that I have worked hard, but I have enjoyed it. I feel sorry for a man who works at something he doesn't like."

Those who have known of the high positions in government which have offered Mr. Smith under both Republican and Democratic administrations have often asked him why he refused such honors. He has said that he refused them for "selfish reasons." Selfishly, he explains, he preferred to serve Illinois farmers in his present position.

Why then did Mr. Smith resign his position at this time? Again the answer can be found in his devotion to the organization. He believed that this was an opportune time to step aside and let a younger man take his place at the helm. With the counsel and advice of older officers, a young man, he believed, could develop and grow and lead the Illinois Agricultural Association into even greater fields of service. Only a big man could make the decision that Mr. Smith made.

Another insight into the character of the IAA's retiring president can be found in the fact that the door of his office was always open to anyone who wished to see him. A man occupying a position comparable to Mr. Smith's in a private business corporation would have surrounded himself with a barricade of secretaries. Mr. Smith did not. The door was always open and members of the staff felt free to approach him on any subject and offer constructive criticism on administrative matters. Another distinguishing feature of Mr. Smith's personality was his way of getting things done. Rather than issue orders, he accomplished the desired end through suggestions and recommendations. This was not a studied approach; he did it unconsciously because it is part of his nature.

Another of the attributes that marked Mr. Smith as a leader was his ability to iron out differences of opinion among leaders of various groups seated around a council table. Many times after long discussions which had failed to arrive at any conclusion, Mr. Smith, who had been listening quietly, would step in and in a clear-cut summation state the problem and offer a suggestion for its disposal. He wasted no words in his summary, and what previously had appeared to be a mass of tangled strands, suddenly became untangled.

★ ★ ★ ★ ★

Another obvious part of Mr. Smith's personality was his outstanding ability as a platform speaker and as a representative of the farmers' cause in the halls of Congress and before the General Assembly. This was not an inherited ability. He developed as a speaker after becoming president of the IAA. As one farm adviser recalls, shortly after Mr. Smith became president he was suggested as an annual meeting speaker for a County Farm Bureau. Local leaders said, "No, not Smith. He can't speak for sour apples." Today he is one of the most sought-after speakers on the public platform.

Persons who had only a casual acquaintance with Mr. Smith may have never realized his love of people and the high value he placed on true friendship. This was because of Mr. Smith's reserved nature. This natural reserve was deepened by his concentration on the many and serious problems and responsibilities that he had to study and bear. But those who came to know Mr. Smith through travelling with him to County Farm Bureau meetings or in working with him, found a delightful companion and one who was truly interested in them as individuals.

Some may have thought Mr. Smith was headstrong, and at times he was misunderstood. This misunderstanding grew from the fact that Mr. Smith had certain deep and fundamental convictions. He would listen and weigh the facts carefully, but he would not compromise on his fundamental beliefs. Again this characteristic had much to do with his development into a great leader.

It is without a doubt that Mrs. Smith was a constant reservoir of inspiration

to her husband. This lovely and gracious lady was well known to those who attended annual meetings. She had a deep interest in farm people and rural life as she was born and reared on a farm one and one-half miles from the present Smith home.

When Mr. Smith came to make his great decision to retire as IAA president, he counseled with no one but his wife. Her reply to the question of retirement was, "As you know, Earl, I never wanted you to be president of the Illinois Agricultural Association because it would take you away from home. But now that it has been your life for 20 years, you alone must make the decision."

There is often inspiration to be found in the biographies of American leaders because they are tributes to the traditions of the nation which places no limit on the heights a man may reach. In America a man can be as great as his capacities permit.

Such is the story of Earl C. Smith. He is a farmer by choice. Born Feb. 19, 1886, in Pittsfield, Pike county, the son of Annie Clemmons and William Thomas Smith, his parents were native rural people of Illinois. His parents moved to Tennessee when Mr. Smith was five years old because of his mother's health which could not withstand the rugged winters. During summer vacations, his parents each year returned to Pike county where they had farming interests and lived in a cottage on one of the Smith farms near Detroit.

It was during these visits that Mr. Smith decided that when he reached his majority he would be a farmer as he was particularly interested in livestock. In school, Mr. Smith showed particular aptitude for mathematics, and completed the highest book in this course, which at that time was calculus, in his second year at American University of Harriman, Tenn. But Mr. Smith disliked foreign languages, particularly Latin, even though his father was a teacher of these subjects and a learned scholar in Greek.

Because of this dislike of foreign languages, which in those days was an important part of the curriculum, Mr. Smith left school and went to work at the age of 16. He worked for several years first as a shipping clerk for a wholesale grocery and later as a salesman on the road for the company. Even at this age, Mr. Smith enjoyed business success because of his ability with figures, but he didn't like the work. He wanted to be a farmer. He saved some money and he decided he would go into business for himself and rent a farm.

Thus at the age of 21, he returned to Pike county and started out as a tenant farmer. Two years later he married a Pike county girl, Mary Sanderson, and purchased the home place that was settled by his grandfather, W. A. Clemmons in 1838. Mr. and Mrs. Smith have maintained their home there for the past 35 years. They have established a modern farm home, the kind of a home they dreamed about when they were first married. To Mr. Smith, this home is a symbol of the kind of farm life that he has been fighting to secure for farmers for the past 20 years.

This scene is from the 1943 IAA annual meeting and shows Mr. and Mrs. Smith looking with admiration on the beautiful clock presented to the IAA leader by Illinois Farm Bureau members as a token of their appreciation for his services. If members have copies of the December 1943 IAA RECORD they would be interested in again reading the tribute which Vice-President Defrees gave at that time.

★ ★ ★ ★ ★ ★ ★ ★ ★ ★ ★

Today, the man who started out renting land, owns and operates 800 acres of land in Pike and Scott counties. He also operates for non-resident brothers and sisters an additional 600 acres of land.

While Mr. Smith has often been labelled a "corn farmer" because of his belief that the stabilization of grain prices makes for greater stabilization in the prices of cattle, hogs, dairy products and poultry, and while raising rather substantial amounts of corn, oats and alfalfa, he is in reality a livestock farmer. During the 38 years he has been on the farm, cattle and hogs have consumed not only all of the grain and hay produced on the land, but at least an equal amount of grain that was purchased. The livestock operations have added greatly to the improvement of the land, as any one of Mr. Smith's neighbors will testify. Mr. Smith also was one of the first farmers in Pike county to use limestone and sweet clover in building up soil fertility.

Mr. Smith came up through the Farm Bureau ranks to the presidency of the IAA. He first served on the Pike County Farm Bureau executive committee as representative from Detroit township in 1920, was elected vice-president in 1921, and president in 1922. In 1923 he was elected to the IAA board of directors to represent the 20th Congressional district. He served as director until 1926 when he was named as IAA president to succeed Sam H. Thompson, Adams county. He was elected to the board of the American Farm Bureau Federation in 1931 and was named vice-president in 1936. He has served as chairman of the policy making committee of the AFBF since 1933. Volumes could be written on his contributions in the latter position.

Under Mr. Smith's leadership the membership of the IAA has grown from 45,600 to 115,651. Twelve separate business corporations have been organized and all have been outstandingly successful. During his term of office the net worth of the organization has grown from $273,606 to $11,272,000. The IAA and its affiliated service corporations, all of which operate under a Management Corporation of which Mr. Smith was president, now have total assets approximating $50,000,000. Mr. Smith was a director of 12 corporations serving farm people, president of seven and vice-president

(*Continued on page 46*)

FARM SUPPLY HAS NOVEL PROGRAM

By MARY TUCKER

Editor of Pacemaker

ILLINOIS Farm Supply Company member-audience at the Sherman Hotel, Nov. 27, saw an innovation as a different kind of annual meeting program unfolded. Officers and board of directors filed upon the stage as usual, but during President Fred E. Herndon's address, he announced that all directors would have a part later in the day's program, each discussing a topic of vital importance. This was a change in the regular meeting routine, but was well received by the delegates and others who thought the subjects chosen for discussion were not only timely but of fundamental importance to a better understanding of the organization's policies, aims, and contributions to Agriculture.

The topics discussed by the board included: "Better Inter-Organization Relationship, the Goal of 3-Man Advisor Committees"; "Proper Absorption of the Returned Veterans Who Were Former Employees"; "'Service Brand' and its Place in Our Feed Manufacturing Program"; "Timely Counsel on Investments in Fixed Assets"; "What New Services Can We Properly Consider?"; "Is Our Previous Border-Line Policy Still Adequate?"; and "The Uniform Management Agreement."

President Herndon discussed "Illinois Farm Supply's Increased Participation With Other Regional Cooperatives." In this he spoke of the company's relationship with other cooperatives; the formation of our first operating membership in another cooperative, the Farm Bureau Milling Company; our second cooperative association, that with Indiana Farm Bureau Cooperative Association, Inc.; our third activity which took us into research as a member of The American Farm Research Association; and our most recent membership in United Cooperatives of Alliance, Ohio.

C. H. Becker, manager of Illinois Farm Supply Company, in presenting the board of directors' report, said that the 19th year, concluded on Aug. 31, was a year of uncertainty and great change, but despite the problems of war and its aftermath the company had added another brilliant page to its record as a history-making cooperative. The most successful year in its life span, the company made a 15.3 per cent gain over last year (the previous record), the total wholesale value of goods sold and transportation income amounting to $19,090,448.86. Members were happy to hear that patronage refunds in the amount of $1,075,973.66 and capital stock dividends in the amount of $51,784.02 had been declared for distribution.

President Fred Herndon (left) welcomes two new members to the board of Illinois Farm Supply Company — Charles Kesslinger (center) and Otto Steffey. F. E. Morris was third member elected.

"Sales of all petroleum products during this fiscal period," said Becker, "amounted to 132,148,985 gallons, representing an increase over last year of six and one-half per cent. Stated in another way, this is a gain of approximately 26 million gallons over the year 1941.

A total of 55,144 tons, including 39,134 tons of Blue Seal feeds, 11,635 tons of ingredients, and 4,375 tons of Service Brand feeds (manufactured by the four newly authorized Service Brand distributors) represents an increase of 40 per cent over last year.

The achievement of the Feed Division, accomplished in the face of limitations of both facilities and ingredients, was small compared to what it could have done had adequate manufacturing facilities been available. Becker emphasized that greater manufacturing capacity is imperative. The first step in such a program was taken when the company purchased the Benton Flour Mill properties at Benton, Franklin county, and began to remodel facilities into a completely modern feed manufacturing plant, which will be in operation by mid-winter.

Probably the most notable development of the past year was the plant food program, formulated because of the need of Illinois farmers to put back into their land the minerals removed by heavy wartime production. Although farmers were unable to get more than a fraction of the plant food materials that they needed during the year, much progress was made. The total amount of chemical fertilizers handled by the company was approximately four and one-half times the quantity sold a year ago. This includes 9,361 tons of mixed goods, 6,145 tons of superphosphate, 310 tons of treble superphosphate, 4,047 tons of muriate of potash, and 15,836 tons of raw rock phosphate.

Becker stated that "the most important single development in the Farm Bureau Plant Food Program during the year was the establishment of 55 complete soils analysis laboratories by county Farm Bureaus throughout the state. Eleven others were in the process of being established at the close of the year. This program is making it possible to take the guesswork out of plant food recommendations. These laboratories, along with the soil conservation services, place within the grasp of individual farmers the opportunity to make a genuine science of soil management, which is the basic problem of modern agriculture.

Notable among the company's activities of the past year was the formation of many new service companies out of previously large multiple companies. Becker reported that fifteen new service companies were thus formed. Also, there were six elevator members who changed their articles of incorporation and converted to Farm Bureau type cooperatives. Sangamon county was taken into our membership during the year, which makes service available now in 101 of the 102 counties in the state.

In his closing remarks, Becker stressed the need for new construction, modernization, renovation, repairs, and new equipment. He predicted that the powerful nations and the powerful industries throughout the world of tomorrow will be those with vast research talent and facilities. "He who would serve better and hold his place in the competitive system," said Becker, "must engage in research on a large scale, and he must master the research technique. We, as an organization, must give a new meaning to this word in the years ahead. It is with these thoughts in mind that on Jan. 1, 1946, we are creating a separate 'Research and Development' Division. We propose to utilize this new, important Division in carrying out actual physical research and to study the work of other research institutions. We intend also to collaborate with the University of Illinois, the American Farm Research Association, and other public and semi-public research organizations; and in general it should be our purpose to do whatever is necessary in the broad field of research to make every phase of our program progressive and sound."

MEMBERSHIP

MAY REACH 125,000 IN *1946*

HOPES for IAA membership reaching the 125,000 mark in 1946 was expressed at the annual organization-information conference in Chicago Nov. 28, by O. D. Brissenden, IAA organization director.

The conference was held in conjunction with the annual meeting of the IAA at Hotel Sherman.

"For the past four years," Brissenden said, "we have had a net annual gain of 10,000 members. We may well expect a similar gain in 1946. The membership banner may well carry the figure 125,000.

"I believe it will if those who believe in the Farm Bureau live up to their opportunities.

"A strong membership," he explained, "will be necessary if we would live up to our future. Last year it stood at 105,057. As of Sept. 30 it was 115,657. Let's make it 125,000 next year!"

Theme of the conference was "Selling, Serving and Saving Farm Bureau membership." The selling point was discussed by Orville Helms, president of the St. Clair County Farm Bureau, the serving by Lester Day, president of the Kankakee County Farm Bureau, and Dave Mieher, manager of Country Life Insurance Company, and the saving by A. E. James, president of the Whiteside County Farm Bureau, and by C. H. Becker, manager of the Illinois Farm Supply Company.

Helms stressed the importance of contact with the individual farmer and urged county organization directors to plan and conduct a well-organized membership campaign at least once a year.

Day pointed out to all Farm Bureau officers the importance of service. If we serve the member as he should be served, he said, we won't need to worry about saving them.

Mieher advised the C.O.D.'s not to consider their jobs done as soon as the farmer has signed his contract. The big selling job, he said, is to see that the member gets the benefit of all the services to which he is entitled.

Mieher pointed out that the new Farm Bureau member, remembering the points of service stressed when he was being asked to join, is in a mood to challenge somebody to prove that he did not make a mistake when he signed a membership contract.

"We recognize our responsibility," Mieher said, "as representatives of the Farm Bureau insurance program to be one of providing for all of the insurance needs of Farm Bureau members.

A. E. James, president, Whiteside County Farm Bureau.

We believe that our insurance companies are in a position to provide these needs with a superior service offered at a low cost."

James reminded Farm Bureau officers to recognize the fact that each member doesn't look to his organization for the same thing. So build your program, he said, so it will reach and interest all membership. To some, insurance is the big feature, to others service and educational programs are of paramount importance. Plan your program to give the farmer what he needs, and see that he gets it.

Becker urged the participation of all in Farm Bureau affairs to save it from membership apathy and defection. "If you want to lose your members," Becker told his audience, "just ignore them. To be ignored hurts more than to be insulted.

"When the Farm Bureau does not have good public relations and good membership relations, it hasn't very much left," he continued. "When farm people cannot reach out and touch the organization and be conscious of the fact that it is theirs, we have failed.

"We have a democratic set-up with 2,900 farmer officials operating Farm Bureau and its cooperatives in Illinois. As long as we keep this kind of democratic machinery operating we will save membership effectively."

The meeting was presided over by Otto Steffey, Henderson, who also asked the membership to "talk Farm Bureau every chance you get." Farm Bureau leaders especially, he said, should get acquainted with as many farmers as possible, letting them know the advantages of belonging to our organization. Others introduced on the program were the new vice president of the IAA, Floyd E. Morris, Sangamon, and August Eggerding, Randolph.

Five county organization directors, L. W. Braham, Will; R. L. Montavon, Lee; H. Zeis Gumm, Edgar; C. H. Mills, Cook, and John C. Bigelow, Marion, were singled out by the organization department for special mention.

Braham reported a gain of 265 members for the largest numerical gain in the state. Montavon was a close second, reporting a net numerical gain of 259. Gumm had 351 per cent of his new member quota, which was state high on a percentage basis. He was closely followed by Bigelow with 349 per cent. Mills reported 380 new members signed, which was the highest number reported.

Director Brissenden also commended the fine records of his district assistants — L. B. Hornbeck, John C. Moore and Harry Claar.

During the past year, two new county Farm Bureaus were organized in Hamilton and Perry counties. The new Farm Bureaus were set up after the reorganization of the Franklin-Hamilton and Jackson-Perry Farm Bureaus. Both of the new organizations have experienced splendid growth during the past several months, Brissenden reported.

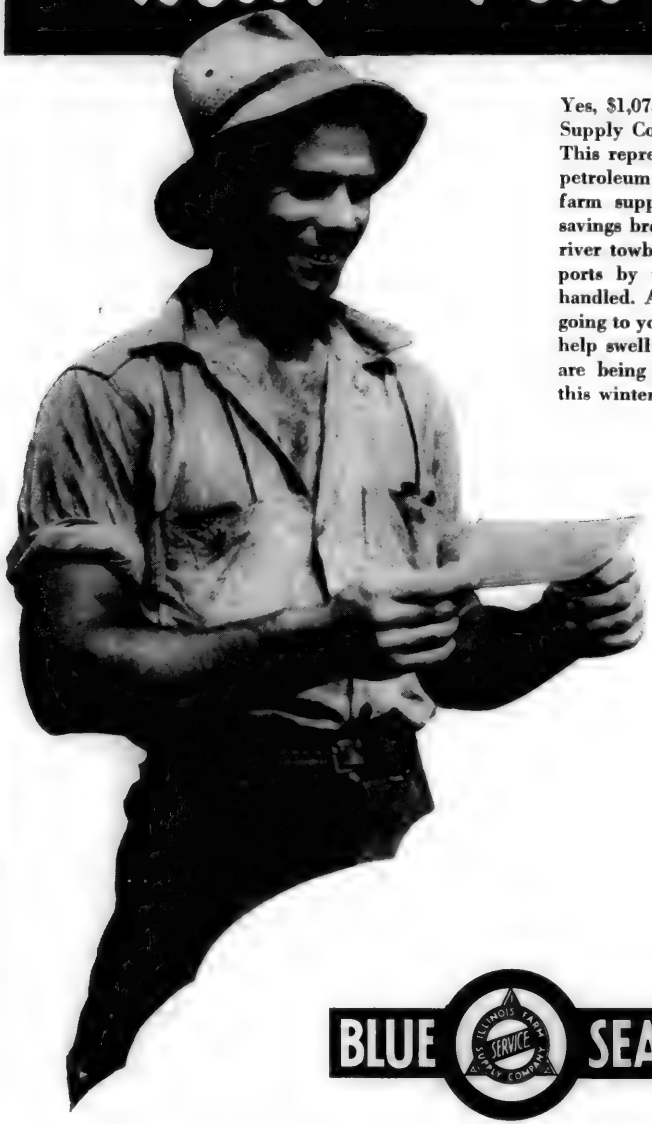
HOLD FARM AND HOME WEEK, FEB. 12-14

Farm and Home Week, highlight of the year's University of Illinois college of agriculture activities, will be held on the Urbana campus Feb. 12-14, Dean H. P. Rusk of the college of agriculture has announced.

Dean Rusk warned all farm people to get rooming accommodations far in advance if they plan to attend Farm and Home Week.

"The housing situation in Urbana-Champaign is extremely critical," he said, "and visitors will experience difficulty if they come to stay overnight without reservations."

"Well! Here's some of my



Yes, $1,075,973.00 is being returned by the Illinois Farm Supply Company to 162 local Farm Bureau cooperatives. This represents savings from large volume purchasing of petroleum products, feeds, plant foods, and other essential farm supplies. Included in this are the transportation savings brought about by the ownership and operation of river towboats, barges, marine terminals, and truck transports by which 88% of our petroleum products were handled. A proportionate share of this million dollars is going to your local Farm Bureau service company and will help swell the size of the patronage refund checks which are being distributed to Farm Bureau member patrons this winter season.

132,148,985 GALLONS PETROLEUM PRODUCTS

FARMERS BOUGHT 132,148,985 gallons of petroleum products—the largest volume in the company's 19 years of history. This is an increase of 6½% over the previous year. Petroleum today is essential to food production. During wartime, purchasing, superior quality, transporting and distributing 115,000 farms was indeed a huge task. this record was accomplished with 15% trucksalesmen driving older trucks achievement in efficient distribution was possible by the effective cooperation an enthusiastic service personnel splendid organization of farm operating in our "keep filled" pr

my money they didn't use!"

A MILLION BAGS OF FEED

Sounds like an impressive quantity. It is 40% greater than the previous year. But spread over the 63 counties that have this service and the thousands of livestock and poultry feeders, the supply was not adequate. Farmers are following better feeding practices today than in any period. They have learned that it pays to feed a balanced ration. They are feeding their livestock to heavier weights and are producing more beef steaks, pork chops and poultry products for American tables. With limitations on both facilities and ingredients during the past year, it was not possible to meet all the membership needs. Plans are being formulated, however, to provide the physical facilities necessary for the manufacture and mixing facilities to enable your organization to more adequately meet the demands being placed upon it.

A MILLION DOLLARS IN PLANT FOODS

The most spectacular development has been in plant food and rightly so, for the fertility of our farms is basic and demands our first attention. During the year 67 county Farm Bureaus authorized plant food distributors. The county Farm Bureaus have also taken the lead in the educational phase by establishing 55 soil testing laboratories. There are more in the offing. In this first year the volume of plant food handled by member companies zoomed past the million dollar mark. This volume includes rock phosphate, super phosphate, muriate of potash, nitrogen carriers, and mixed grades. Although this is but a fraction of farmers' needs, the program is becoming better organized and the future offers much promise for a better balance between demand and supply.

LY COMPANY, Chicago

Over $3,075,000 is being returned by the Illinois Farm Supply Company to 162 local Farm Bureau cooperatives. This represents savings from large volume purchasing of petroleum products, feeds, plant foods, and other essential farm supplies. Included in this are the transportation savings brought about by the ownership and operation of river towboats, barges, marine terminals, and truck transports by which 88% of our petroleum products were handled. Announce Milk Price Floors Now, Says PMA Manager

THE federal government should immediately announce floors for 1946 milk prices to sustain high production, A. H. Lauterbach, manager of the Pure Milk Association, Chicago, said in an address Nov. 27 before the Illinois Milk Producers Association. The meeting was held in conjunction with the annual sessions of the Illinois Agricultural Association.

Pure Milk Association is the producer cooperative through which 13,000 dairy farmers in the Chicago milk shed market their milk in Chicago and suburbs.

Lauterbach expressed fear that if floors were not announced soon many dairymen would sell their cows and produce farm products requiring less labor than it takes to produce dairy products.

"Until Congress decides what it is going to do about parity, the Secretary of Agriculture should fix a floor under butter, cheese, powdered and evaporated milk, and some agency, such as the Dairy Products Marketing Association, should take the surpluses that will not sell at the fixed prices off the market, using them in relief channels for domestic and foreign people who must have relief," he said. "We should seriously consider a food stamp plan for milk and other dairy products for the underprivileged."

In order to get enough production, Lauterbach said, dairy farmers must receive a higher income in 1946 than they received in 1945.

"If subsidies are removed, which they should be, consumers must pay higher prices for dairy products," he added.

The PMA manager declared that farm labor is harder to get now than at any time during the war. Industrial wages are higher than the dairyman can pay at present dairy prices, Lauterbach explained. Dairy prices must be raised high enough so that

A. H. Lauterbach, PMA

dairymen can pay wages comparable with industry if we are to have enough dairy products for consumer demand.

"We are now short of all dairy products," he said, "because of heavy consumption. If reconversion is not held up too long, 1946 may be the year when we will reach all-time peak consumption."

Ed Gumm, Knox, talks on dairying with J. L. Strohm and Art Page of WLS

Lauterbach also pointed out that marketing agreements and orders have won their spurs and are here to stay. The Chicago marketing area federal orders have worked beyond all expectations, he said, and the same can be said about the federal orders in Illinois and all of the United States.

"A committee," he continued, "is now working on a federal order and agreement for evaporated milk covering the entire industry. This is still in the talking stage and much work has to be done between producers and manufacturers of dairy products before a workable order can be proposed.

"Illinois producers selling milk to evaporated milk plants should become organized so that they can speak as a group with reference to any federal orders."

Discussing cooperatives, Lauterbach said: "Cooperatives should be built stronger because they will be needed more than ever when we reach the next recession in prices, which will come when we are caught up with the consumer demand for consumer goods. No doubt that time will come within the next three to five years.

"Dairy producers should strive," he concluded, "to become more efficient by breeding better cows, doing a more scientific job of feeding, and producing better quality dairy products."

During the fiscal year ending Sept. 30, the 23 milk producer cooperatives comprising the membership of the Illinois Milk Producers' Association marketed 2,219,803,173 pounds of milk.

It was the highest volume of production marketed in the association's 12 years of operation and was an increase over the previous year of 200,943,140 pounds or 10 per cent. Considerably more than half of the fluid milk in Illinois city markets is supplied by the Illinois Milk Producers Association.

Milk (3.5 per cent butterfat content) marketed by the association during the past fiscal year had a sale value of $68,877,326.91, which was $5,554,938.20 above the preceding year.

ately recognized when we remember the continuing charges and counter-charges in the field of politics and the heated discussions in the General Assembly of the questions of re-apportionment and modernized taxation. These two issues are largely, if not entirely, responsible for the Chicago versus down-state arguments that have ensued throughout the past 25 years. Until the General Assembly is permitted, through constitutional change, to consider both questions of revenue and re-apportionment at one time, these issues will become more serious and the breach between Chicago and down-state will widen.

School Survey Law Secured

The school legislation which I have referred to assures, at least for a time, that parents of children and taxpayers in the rural communities have full authority for determining to what extent they will bring about the reorganization of the rural school system in a manner to assure the children in rural areas a better and reasonable opportunity for education and to assure, according to need therefor, a fair distribution of State funds appropriated for the equalization of school opportunities. Again it is impossible here to discuss at any length the intricacies of the issues involved. Suffice to say that the legislation enacted is the culmination of a two-year study by the IAA State-wide School Committee of which all county organizations and interested members have had a full report. This legislation, at least for the time being, blocks the continuing efforts that have been made throughout the years to bring, in substantial part, the control of the rural school system under some type of a central State body. It now behooves rural people to take advantage of the authority given for local rural school surveys, to take steps that may be necessary for the discontinuance of extremely small schools, and to bring about such reorganization or consolidation of these small schools into such community units as will give to the children a competitive situation essential to education, afford the employment of better teachers, and in the long run not only keep control of the policies and operations of rural schools in the community, but assure their operation on a reasonable basis of economy. The Association can not longer continue to support appropriations of State funds to assist in the maintenance of schools with four, six, seven, or, except under unusual conditions, even ten in attendance. It is my well considered opinion that the I.A.A. has succeeded in paving the way to assure the opportunity for and that places responsibility upon rural parents and taxpayers to do the job that must be done. The Association has created a full time Rural Schools Department which will be available to our county organizations for assistance and cooperation in the study of local problems to the extent it may be desired.

Farm to Highway Roads

Throughout my years of public service, my interest and efforts in behalf of the importance of our highways and rural roads have been second only to securing for farmers a fair share of the National income. For the first time in the history of Illinois, legislation was enacted that recognized State responsibility for cooperation in the all-weather surfacing of township and road district highways. $15,000,000 was appropriated for the next biennium, to be divided among the several counties in such proportion as the total mileage of township and road district roads in the county bears to the total mileage of township and road district roads in the State. Moneys allocated to counties are likewise to be divided among the several townships or road districts on the same basis of measure. Townships and districts retain responsibility for grading and building ordinary culverts, as the use of State moneys is to be confined to surfacing, except where substantial culverts may be necessary. On the broad average, this means about $9,300.00 per township or district. While this amount may seem small in comparison to immediate road needs, yet if economically used, especially in those areas where gravel or rock is available, $9,300.00 will go a long way in starting to meet a need that has long been neglected.

This legislation should not be confused with Federal funds ear-marked for secondary road improvement by the Federal government, of which our State gets some $4,700,000 per year for the next three years which must be matched by State and county funds. In Illinois, policies determined upon for the use of this fund require its use in the improvement of the county highway system and permits taking into the county road system such additional mileage of township roads as may be determined by the governing body of the county. All in all, it now appears that Illinois is finally launching upon a program that in a few years should go a long way in getting farmers in strictly rural areas and on the lower traffic roads out of the mud.

While referring to road legislation, I should also refer to a bill passed by the Assembly which calls for the creation of a State-Secondary Road Commission, five to be selected by the Senate, five by the Speaker of the House of Representatives and seven by the Governor of the State. I have been asked by the Governor to serve on this Commission and shall use every proper influence in seeing that the specifications for the improvement of strictly rural roads are held to a basis of need rather than one of engineering pride.

Legislation was enacted which calls for the selection of an advisory council of thirteen members which is to be representative of livestock interests to advise with the Department of Agriculture concerning animal disease control rules and regulations before their adoption. If practical men are selected to serve on this commission, future rules and regulations governing animal disease control will not be fraught with the constant change, confusion and arguments that have ensued during recent years and, best of all, should insure a speeding up of animal disease control in the State of Illinois.

100% Assessment Law

Broad tax legislation dropped in the hopper toward the close of the session and which was enacted into law, is of far-reaching importance to every taxpayer in the State. The Illinois Agricultural Association strenuously opposed the enactment of this legislation not so much because of its unsoundness, but because of the manner in which it was brought before the General Assembly at a late hour and the inadequacy of time to give such far reaching legislation the consideration it deserved. As enacted, I fear it will bring about considerable disturbance in many counties of the State. This legislation goes into effect next January 1 and makes it mandatory that all property be assessed at 100 per cent of its current cash value. All legal tax rates were cut by one-half. When we stop to consider that in several counties the ratio of assessments to full value runs from 16 per cent to 20 per cent while in others from 70 per cent to 75 per cent, one can readily see the danger of a great shock not only upon total revenues, but upon taxpayers. On the average, down-state counties are now assessed on a basis of 30% of full value and, therefore, the over-all increase in assessed value will be about 3 1/3 times the present assessment. With legal rates cut only one-half, the way is provided for local officials to greatly increase revenues and affords the opportunity for buck-passing when taxes are increased. The problem now is one of

tremendous importance to the citizens within each county. I strongly recommend that each county Farm Bureau immediately select a permanent tax committee of the ablest men available and that these committees become immediately acquainted with the possible effect of this legislation within the respective counties. In the higher assessed counties, the problem will largely be one of finding adequate revenue for the orderly continuance of local government, while in the lower assessed counties, the citizens must be eternally vigilant or they are likely to wake up and find a substantial increase in property taxes. The issues are such as to afford every county Farm Bureau the opportunity of rendering great service not only to farmers but to all property taxpayers in their counties.

In the Public Relations Conference this afternoon, the opportunity will be provided for the consideration of these and other broad questions of public interest in much greater detail than it would be appropriate for me to discuss here.

Face National Problems

On the National front, farmers must be prepared to meet ever increasing and most difficult problems. These problems can rightfully be divided into two classes — first, problems within agriculture, and the other, farmers' interests and relations with other groups of the National economy. While I recognize there are many and involved problems within agriculture, I can deal here only with a few of the more important and broad questions of policy. As we emerge from the war, it is only natural that the rank and file of farmers begin to wonder what is the prospective outlet for the products they have the ability to produce. Everywhere farmers are wondering and asking, "Can we depend upon the many statements that have come from men in National authority that the Government's responsibility in feeding the peoples of devastated and conquered countries would absorb any surpluses that American farmers could produce?" I do not believe anyone is warranted in attempting definitely to answer these inquiries. I have not the slightest doubt that the immediate needs of the world could easily absorb any food surpluses American farmers will produce, but I am beginning to wonder at what price.

Price Support Program

Many weeks ago, representatives of the American Farm Bureau Federation met with the top officials of the Department of Agriculture and made specific recommendations as to the steps that should be taken to meet and cope with any surpluses of given farm commodities that are marketed but cannot be absorbed at the price floors authorized by Congress. Frankly, I was keenly disappointed at the inadequacy of plans developed in the Administration to carry out this mandate of Congress, which was enacted four years ago. While our recommendations were rather cordially received, we do not yet know of any decisions by those in the Administration responsible to the farmers of America. I know, of course, of the ability and the desire of farmers to produce food to meet every possible need in the peacetime domestic market and to do their utmost in assisting the Government to discharge every obligation it may have to the people of other nations of the world. But I am not going to be disillusioned by any glossy promises which encourage farmers to produce to the limit, where by doing so they run the risk of again experiencing the disastrous results following the last war. I regard it as one of the chief duties of our National organization to continue to insist that the responsible officials of government, particularly those administering the Department of Agriculture, decide and announce the prospective needs of the various major commodities in agriculture and simultaneously announce the responsibility Government is assuming to make effective price floors, so that large scale production will not result in the collapse of farm commodity price levels below the 90 per cent of parity as directed by Congress. To be practical, such plans should be announced substantially in advance of the planting or production period of the commodity. As much as I desire to see large scale production in agriculture, unless this is done, I cannot do otherwise but advise farmers to move forward with caution.

A year ago I said with some emphasis that regardless of some weaknesses in the Agricultural Adjustment Act or mistakes in its administration, farmers should uphold and defend this basic law, as it was entirely possible it would be needed in the years ahead even more than during the days of the last depression. I repeat that statement.

Possibly the most important provision of this Act is the parity formula. As you well know, this formula is the legal yardstick for determining currently what is a fair price for the basic soil crops, corn, wheat, cotton, rice, tobacco and peanuts. Throughout the years it has drawn criticism from many sources. Some have charged that it was out-moded. Some charge that its basic period was too favorable to agriculture, while others have stated it was unsound because it did not take into consideration current wage levels of agricultural workers. And some even insist that computations should include wages for the farmer and all members of his family who work upon the farm. Still others criticize the application of the parity formula to livestock and dairy products. With the last criticism, I am in wholehearted agreement. These and other criticisms are again becoming a popular pastime.

Because of the importance of the parity formula to the long-time interest of farmers, I feel impelled to discuss it at some length. First, we must remember that it legally applies only to the basic soil crops. Second, we must remember that its purpose is to determine what constitutes currently the price at which such commodities must flow in the channels of trade to give these commodities a fair exchange value with the industrial commodities farmers generally purchase.

Parity Formula Defended

Dealing with the first mentioned criticism, let me say that when the parity formula was written into law in 1933, the 1910 to 1914 base period was accepted only after a review of the price relationships of industrial and agricultural commodities during every five-year period between 1900 and 1933. The 1910 to 1914 base period was accepted because there were not only more stable conditions within agriculture during that period, but a fairer relationship existed between the price levels of agricultural commodities and industrial commodities during that time than in any other five-year period during the years mentioned. You will remember it is the five-year period immediately before the first World War and it was the war, which caused radical change in normal price relationships.

Pressure for the inclusion of farm wages in the parity formula has much popular support. It is, of course, easy for one speaking before a partially informed audience to make light of any yardstick for the determination of a fair price for farm commodities that does not recognize agricultural labor costs as an important factor in their production. But we must remember that the premise of the parity formula is to give agricultural commodities a fair exchange value with industrial commodities and it is not a cost of production plus profit formula. Today we are living in an economy where relatively high industrial wages are being paid and we are witnessing daily continued

pressure for a further increase in industrial wages. According to competent and dependable authority, industrial wages on the average constitute about 80 per cent of the total cost of producing industrial commodities and, therefore, have a major effect in determining the prices at which industrial commodities are sold. Under the parity formula, when industrial prices rise the parity price of a farm commodity also rises and should we witness a lowering in industrial wages, the parity price of a farm commodity likewise decreases. This is as it should be, because the masses of working people constitute the best market for agricultural commodities and I know of no way to better balance wages of workers with prices of farm commodities than under the formula as now written into law. Should agricultural wages be put into the parity formula, it would merely mean that less emphasis will be placed upon prices of industrial commodities, which are largely influenced by industrial wages, and substituting therefor the wages of agricultural workers. I submit that it is much more sound, defensible and in the long time interest of farmers, to keep the legal yardstick for determining fair prices for farm commodities tied to the general price level of industrial commodities than to accept the proposal for substituting, at least in part, wages of agricultural workers in lieu of the influence industrial wages have in determining industrial prices.

The parity formula, when written, was not intended as a measure for determining fair prices for other than the basic soil products, but it has been applied to livestock, dairy products and many other commodities. Several years ago Congress directed the Secretary of Agriculture periodically to determine and announce prices for these commodities that would give them the same relative position in the markets of the country as the basic commodities had under the parity formula. The spirit of this mandate has not been used and it is this neglect that has resulted in much rightful discontent of the producers of these commodities with the unfair determinations made. The answer to this problem will not be found in any radical change of the parity formula, but should be found by the preparation of formulas that recognize the peculiar problems and costs entering into the production of these commodities in a manner that will give the producers of these commodities the same relative position in the market as that enjoyed by the producers of basic crops.

Oppose Parity Change Bills

There is pending in the Congress the Pace Bill in the house, which would amend the parity formula by the inclusion of farm wages and the Thomas Bill in the Senate, which would amend the formula by changing its base years to the 1919 to 1929 period and also would include not only farm wages, but comparable wages for every member of the family who works upon the farm. These bills have varying degrees of support and they have definite appeals to the producers of certain crops in given areas of the country. Temporarily these bills, in varying degrees, would give a price advantage to the producers of some commodities in particular areas. Thus far we have consistently and aggressively opposed these bills and I recommend that as an organization we continue to do so. I further recommend that we resist any change in the parity formula as applied to basic soil crops, at least until such time as a proposal is made that is equally defensible, equally sound and as effective as the parity formula has proven to be. I also urge that every possible effort be made to secure a formula that will give to livestock, to dairy products or to any other farm commodity, a measure for determining what constitutes a fair price for such a commodity currently in the markets of the country.

Cooperatives and Taxes

There is much public interest and discussion of income tax exemption privileges extended to agricultural cooperatives. Many charges and countercharges are being rather loosely thrown about. It is time that we all have a better understanding of the issues involved. There is some merit on both sides of the argument. Years ago, Congress provided for the exemption of agricultural cooperative organizations, within prescribed limitations, from the payment of income taxes on the theory that a bona fide cooperative belonged to its members and that any net earnings it made had the same ownership. Upon application and showing of the qualified nature of the agricultural cooperative, a letter of tax exemption was issued by the Federal Bureau of Internal Revenue. Some agricultural cooperatives have interpreted this exemption as continuing only if the annual net earnings are returned to the member patrons, where such income becomes taxable. Others have construed the exemption as continuing even if the net earnings are retained by the cooperative, on the theory that earnings retained and used for expansion purpose are in the interest of the patron members. It appears that the capital structures of many cooperatives have become extremely large as a result of retaining such earnings. As the result of the great increase in taxes, this situation has become seriously acute. In Illinois the so-called "Farm Bureau Cooperatives" acting under what I regard as sound, legal and technical advice, have construed tax exemption on the income of the cooperative as applying only to that portion of the earnings that has been returned annually to the patron members. They have for years made reports of earnings and paid taxes on that portion of earnings retained in the capital structure of the cooperatives. So far as I know, the policies followed in Illinois are not under criticism. But we are concerned that all agricultural cooperatives put their houses in order so as to meet competition fairly in the business world.

This matter is now receiving attention of the Congress. Only recently I heard a prominent member of the House Ways and Means Committee say that the broad purpose of the Congress when extending tax exemption privileges to the cooperatives was justified, but that the abuse of these privileges demanded attention.

Tax Law Recommendation

I recommend the adoption of a resolution by this Convention directing the Illinois Agricultural Association to support policies that will require every business service cooperative operating in the field of business competition to report annually on its operations and net earnings and to pay taxes on that portion of annual earnings that is retained in its capital structure. Under such a provision of law, all earnings of the cooperative will be taxable either in the possession of the cooperative or in the hands of the individual member patron. I believe also that farmers should not resist a change in the tax laws extending to a private corporation the same privilege. In other words, a change that would tax a corporation only upon that portion of its annual earnings retained by the corporation and where the portion of the annual earnings distributed would become taxable in the hands of the stockholders. This would have the very great advantage to the American public of encouraging, if not forcing, larger distribution of corporate profits annually. This would add greatly to the buying power of the public. It would be extremely helpful to many retired people who depend upon the earnings of corporate investment as means of a livelihood.

I fully appreciate that this recommendation will not meet with the favor of the leaders of many cooperatives in the United States, but I have deep conviction that if the bona fide agricultural cooperatives of the present and the fu-

ture are to command the respect of thoughtful people, they must meet private business in the field of competition on a basis of comparative economy and efficiency. Certainly no cooperative is warranted that has to depend upon tax evasion or tax advantage.

Some Seek Selfish Advantage

Notwithstanding all that has been said throughout recent years by leaders of government and leaders of business, labor and agriculture as to the importance of a sound, stable and fair economic balance between wages, prices and profits, we are forced daily to witness the many efforts that are being made by some so secure selfish advantage. Throughout the war, farmers have wholeheartedly cooperated with and supported all honest efforts that have been made to secure and maintain this balance and to avoid dangerous inflation. I wonder if the leaders of other groups of our economic life could honestly make the same statement. You will remember that when the price control law was first under consideration by the Congress, it included wages as well as industrial and agricultural prices. Labor strenuously opposed the inclusion of wages. It is well to remember that it was the President of the United States who said, in effect, "Leave wages to me." The Little Steel Formula was adopted as a yardstick to keep wages in line with prices. This formula, repeatedly violated, has been little more than a myth for a long time.

Unit Cost Increase Dangerous

I would not have you think that either as an individual or as a spokesman for others, I oppose either substantial, regular wages, or the best of working conditions for the workers of the country. Neither do I fail to recognize the importance of large scale employment and industrial activity. But I do strenuously and uncompromisingly oppose the continuing efforts on the part of some leaders of labor to secure for workers more and ever higher wages for doing and producing less and less. Stating it in another way, it is not the high wage that is dangerous, but the ever-increasing per unit cost of producing industrial commodities. I oppose such policies because I know that if permitted to succeed, they will contribute to further unbalancing the economy and ultimately will not only undermine, but will destroy the free economy of America.

Farmers' Record Clear

The condition of our country, its obligations and its financial stability are such that we cannot afford to continue coddling any leader or group of people. I realize that this is plain and serious language, but dangerous encroachments upon the broad public interest that threaten the foundations of government itself require and call for such plain and serious treatment. No group have more at stake, and no group of citizens have a greater right to speak out than farmers. Throughout this war they have been called upon to do more and more with less and less. Their record is one of which we can all be proud. There have been no farmer strikes and there have been no slowdowns or sitdowns in agriculture. No one has gone hungry in America because of a let-down on the agricultural front. The record is clear. On a basis of that record and because of farmers' belief in and devotion to the fundamentals of our free institutions, free enterprise and a nation of free men, they demand that government immediately revise policies and programs necessary to assure fair and equitable treatment of all classes of men, whether engaged in the factory, in the office, or upon the farms. It is not pleasant to think of, nor does it make us comfortable, but every true American must now fully recognize that the obligations of the United States now approximates the value of all tangible property. If the boys and girls of today, yes, even the young men and the young women who have borne the real brunt of the terrible war, are in the future to live in a nation of free men, it is already a late hour for getting our national economy in order. Present trends do not offer much encouragement.

Need Substantial Tax Structure

Congress has already passed and the President has approved a bill providing large reductions in next year's tax revenues and the removal of millions from the obligations of direct federal taxation. Are equal efforts being made for the reduction of federal expenditures? Are people who are doing useless or non-essential work in the employ of the federal government being retired and made available for the requirements of legitimate business? The answer is obvious to every student of public affairs. What America needs and must have is sound laws and sound policies in the administration of law that will permit, will encourage and will sustain a large national income. This can only be accomplished through large scale industrial and agricultural production, which means large scale employment. This goal can only be achieved through policies that recognize the importance of sound and fair economic balance between all groups of people. I say all, because the largest group of all, the so-called "white collar workers" together with retired people who depend upon investments for a living, are seldom considered in their proper sphere of importance to a sound National economy. Such a substantial National income must be maintained if for no other reason than to constitute a reservoir for the purposes of taxation essential to maintain the solvency of the United States.

Some of you may feel that I am placing too much emphasis upon the necessity of maintaining a very substantial tax structure. Some people seem to think that obligations of government are different, because in effect the people are the government and, therefore, we owe this financial obligation to ourselves. I do not agree with such theories. I have never been and I do not want to be either a pessimist or an alarmist, but only a few weeks ago I heard a very prominent United States Senator say that America had been slipping and was now speeding into a situation where ultimately, unless present inflationary trends were curbed, American money and bonds would become nothing more or less than printing press money. Ladies and gentlemen, I ask you to think seriously, are we warranted in supporting any effort to reduce federal revenues in the belief that we save something of value to ourselves, when by so doing we run the risk of destroying the value of the saving itself? It is my profound belief that we are warranted only in such revision of the tax structure as will stimulate business activity to a point where the increased National income resulting therefrom will constitute a basis of taxation that will increase Federal revenues and thus protect our money, our bonds, our property, yes, the Nation itself. I firmly believe that every citizen, except those in the lowest incomes, should be a direct taxpayer. To be a taxpayer makes a better citizen, because it encourages civic consciousness when one becomes a partner in the financial affairs of government.

Labor-Industry Relationship

We stand now at the threshold of decision as to what will constitute the basis of relationship between organized industry and organized labor and what shall be their combined attitude toward the importance of a stabilized agriculture. Millions of American boys have offered their lives if need be to preserve the essentials and ideals of true democracy and hundreds of thousands have given of their all for this purpose.

We are informed that there are as many as 800 official committees and commissions which have given more or less of their time throughout the war

to a study of and to make recommendations as to the requisites of industrial and national peace. But today we still find organized industry almost, if not totally lacking in offering any sound basis to assure workers of participating in the fruits of their endeavor, and we find organized labor asking for higher wages even though it is necessary to draw a substantial portion of such increased wage from past reserves and profits. We find nearly all of our citizens in need of almost every kind of industrial product, but we find their desires thwarted by the indecision of industrial leaders and the extravagant demands of organized labor. We find industry urging substantial reduction in taxes and we find labor insisting upon higher exemptions from income tax, yet we all recognize the continued and tremendous requirements of the Nation for revenue to balance expenditures with income. We find the masses still demanding comparatively cheap food and without practically any realization that about nine per cent of their rightful costs were borne by the Federal Government throughout the period of the war.

Nation Needs Prosperous Agriculture

We find farmers yet forced, at least in certain areas of production, to depend upon the Federal Government for a substantial portion of their income in order that certain divisions of government may continue war-time methods of controlling prices to avoid further demands of organized labor for increased wages. We yet find the farmers insisting only upon prices for their products in the markets of the country that are necessary to give them a reasonable degree of equality of purchasing power for the products of industry and industrial labor. It should never be forgotten by America that the thinking farmers of the country are the one group who have constantly and consistently demanded policies of government that would permit and require the American public to purchase food and fiber in the markets of the country through both depression and prosperity periods on a basis of equality with the profits of industry and the wages of labor. They knew before as they know now that this Nation can never enjoy any permanent degree of prosperity unless the basis of our American economy, agriculture, is in a reasonably prosperous condition. Only the simplest of economic fact is necessary to convince anyone of this fundamental fact.

Challenge to Economists

Notwithstanding all of the experiences of depression and of industrial activity, their causes and their effect, we still have professional economists writing essays on what would constitute a sound National agricultural policy and receiving large awards for the best of their essays. Only recently the prize essays prepared by professional economists placed great emphasis upon the importance of large agricultural production and cheap food, and making up the difference between a low return to the farmer in the market and a just return by checks from the Treasury of the United States. To accept such a policy would mean that those engaged in agriculture would soon become wards of the Government. I regard those prize winning essays as a challenge to the Departments of Economics of our Land Grant Colleges to offer proposals that recognize the fundamental importance of a sustained, contented and prosperous agriculture to the welfare of every man, woman and child in the United States. I have never known of any but a small minority of farmers who have sought more in the way of price return for their long hours of labor and effort than an equitable return for the products of these efforts. In other words, prices for farm commodities that would give them a fair exchange value with the products of industry.

Strife Hampers Reconversion

Farmers also have a very definite interest in the immediate solution of difficulties between industry and labor. It may seem out of place for me to offer a suggestion for the solution of our industrial-labor relationships, but I do so only because of the failure of our economists, our industrial and labor leaders, and should I say political leaders, to offer anything that would seem to promise a solution of the industrial strife which is so seriously stifling sound reconversion. If we are to protect America as a nation of free men, we must recognize that capital is an essential to business progress and, therefore, is entitled to a reasonable return. We must recognize that outstanding ability of management is entitled to reward, and we must recognize that labor is a partner in industry and entitled to a wage that reflects a reasonable return for its contribution to total net profits.

Answer Is in America

May I suggest for consideration by the American people that a sound basis for solving industrial-labor relations may be found in agreements which provide first, reasonable living wages for workers; second, reasonable returns currently for capital invested and rightful rewards to management resourcefulness and ability. After meeting these requisites, would it not be well to consider an allocation of remaining profits to capital, to management, and to workers in proportion to their contribution to final results? It is known by every thoughtful person that America became the greatest Nation of the world because of the resourcefulness of men. We have seen the sons of rich men become paupers because of their inability even to take care of inherited riches. We find generally that the real captains of industry arose from humble surroundings through the channels of hard work, of long study and uncompromised effort. In other words, it has been either the resourcefulness or the neglect of men that have determined their social and economic destiny.

Are we to throw aside these long years of experiences and record for the dreamy ideas of impractical economists, cheap politicians or any of the alien theories that have entered the borders of America during the last 20 years? Practical, hard-working people made America and it is the same kind of courage and determination that will protect America in the days ahead. I fully recognize we are long past the horse-and-buggy days, but I am one who yet believes that ignoring the fundamental principles underlying government and the experiences of horse-and-buggy days will not serve the true interests of American boys and girls in the days ahead. It is time America awakes to the fact that there is no Utopia. The issues are great, the stakes are high. We have nothing to draw from any nation of the world except the bitter experience of their strife that has led America and taken Americans through two world-wide wars. It is in America and in America alone that we will find the solution to our domestic and international problems and it is as Americans and Americans alone that we must and will find the way.

SANGAMON HIRES ASSISTANT FARM ADVISER

Lyle D. Kerley of Brown county has assumed his duties as assistant farm adviser of Sangamon county. He was recently discharged as a captain after serving four years with the army air forces, three years of which were spent overseas.

Kerley was graduated from the University of Illinois college of agriculture and at the time he entered service had been in charge of the USDA swine breeding project at the state university where he also served as an instructor in the swine department. He is married and the father of two children.

I. A. AUDITING REPORTS FURTHER GAINS IN '45

FURTHER gains in cooperative auditing during the 1945 fiscal year ending Sept. 30 were reported by C. E. Strand, manager of the Illinois Agricultural Auditing Association, at the annual meeting of the association in Chicago Nov. 26.

This IAA affiliate, which offers an auditing and general business service to its members, consisting wholly of cooperatives and farmer-owned organizations, reported a net increase of 30 member clients over the preceding year.

Memberships listed by Strand totaled 439, including 155 Farm Bureaus and Farm Bureau subsidiaries, 28 cold storage lockers, 97 grain elevators, 18 livestock associations, 32 dairies and creameries, six insurance companies, 72 service companies, three home bureaus and 28 miscellaneous organizations.

The purpose of the Illinois Agricultural Auditing Association has been to render, substantially at cost, an unbiased auditing system, income tax, and business advisory service to its member clients.

During the past year the association had the greatest volume of business in its history with a total billing of $103,341.67 and with total income in excess of $105,000. Operating expenses amounted to almost $100,000 with net income of $5,765.70. Dividends paid on capital stock totaled $1,267.76 and the net surplus after payment of dividends increased $4,498.03.

Since the chartering of the association in 1924, membership has increased almost four-fold until today it is no doubt safe to say it is the largest accounting organization in the United States serving cooperatives exclusively.

Here is the board of the Illinois Grain Corporation for 1945. Left to right: Harry Dixon, Bloomington; Charles Lauritzen, Reddick; H. P. Joy, Chapin; Sam Yergler, Cissna Park; Arthur Bertsche, Pontiac; Chester A. Hunt, Morris; John Butterfield, Pana; President Charles Schmitt, Beason; Carl O. Johnson, Varna; Fred Romine, Tuscola; E. E. Stevenson, Streator; A. O. Eckert, Belleville; A. E. Burwash, Champaign; Dwight Hart, Taylorville, and Ralph Vercler, Washington. At the annual meeting, C. J. Elliott, Streator, was named to succeed Dwight Hart; L. J. Sutter, Lexington, to succeed Harry C. Dixon, Bloomington, and Erwin Isenberg, Alhambra, to succeed H. P. Joy, Chapin.

ILLINOIS GRAIN SETS NEW MARKETING RECORD

TWENTY-FIVE million bushels of grain, the largest volume in the organization's history, were marketed cooperatively by Illinois farmers during the past fiscal year through the Illinois Grain Corporation, according to the report made at the corporation's annual meeting in Chicago, Nov. 26 by Manager Frank Haines.

Earnings for the year, including patronage dividends received from other cooperatives amounting to $11,820.94, totaled $292,628.80. After payment of taxes, payments of capital and class "C" stock, and additions to surplus, patronage dividends declared amounted to $247,138.92, which included $173,488.92 in cash and $73,650 in class "C" stock.

Owned and controlled by grain producers through their local cooperatives, their county Farm Bureau and the IAA, the company maintains terminal offices in Chicago, Peoria and St. Louis with branch offices at Mendota, Bloomington, Champaign and Jacksonville. During the fiscal year 13 elevators were added to the membership of the Illinois Grain Corporation. Patronage dividends received from other cooperatives means chiefly from Indiana Grain Cooperative, Inc., which credits Illinois Grain Corporation for business originated in Illinois by the Illinois cooperative for the benefit of the Indiana cooperative.

Erwin Isenberg

In July, 1944, marketing services were extended to producers in Iowa through a marketing agreement with the Farmers Grain Dealers Association of Iowa. This has resulted in a very substantial addition to volume. Since increased volume lowers costs and increases savings, this arrangement is of direct benefit to producers in Illinois.

Directors of the Illinois Agricultural Auditing Association during 1945 are pictured here. Reading clockwise: F. A. Esterly, Carbondale; Carl A. Lage, Saybrook; Vice President B. W. Horan, Reynolds; President R. H. Voorhees, Jerseyville; Secretary George E. Metzger, Chicago; Ruth Lange, office secretary, and Comptroller C. C. Chapelle, Chicago.

RESTRICTIONS HAMPER LIVESTOCK MARKETING ASSOCIATION EXPANSION

ILLINOIS farmers sold 200,886 head of livestock through the Illinois Livestock Marketing Association during the fiscal year ending Sept. 30, Manager H. W. Trautmann of Danville reported to the annual livestock marketing conference held Nov. 27 in conjunction with the IAA convention in Chicago.

Volume shipped by the state-wide Illinois cooperative was about equal to that handled the preceding year. Net income for the year was $9,711.53.

After payment of $1,815 in dividends on capital stock and the return of $4,905 to farmer producers in the form of patronage dividends, $2,880.35 was added to the surplus of the association.

War restrictions and the increasing number of direct buying stations set up close to the producers by packers curtailed considerable expansion by the marketing cooperative.

Competition to acquire the highest volume on the part of packers was keen and reports of violations of ceiling prices were common. Inducements of one kind or another, which varied from offers of a flat sum per hog or per carload to more involved procedures which were evolved for the purpose of staying within the law, were faced by the association.

Regardless of the attractiveness of the offers, Illinois Livestock Marketing Association continued to operate its business as in the past, along lines which reflected maximum service to livestock producers. A close check was kept at all times to keep every phase of the operations within the intent of the war regulations.

Hogs were not sold to the first ceiling-price bidder. Packers who have long been customers of the association and especially those packer patrons who gave the association orders during the period of the hog glut, received preference in allocating the limited supply of hogs available.

"To say that the position of the association has been awkward at times," Trautmann said, "would be an understatement. Our most difficult task has been to refuse to sell hogs to packers whose patronage had been earnestly solicited in previous years. Token shipments to some of these packers were made to build good will for the period of normal production and marketing.

"With the setting up of direct buying stations at numerous country points, the competition for the small supply of hogs became unbelievably keen," Trautmann explained.

"To say that the increase in the number of buying stations, trucker traders and all the other forms of competition had no effect on the volume of Illinois Livestock Marketing Association and its affiliated units would be untrue," Trautmann reported. "To what extent, however, the business of the association was reduced by the increased competition, we cannot tell. It is sufficient to say it was appreciable."

During the past year new stock yard facilities were built at Champaign, Decatur and Paris. Other association yards are at Bloomington, Danville and Shelbyville.

Directors of the Illinois Livestock Marketing Association for the year 1945 are pictured here. Seated, left to right: W. A. Dennis, Paris; LaRue Tice, Shelbyville; Carl Lage, vice president, Saybrook; Mont Fox, president, Oakwood; Ralph Beckett, treasurer, Blue Mound; Fred Smittkamp, Paris; Clark Wise, secretary, Champaign. PLAN SERIES OF HEALTH MEETINGS FOR JANUARY

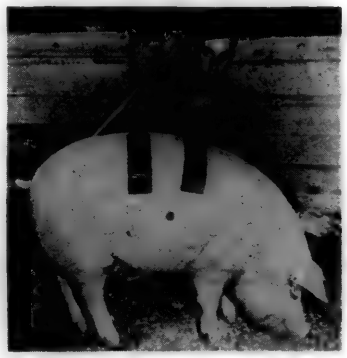
A series of public health seminars will be held in seven Illinois communities during the last half of January.

The series is being sponsored by the Illinois Community Relations seminar in cooperation with the the extension service in agriculture and home economics, the Illinois department of public health and the Illinois Statewide Public Health committee.

Dates of the meetings are as follows:

Dixon, Jan. 15; Pontiac, Jan. 16; Springfield, Jan. 17; Urbana, Jan. 28; Effingham, Jan. 29; Benton, Jan. 30, and Highland, Jan. 31.



Francis Callahan, Iroquois, is shown with his 287-pound Chester White which was chosen grand champion barrow in the Chicago Fat Stock Show Dec. 4.

Frank Trainor, Livingston, is shown with the barrow which won the junior grand championship in the barrows division of the Chicago Fat Stock Show.

Good Schools IMPORTANT TO FARM PEOPLE OF ILLINOIS

THE future of their rural schools is a matter of prime importance to the farm people of Illinois and their school officials. That would be the obvious conclusion if you attended the schools conference during the IAA convention in Chicago, Nov. 28.

Presided over by IAA board director Homer Curtiss of Jo Daviess county, the conference attracted approximately 275 persons, including leaders in education, agriculture, politics and women's organizations.

Special phases of the school problem were discussed by three members of the IAA staff. L. H. Simerl, director of the department of research and taxation, talked on "New Legislation Affecting Schools," John K. Cox, director of rural school relations, discussed "Pupil Transportation Problems," and Paul Mathias, IAA secretary, addressed the group on "Compulsory vs. Voluntary Reorganization."

A lively discussion followed in which many persons in the audience participated. The questions asked were principally concerned with the implications of the County School Survey Act.

The discussion, however, covered a wide range of school subjects, some of which included comparative transportation costs in various parts of the state, responsibility for school bus accidents, the relative cost of school consolidation, and teachers' salaries.

George Frazier, state representative from Clark county, asked that a vote be taken in the group to get its attitude toward the minimum salary for teachers bill. Some were opposed but a majority favored it.

Noble Puffer, superintendent of Cook county schools, commented on the costs of consolidation, saying: "I do not think that we should kid ourselves that consolidated schools are going to cost us less. I think farming at the present time costs more, but your returns are greater. We cannot put a dollars and cents return on schools but it (consolidation) gives us a better return for our money."

Mr. Leigh of Marshall county asked Director Cox if the state school survey bill prevented four or five school districts from going ahead with their own consolidation.

"No, it does not," Cox answered. "There are some things a district should consider. In the first place, you should have an assessed valuation which will provide the school adequate financial support on a reasonable tax rate. In the second place, you need a reasonable number of pupils. In the third place, the school should be in the main located near a community center wherever possible. That community center may be in a strictly rural area, however. If you have an idea of going ahead, it would be a good idea to discuss it with your school survey committee and your county superintendent."

Robert Ring of the office of the state superintendent of public instruction complimented the numerous groups in Illinois which have contributed to the improvement of rural education and paid particular tribute to the State IAA School Committee. He also voiced his approval of local control over school affairs.

Other school officials in attendance included the following county superintendents: McCoy, Kane county; Dickey, DeWitt; Morgan, DuPage; Clark, Kendall; Hall, Kankakee; Mrs. Endres, McHenry; Mrs. Andresco, Grundy; Bottino, Will, and Asst. Supt. Spickerman representing La Salle county.

Others present included: Mrs. Stanley Castle, state president of Home Bureau; Paul S. Conklin, president of the State Association of County Superintendents of Schools; and Mrs. Anita Connor, educational chairman of the league of women voters.

GRAIN MERCHANDISING PLAN OUTLINED

by W. P. Sandford

THE board of directors of the Illinois Agricultural Association, after numerous conferences with interested groups and persons and a two-year study by a staff committee, has approved a plan for moving forward into the vital field of grain merchandising. *Thus a new era opens in cooperative marketing.*

The over-all plan takes into account the economic trends that have brought about vast changes in grain marketing. Under the plan farmers would have their own terminals company, operating as a statewide agency, with facilities at Chicago, St. Louis, and possibly Peoria; river-point subterminal agencies strategically located to get the full benefit of water transportation; and local cooperatives coordinating their activities with the river and terminal agencies.

Along with their merchandising machinery, farmers would retain the Illinois Grain Corporation, which would render its brokerage and commission services as heretofore. Cooperation of this company with Indiana and Iowa state cooperatives, so fruitful of results in the past, would likewise go forward.

But with it would be the large enterprises which would be headed by the new Illinois Grain Terminals Company. This eventually would be a three-million dollar concern, whose function it would be *to merchandise* the farmers' grain in the markets of the Midwest and of the world. A system of barges and towboats, operating between river subterminal points, and possibly trucking system, would help realize for farmers the full savings of water transportation.

The whole enterprise, from county to district to state levels, would be composed of Farm Bureau-type cooperatives, with the unifying effect of central management and of "B" control stock assuring Farm Bureau members that their cooperative marketing system would always operate in their interests.

Farm Bureau control is amply justified on the ground that over 80 per cent of all the grain raised in Illinois is produced by the 115,00 members.

"Merchandising" Pays

The terms "merchandising" and "commission and brokerage" are not always clear to the layman. Under the latter plan, Illinois Grain Corporation has served farmers by acting as the agent of its 104 member-elevators on the Boards of Trade, selling corn, wheat, beans, etc., at the market. In a *merchandising* operation, however, grains are sold directly to processors, such as flour mills, feed manufacturers, breakfast food makers, distilleries, and the like. Large scale operations, 50,000 bushels and up, are the rule. Specific grades are bargained for, and prices are set in accordance not only with market conditions, but with respect to the requirements of the purchaser. Water shipment, direct from subterminal river points, would be utilized wherever possible. In some cases, grain would be acquired direct from farms, thence to move by truck to water points, utilizing the services of local elevators or county grain companies owned by the farmers, but not actually entering their elevators.

The special grain marketing committee reported to the IAA board of directors November 17, 1944, that "merchandising operations have earned larger profits per bushel than have commission and brokerage. (In 1944 the average net of 17 regional merchandising cooperatives was 4c a bushel and of the three commission type cooperatives 1c a bushel.)" That these potential earnings, already known to exist in grain merchandising may be made available to farmer-producers, and redound to their benefit, is of course a basic reason for entering this field of activity.

Water Transportation Grows

Opinion of the special committee was unanimous "that the movement of grain by water will continue to expand, although the *rate* of expansion may not be as great as in recent times."

"Any grain merchandising project would, of necessity, hinge on the Illinois River, principal waterway flowing through the center of the grain belt and connecting principal grain markets at Chicago, Peoria, St. Louis, Louisville, Kentucky, Decatur, Alabama, and other southern outlets," the report continues. The Mississippi is similarly important.

Already, beginning in 1937, the volume of grain movement by the Illinois waterway has grown. There are now nineteen barge loading points on this channel. When long-range trucks again become available, grain moving by water will increase, it is predicted. Grain shipments may originate as far as fifty miles from river subterminal points, some managers believe.

It is this revival of water shipment, coupled with truck transportation, that has basically changed grain marketing in Illinois. It means that many small elevators within 30 miles of the rivers may find their former volume, shipped by rail, dwindling rapidly; indeed, this has already occurred. The grain committee believes that this tendency should be recognized and that farmer-owned cooperatives should meet the shift to river traffic.

Details of the Plan

Study of the changed economics of grain marketing by the special IAA committee was followed in February, 1945, by a general conference of Farm Bureau presidents and Farm Advisers from counties likely to be affected by river movement of grain. After discussion, the delegation named a small committee to draft a report on the conference, to work out minor details, and to submit the report to a second river area conference. This was done on March 26. After approval, the over-all plan was presented to the IAA board of Directors in July, and given its sanction.

M. B. Thompson — new Fulton Co. Farm Bureau member registers at convention.

Delegation arriving from southern Illinois for annual IAA convention are, left to right: W. H. Faires, Madison; W. B. Timpner, Perry; G. G. Pape, Madison, and Tony J. Druxelius, Madison.

For the record, here is the personnel of the small committee: Guy Gee, president, Livingston County Farm Bureau; Charles Heller, president, Peoria County Farm Bureau; C. E. Yale, Farm Adviser, Lee County; M. E. Tascher, Farm Adviser, Grundy County; George E. Metzger, Field Secretary, IAA; Harry Meloy, Legal Department, IAA; and George H. Iftner, Director of Grain Marketing IAA.

Here are some of the important details of the plan as approved:

Illinois Grain Terminals Company

The statewide merchandising agency, to be known as Illinois Grain Terminals Company, would be incorporated with a total of $3,000,000 in capital stock, subscribed by producers, county Farm Bureaus, local Capper-Volstead elevators, county grain and service companies, river terminal companies, the IAA, and the Illinois Grain Corporation. Ten thousand shares of Class "A" preferred stock, $100 par value, 6 per cent cumulative, and redeemable at par and accrued dividends, would be sold to individuals. Ten thousand Class "C" preferred, $100 par value, 5 per cent cumulative, and redeemable, would be sold to organizations. Ten thousand Class "D" preferred, $100 par value, 4 per cent cumulative, would be used for patronage purposes; and common stock would be issued in sufficient amount for membership purposes only, one share to be issued to each county association and water terminal or out-of-state cooperating association.

There would be 30,000 shares of Class "B" control voting stock of no par value to be held by the Illinois Agricultural Association.

This company would own or lease terminal properties at Chicago, St. Louis and possibly at Peoria. These terminal facilities would provide for the handling of grain by truck, rail and water.

River Sub-Terminals

To assure that earnings resulting purely from river operations flow back to areas affected as directly as possible, river operating companies would be organized. Each of these would require an investment by farmers and county grain companies of approximately $150,000. Each would have one or more fast-operating elevators of between 50 and 100 thousand bushel capacity. Such facilities would cost between $50,000 and $100,000. The river companies would each have $50,000 invested, in addition in the state organization for construction or purchase of terminal facilities and marine or other transportation equipment.

Capitalization of these companies at river points would follow the same general pattern as that of Illinois Grain Terminals Company, except that Class "B" stock of the river terminal companies would run to Illinois Grain Terminals Company, and membership common stock of no par value would be available for issue to every Farm Bureau patron member in the grain producing areas around the sub-terminal. Such stock would be conditioned upon Farm Bureau membership, and would be cancelled if the patron ceases to be a Farm Bureau member. Such membership stock would also be made available to every qualified Capper-Volstead patron-association cooperating with the river subterminal. Farmer-producers, Capper-Volstead elevators, Farm Bureaus, and County grain and service companies would be eligible to own stock in the river terminal companies.

Several Illinois river sub-terminal companies are planned between Morris on the north and Havana on the south, and on the Mississippi at strategic points.

County Companies

Local grain-marketing facilities would include local Capper-Volstead elevator companies, plus county grain associations or Service companies in areas not served by such elevators. The county grain companies would be incorporated as Farm Bureau-type cooperatives with stock subscribed either by the County Farm Bureau itself or by producers and the Farm Bureau, with Class "B" stock running to the County Farm Bureau. Members of the company would be Farm Bureau members in the county. Proper safeguards in the way of working relations between the county grain company and the local Capper-Volstead elevators, to prevent duplication in the handling of grain and the distribution of patronage, would be set up.

This Is the Plan

Such is the plan: big in its conception, geared to modern grain marketing trends. Already it is leading to action, with organization of the river sub-terminal cooperatives under way in the La Salle, Peoria and Havana areas on the Illinois and the Dallas City area on the Mississippi, and with interest turning into action at other points along the rivers and in the grain producing counties. Owned and controlled at every level by Farm Bureau members, and working with coordinated strength, it will be the agency through which Farm Bureau members in Illinois market their grain, and through the power of organization, reap the benefits of large-scale cooperation.

HIRE NEW FIELDMAN IN LIVESTOCK DEPARTMENT

Dale A. Rouse, 34, assumed his duties, effective Nov. 1, as an IAA livestock fieldman for Illinois livestock marketing in District 4, which includes east central Illinois. He is making his home at Danville, headquarters of District 4.

D. A. Rouse

Rouse is a former employee of the Vermilion County Livestock Association. He entered army service in 1943 as a private and rose to the rank of Captain in field artillery serving at the battlefronts in France and Germany.

He received four battle stars and was placed on terminal leave Oct. 15 when he returned to civilian life. Rouse was born on a cattle and sheep ranch in Wyoming and came to Illinois in 1937. He is not married.

FARM BUREAU SERUM IS INDUSTRY STABILIZER

Directors on the Illinois Farm Bureau Serum Association board during 1945 are pictured here.. Left to right: (standing) H. K. Danforth, Cambridge; Vice President Ray Cunningham, Alvin; Everett G. Reynolds, Jacksonville; William Stockley, Earlville; K. T. Smith, Greenfield; Jesse E. Tuttle, West York, and Ben Bodecker, Sutter. (Seated) Secretary S. F. Russell, Chicago; President R. V. McKee, Varna, and Dorothy Crum, office secretary. At the annual meeting, I. W. Cory, Earlville, was elected to succeed William Stockley, also of Earlville.

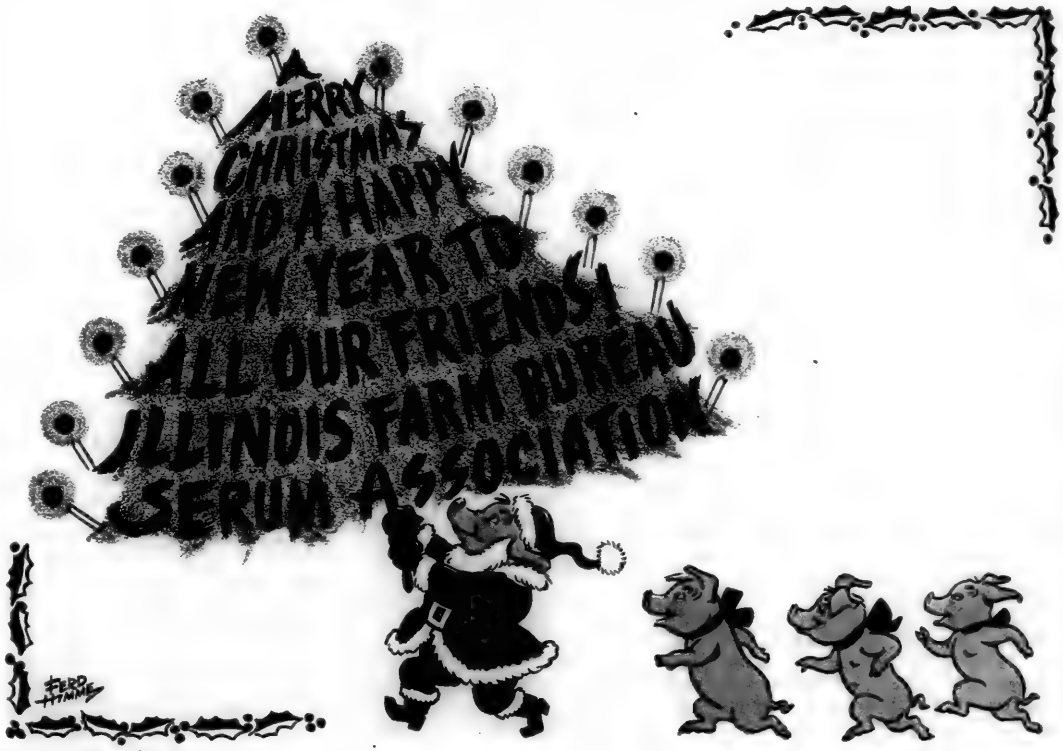
ILLINOIS Farm Bureau Association continued to exert a stabilizing influence on the serum-virus industry during the past year by furnishing a high quality product at cost to Illinois farmers.

In his annual report to the membership, Secretary-Manager Sam F. Russell stated that the association had purchased 42,410,075 cubic centimeters of serum and virus for distribution among members during the year ending Sept. 30.

This was approximately 6,000,000 cc. less than the previous year when hog production was larger. Russell said the widespread use of serum held hog cholera in check and helped a great deal to keep war production high.

After payment of $3,500 in dividends on capital stock, $65,832.03 in patronage refunds were distributed to members. Massac county became the 91st member of the association on March 10, 1945.

Counties receiving more than 1,000,000 cc. of serum during the past year were: Henry, Knox, both buying more than 2,000,000 cc.; McLean, Fulton, Warren, Pike, Whiteside, Peoria, Hancock, DeKalb, Bureau and LaSalle.



Delegation arriving from southern Illinois for annual IAA convention are, left to right: W. H. Faires, Madison; W. B. Timpner, Perry; G. G. Pape, Madison, and Tony J. Druxelius, Madison.

For the record, here is the personnel of the small committee: Guy Gee, president, Livingston County Farm Bureau; Charles Heller, president, Peoria County Farm Bureau; C. E. Yale, Farm Adviser, Lee County; M. E. Tascher, Farm Adviser, Grundy County; George E. Metzger, Field Secretary, IAA; Harry Meloy, Legal Department, IAA; and George H. Iftner, Director of Grain Marketing IAA.

Here are some of the important details of the plan as approved:

Illinois Grain Terminals Company

The statewide merchandising agency, to be known as Illinois Grain Terminals Company, would be incorporated with a total of $3,000,000 in capital stock, subscribed by producers, county Farm Bureaus, local Capper-Volstead elevators, county grain and service companies, river terminal companies, the IAA, and the Illinois Grain Corporation. Ten thousand shares of Class "A" preferred stock, $100 par value, 6 per cent cumulative, and redeemable at par and accrued dividends, would be sold to individuals. Ten thousand Class "C" preferred, $100 par value, 5 per cent cumulative, and redeemable, would be sold to organizations. Ten thousand Class "D" preferred, $100 par value, 4 per cent cumulative, would be used for patronage purposes; and common stock would be issued in sufficient amount for membership purposes only, one share to be issued to each county association and water terminal or out-of-state cooperating association.

There would be 30,000 shares of Class "B" control voting stock of no par value to be held by the Illinois Agricultural Association.

This company would own or lease terminal properties at Chicago, St. Louis and possibly at Peoria. These terminal facilities would provide for the handling of grain by truck, rail and water

River Sub-Terminals

To assure that earnings resulting purely from river operations flow back to areas affected as directly as possible, river operating companies would be organized. Each of these would require an investment by farmers and county grain companies of approximately $150,000. Each would have one or more fast-operating elevators of between 50 and 100 thousand bushel capacity. Such facilities would cost between $50,000 and $100,000. The river companies would each have $50,000 invested, in addition in the state organization for construction or purchase of terminal facilities and marine or other transportation equipment

Capitalization of these companies at river points would follow the same general pattern as that of Illinois Grain Terminals Company, except that Class "B" stock of the river terminal companies would run to Illinois Grain Terminals Company, and membership common stock of no par value would be available for issue to every Farm Bureau patron member in the grain producing areas around the sub-terminal. Such stock would be conditioned upon Farm Bureau membership, and would be cancelled if the patron ceases to be a Farm Bureau member. Such membership stock would also be made available to every qualified Capper-Volstead patron-association cooperating with the river subterminal. Farmer-producers, Capper-Volstead elevators, Farm Bureaus, and County grain and service companies would be eligible to own stock in the river terminal companies.

Several Illinois river sub-terminal companies are planned between Morris on the north and Havana on the south, and on the Mississippi at strategic points.

County Companies

Local grain-marketing facilities would include local Capper-Volstead elevator companies, plus county grain associations or Service companies in areas not served by such elevators. The county grain companies would be incorporated as Farm Bureau-type cooperatives with stock subscribed either by the County Farm Bureau itself or by producers and the Farm Bureau, with Class "B" stock running to the County Farm Bureau. Members of the company would be Farm Bureau members in the county. Proper safeguards in the way of working relations between the county grain company and the local Capper-Volstead elevators, to prevent duplication in the handling of grain and the distribution of patronage, would be set up.

This Is the Plan

Such is the plan: big in its conception, geared to modern grain marketing trends. Already it is leading to action, with organization of the river sub-terminal cooperatives under way in the La Salle, Peoria and Havana areas on the Illinois and the Dallas City area on the Mississippi, and with interest turning into action at other points along the rivers and in the grain producing country. Owned and controlled at every level by Farm Bureau members, and working with coordinated strength, it will be the agency through which Farm Bureau members in Illinois market their grain, and through the power of organization, reap the benefits of large-scale cooperation.

HIRE NEW FIELDMAN IN LIVESTOCK DEPARTMENT

Dale A. Rouse, 34, assumed his duties, effective Nov. 1, as an IAA livestock fieldman for Illinois livestock marketing in District 4, which includes east central Illinois. He is making his home at Danville, headquarters of District 1.

D. A. Rouse

Rouse is a former employee of the Vermilion County Livestock Association. He entered army service in 1943 as a private and rose to the rank of Captain in field artillery serving at the battlefronts in France and Germany.

He received four battle stars and was placed on terminal leave Oct. 15 when he returned to civilian life. Rouse was born on a cattle and sheep ranch in Wyoming and came to Illinois in 1937. He is not married.

FARM BUREAU SERUM IS INDUSTRY STABILIZER

Directors on the Illinois Farm Bureau Serum Association board during 1945 are pictured here. Left to right: (standing) H. K. Danforth, Cambridge; Vice President Ray Cunningham, Alvin; Everett G. Reynolds, Jacksonville; William Stockley, Earlville; K. T. Smith, Greenfield; Jesse E. Tuttle, West York, and Ben Bodecker, Sutter. (Seated) Secretary S. F. Russell, Chicago; President R. V. McKee, Varna, and Dorothy Crum, office secretary. At the annual meeting, J. W. Cory, Earlville, was elected to succeed William Stockley, also of Earlville.

ILLINOIS Farm Bureau Association continued to exert a stabilizing influence on the serum-virus industry during the past year by furnishing a high quality product at cost to Illinois farmers.

In his annual report to the membership, Secretary-Manager Sam F. Russell stated that the association had purchased 42,410,075 cubic centimeters of serum and virus for distribution among members during the year ending Sept. 30.

This was approximately 6,000,000 cc. less than the previous year when hog production was larger. Russell said the widespread use of serum held hog cholera in check and helped a great deal to keep war production high.

After payment of $3,500 in dividends on capital stock, $65,832.03 in patronage refunds were distributed to members. Massac county became the 91st member of the association on March 10, 1945.

Counties receiving more than 1,000,000 cc. of serum during the past year were: Henry, Knox, both buying more than 2,000,000 cc.; McLean, Fulton, Warren, Pike, Whiteside, Peoria, Hancock, DeKalb, Bureau and LaSalle.

INCREASING use of frozen foods by Illinois farm families has brought cooperative cold storage locker rentals in the state to an all-time high, according to the report made to the annual meeting of the Illinois Cooperative Locker Service Nov. 26 by Director Frank Gougler of the IAA produce marketing department.

The meeting was held in conjunction with the IAA annual convention at the Hotel Sherman in Chicago.

In spite of the war time curbs on construction, the number of cooperative cold storage locker plants has increased from 48 in 1941 to 77 in 1945. These 77 plants contain 32,417 lockers which virtually all have been rented throughout the year.

Gross income per plant increased from $16,000 in 1941 to $21,000 in 1944. Total volume of meat, poultry, fruit and vegetables stored in the lockers has reached the annual figure of 13,000,000 pounds.

Director Gougler and President Dana Cryder said a great deal of thought was being given to suggestions on how to level off the volume of produce handled by the locker plants in order to eliminate peak loads and slack periods.

Interest, they explained, is also being manifested in further expansion to include slaughter and rendering units. Plans call for slaughter units for all cooperatives and centralized rendering which would bring additional income from the processing of by-products.

Fixed assets of the 77 plants amount to $1,165,087, 60 per cent of which is represented by capital stock. Average net income of each plant amounted to $2,142.30 for an average 13.53 per cent profit above operating expenses. Because of abnormal conditions during the war years when plants had waiting lists for lockers, managers of locker cooperatives are wondering how long the demand will continue and what the post-war trend will be.

Two other questions in connection with the trends of the future are asked by locker men: How long are locker rentals and charges going to be frozen? When will costs of operation, over which the associations have no control, cease to increase or decrease?

The board of directors of the Illinois Cooperative Locker Service submitted a program at the annual meeting of the organization in Chicago Nov. 26 for the further development of services at its locker plants.

The proposal was submitted after a survey started in late August emphasized the need for more and better services to members. It was approved by delegates to the annual meeting.

Directors of the Illinois Cooperative Locker Service in 1945 are pictured here. Left to right: Earl L. Wenzel, Kirkland; Carl J. Bates, Kewanee; President Dana Cryder, Minooka; C. Ray Ward, Cropsey, and Paul Rosentreter, Carlinville. Not present is J. E. Mau, Harmon. E. A. Fosse, Marion, was named at the annual meeting to represent district 7.

CO-OP LOCKER PRESENTS NEW SERVICE PROGRAM

Meeting Dec. 4, the board set the machinery in motion to put the following proposal into effect:

Employ: 1. A general manager. 2. A service engineer. 3. A consulting engineer.

The duties of these three men and the source of income to employ such personnel to be as follows:

1. Manager's duties: Direct and supervise the services of the service engineer. Meet with local boards and managers and assist them with improving their services. Purchase all supplies needed by local plants and some of the smaller lines of equipment. The source of income to pay for this service would be from annual dues and commissions earned on handling supplies, equipment, etc.

2. Service engineer's duties: Render periodic inspection service to member companies similar to that which has been rendered during the past three years by Mr. Bodine. He would also be required to take care of emergency calls. Should the consulting engineer be unable to take care of all the business in his line, the service engineer could probably take care of some such service.

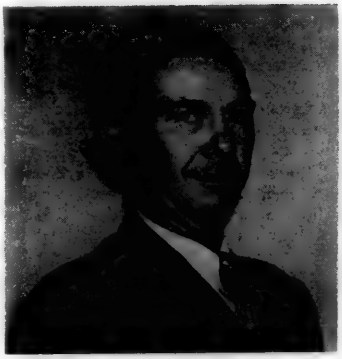
For emergency service, the state company would charge members who have paid in advance for periodic service at the rate of $2 per hour and expenses and $3 per hour and expenses to members who have not paid in advance for periodic service. The board would necessarily have the privilege of adjusting these hourly charges from time to time, to conform with prevailing charges for similar services.

Expenses would include meals and hotel costs while rendering emergency service and travel by car at the rate of 5c per mile or actual railway fare. Similar expenses would be paid by state company to cover the expenses of the service engineer while rendering periodic inspection service.

For this service, member company would pay to state company $75 per year in advance for each complete locker plant for which the service engineer would render three full days of service to each plant subscribed for by member company.

The service engineer would be employed on a salary basis.

3. Consulting engineer's duties: Render service to new and old companies with the installation of locker plants, expansion of locker plants, slaughter plants, and construction of slaughter plants or slaughter-processing plants. The work would be similar to that which Mr. Bodine has been rendering during the past two years. It would not include periodic inspection service or emergency service.

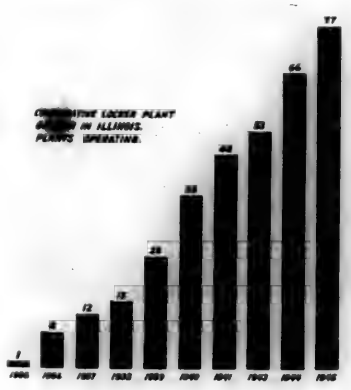


E. A. Fosse
New Co-op Locker Director

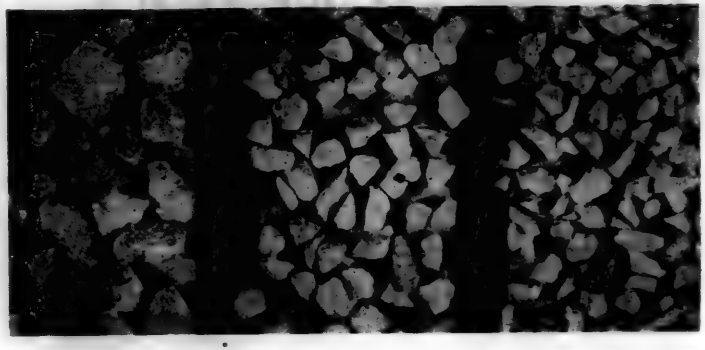
For such service the state company would charge member companies six per cent of the costs of materials going into such plants other than materials used in building construction. Five per cent of such income would be paid to the engineer. Said engineer would be required to take care of all of his expenses.

The consulting engineer would also act as a purchasing agent for the state company in the purchase of all equipment going into new locker plants, expanded plants, other plants needing equipment, not supplies, slaughter and slaughter-processing plants. All discounts, commissions and other income earned as a result of this service would accrue to the state company.

4. In order to provide operating capital for the purchase of supplies and equipment, your board of directors of Illinois Cooperative Locker Service recommends that the company secure these funds through the sale of Class "A" preferred, six per cent non-cumulative stock to member companies on the basis of 50c per locker.



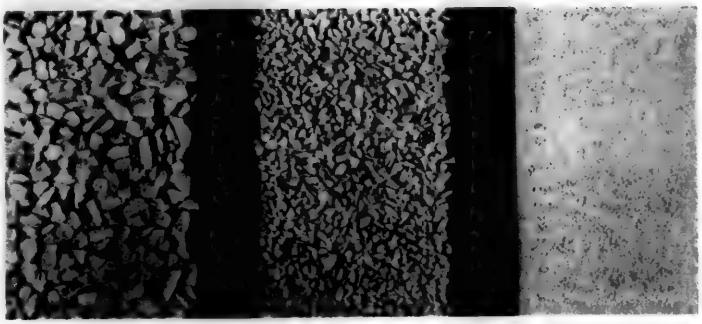
ARE YOU BUYING LIMESTONE OR ROAD ROCK?



(A) Too Coarse To Pass 4-Mesh Screen

(B) 4 to 6 Mesh

(C) 6 to 8 Mesh



(D) 8 to 14 Mesh

(E) 14 to 28 Mesh

(F) Thru 28-Mesh

Actual sizes of limestone particles separated by screens used in determining the fineness of limestone.

CHECK YOUR LIMESTONE

A ton of limestone is a ton of limestone, but one ton may be worth only half as much as another ton for use on the soil. The value of a ton of limestone depends upon its fineness as well as its purity or neutralizing power.

Limestone should be ground fine enough so that at least 80 per cent will pass through an 8-mesh screen. This 80 per cent will be made up of particle sizes at (D), (E) and (F) shown above. Limestone particles coarser than 8-mesh (A), (B) and (C) above are too coarse to be very effective in correcting soil acidity. Some of the limestone now being sold in this state has very satisfactory fineness. In some cases more than 90 per cent is fine enough to pass an 8-mesh screen, while limestone from other sources is so coarse that only 60 to 70 per cent will pass an 8-mesh screen. This coarse material is good driveway stone but not worth much on the soil, according to C. M. Linsley of the University of Illinois College of Agriculture. The fineness and purity of the limestone produced in this state is checked by the Illinois Agricultural Association and this information is available in the office of the county farm adviser.

DEAN RUSK SEES BRIGHT FUTURE FOR FARM YOUTH

OPPORTUNITIES for a fuller and richer life for farm youth in agriculture were never brighter, Dean H. P. Rusk of the University of Illinois college of agriculture said in an address before the annual conference of Illinois Rural Youth in Chicago Nov. 27.

The Rural Youth conference was held in conjunction with the annual meeting of the Illinois Agricultural Association in Hotel Sherman.

"Not all young people born on the farm should stay on the farm," Dean Rusk said. "The birth rate on farms in the United States is about 50 per cent above that needed to maintain a stable farm population. With modern equipment and methods, we probably do not need a greater farm population than at present."

Dean Rusk pointed out the increasing importance of the rural youth element in the nation's economy, not only on the farm but in the city's trade and industry. Because of the declining birth rate in the cities and the restrictions on immigration, the nation needs the vigorous surplus youth from the farms.

"Rural youth," he continued, "has been a real bulwark of democracy throughout the history of this country. I believe that this steady flow of virile youth from our rural areas to the cities may be the salvation of our democracy.

"The people who produce the necessities of life for all of us have not always had their fair share of this country's wealth; and they have sometimes vigorously protested, but they have never lost faith in the fundamental concepts which underlie our system of government," Dean Rusk said.

The head of the state agricultural college discussed the new technological developments on the farm and traced the development of the American farm from the period when very little investment was required to the present time when a large per capita investment is necessary to conduct the modern farm.

Dean Rusk told his farm youth audience to watch for further change in agriculture.

"Technological developments," he said, "during the war and those about to emerge warrant the belief that agriculture may be on the verge of further revolutionary changes.

Dean H. P. Rusk

"The growing complexity of the modern farm business," he continued, "demands as high a degree of managerial ability as the average business enterprise. The skills which any one farm worker must use are more varied than those that must be mastered by the average industrial worker. These facts emphasize the importance of intelligence, training and the mastery of skills in the preparation of rural youth for success in the agriculture of tomorrow."

Dean Rusk explained that University of Illinois college of agriculture graduates are found in a wide variety of occupations. A recent survey of 2,000 men and women listed 360 different jobs in 45 states and 11 foreign countries.

"Obviously," he said, "an agricultural background and training are good preparation for successful careers in many different fields.

"First of all we should encourage intelligent, energetic farm boys and girls who are favorably situated to consider carefully a career on the farm. But for the surplus not needed to carry on the nation's agricultural operations, the training they receive in rural activities should help to prepare them for useful participation in other areas of our complex economy."

In closing, Dean Rusk cautioned that in spite of the brightness of the farm picture, the present may be a poor time to buy into the farm business and that young people going into farming might very readily mortgage their futures by assuming too large obligations on the basis of wartime inflated values.

"Remember," he said, "there has been a recession in prices of agricultural products and in land values after every major war. Unless you can buy on the basis of long-time average returns it would seem wise to rent a while or even work for wages where other conditions are satisfactory.

"To each of you I wish the best of luck. But I admonish you to keep eternally after pertinent facts; face them frankly, and act energetically and intelligently in accordance with the facts. Do these things and you will live long and prosper without the aid of luck."

Members named to the Rural Youth State committee at annual meeting in Chicago and their alternates are, left to right: (back), Robert Temple, Estelle Jansen, alt.; Evelyn Burger, alt.; Barbara Long, alt.; L. D. Elwell, alt.; (front), Juliafern Detroy, alt.; Glen Sailer, Alfred Mangold, John Rollins and Dick Williams.

Name Topnotchers for 1945

FIVE speakers, four young men and a young woman, were rated Topnotchers in the annual Rural Youth Talkfest held Nov. 27 in Chicago in conjunction with the annual convention of the Illinois Agricultural Association.

Topnotchers and their subjects were: Robert Temple, La Salle, "The Red Cross on the Job;" L. D. Elwell, Peoria, "115,000 Organized Farmers Have Power;" Dale Lepper, Adams, "The Ideal Life Partner;" Kenneth Cheatham, Bond, "Good Recreation Creates High Morale;" and Gladys Hasler, Richland, "What is a Well-Balanced Rural Youth Program is for My County?"

Enrollment at the Rural Youth meeting in Chicago was 175 representing 47 counties.

Besides the Topnotchers, the following speakers took part in the Talkfest: Evelyn Burger, Morgan; Walter Brockmeier, Washington; Violett Rixmann, Washington; Juliafern Detroy, White; Glen Sailer, White; Allen Wilson, Whiteside; Estelle Jansen, Jasper; Joe Trainor, Livingston; Dorothy Hoerner, Livingston.

Robert Croxton, Schuyler; Winnie Nadler, Will; Glen Ioder, Bureau; Rosemary Sharp, Woodford.

Members of the 1945 State Rural Youth Committee, who assisted with the handling of attendance and who planned the program for the annual meeting were: Jewell Emmerich, Jasper; Bob Croxton, Schuyler; Willis Ennle, Peoria; Bill Thomas, Whiteside. Alternates Wanda Bradshaw, Wayne, and Tom Kerley, Brown, also were present and lent a hand to the busy committee. Singing during the meetings was led by Mary Ellen Pearman, Edgar.

Named to the 1946 State Rural Youth Committee were: John Rollins, Knox; Alfred Mangold, Macon; Dick Williams, Fulton, Bob Temple and Glen Sailer. Alternates named were: Barbara Long, Morgan; L. D. Elwell, Estelle Jansen, Evelyn Burger, and Juliafern Detroy.

Rural Youth members attended the program of general entertainment, Tuesday night, Nov. 27, provided for all farm people attending the IAA convention. Rural Youth day closed with an impromptu recreation period in the Crystal Room of the Hotel Sherman under the direction of Jewell Emmerich and Tom Kerley.

During the afternoon business session, it was decided to make the State Rural Youth Committee a part of a coordinating committee which was proposed at state Rural Youth camp last August. The proposed committee set-up became a reality with only a slight change in the manner of selecting members from Illinois Rural Youth to the National Rural Youth Committee under the American Farm Bureau Federation.

Following are the rules for the committee set-up:

1. The committee would coordinate activities of the present existing committees, which are composed of all members of the IAA committee, three members of the state camp committee, three of the Farm and Home Week committee and two of the fall conference committee, making a total of 13.

2. The committee would not supersede the present committees, but would simply handle anything that could not be handled by them. There would be a revolving chairmanship with no chairman serving at consecutive meetings.

3. The National Rural Youth delegates will be elected by the coordinating committee from a group suggested by the IAA.

4. The representatives of each committee will be elected from said committee by its own members.

5. The present committees will be retained and will not be required to consult the coordinating committee.

6. No constitution will be drawn up.

7. Emphasis is to be placed on strong cooperation with the IAA and extension service rather than on a strong state organization.

FRUIT GROWERS EXCHANGE MARKETS 1,000 CARLOADS

MORE than 1,000 carloads of strawberries, peaches, apples and vegetables were sold cooperatively for Illinois growers during the year through the Illinois Fruit Growers Exchange, according to the report of L. L. Colvis, director of fruit and vegetable marketing for the Illinois Agricultural Association, prepared for the marketing conference of the IAA annual convention in Chicago.

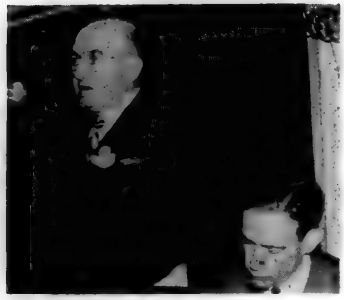
Sales of fruit and vegetables by the farmer-controlled cooperative totalled 464,307 bushels or packages, an increase of 132,000 bushels or packages over the previous year, which itself was a record high.

The Fruit Exchange Supply Company, which is a subsidiary cooperative of the Illinois Fruit Growers Exchange, is located at Carbondale and is managed by Colvis. It was set up as a purchasing cooperative as a convenience in obtaining orchard equipment and supplies.

When the purchasing cooperative was set up in 1942, purchases amounted to $81,000. For the first nine months of 1945, buying by the supply company amounted to $330,000.

With gradual release of wartime restrictions, Colvis predicted further expansion in cooperative fruit marketing among Illinois farmers. Since the end of the war, the Illinois Fruit Growers Exchange has let the contract for a new cold storage building at Carbondale. It will cost approximately $100,000 and will have storage capacity for 60,000 bushels of fruit and vegetables including facilities for quick freezing.

Winners of the title of Topnotcher in the annual Rural Youth Talkfest held in Chicago, Nov. 27 are left to right: Bob Temple, La Salle; L. D. Elwell, Peoria; Gladys Hasler, Richland; Dale Lepper, Adams, and Kenneth Cheatham, Bond.



Charles Schmitt, president, Illinois Grain Corporation, and Secretary John Butterfield at annual meeting.

Director K. T. Smith presides over public relations conference

SEC'Y ANDERSON SPEAKER

Secretary of Agriculture Clinton P. Anderson will be the principal speaker at the annual meeting of the Sanitary Milk Producers Association to be held Jan. 17, 1946 in East St. Louis. He will speak at the morning session.

HOCHSTRASSER RETURNS TO CHAMPAIGN CREAMERY

Sgt. Ira C. "Ike" Hochstrasser resumed his job as manager of the Prairie Farms Creamery of Champaign about the middle of December.

Hochstrasser has returned to civilian life after active military duty in the European theater of operations. He resumed his duties about the time of the annual meeting of the cooperative Dec. 12.

FARM ADVISER RESIGNS

Homer E. Kearnaghan, farm adviser in Jo Daviess county since November, 1938, resigned Sept. 1, to take a position with a cheese company. He will be located in Milledgeville, Carroll county. He was graduated from the University of Illinois in 1930, taught vocational agriculture at Newton, followed by four years as assistant farm adviser in Sangamon county.

ELECT DIRECTORS OF IAA ASSOCIATED COMPANIES

BOARDS of directors of associated companies of the Illinois Agricultural Association and changes made during elections at the 31st annual meeting of the IAA in Chicago Nov. 26-29 are as follows:

Illinois Wool Marketing Association: William Temple, La Salle; A. L. Doubet, Knox; Escol Oxford, Hardin; August Eggerding, Randolph, and Ronald Holt, Henry (replaces Lyman Bunting). All others re-elected.

Farmers Mutual Reinsurance Company: George F. Tullock, Winnebago; L. E. Lingenfelter, Pulaski; J. M. Beckett, Macon; George F. Hayes, Henry; J. E. Miller, Madison; George W. Lenhart, DuPage; Clifton Davis, Morgan; Claude Hiesstand, Marion; and E. B. Reeves, Grundy. Latter three were only members up for re-election. Members named from IAA board are Lyman Bunting, Wayne, and Homer Curtiss, Jo Daviess.

Illinois Cooperative Locker Service: Dana Cryder, Grundy; Carl J. Bates, Henry; Earl Wenzel, DeKalb; C. Ray Ward, McLean; Paul Rosentreter, Macoupin; J. E. Mau, Lee, and E. A. Fosse, Marion. All re-elected with exception of Fosse, new member named to fill added directorship.

Illinois Farm Bureau Serum Association: R. V. McKee, Marshall; Ray Cunningham, Vermilion; Ben Bodecker, Hancock; Everett G. Reynolds, Morgan; Jesse E. Tuttle, Crawford; K. T. Smith, Greene, and J. W. Cory, DeKalb (replaces William Stockley, La Salle).

Illinois Grain Corporation: Charles Schmitt, Logan; Carl O. Johnson, Marshall; John Butterfield, Christian; A. E. Burwash, Champaign; E. E. Stevenson, La Salle; Arthur Bertsche, Livingston; Charles Lauritzen, Kankakee; A. O. Eckert, St. Clair; C. J. Elliott, La Salle (replaces Dwight Hart); L. J. Sutter, McLean (replaces Harry Dixon); Irwin Isenberg, Madison (replaces H. P. Joy). Others re-elected were: Chester A. Hunt, Grundy; Ralph Vercler, Tazewell; Sam Yergler, Iroquois, and J. Fred Romine, Douglas.

Illinois Agricultural Auditing Association: Frank Easterly, Jackson; B. W. Horan, Mercer; Roy Edwards, Champaign; George Metzger, IAA. Re-elected were R. H. Voorhees, Jersey, and Carl A. Lage, McLean.

Illinois Livestock Marketing Association: LaRue Tice, Shelby; Mont Fox, Vermilion; Ralph Beckett, Macon; Carl Lage, McLean; Fred Smittkamp, Edgar; Charles Shuman, Moultrie; W. A. Dennis, Edgar, and Clark Wise, Champaign. All members were re-elected.

Prairie Farms Creameries: Harold W. Enns, Tazewell; D. L. Garber, Carroll; Thad Loveless, Macoupin; A. Oliver Bower, Coles; Harry Gehring, Knox; H. B. Smith, McDonough; John Sterchi, Richland; Chester McCord, Jasper; E. A. Fosse, Williamson; H. J. Schumacher, Marshall, and A. E. Meyer, Davenport, Ia. All members were re-elected.

Illinois Milk Producers Association: Ray H. Miller, DeWitt; Edwin Gumm, Knox; Dean H. Radford, Henry; Charles H. Cameron, Peoria; Anthony Grawe, Adams; A. E. Meyer, Rock Island; Lowell B. Coomber, Stephenson; B. J. Schumacher, St. Clair; George I. Maxwell, Champaign; J. Warren Ellis, Vermilion; William O'Malley, DeKalb; Harold Kamm, Morgan; O. H. Ryan, La Salle; W. A. Newman, Winnebago; Mattie Nolan, Livingston; Charles W. Krell, Sangamon; W. J. Sawyer, Cook; Glen Tombaugh, La Salle, all re-elected. Delbert Freeman, Fulton (replaces Ernest Reed); George W. Pitts, McLean (replaces William L. Mays); Carl Eislie, Peoria (replaces John Hagenstoz); Joseph Hart, Saline (replaces Fred Patterson); and William J. Kessler, Sangamon (replaces J. D. Allen).

NOTICE

Illinois Agricultural Association Election of Delegates

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the months of December and January, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During December, annual meetings will be held in Cook, Crawford, DuPage, Edwards, Henderson, Iroquois, Jackson-Perry, Jasper, Jefferson, Johnson, Kane, Lee, Livingston, Marshall-Putman, Morgan, Moultrie, Ogle, Piatt, Randolph, Saline, Stephenson, Union, Vermilion and Wabash Counties.

During January, annual meetings will be held in Bureau, Carroll, Champaign, Clark, DeWitt, Edgar, Fulton, Greene, Jersey, Kankakee, Kendall, Knox, LaSalle, McDonough, McHenry, McLean, Mason, Mercer, Rock Island, Sangamon, Tazewell, Winnebago and Woodford Counties.

PAUL E. MATHIAS,
Corporate Secretary

November 20, 1945

Soils Conference Emphasizes Crop Hunger In Illinois

★ ★ ★ ★

THE good old days when yields were high without regard to soil care are gone, Dr. E. E. DeTurk of the University of Illinois college of agriculture told a large group of farmers attending the soil improvement conference in Chicago Nov. 28.

The conference was held in conjunction with the 31st annual meeting of the Illinois Agricultural Association.

Dr. DeTurk dramatized the importance of his subject, "Hunger Signs in Crops," by comparing the effects of soil food deficiencies in plants with the effects on humans of deficiency diets.

He also illustrated graphically the benefits of a balanced soil food program with picture slides of sick and healthy plants.

Other speakers on the program included Manager C. H. Becker of the Illinois Farm Supply Company who discussed the "Outlook for Plant Food Supply," and John R. Spencer, IAA director of soil improvement, who explained the activities of the soil improvement department.

In his talk, Dr. DeTurk listed the 14 known essential elements in corn and from there proceeded to explain the general state of Illinois soil in relation to each element and the deficiency disease symptoms in corn lacking in the element.

Taking potassium as one of his examples, he explained that a plant cannot live without this element which is absorbed only through direct contact with the roots of the plant. Potassium exhaustion is evident, he said, in the leached soils of southern Illinois and the alkali lands of central and northern Illinois.

Potassium deficiency symptoms listed by Dr. DeTurk included actual plant death in early stages of growth where deficiency is severe, growth stunted with leaves close together, and stalks weak, often breaking over. If an ear forms it may be pollinated but the best seeds are at the butt becoming more and more chaffy toward the tip.

Director Spencer pointed out the notable increases in consumption of fertilizers in Illinois which amounted to 31 per cent more agricultural limestone and 25 per cent more rock phosphate than the previous year. During the calendar year 1944, he said, Illinois farmers used 4,214,000 tons of limestone — 20 per cent of the nation's consumption.

The five high counties in limestone consumption in 1944 were Lee, La Salle, Bureau, Henry and Livingston.

Spencer explained the routine operations of the department including the periodic testing of fertilizers at quarry sources. He revealed that the standards of limestone quality in most parts of Illinois are good.

Becker emphasized the increasing acceptance of regular plant food applications to the land in Illinois by pointing out the greater purchases of commercial fertilizers in 1945 compared with 10 years ago.

He predicted the purchase of even greater tonnages of fertilizers in 1946 by Illinois farmers, estimated at 230,000 tons of mixed fertilizers, superphosphate, and potash, and 375,000 tons of rock phosphate.

"These estimated quantities of plant foods for next year look enormous," Becker said, "but men like Dr. DeTurk and his associates at the University of Illinois tell us we have not yet begun to restore and maintain fertility even with that kind of tonnage.

"During the past 18 months," the Illinois Farm Supply Company manager said, "we have not been able to fully meet the demands placed upon us by farm people. Actually our organization entered the plant food business after the supply situation became acute."

In preparing to serve the mixed plant food needs of its members, Becker said his company faces two alternatives: Either to build central manufacturing plants or small regional plants.

"While we are unable to define all the details of our course at this stage," Becker explained, "our objectives are quite clear. We shall strive to make available to Illinois farm people quantities of phosphates, potash and nitrogen in straight material form for direct application. This material will be provided in grades approved by the quality control committee and as recommended by the University of Illinois college of agriculture."

Hunger signs in crops are described by Dr. DeTurk of the U. of I.

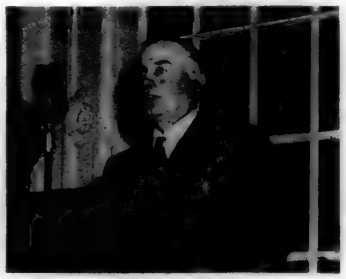
ANNOUNCE NEW WHEAT VARIETY

Prairie, a new soft winter wheat for Illinois developed at the U. of I. agricultural experiment station, was available in moderate quantities for seeding this fall.

According to the experiment station, Prairie is resistant to wheat mosaic and to the physiologic races of black stem rust that commonly occur in Illinois. It is susceptible to loose smut and leaf rust, say its originators, O. T. Bonnett and G. H. Dungan, of the U. of I. College of Agriculture.

If you want more information on Prairie, write for a copy of the new Prairie wheat bulletin No. 513, U. of I. College of Agriculture, Urbana.

Because of its stiff straw, Prairie may be grown on fertile soil, where it is best adapted; but since it is a soft wheat, plantings should, for commercial reasons, be limited to those sections of Illinois where soft wheat predominates.



R. H. Voorhees, presides at annual meeting of Illinois Agricultural Auditing Association.

Cattle given a full feed of corn on pasture paid a little more return for each $100 worth of feed than cattle fattened at the same time in drylot in each of the five years 1939-43 on farms reporting results in the Farm Bureau Farm Management Service of the University of Illinois.

Thirty years ago it required a total of 21 minutes to grow a bushel of corn in Champaign county. With the development of hybrid corn and improving farming methods, some farmers have reduced the time to about three minutes.

WOOL GROWERS IN WEAK SPOT

BECAUSE OF LARGE STOCKPILES INCREASED PRODUCTION COSTS PRICE DISPARITY BETWEEN FOREIGN AND DOMESTIC WOOLS

LARGE stock piles of foreign wool, the disparity between the price of domestic and foreign wools, and the increase in the cost of production without a corresponding increase in price put Illinois sheep raisers in a weak spot for post-war adjustments, according to the report of 1945 operations of the Illinois Wool Marketing Association by President William Temple of La-Salle county at the cooperative's annual meeting.

Reviewing the wool marketing situation for the year ending Sept. 30, Temple pointed out that a combination of factors plus increased activity of country buyers are due to favorable commissions curtailed operations of the Illinois Wool Marketing Association during the year.

Wool marketed through the association during the year amounted to 312,-366 pounds compared to 275,241 pounds the previous year. The 10 leading counties in volume handled in the 1945 pool in the order named are Vermilion, Pope-Hardin, Knox, Champaign, Morgan, Bureau, La Salle, Henry, Livingston and Adams.

An added factor in the curtailment of the association's activities was the establishment of ceiling prices and the setting up of the Commodity Credit Corporation as practically the sole buyer of domestic wool.

Consumption of wool in the United States was 1,200,000,000 pounds in 1944 of which 74.1 per cent was of foreign origin. The United Kingdom has stored in the United States 425,-000,000 pounds, over one year's domestic production. By Jan. 1, the CCC will have 500,000,000 pounds on hand.

During the six clip years since the Illinois Wool Marketing Association was organized, approximately 2¼ million pounds of wool have been marketed through the association.

An attempt was made to obtain warehouse facilities for the 1945 wool pool but after a thorough investigation in cooperation with the IAA Transportation Department it was determined that no suitable warehouse facilities were available.

Consequently wool was assembled through county wool pools in cooperation with the county Farm Bureaus which appointed county wool pool managers with the approval of the state organization. The manager received, weighed, made cash advances to growers and stored wool in a safe, dry place until time to ship.

For this service the state organization paid one cent per pound. Field advances were made as follows: clear medium, 35c per pound; fine and fed, 25c; and rejects, 20c. These high prices were made possible by the CCC-guaranteed ceiling prices to growers.

The wool was assembled in carload lots and shipped direct to Boston to the National Wool Marketing Corporation where it is graded by the National, appraised by the CCC appraisal committee and final settlement made through the state organization to individual growers.

Earnings to members who have marketed their wool through the state organization are now being paid. These patronage earnings go back to the year 1932 and will be brought up to date as soon as possible. These patronage refunds represent earnings of the National Wool Marketing Corporation of which the Illinois Wool Marketing Association is a member, and have been held up until the National obtained paid-in capital stock of $1,000,000. This has been accomplished and hereafter earnings will be paid on a more current basis.

Pres. Temple presides at wool marketing meeting. Right is Sam Russell

Here are the directors of the Illinois Wool Marketing Association for 1945. Left to right: Vice President A. L. Doubet, Williamsfield; Escol Oxford, Elizabethtown; August Eggerding, Red Bud; Dorothy Crum, office secretary; President William Temple, Serena, and Secretary S. F. Russell, Chicago. Lyman Bunting, Ellery, was absent when picture was taken. At the annual meeting, Ronald Holt, Galva, was named to succeed Lyman Bunting, Ellery.

PFC Board of Directors, left to right: John Sterchi, Olney; D. L. Garber, Mt. Carroll; H. B. Smith, Mt. Sterling; A. E. Meyer, Moline; Secretary Thad L. Loveless, Carlinville; President Harold W. Enns, Bloomington; Treasurer Harry Gehring, Galesburg; A. Oliver Bower, Champaign; H. J. Schumacher, Henry, and E. A. Fosse, Carbondale. Chester McCord, I.A.A., was absent when picture was taken.

1945 — AN OUTSTANDING YEAR FOR PRAIRIE FARMS CREAMERIES

☆ ☆ ☆

DURING the past year the name of the state creamery company was changed to Prairie Farms Creameries after a special meeting of stockholders in July. Since its organization in May, 1933, the name of the company had been Illinois Producers Creameries.

The year 1945 was outstanding in the history of the organization. During that time Prairie Farms Creameries manufactured 6,338,175 pounds of butter. Total butterfat purchases of 6,596,376 pounds are 6.52 per cent above the preceding year; 3,791,405 pounds of milk powder manufactured represents an increase of 47.12 per cent, and 601,740 pounds of cheese made is an increase of 147 per cent.

Production of butter from milk and cream sold to the cooperative by 8,162 member patrons at its 10 creameries amounts to more than a carload daily.

With plants located at Galesburg, Henry, Moline, Bloomington, Champaign, Olney, Carbondale, Mt. Sterling, Carlinville and Mt. Carroll, together with a state sales plant in Chicago, Prairie Farms Creameries has a total investment in buildings and equipment of more than one million dollars.

During the past year a new plant was built at Mt. Carroll and another is nearing completion at Henry. Cost of both plants, among the most modern and sanitary in the country, will approximate $200,000.

Farmers have now invested $751,150.76 in Class "A" preferred stock in these plants as of Sept. 30, 1945. The net worth of each dollar invested was $1.48. Since these plants were organized, Illinois farmers have been paid $532,414.03 in capital stock dividends and patronage refunds.

Since organization, Prairie Farms Creameries has maintained a strict quality program. No butter grading less than 90-score government grade can be packaged and sold or offered for sale in Prairie Farms cartons.

Purchases of new equipment during 1945 by Prairie Farms Creameries amounted to more than $250,000.

Earnings of Prairie Farms Creameries in 1945, Manager J. B. Countiss said, were such as to permit the payment of a 7 per cent dividend on all outstanding capital stock, ¾c per pound premium on 92 and 93-score butter and additional patronage refunds of 1½c per pound on free butter handled. An additional refund of 8 per cent on creamery supplies purchased by member creameries was made.

Prairie Farms service program for 1936 has been announced as follows: 1. Develop new outlets and sales for butter, powdered milk and cheese. 2. Maintain and promote quality and uniformity of all products. 3. Maintain procurement of milk and cream and further develop facilities for handling both. 4. Increase plant efficiency. 5. Develop new products and new markets for them. 6. Purchase supplies and equipment. 7. Secure and train additional help.

EARL C. SMITH
AN ESTIMATE OF HIS WORK

(*Continued from page* 19)

of two. In addition he served on three official commissions of the State of Illinois. It is Mr. Smith's stated purpose that he be relieved of all official duties with the exception of his directorships in his local bank, local church, and several of the state commissions having to do with broad policy matters of interest to the farmers of Illinois.

Since 1926 Mr. Smith has been an effective leader on both the state and national legislative fronts. His work dates back to his fight to secure enactment of farm surplus control legislation known as the McNary-Haugen bill. It was largely due to his influence that corn and hogs were included with other commodities in price stabilizing legislation, first in the Rainey-Norbeck bill introduced in Congress during the last year of the Hoover administration, and later the Agricultural Adjustment Act which was enacted into law early in 1933. The corn loan idea was adopted by AAA officials after several appeals from Mr. Smith and a mass meeting of 10,000 Illinois farmers at Peoria in October, 1933, and the writing of a mandatory corn loan provision into the second adjustment act was accomplished largely through IAA efforts. With the invalidation of the original AAA in 1936, Mr. Smith worked strenuously for the adoption of a temporary conservation program in the same year, and the passage of the second AAA in 1938.

It was Mr. Smith who spearheaded the drive for the writing of the parity formula into the AAA law, and over the years he has courageously defended this fundamental principle in the face of strong demands for a change in the formula. His position has always been, "Let's hold on to parity until we have something better that is equally as fair and defensible as our present formula."

Similarly, in the state, the IAA leader has been named as the representative of agriculture on a number of state committees and conferences appointed by succeeding governors to advise on important matters of public policy.

Under the leadership of Mr. Smith, the IAA has fought for many years for a fair revenue amendment to the state constitution, and for legislation to reduce and replace at least part of the burdensome property tax which rests so heavily on farms, homes and other tangible property. The IAA campaign in this respect has been highly successful.

Mr. Smith has worked hard and long for another benefit that is close to the hearts of all farmers — better roads. In the recent session of the General Assembly at Springfield, the IAA successfully sponsored legislation which provided an appropriation of 15 million dollars for the construction of township and road district roads, better known as farm-to-highway roads. Mr. Smith had a major part in the writing of this bill, placing special emphasis on provisions to see that farmers would get the most roads for the money expended.

This short article can in no way relate all of Mr. Smith's contributions. It has merely been an attempt to touch some of the highlights in his 20 years of service. As was pointed out in the beginning of this writing, no printed word can add to the niche he has made for himself in the hearts of farm people and in the structure of American agricultural history.

While retiring from active leadership of the IAA, there is no doubt that Mr. Smith's advice and counsel will be sought in order to draw on the many years of his rich experience. Such advice and counsel he has assured to the new president, the board of directors and staff members to the extent it may be desired.

NEW IAA DIRECTORS

(*Continued from page* 15)

1929, and also served as treasurer for 10 years. He resigned as its president this year, but continues to serve on the board.

Mr. Eaton is a charter member and has been a director of the Madison County Farm Bureau, and has served as secretary of his local elevator, the Hamel Cooperative Grain Company, for 25 years. Mr. Eaton operates a 224-acre dairy farm and has a herd of 25 Holstein and Jersey cows. He is an advocate of sound soil conservation practices and his farm has been used as a demonstration unit on many tours.

Mr. Eaton is a trustee in St. John's Methodist Church in Edwardsville and is a member of the choir. He is also a member of the Edwardsville Rotary Club. The farm on which he lives has been in the Eaton family for more than 100 years. He has one son, Harrison, who works on the farm with him. Mrs. Eaton is the former Anna May Hamilton of Hamel township and was married to Mr. Eaton in 1911. Mr. Eaton has served as Hamel township trustee for 12 years.

Directors whose terms expired at the annual meeting and who were re-elected were: C. J. Elliott, Streator, La Salle county, 12th Congressional district, which includes DeKalb, Winnebago, Boone, La Salle, Kendall and Grundy counties.

Otto Steffey, Stronghurst, Henderson county, 14th Congressional district, which includes Warren, McDonough, Hancock, Henderson, Mercer and Rock Island counties.

K. T. Smith, Greenfield, Greene county, 20th Congressional district, which includes Pike, Calhoun, Jersey, Greene, Scott, Morgan, Brown, Cass, Menard and Mason.

Lyman Bunting, Ellery, Edwards county, 24th Congressional district, which includes Clay, Wayne, Edwards, Hamilton, White, Saline, Gallatin, Johnson, Pope, Hardin and Massac.

RETIRING DIRECTORS

(*Continued from page* 19)

a member of the Illinois Farm Supply Company board for five years. Mr. Dennis is a Jersey cattle breeder and operates a dairy and livestock farm near Paris.

When Mr. Dennis was first elected to the IAA board in 1930, he said, "I have helped in a small way in Farm Bureau work ever since it was started as I have long been convinced of the necessity of farmers organizing. . . The IAA is without question the most courageous, active, and successful state association, and I have the utmost respect for the ability of the officers and directors who have developed it."

Mr. Dennis has five children: Barbara, a WAC sergeant in Berlin; Herbert B., discharged after four years as a Navy lieutenant; Dorothy, a petty officer in the WAVES; Betty, a senior at the University of Illinois, and Charles H. Dennis, II, fifth grade pupil in country school. Mr. Dennis, who was born in Chicago, March 25, 1888, is the son of the late Charles H. Dennis, former editor-in-chief of the Chicago Daily News.

McLEAN ASSISTANT ADVISER

Eugene G. Mosbacher, 27, of Monroe county has been named associate farm adviser and 4-H club leader of McLean county. He took over his duties in Bloomington Dec. 1.

Mosbacher, recently released from army duty after 3½ years during which he served as an artillery lieutenant in the European theater, succeeds Paul V. Curtis, who resigned to raise hogs.

He was graduated from the University of Illinois college of agriculture in 1940.

"May Your Days Be Happy And Bright
And May All Your Christmases Be White"

There is a special warmth that we in the insurance business feel this time of year. For by insuring the property and growing crops of Illinois farmers, we help provide assurance that there will always be a Christmas on Illinois farms. May we extend to you our wishes for the happiest of Holidays.

LET US ASK YOU ONE VITAL QUESTION:

"IS THAT SAFETY STRAND A STRONG ONE?"

• THE FARMER who rents often enjoys advantages that do not exist for the owner-farmer. There may be one weak link in his position, however, and that is the predicament facing his family should he be removed by death. The wife of the man who owns his farm may hire a man and carry on . . . but this opportunity is not available to the wife of the tenant farmer. Suddenly she finds herself without a means of livelihood. Unless there is a grown son in the family to take the husband's place, she must move off the farm and seek other means of providing an income. This is why insurance is imperative for the tenant farmer. He must provide a STRONG *safety strand* . . . a lump sum or regular income . . . for those he leaves behind. How strong is YOUR *safety strand*? Discuss it soon with your Farm Bureau insurance representative.

COUNTRY LIFE INSURANCE COMPANY

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

A Message From President Shuman

IN BRINGING you my first official message after assuming the responsibilities of leadership in our great organization, I have mixed feelings of confidence and humility — humble in the realization of the magnitude of the task you have assigned me, confidence that your continued loyalty and support will result in the successful solution of our many and great problems.

I fully appreciate the great trust you place in me as the one chosen to assume the duties and follow the path charted by one of the great leaders of our time, Earl C. Smith. With a sound record of accomplishment behind us, with the assistance of the loyal, capable staff of officers, directors and employees and with the support of 117,570 Farm Bureau members, we can face the future with renewed determination.

New and challenging problems have arisen and will continue to arise. We dare not look backward or rest on our laurels. We have demonstrated what can be done by building our entire organization on the ideals of service. Now that we know our strength, we must courageously accept the challenge of even greater problems. Within our own state we have many problems, such as those relating to cooperative marketing, taxation, rural schools, farm-to-highway roads, rural electrification and rural health. The proper solution to most of these problems will depend upon local action. Our township and County Farm Bureau organizations must grasp this opportunity for greater service. During the war emergency, our great concern was increased production. The war is over, we must swing into action on broader fronts of service to farm people.

In the state and nation we are faced with a wave of unrest and uncertainty. Our organization may well be the balance wheel during these turbulent years. The nation has need for clear thinking — the kind of thinking that farmers can do as they work together. Individuals can do little to cope with the great power of labor, of business, or the government itself. As General Eisenhower recently said, "Weakness cannot cooperate with anything, only strength can cooperate." If we are to make our influence felt and assist in the preservation of our Democracy, we must have an even stronger organization. Toward the accomplishment of this goal, I pledge to you my continual efforts. My earnest prayer is that we all, as members and leaders in this great organization, may meet and solve our coming problems with the same Christian concern that we have had in the past for the welfare of all the nation. Agriculture will prosper as America prospers.

The Illinois Agricultural Association RECORD is published monthly except August by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

STATE ALLOCATES $10,000,000 *for* FARM-TO-HIGHWAY ROADS

RULES and regulations for the construction of farm-to-highway roads under the bill appropriating $15,000,000 from state funds for such roads have been announced by the Division of Highways of the State Department of Public Works and Buildings.

The Division has also allocated $10,000,000 from this appropriation to the counties and the townships and road districts. Under the law, no more than $10,000,000 can be made available in any year.

The Illinois Agricultural Association sponsored the legislation providing these funds in the General Assembly at the last regular session and is much interested in the administration of this law.

Under this law and appropriation, the state for the first time recognizes some obligation for the improvement of these local township and road district roads.

Of approximately 105,000 miles of road in the state, more than 75,000 miles are township and road district roads.

The law provides that after deducting certain amounts for administrative and engineering expense, the funds shall be allocated among the several counties and the townships and road districts in proportion to their mileage of these township and road district roads. The amount allocated to each of the counties is shown in the table at the end of this article.

Under the law the roads to be improved from these funds are to be selected by the county superintendent of highways in cooperation with the township and road district commissioners. They are also to prepare the plans for the improvement of the roads so selected. The State Department of Public Works and Buildings, through the Division of Highways, approves the plans and has general supervision of the work and disburses the funds to the counties.

The Association, and the members of the legislature who introduced and supported this legislation, were concerned that the standards of design for these roads be held to the minimum in order that the maximum mileage of improved roads might be obtained from the funds available.

The rules and regulations as announced recognize that the same standards of design are not required for these roads as are necessary for roads carrying a heavier volume of traffic.

For roads carrying more than 100 vehicles per day, the rules and regulations require that the Department's design policies for Federal-aid secondary roads be used.

For roads carrying less than 100 vehicles per day, the rules and regulations require a minimum right-of-way of 40 feet, with more where needed for construction purposes and a minimum road bed of 20 feet (shoulder to shoulder).

They require only a minimum of grading and realignment or relocation and as to surfacing, provide — "For all types of gravel or stone surfaces, the requirement will be; not less than 4 inches thick (loose measure) and not less than 10 feet wide, or the equivalent volume. For oiled earth surfaces, the oil shall be applied not less than 12 feet wide and not less than .5 gallon per square yard for new graded roads or not less than .25 gallon per square yard for re-oiling. Once a road is oiled using these funds, the township will be expected to re-oil at such intervals as is necessary to keep the road in satisfactory condition and to protect the original investment".

Under the legislation and the rules and regulations for its administration the local commissioners of highways, together with the county superintendent of highways, have a great deal of discretion both as to the selection of the roads to be improved and as to the type of improvement to be made.

Farmers and others interested in road improvement should cooperate and work with these local officials in order that the maximum benefit may be derived from the use of these state funds. The funds available are not sufficient of course to surface many miles of road in any one township.

However, in the state as a whole the mileage will be substantial. Meanwhile the special commission to plan a future program for the improvement of our roads and particularly these local roads will, it is hoped, develop some plan for continued state contributions toward the cost of surfacing these local roads.

FARM BUREAU *Turns to* POST-WAR TASK

THE farmers of the American Farm Bureau Federation again dedicate themselves, in harmony and union with all American people, to the Nation's new task — leading a war-worn world to peace.

These words, taken from the foreword of the 27th annual convention resolutions of the American Farm Bureau Federation, may well bring a thrill of pride to every Farm Bureau member who reads them. They are not mere words. They are backed up by past performance and records.

This devotion to the national welfare was reflected in all the deliberations and resolutions adopted at the convention, which drew a registration of 3500, the largest attendance in history. In considering postwar programs and in making recommendations, Farm Bureau delegates approached today's momentous problems with a view as to how agriculture could best pull together with all other groups. There were no "me-first" expressions in any of the proposals on broad national questions.

The question of parity figured prominently in the convention discussions and in the addresses of guest speakers. With so much talk today of the need for a change in the parity formula, it is interesting to note that farmers were advised to hold on to the parity principle, if and when changes in the parity formula were made.

Said Secretary of Agriculture Clinton P. Anderson in addressing the convention: "The farmer should hold firmly to the parity principle, which is his first and to date his best measure of the balance of agriculture in the whole economy. If parity needs to be changed, I believe the farmer and his friends should make the change."

President O'Neal (left) pins AFBF's highest award for distinguished service to American agriculture on coat lapel of retiring Vice President Earl C. Smith.

Secretary Anderson added, however, that there was need for some adjustment in the parity formula as it applied to certain commodities.

He further stated that he was not "committed to any particular formula. I do believe we should consider various possibilities with extreme care, taking into account the many great changes taking place today."

IAA Organization Director O. D. Brissenden (left) reads list of Illinois counties honored in membership drive. Counsel Donald Kirkpatrick (right) talks before AFBF general session.

Discussing reconversion, Secretary Anderson said, "Agriculture is willing to be the lead horse. It is not, however, willing that the rest of the team shall lag in the traces and expect the farm to carry the whole load. Farmers have tried it before with disastrous results to themselves and to the nation. If we are going to use the great productive capacity of America we must have a well matched team with agriculture, labor and industry, pulling together to achieve the high standard of American living we are so capable of producing."

Congressman John Flannagan of Virginia in his discussion of parity said: ". . .There can be no doubt about the soundness of the parity concept. The trouble comes when we attempt to put the concept into practice by establishing parity prices. . . What we should do is this: We should reexamine parity and work out a formula that will, as far as humanly possible, level down the present valleys and peaks, and bring about the proper price relationship with respect to all farm products.

"And, may I add, that in my opinion it is humanly impossible to write with one stroke of the pen a parity law that will hold good on down through the years. We will, if we maintain even approximately correct parity prices have to modernize the law from time to time. Having established parity prices, the job, however, is only one-half completed. It is an idle gesture to establish parity prices unless we take the next step and make parity prices effective."

Congressman Flannagan also declared that if we are to place farming

Jose Ramon Quinones, colorful delegate from Puerto Rico, gestures as he talks before session of AFBF convention.

on a business basis it was necessary to get rid of farm subsidies and roll backs on farm products.

President Edward A. O'Neal, in his annual address, had this to say about parity: "The parity concept has served agriculture well . . . It is natural that, as conditions change, there will be real need for adjustments of the formula, and I'm for that. But before any changes are made, let's be sure that the changes are sound.

. . ."The most promising proposal I have seen is to take the actual average price for the 10 preceding years and then adjust it to reflect the economic balance that existed between agriculture and industry during the base period of 1910 to 1914. For 1945, the years 1935-44, inclusive, would be used.

"Using actual average prices for the preceding 10 years would automatically allow for the changes that are constantly taking place in agriculture. It would have the further greater advantage of maintaining a fair relationship between basic feed crops and the livestock products into which feed is converted. . .

"It would be folly in my opinion, to discard the 1910-14 period as a base, because there has been no other period during the past 50 years, in which prices were so stable, and in which economic relationships between groups were so equitable.

"By using the 10-year moving average of prices, as I have suggested, we in effect modernize the formula and still keep the 1910-14 base for its overall relationship between groups."

In the AFBF resolution on parity, the Farm Bureau announced that it would support the present parity formula as now applied to the six basic crops (corn, wheat, cotton, tobacco, rice and peanuts) until such a time as a new formula is developed that is fairer and more defensible than the present parity formula for any or all basic crops.

"We insist, however," the resolution stated, "that steps be taken to develop immediately a plan for livestock, livestock products, dairy products, and any other agricultural commodity not fairly treated under the present parity formula that will give the respective commodities equitable treatment.

Allan B. Kline of Iowa thanks the delegates after being elected AFBF vice president to succeed Earl C. Smith of Illinois.

. . ."In any consideration given to a revision of present parity, we recommend that care be taken that no irrational steps be effected that will nullify the government's guarantee of continued support prices."

The national fertilizer program was another topic covered by guest speakers at the AFBF sessions.

Robert Temple, 19, (left) LaSalle county, receives trophy from President O'Neal after winning National Rural Youth Talk Fest.

Congressman Flannagan and Senator Lister Hill from Alabama outlined the National Fertilizer Policy Bill which they are sponsoring in Congress. Senator Bankhead and Senator Hill are cosponsors of the bill in the Senate and Congressman Flannagan sponsored the bill in the House of Representatives. This bill is the key to the fertilizer program based on scientific facts prepared by the American Farm Bureau Federation.

Both Congressman Flannagan and Senator Hill warned that there would be considerable opposition to the bill in Congress, with most of the opposition coming from the National Plant Food Council, which they said, represents the fertilizer interests.

According to Hill, under this bill the goal would be to make it possible for farmers to buy the plant food they need for their own soil. It would also modernize the formulas for farm fertilizers and eliminate the wasteful processing of unneeded inert matter.

"But the tragedy," Senator Hill said, "is not alone that present fertilizer production and practices are as out-of-date as a 1925 automobile. The greater tragedy is that we are removing twice as much plant food from our soil through cropping, erosion, and leech-

Seven members of the Illinois delegation to the American Farm Bureau Federation convention Dec. 17-20, in Chicago are shown during a general session in Hotel Sherman. All members of the IAA board of directors, they are, left to right: C. J. Elliott, Lyman Bunting, K. T. Smith, Vice President F. E. Morris, Chester McCord, President Charles B. Shuman and Otto Steffey. Elliott substituted at the final sessions for August Eggerding who was taken ill.

H. L. Wingate (*Georgia*) | Walter Randolph (*Alabama*) | R. E. Short (*Arkansas*)

Smith Paid Tribute

BY AFBF LEADERS

"MY INTEREST in the Farm Bureau movement will not diminish. And my devotion to the farm people of my state or of this nation will never waver. . ."

With these words, Earl C. Smith retired from the vice-presidency of the American Farm Bureau Federation at the December annual meeting.

His closing message to the convention came after he had received many eloquent tributes to his services as a national farm leader and after he had received the Farm Bureau's highest recognition, the AFBF's award for Distinguished Service to Agriculture.

One tribute which cited Mr. Smith's greatest contribution to American agriculture and the Farm Bureau was contained in the words of R. E. Short, AFBF board representative from Arkansas.

Said Mr. Short in part: ". . .I don't know what the history books will say about the Farm Bureau. I don't know what the history books will say about this combination we have had for these several years, Edward O'Neal and Earl C. Smith, but I am certain there is one thing it will say. They will say the greatest contribution during this period of time has been the bringing together of American agriculture as never before in the history of this or any other nation."

Mr. Short said that Mr. Smith had made a great contribution in this field in breaking down regionalism and commodityism and bringing about a realization that after all the great problems confronting agriculture are common regardless of the area.

"I can truthfully say," he asserted, "that in all of our deliberations Mr. Smith has never shown in the least any provincialism or sectionalism or commodityism. . . It has been a great source of information and inspiration to me to have had these past 10 years in serving on the board of the AFBF with Mr. Smith — to have had his counsel, his cooperation and his guidance."

Earl C. Smith, retiring IAA president, explains to AFBF delegates his reasons for wishing to retire as vice president of the American Farm Bureau Federation.

H. L. Wingate, AFBF board representative from Georgia, in explaining to the delegates why Mr. Smith's name was not mentioned during the nominations, said:

"Mr. Smith would have been elected unanimously at this convention had he allowed his name to have gone before the convention. I have never witnessed a group that was more disturbed about any one thing than they have been about the fact that Mr. Smith has declined to accept this position. He has definite reasons and they are very good reasons . . . We feel that Mr. Smith could have rendered us an even greater service in the years to come. But I want you to know that we recognize his feelings in this matter. He has a great desire to continue to help in every way in the world that he possibly can, and he is offering that assistance."

Mr. Smith had advised the AFBF board on the Saturday preceding the convention that he was retiring from active service, but many of the delegates were unaware of his action.

Walter L. Randolph, Alabama, a member of the AFBF resolutions committee, then made the following motion which was unanimously adopted by the delegates:

"For more than 20 years, our retiring vice-president, Mr. Smith has rendered distinguished service to American agriculture. He has contributed leadership and work far beyond the call of duty. And at this time I do move that all of the rules be suspended and that the President be directed to confer upon Mr. Earl C. Smith of Illinois a Distinguished Service Award."

As President O'Neal pinned the Distinguished Service medal on Mr. Smith, he said, "I know of no greater honor than to do this . . . . I don't know of a more forthright man . . . or one who has done so much for the farmers of this nation."

Following the acceptance of the award, Mr. Smith said, "This is the first time in 26 years that I have looked into the faces of an audience where I didn't carry official responsibility somewhere in the Farm Bureau movement of my county, state or nation. My heart is not only seeping, but overflowing with gratitude and appreciation for the wonderful opportunity the farmers have given me in the field of broad service.

"Whatever I have contributed has been from the heart, the mind and from the overwhelming conviction that the farmers of this nation are what many recognize them to be but only a few treat them as being, the salt of the earth, the hope of a nation."

Mr. Smith reviewed his reasons for withdrawing from active leadership in the Farm Bureau as he did before the IAA convention and explained that he planned to use some of his new leisure to become reacquainted with his neighbors in his community.

At the same time, Mr. Smith declared that, "I have an abiding conviction that the greatest service this organization or this great nation can render to other nations of the world is to get out and make democracy work in America and thus constitute a real ideal for the folks of other nations to

Text of Resolution On Mr. Smith's Retirement Adopted at AFBF Annual Meeting.

Since our distinguished vice-president, Mr. Earl C. Smith, has seen fit to retire from active leadership in the Farm Bureau, this convention on behalf of the entire membership, desires to express its deepest appreciation for the magnificient contribution that Mr. Smith has made to the Farm Bureau movement during his long service as president of the Illinois Agricultural Association, and as vice-president of the American Farm Bureau Federation.

During the long years of our association with Mr. Smith, we have come to respect his clear thinking, his sound judgment, his fairness in debate, and the high ethical standards he has always maintained. We regret his withdrawal from active leadership, but we agree that he has earned respite from his arduous duties, and we wish for him and his devoted wife long years of happiness and contentment.

follow.

"To that purpose, I dedicate whatever ability I may have. And while I have asked and you have kindly consented for me to retire from active leadership, I want President Ed to know and I want his board of directors to know that whatever investment you folks may feel you have in me in the way of experience will be available freely in the fields of counsel and advice in the years ahead.

"My only hope and constant prayer will be that I never do anything in my remaining days that will in any way reflect upon the confidence and the devotion that has been extended to me by the farm people of this great nation."

Grain Merchandising Program Moves Ahead

FURTHER developments in the Illinois Agricultural Association's comprehensive plan for cooperative grain merchandising have been reported from Illinois areas chiefly affected by the new project.

The Western Illinois Grain Company, organized recently by the Hancock, McDonough, Warren and Henderson County Farm Bureaus, is negotiating a purchase contract for the properties of the Dallas City Grain and Feed Company.

By purchasing the Dallas City company, the new Farm Bureau grain cooperative would become the first Mississippi river operating company. The purchase would also mark the first important step in the new state-wide grain merchandising project.

The new Farm Bureau and IAA-controlled grain merchandising cooperative is expected eventually to be a $3,000,000 concern headed by the new Illinois Grain Terminals Company. The function of the state organization would be to merchandise the member's grain in the nation's and the world's markets.

A system of barges and towboats, operating between river subterminal points, and possibly trucking systems, would help realize for farmers the full savings of water transportation.

Farm Bureau leaders of Mason, Logan, Menard, Cass, McDonough, Schuyler and Fulton counties have already filed papers of incorporation for the Havana River Grain Company and have acquired 300 feet of river frontage at Havana for the erection of a modern river terminal as soon as building conditions will permit.

County Farm Bureaus in the seven above-mentioned counties have held preliminary meetings in connection with the perfecting of the organization of the new river company.

Henry T. Marshall of La Salle county, president of the Prairie Grain Company which will eventually operate river terminals between Seneca and Peoria, reports that Farm Bureau approval has been voted in the nine counties in the area.

The board of directors met recently and adopted a constitution and bylaws and made preliminary plans for a stock-selling program to finance the Prairie Grain Company. Counties taking part in the organization of the Prairie Grain Company are: La Salle, Lee, Marshall-Putnam, Woodford, Peoria, Stark, Henry and Bureau.

Western Illinois Grain Company has also started a stock-selling campaign following a meeting Jan. 11 in Macomb. Western Illinois Grain directors are: Emory W. Ward, Ferris; Irving M. Graham, Carthage; Leo W. Worden, La Harpe; Marion E. Herzog, Blandinsville; R. E. Keithley, Macomb; Ira W. Huston, Roseville; E. H. Kirkpatrick, Roseville; L. W. Ross, Stronghurst and Otto W. Steffey, Stronghurst.

Attending the first school for managers of grain elevators in Chicago in December were, left to right: Charles McNair, Eugene Hoerner, Robert Sherrard, Verne Hoar, Edwin E. Jones, Robert Welty, Harlow Boyd (standing), Charles Votamier, Clarion Kallern, G. H. Iltner (standing), Ross Thomas, William Skaer, Forrest Hunt, Charles McDonald and Fred Heck. School stressed fundamentals in marketing.

Summary of

RESOLUTIONS

Adopted by

FOREWORD

FOUR year ago the farmers of the American Farm Bureau Federation, in session at the time of the attack on Pearl Harbor, dedicated themselves unreservedly to the task of war. Today the farmers of America can with pride say they have kept that pledge.

The farmers of the American Farm Bureau Federation again dedicate themselves, in harmony and union with all American people, to the nation's new task — leading a war-worn world to peace.

PARITY

In some cases the parity formula as now applied does not give equitable treatment to certain commodities, especially livestock and dairy products. To avoid inequities, the legislation permitted the computation of comparable prices. This provision, however, has only been used in a limited manner with consequent inequalities.

We, therefore, will support the present parity formula as now applied to the six basic crops until such time as a new formula is developed that is fairer and more defensible than the present parity formula for any or all basic crops.

We insist, however, that steps be taken to develop immediately a plan for livestock, livestock products, dairy products and any other agricultural commodity not fairly treated under the present parity formula that will give the respective commodities equitable treatment.

In any consideration given to a revision of present parity, we recommend that care be taken that no irrational steps be effected that will nullify the government's guarantee of continued support prices.

POSTWAR FARM PROGRAM

The present national farm program is the outgrowth of basic laws enacted by Congress as a result of 25 years of struggle for economic equality. Because of this basic legislation, farmers are in a much more favorable position now than at the end of World War I. We reaffirm our support of these basic laws. We recognize, however, the necessity for adjustments to meet changing conditions in the postwar period.

We believe that greater emphasis should be given to efforts to stimulate increased consumption of agricultural commodities through concerted efforts of all interests in a long-time food program to provide the American people with an adequate diet.

We urge the retention and strengthening of the Agricultural Adjustment Act and related measures, including the conservation of soil, water and forest resources; machinery for acreage adjustment; mandatory commodity loans and marketing quotas for basic commodities; continuation of Section 32 funds to promote the disposal of surpluses in domestic and foreign outlets.

We will oppose any efforts to repeal or circumvent the spirit of any agricultural law directed toward the support of farm prices during the postwar period.

We recognize the importance of marketing agreements and therefore favor the enactment of legislation to extend the benefits of the Agricultural Marketing Agreements Act of 1937 to any agricultural commodity.

We reiterate our previous recommendation for the improvement of administration and the coordination of all agricultural programs and insist upon continued efforts to eliminate duplication and overlapping of functions. We insist further that greater authority and responsibility be vested at both county and state levels in the administration of agricultural programs.

INTERNATIONAL COOPERATION

This nation, through no direct choice of its own, finds itself in a position of world leadership which it cannot avoid. To default this trust would break faith not only with those who have died in battle, but also with future generations.

We earnestly believe it is our solemn obligation to remain the citadel of democracy. One of the outstanding contributions this nation can make to a war-weary world is to make democracy really work here at home.

The American Farm Bureau Federation has supported and will continue to support aggressively the United Nations Organization, the Bretton Woods monetary agreements and the International Food and Agricultural Organization. We insist that this nation do everything in its power to make these programs work in an effective manner.

The establishment of adequate international laws is essential to world peace. Powers delegated to an international organization for the enforcement of peace should be adequate to cope with the threat of destruction by the use of atomic bombs and all other means of warfare without surrendering the sovereignty of the respective nations other than necessary to effectuate these ends.

We favor long-term capital loans to other nations as a means of increasing the productive and consumptive capacities of the countries involved. But we do not believe that continued gifts are in the best long-time interest of either the nation receiving the gifts or of this nation.

We believe, however, that this nation should furnish food and other necessities of life to the devastated countries to the fullest extent of our ability especially this current winter.

We strongly recommend that our Department of State be strengthened greatly in order to represent our nation more adequately in international affairs. We favor strengthening the Office of Foreign Agricultural Relations of the Department of Agriculture.

The American Farm Bureau Federation earnestly recommends that this nation place great emphasis upon the development of a clear cut foreign policy on a non-partisan basis that will be discussed freely and understood clearly by the citizens of this nation and the other nations of the world. This foreign policy must be consistent with our high Christian ideals and must meet our opportunities and responsibilities of international leadership.

FISCAL POLICIES AND TAXATION

If this nation is to remain solvent and meet its obligations, it is imperative that we maintain a high national income and a heavy tax program for many years to come. Our national fiscal policies must be handled prudently in view of the magnitude of the national debt.

We look with disfavor upon the activity of certain business and labor

groups to reduce taxes or to obtain exemptions from the tax rolls at a time when federal deficits are still mounting. We believe that the only justifiable changes in taxes under present conditions, are those necessary to provide a high level of production and employment.

We favor keeping the personal income tax base as broad as practicable through the retention of low exemptions and the avoidance of a general federal sales tax. The income from all future issues of government bonds should be taxed like other income.

Corporations should be exempted on that portion of their annual earnings distributed to the stockholders as dividends where such dividends are taxed in the hands of the stockholders. A reasonable proportion of corporate earnings retained should be taxed on a graduated scale.

Federal excise taxes should be largely limited to amusements and taxes on the so-called luxury goods, including alcoholic liquors and tobacco. The transportation tax on the movement of goods should be repealed.

The federal gasoline tax should be reduced to one cent a gallon and should not exceed that amount. This tax should be paid only on gasoline used for transportation and all of the money so raised should be expended for construction and maintenance of transportation facilities.

The federal government should declare a definite public policy in regard to replacing taxes lost to local governments through the acquisition of property by the national government.

The federal social security taxes should not be increased until a study of the entire problem is made. Taxes for unemployment compensation should be levied upon employer and employe alike.

The American Farm Bureau Federation will continue to support the right of income tax exemption to those farmer cooperatives which do business with farmer members and otherwise comply with the restriction of the exemption provisions of the present law. The federation also will continue to support the right of non-exempt farmer cooperatives to make distribution of their margins or savings to members without subjecting such cooperatives to taxation on patronage refunds so distributed.

PRICE AND WAGE CONTROL

The American Farm Bureau Federation was one of the first organizations representing a large segment of our society that insisted upon the control of inflation and has consistently supported measures for this purpose. We again reaffirm our position in favor of an aggressive program to control inflation.

Closely following the reading of the AFBF resolutions during national convention in Chicago Dec. 17-20 are (left to right): IAA President Charles B. Shuman, Vice President Floyd E. Morris and Secretary Paul E. Mathias.

As a guarantee against runaway prices, we recommend that the purpose of price control legislation be effectively administered until June 30, 1946, and from then on only on those commodities for which the supply is not enough to meet the demand.

We reaffirm our opposition to subsidies in lieu of fair prices at the market place. Subsidies should be removed as rapidly as possible and price ceilings adjusted accordingly.

We do not believe that the removal of wage controls in an indiscriminate manner is in the best interest of the nation. Wage increases must not be such as to necessitate price increases.

We insist that a monetary fiscal and tax policy be adopted which will contribute to correcting the basic causes of inflation. Agriculture is at full production and insists that steps be taken immediately to get full production in other industries.

INTERNATIONAL TRADE

We recommend that this nation adopt a positive foreign trade policy to expand on a sound basis the volume of trade and exchange among all nations consistent with the standard of living this nation must maintain.

We believe the development of an aggressive foreign trade policy is one of the "musts" of our postwar program.

We insist that our foreign trade policy be conducted on a sound basis. It must be realized that this nation has to be willing to import goods and services from other nations if we are going to export our products and our capital. We recommend that the appropriate agency of government give careful study to means of increasing our imports of products and services which will be consistent with the best long-time interests of the nation and will not unduly disrupt our economy.

We favor the gradual reduction of trade barriers. All nations of the world should have access to essential raw materials. We reiterate our support of international commodity agreements and recommend that the program be expanded to deal with other commodities for which there are likely to be world surpluses.

The American Farm Bureau Federation again repeats its urgent request and reiterates its willingness to support an international trade conference. America must aggressively support such a conference and insist that this conference take time to deal effectively with trade problems.

CREDIT AND RURAL HOUSING

We urge the early enactment of the Flannagan bill to place under the direction of a single independent national policy-making bi-partisan board all farm credit agencies now under the Farm Credit Administration, the Farm Security Administration, and all governmental direct lending agencies making loans to farmers or farmers' cooperative associations. We reiterate our previous recommendation urging close cooperation of the veterans administration with the Farm Credit Administration and farm organizations in order to safeguard veterans against exploitation through unwise loans and against the purchase of farms at inflated prices.

We view with concern the growing tendency to expand greatly the number and scope of Government lending agencies and to bring about undue dependence upon Government credit. It is time to call a halt to this alarming trend.

We recognize the need for improvement of rural housing, but we believe this need can be met by utilizing existing credit agencies and private credit facilities. The improvement of housing is the primary responsibility of land-owners, local people, and local credit institutions. It is unnecessary and unwise for the federal government to embark upon a gigantic program to promote housing construction through the establishment of a new system of government loans by the Secretary of Agriculture or through the over-extension of government lend-

With the school divided into two rooms, pupils get benefit of more individual attention. More classmates provide necessary competitive stimulus.

Piatt County Consolidation Is Moderate, Successful

By J. C. THOMSON

AFTER 46 years in office — the longest period of any superintendent of schools in Illinois — you wouldn't be surprised if Piatt County Supt. Charles McIntosh viewed the increasing trend toward rural school consolidation with some misgivings.

His long association with the one-room schoolhouse system of education could be expected to influence him very much in its favor. But such is not the case.

And although the soft spoken educator indicated his neutrality in any such issue as for or against consolidation, which must ultimately be decided by the rural school boards, he appeared pleased with the success so far of the consolidation program in Piatt county.

Supt. McIntosh said the Illinois Agricultural Association and its school committee shared in the success of the undertaking because of work done in making the case for reorganization attractive.

"The farmers themselves," he said, "started the ball rolling for consolidation when they began sending an only pupil in one school to a neighboring school, and when a number of farmers took the attitude that consolidation was inevitable."

An important factor in the success of the undertaking, McIntosh explained, was in gaining the confidence of the people directly concerned. Directors met at a fact-finding meeting. "There was no compulsion on our part. They were invited to ask questions," he said.

After being given time enough to think it over, another meeting was called and directors were asked what they thought should be done to bring their schools up to date. What they decided is made plain by the fact that partial consolidation has taken place in every township in the county.

Recess periods are so much fun at the consolidated school because you can always find someone to play games.

No one, least of all Supt. McIntosh, claims that the task is complete, but there is a great deal of pride and promise of things to come in what has already been accomplished.

"Piatt county was fortunate," S. L. Simer, affable assistant to Supt. McIntosh said, "in having a number of buildings available to take care of the consolidation when it occurred."

A typical case of consolidation in Piatt county is illustrated by the White Heath school, situated on the edge of the small village of White Heath a half dozen miles northeast of Monticello, the county seat.

Because White Heath already had a large, attractive, two-room, brick building, there was no need to build a new structure and the pupils of three surrounding districts were absorbed by the White Heath school.

Teachers, Mrs. Anna Warren and Mrs. Mabel Wheeler say the children like the new arrangement, especially those who formerly had only one or two classmates. One pupil at the Camp Creek school, one of the absorbed districts, had no classmates. The boys are especially pleased because enough of them now are generally available to play team games, such as softball. The smaller children enjoy the playground equipment their former schools didn't possess.

Although 41 pupils are enrolled, the teachers are able to give the children as much individual attention as they received in their former schools, if not more so, since their present teachers handle four grades instead of the eight in the one-room schoolhouse.

One of the high spots in the school day at White Heath is the lunch hour when the pupils are served a hot, balanced meal in the basement dining room. Cost of the meals, prepared by a cook, is 50 cents weekly to each pupil with the rest of the expense being made up with federal funds.

The teachers eat with the students and supervise their manners and behavior at the table. Committees of the children vie with each other in planning the most attractive decorations each week for the dining room with motifs generally in keeping with the season. Each of the pupils also takes turn saying grace be-

Lunch hour is one of the high spots of the school day when the children are served a hot, balanced meal. Teachers supervise pupils' table manners.

A reliable driver takes the children to and from school. Pupils are taught to line up, be considerate of others.

fore the noon meal.

The hot lunch is so popular that only two of the 41 children in the school go home at noon to eat. Children in the upper room have organized an activity club under the supervision of Mrs. Warren.

One of the attractive points in the school consolidation program in Piatt county is the fact that the tax rate for schools hasn't risen appreciably. Supt. McIntosh explained that the tax rate after consolidation had risen slightly in some districts and had dropped slightly in others while tending to equalize the rate over the consolidated area.

Little has been done in the way of introducing the manual arts into the Piatt consolidated schools but Supt. McIntosh said it would be done if desirable, especially in the larger consolidated schools like Mansfield in the northern part of the county where such a program would be practical.

When asked: "How would you like to go back to the old school?" one of the boys at White Heath looked up quizzically, grinned and answered with an unequivocal "No sir, I wouldn't."

Virginia, 11; Melba, 10; and Dolores, 10, (front to back) had no classmates in former schools. Like it better now.

HOLD SCHOOL FOR GRAIN ELEVATOR MANAGERS

The first school of instruction for managers of grain elevators was held in the Chicago offices of the Illinois Agricultural Association Dec. 10-11-12 under the general direction of George H. Iftner, IAA director of grain marketing.

Assisting with the course of instruction, which was designed to give beginners some knowledge of the fundamentals of grain marketing were Dr. L. J. Norton of the University of Illinois college of agriculture, A. N. Scheeler, manager, Graymont Cooperative Company; Eugene Hoerner, manager, Ludlow Cooperative Elevator Company; W. B. Combs, extension service, Chicago.

W. P. Sandford, IAA director of sales service; Frank Haines, manager, and E. J. Kazmarek, assistant manager, Illinois Grain Corporation; C. E. Strand, manager IAA Auditing Association; H. O. Nelson, IAA accountant; Donald Kirkpatrick, IAA legal adviser; W. B. Peterson, Illinois Farm Supply company, and C. C. Chapelle, IAA comptroller.

Others attending the school were Charles McNair, Savoy Grain and Coal company; Robert Sherrard, Henry County Service company; Verne Hoar, Colchester; Edwin E. Jones, Cambridge; Robert Welty, Erie Cooperative company; Harlow Boyd, Moultrie County Grain company.

Charles Votsmier, Montgomery Service company; Clarion Kallern, Newark Farmers Grain company; Ross Thomas, Sullivan; William Skaer, Summerfield Farmers Co-op Grain Company; Forrest Hunt, Paxton Farmers Grain company; Charles McDonald, Moultrie County Grain company, and Fred Heck, Montgomery Service company.

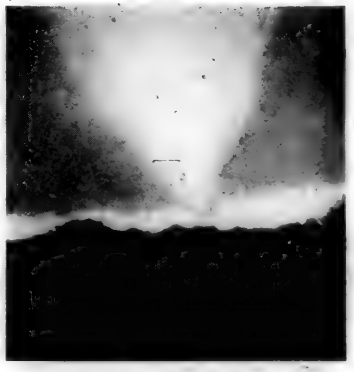
U. OF I. HOLDS FARM LABOR SAVING SHOWS

Since the first of the year a series of shows offering ideas for better farming and better living have been presented to Illinois farm people in colorful exhibits by the University of Illinois college of agriculture.

The exhibits include a look into the future of farm prices and incomes, new uses of DDT, efficient ways of performing chores, ideas for landscaping the farm home, uses of pasture in maintaining farm income in postwar reconversion, efficient methods of performing homemaking tasks and many other interesting features.

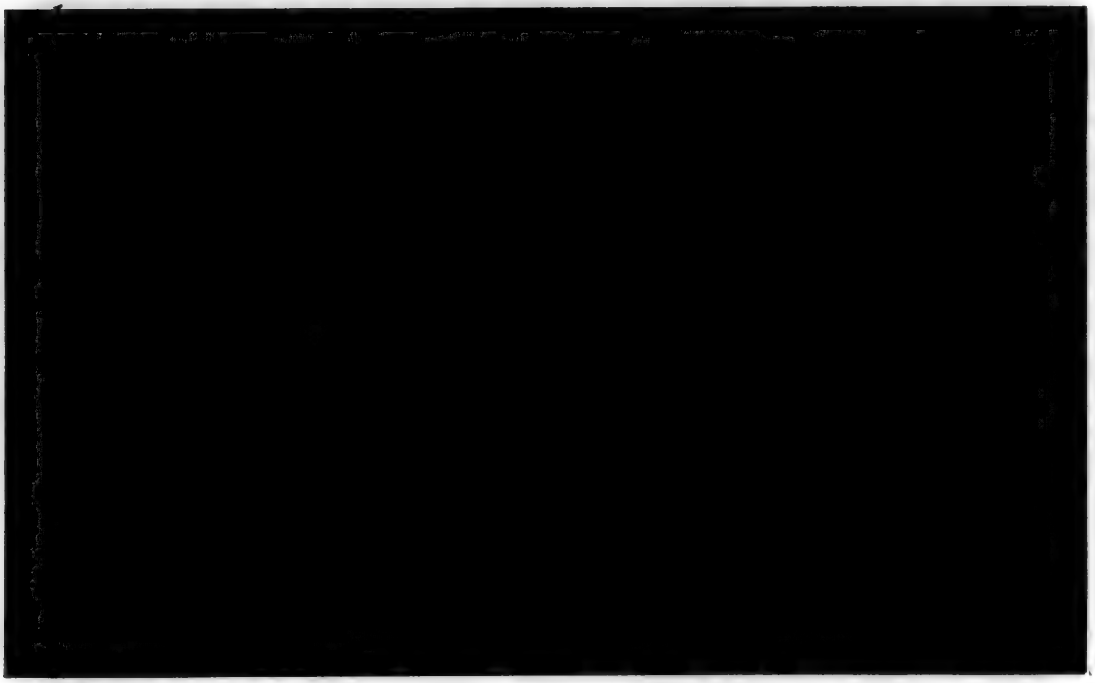


This picture of a tornado roaring through Rock Island county was made last June just before it crossed the Rock river into Henry and later Bureau county. Coming out of Iowa, the twister caused extensive damage to buildings and crops in the three counties. Picture was received from Arnold Struss of Port Byron, Ill.

In addition to the University's exhibits and demonstrations, there will be a competitive exhibit, developed by local farmers and homemakers, of ideas, methods and devices for making work easier.

Thirty-nine shows throughout the state were scheduled. Following is the remainder of the schedule: Feb. 18, Vermilion; 19, Iroquois; 20, Kankakee; 21, Will; 22, Lake; 25, DuPage; 26, Boone; 27, Lee; 28, Bureau; March 1, Rock Island; 4, Henry; 5, Stark; 6, Marshall-Putnam; 7, McLean, and March 8, Peoria, Tazewell and Woodford.

Dr. Dwight Powell (right), University of Illinois horticulturist, demonstrates at Moline his plan of using water under 500 or 600 pounds pressure with regular spraying equipment to remove rough bark to kill codling moth larvae in winter in apple tree. Conventional method of scraping and burning bark requires hours for each tree. Orchard owner John King looks on.



SOMETHING TO RESOLVE *Against* IN 1946

TAKE THESE PRECAUTIONS:

★ This year, resolve to provide the, "Ounce of Prevention," that can help prevent a serious fire on your farm in 1946. Here are a few reminders worth reading and remembering:

Keep lantern wicks trimmed. Uneven wicks mean cracked chimneys and fire.

Tall, dry weeds around farm buildings are fire hazards. Mow 'em down!

Place furnace ashes in metal containers. Never pile them against wood buildings.

Don't carry loose matches in your pocket; you might drop some. Don't leave loose matches in a jacket that's hanging in the barn. Mice and rats can ignite them.

Light a lantern BEFORE you enter the barn. Match heads DO fly off.

Hang your lantern where hay will not fall on it, or stock kick it over. Remember Mrs. O'-Leary's cow?

Never smoke around buildings. The law of averages is against you when you do.

Don't let bums sleep in the hay loft. They may be careless smokers. Give them the guest room rather than risk having them sleep in your barn.

Don't let the children play with matches.

Keep fire extinguishers and water buckets handy.

Be assured of an adequate water supply.

Never draw gasoline from a tank while you are smoking.

Have lightning rods grounded. Those not properly grounded are worse than none at all.

Be PROTECTED against fire-loss. See your Farm Bureau insurance man today.

ALLOT FUNDS FOR *Youth Work*

THE "accent on youth" programs in Illinois have received additional impetus by way of the federal Bankhead-Flannagan Act of June 6, 1945. This recent legislation not only enhances further work among rural young people, but provides for continued expansion and development in the over-all county extension program.

Operation of the Act in Illinois will be under the University of Illinois College of Agriculture as the land-grant institution in this state.

The Act provides "expenses of cooperative extension work in agriculture and home economics, including technical and educational assistance to farm people in improving their standards of living, in developing individual farm and home plans, better marketing and distribution of farm products, work with rural youth in 4-H Clubs and older out-of-school youth, guidance of farm people in improving farm and home buildings, development of effective programs in canning, food preservation, and nutrition, and for the necessary printing and distribution of information. . ."

Prof. J. C. Spitler, associate director of extension at the University of Illinois, reveals that the funds allotted to Illinois for the current year are not sufficient to give assistance to every county farm and home adviser, but he indicated that with increased funds to be made available next year it may be possible to meet requests from any county in the state.

Funds provided by the Act must be appropriated each year, and according to the Act the amount increases during each of the following two years, after which the final sum made available in the third year or July 1, 1947 becomes the figure to be allocated during each successive year thereafter.

In line with the discussions by Congress, first attention in Illinois has been given to the placement of assistants for the expansion of youth programs and the expansion of home advisory work into counties that do not have a home adviser.

Counties selected for this additional assistance were determined by the present load placed on farm and home advisers, and by the potential number of teen-agers (10 to 19 years) in the counties indicated by the 1940 census.

Seventeen counties have been selected to have an assistant for boys and girls 4-H and older rural youth programs under these new funds. Additional counties will be selected as funds become available. Two thousand dollars per county has been budgeted for the salary of a youth assistant with all other expenses to be met locally. Twelve of these counties have employed assistants to date. The new assistants will work under the joint supervision of the farm and home advisers.

Youth assistants who are now employed and their county include the following: Mary Elizabeth Vick, Williamson-Franklin; Mildred Benz, Jackson; Mary E. Davies, Kankakee; Mrs. Beulah Petty, Lawrence-Crawford; D. C. Rocke, Macon; Mrs. Helen C. Harless, Shelby; Webster H. Gehring, Warren; Margaret M. Knecht, St. Clair; Eldon W. Barnes, Bureau; Carlos C. Reichert. Iroquois; Hobart V. Deffenbaugh, Edgar; and M. O. Vesaas, Knox. Other counties expecting to employ youth assistants soon are DeKalb, Hancock, and Randolph.

COMING EVENTS

Feb. 12-14: Farm and Home Week, U. of I. Urbana.
Feb. 1-2: IAA Insurance Roundup, Hotel Pere Marquette, Peoria.
Feb. 15-16: National Farm Institute, Hotel Fort Des Moines, Des Moines.
Feb. 16: Springfield Producers Livestock Commission Company, Annual Meeting, Springfield High School.
March 7: Chicago Producers 24th Annual Meeting, Bal Tabarin Room, Hotel Sherman, Chicago.
March 12: Pure Milk Association, Hotel Sherman, Chicago.

REINSTATEMENT OF POLICIES

The board of directors of the Illinois Agricultural Mutual Insurance Company has authorized the reinstatement of policies of insurance issued to service men who dropped their policies when they entered the armed forces.

There is no additional policy fee or reinstatement charge of any kind if the application is made for reinstatement of such policy within one year after such person has been honorably discharged from the armed forces. Such person, however, must fully qualify for Farm Bureau insurance before reinstatement can be made.

GIVE TO RED CROSS

Disaster victims and convalescing veterans look to the Red Cross for help in reorganizing their lives and to face the tedious hours while recovering.

Do your bit now! Give to the 1946 Red Cross fund campaign!

New employees of Farm Bureaus and subsidiaries from central Illinois counties listen to panel discussion of statewide cooperatives at Bloomington. This was one of a series of ten such meetings held during the last of 1945. Total attendance was 332.

Seated beneath the chart, and engaged in the panel discussion, are George Curtiss, manager, McLean Service Company; Clare Grube, general agent, Champaign county; W. P. Sandford, IAA sales service director, chairman; J. Walker Robbins, Champaign county's COD; John R. Spencer, IAA soil improvement director; and Ray Miller, fieldman, Prairie Farms Creamery of Bloomington.

SOMETHING TO RESOLVE IN 1946

This year, *resolve* to provide the, "Ounce of Prevention," that can help prevent a serious fire on your farm in 1946. Here are a few reminders worth reading and remembering:

TAKE THESE PRECAUTIONS:

Keep lantern wicks trimmed. Uneven wicks mean cracked chimneys and fire.

Dry weeds around farm buildings are fire hazards. Mow 'em down.

Place furnace ashes in metal containers. Never toss them against wood buildings.

Don't carry loose matches in your pocket you might drop some. Don't leave loose matches in a jacket that's hanging in the barn. Mice and rats can ignite them.

Light a lantern BEFORE you enter the barn. Match heads DO fly off!

Hang your lantern where hay will not fall on it or stock kick it over. Remember Mrs. O'Leary's cow!

Never smoke around buildings. The law of averages is against you when you do.

Don't let bums sleep in the hay loft. They may be careless smokers. Give them the guest room rather than risk having them sleep in your barn.

Don't let the children play with matches.

Keep fire extinguishers and water buckets handy.

Be assured of an adequate water supply.

Never draw gasoline from a tank while you are smoking.

Have lightning rods grounded. Those not properly grounded are worse than none at all.

Be PROTECTED against fire loss. See your Farm Bureau insurance man today.

SUMMARY OF AFBF RESOLUTIONS

(*Continued from page* 11)

ing by existing agencies.

We recommend that the American Farm Bureau Federation collaborate with the appropriate existing agencies to develop a constructive program for the improvement of rural buildings.

Any program that encourages farmers to contract debts in excess of their ability to pay will make no permanent contribution to the rural housing problem.

NATIONAL FERTILIZER PROGRAM

There are now pending in the Senate and in the House identical bills which propose to establish and develop a national fertilizer policy and program. Under the titles and within the proposed act, Congress will define the general policies and be authorized annually to make the needed appropriation to effectuate the proposed program insofar as governmental agencies are involved.

The Secretary of Agriculture, in consultation with an advisory policy committee, is charged with giving general direction to the program through the state Land Grant college experimental and extension systems. The bill also provides the remaining public reserves of phosphate and potassium minerals for the conservation and maintenance of the nation's soil resources and to determine through reasonable exploration the location and extent of such resources.

The proposed measure is premised in part upon the fact that the present quantities of mineral plant food being applied to the Nation's farm lands are severely inadequate, that higher concentrated materials in many parts of the country should be produced and utilized, and that the intelligent use of mineral plant food should be greatly accelerated. The American Farm Bureau Federation vigorously indorses these conclusions.

The bills propose the construction and operation of three pilot fertilizer plants of commercially-sized operations producing highly concentrated materials. These plants should give initial assistance to private industry, including farmers' cooperatives, in the production and distribution of highly concentrated mineral plant foods. On or before five years from such construction, such plants must be disposed of at a fair and equitable price to private industry. Farmer cooperatives should have prior right to purchase them.

The American Farm Bureau Federation believes that the problem is of such proportion as to fully justify the extraordinary program and plan for action as contemplated in the proposed measure. The American Farm Bureau Federation will join with other farm organizations in supporting this proposed program. It solicits industry to join in the program. The board of directors and the executive officers are authorized and directed to support aggressively for enactment into law the proposed national fertilizer policy program.

LABOR-INDUSTRIAL RELATIONS

No group should assume unto itself prerogatives that disturb the interdependence of all segments of our national economy. If in the past it was essential to preserve friendly relations in order to produce the goods needed, it is even more imperative in the present that agriculture, labor, industry, service groups, and those engaged in other channels of endeavor cooperate to the fullest extent to achieve the maximum of production so vital to the welfare of our country.

Unfortunately, the maintenance of economic balance between groups is being endangered by recent developments. Through racketeering practices, hot cargoes, lockouts, secondary boycotts, coercion, intimidation, withholding of goods from markets awaiting tax benefits, and other abuses and practices, the production and movement of products to market is being seriously interfered with today. Such conduct is to be deplored and condemned. The national interest demands that immediate steps be taken to end these abuses and practices.

MILITARY TRAINING

Compulsory military training for American youth in time of peace is foreign to the American way of life. We believe that a greatly expanded program of physical training and education should become a part of the regular curriculum of the upper grades and high schools of the country. The system of military training provided for in our Land Grant colleges should be greatly intensified. We recommend that military training be made a part of the regular curriculum of municipal and publicly-supported universities and colleges. We favor additional inducements to encourage voluntary enlistments for limited service. We oppose a program of compulsory military training which leads to regimentation, a militaristic point of view, and future wars.

OLD AGE AND SURVIVORS' INSURANCE BENEFITS

The federal old age and survivors' insurance program under the Social Security Act provides a type of assistance which is highly regarded by a large majority of persons covered under such a system.

We approve the extension of the federal old age and survivors' insurance program to include regularly employed full-time farm labor and employes of non-profit agricultural organizations. We will not oppose the extension of this program to occasional, part-time farm labor when a practical, workable method for including such labor under this system is presented. We recommend that careful study be given to the development of health insurance programs by non-governmental organizations. These studies should cover the necessary changes in laws which would permit insurance companies or mutual health associations to serve adequately the health needs of the people.

AIR TRANSPORTATION AND AGRICULTURE

It is advisable to prevent unwise federal and state laws of a restrictive nature being put into effect regarding aviation, particularly at the beginning of air transportation of farm products. This is a much better procedure than trying to correct them after they are once enacted.

Air transportation, to serve agriculture and the public interests, must remain free to compete with other forms of transportation with respect to rates and services, in order that it might serve the public welfare with the inherent advantages it possesses. Every encouragement should be given to develop air transport under private enterprise. A careful study should be made as to methods to be applied and the type of agency, either state or federal, that should administer regulations.

UNEMPLOYMENT COMPENSATION

We recognize the benefits in a well-administered unemployment compensation program. Payments, however, must not be incentives for idleness. Cases must be reviewed at frequent intervals, and persons refusing to accept employment should be disqualified from receiving further payments.

We urge a careful review of the entire program. The employment serv-

ices should be returned to the respective states.

PRICE LEVEL STABILIZATION

It is the position of the American Farm Bureau Federation that monetary and fiscal policies, including matters pertaining to the management of the national debt, be coordinated by a bipartisan monetary authority. Plans must be developed for the stabilization of the general price level. We believe that monetary policies are of such fundamental importance to the general economic welfare of this nation that serious consideration and study must be given to the development of practical programs designed to bring about price stability. We recommend that the board of directors of the American Farm Bureau Federation proceed to try to develop a positive program designed to promote stability of prices at a desirable level.

GOVERNMENT OWNERSHIP OF LAND

In many areas of the nation, especially in the West, where the government owns as high as 70 percent of the land in some States, there is grave concern with regard to the alarming amount of governmental control and the further expansion of the land acquisition program. We oppose any further acquisition of privately-owned lands by any governmental agency without the consent of the appropriate state authority except where such lands are needed for general public works or general public welfare, such as dams, irrigation, flood control, power, and navigation, or some other like public use.

Lands, except the aforementioned and commercial timber lands now owned by the government, should be returned to the states, or should be returned by the federal government to private ownership.

AGRICULTURAL RESEARCH

Special emphasis must be given to agricultural research in order for the American farmer to meet successfully the increased competition at home and abroad in the postwar period. Additional attention must be given to developing better methods of production and soil use, new crops, improved crop varieties, improved breeds of livestock and new and expanded uses of agricultural products.

Information dealing with production records and farm practices in the files of various public agencies dealing with agricultural problems should be made available to the appropriate agencies of the Land Grant colleges, and studies should be made of the farm practices used by the most successful farmers. The results of these studies should be made available to all farmers as a contribution to economic production.

Research is also needed to evaluate foods with higher nutritional content, especially as to their vitamin and mineral content and to determine the relative values of such foods as compared with the use of synthetic substitutes.

We therefore recommend that the research programs of the Department of Agriculture and of the Land Grant colleges be expanded so as to assure agriculture a position in research equal to that of industry.

RURAL ELECTRIFICATION

Electricity for farm power is an economic necessity in reducing production costs. Despite the amazing progress of the last ten years, more than half the farmers of the nation do not yet enjoy the comforts and conveniences made possible by electricity. The demand for service among farm people is increasingly insistent. We therefore urge that the REA program together with the programs of privately-owned utility companies, be prosecuted vigorously to the end that all farmers may have the benefits of electrification. We insist that REA cooperatives be based upon truly cooperative principles, and that their primary purpose be to serve rural people as provided by law.

INDUSTRIAL ALCOHOL PLANTS

As we look to the future, all indications point to enormous surpluses in some commodities. We recommend that every known outlet be carefully studied for the purpose of increasing the consumption of these commodities.

We recommend that the American Farm Bureau Federation take such action as the board of directors deems practicable and economically sound to assure the continued operation of the existing industrial alcohol plants so that farmers may have the benefit of this additional market.

AGRICULTURAL EDUCATION

The extension services, the experiment stations, and vocational agricultural training are of immeasurable value and service not only to rural life, but also to the nation. We urge the Federation to support appropriations for the maintenance and expansion of these services to the full extent it appears to be advisable and necessary.

SURPLUS PROPERTY DISPOSAL

The delay constantly encountered by the public in the acquisition of surplus property — even today, over a year after the enactment of the Surplus Property Act — is indefensible.

The American Farm Bureau Federation insists that there be made immediately available to the public a clarification of the rules and regulations of the Surplus Property Administration and disclosure of its plans for carrying out the intent of the Congress. Steps should be taken at once to provide for sales in rural areas in such a manner as will assure farmers and farmers' cooperative associations an equal opportunity with others to purchase surplus property.

RADIO

We reaffirm the position the American Farm Bureau Federation took at the 1943 annual meeting against any reduction in the number of clear channel radio broadcasting stations. If, as seems probable now, frequency modulation broadcasting comes into general use in thickly populated areas, rural people will be more dependent than ever upon clear channel stations. Therefore, we insist that clear channel radio service be maintained and improved to the end that rural people may enjoy the best in radio programs.

PUERTO RICO

Puerto Rico has been a part of the United States since 1898, and since 1917 the people of Puerto Rico have been American citizens. The two million people of Puerto Rico have accepted responsibilities of citizenship, and under the Selective Service act contributed 70,000 of their young men to the American armed forces during the last war. The American Farm Bureau Federation, recognizing the citizenship of the people of Puerto Rico, insists that there not be discrimination in the laws of the United States as applicable to the agriculture and economic welfare of Puerto Rico, and that the inhabitants of this island be given rights and privileges consistent with the duties and obligations of their citizenship.

PULPWOOD

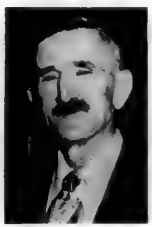
The growing importance of pulpwood as a source of cash income to

(*Continued on page 26*)

"What Farm Bureau MEANS TO ME!"

By
J. C. THOMSON

"ORGANIZATION is our only salvation," he answered without a moment's hesitation when asked why he had stuck with his Farm Bureau through the years.



"You have other reasons, don't you?"

Clem Garton, newspaper column-writing charter member of the Logan County Farm Bureau, looked thoughtfully for a moment across the pasture of his farm on the outskirts of Lincoln. "Yes," he smiled. "Farm Bureau insurance is a strong talking point, may be the strongest."

"But," the tall spare man in his fifties looked serious again, "there are other things with no money value which mean a lot to Farm Bureau people, like fellowship, for instance."

"You mean the farmer's club idea?"

"Yes, in a way. Farm Bureau men are good thinkers and I get a great deal out of our discussions when we get together. We have the club spirit and it feels good to know you belong to an organization which includes so many of your friends and neighbors."

"As far as the dues are concerned," he added, "you can spend as much on a night's entertainment elsewhere and have nothing to show for it."

Mr. Garton showed keenness in his searching analyses of agricultural problems. Keenness no doubt whetted by nine years of school teaching as a youth in Fulton and Schuyler counties. In 1914 he moved to Logan county and rented a farm for eight years. He moved to his present location in 1927.

Credit for his successful and happy family life, he pointed out, was due principally to his wife, the former Annie Fink of Logan county. Together they reared six children, five girls and a boy, all but one now married.

"All," Mr. Garton said, referring to his children with a note of pride in his voice, "were graduated from high school and from college or business school."

In his column, which appears in the Lincoln Courier weekly, Mr. Garton discusses a variety of topics with an agricultural slant and now and then his articles have a word of praise for the Farm Bureau.

Leaning back against a gatepost in his back yard, Mr. Garton recalled the early efforts to organize farmers. "It started," he said, "with an organized effort to show farmers how to farm. But it wasn't popular."

"In those early days we didn't think we could accomplish very much but the movement gathered momentum and in 1919 I joined the Logan County Farm Bureau as a charter member. It appeared then that we were about to face some tough problems. We won't forget the critical days that followed."

Mr. Garton considers the early years of the 20th century prior to World War I as a period of well-balanced contentment but admits farm organization became urgent when other organized economic forces appeared on the scene.

He opened a gate and turned toward the barn at the same time explaining he had so much work to do.

"Before you go do you have a message suitable for our younger farmers?"

"Well, first and last I would say, farmers must be organized. We who believed in organization in the early days of the Farm Bureau have never regretted it. Younger farmers should be even more enthusiastic judging from the greater benefits they will reap during the flourishing future years of the Farm Bureau."

FARM BUREAU PIONEER DIES

John T. Smith, 65, a charter member and former officer of the Champaign County Farm Bureau died December 21 in a Champaign hospital. He had been ill several months. Mr. Smith farmed near Tolono and was called by members of the state college of agriculture "one of the most progressive farmers in Illinois."

He was one of the first farmers in Illinois to raise soybeans and was prominent in organizing farm groups. He is survived by five sons, John, Robert and Gilbert, Tolono; George, St. Louis, and Pfc. Charles, en route home from Europe.

GRAHAM HEADS VET COLLEGE

DOCTOR ROBERT GRAHAM, head of the department of animal pathology and hygiene, has been named dean of the University of Illinois' new college of veterinary medicine by the board of trustees. The college is to be established on the Urbana campus of the University. Professor Graham is a national authority in the field of veterinary pathology and was the unanimous choice of the committee appointed to make recommendations for the new post.

He has been a member of the University faculty since 1917, and since 1941 head of the department of animal pathology and hygiene. He was professor of veterinary science at the University of Kentucky from 1911 to 1917.

Graham was born at Ames, Iowa, and received the doctor of veterinary medicine degree from Iowa State college in 1910. He has written or collaborated in preparing 150 scientific papers on veterinary medicine and 50 bulletins or circulars on animal diseases.

In 1919 at the University of Illinois he developed the first antitoxin for botulinus poison in man, and he has made significant and outstanding contributions to knowledge on forage poisoning and sleeping sickness in horses; brucellosis, erysipelas and enteritis in swine; parasitism and abortion in sheep; and the preparation of vaccine used in immunizing chickens and turkeys against fowl pox.

Since 1919 the diagnostic service of the state department of agriculture has been under the supervision of Dr. Graham. During the past year 121,000 specimens were submitted for laboratory diagnosis compared with 26,000 ten years ago.

In 1925 the U. S. department of state in connection with the American occupation of Haiti asked Dr. Graham to survey animal diseases in that country.

Robert Temple (left) of La Salle county is congratulated by IAA Director K. T. Smith of Greenfield after he was adjudged winner of the national Rural Youth Talk Fest.

LASALLE YOUTH IS NATIONAL WINNER

Robert C. Temple, 19, of La Salle county won the National Rural Youth Talk Fest at the contest held in conjunction with the 27th annual American Farm Bureau Federation convention in Chicago Dec. 17-20.

Acclaimed Illinois state champion during the Illinois Agricultural Association convention in Chicago in November, Temple spoke third in the national contest program drawing the topic "Soil Conservation and World Peace" for the subject of his five-minute talk.

After being judged national champion, Temple delivered a talk on the same subject before a general session of the American Farm Bureau convention.

In second place was Emerson Haussler of Saline, Mich., who spoke on "Farm Youth as a Bulwark in Agricultural and Industrial Relations."

The national champion is a son of William Temple, president of the Illinois Wool Marketing Association, and has been active for some time in 4-H club and Rural Youth work.

STANDING COMMITTEES OF IAA NAMED FOR '46

The following standing committees of the Illinois Agricultural Association board of directors have been appointed by President Charles B. Shuman to serve during the year 1946:

Finance—F. E. Morris, Buffalo, chairman; R. V. McKee, Varna, and Charles Lauritzen, Reddick.

Organization-Information—Otto W. Steffey, Stronghurst, chairman; August Eggerding, Red Bud; John T. Evans, Hoopeston, and a farm adviser representative to be appointed.

Public Relations—K. T. Smith, Greenfield, chairman; Milton W. Warren, Mansfield; F. E. Morris, Buffalo, and a farm adviser representative to be appointed.

Business Service—Lyman Bunting, Ellery, chairman; Dan Clarke, New Berlin; Chester McCord, Newton, and a farm adviser representative to be appointed.

Marketing—Homer Curtiss, Stockton, Chairman; Ronald A. Holt, Galva; J. King Eaton, Edwardsville; Harvey Adair, Chicago Heights; C. J. Elliott, Streator, and a farm adviser representative to be appointed.

NEW ASST. FARM ADVISER

Robert Castle, Vermilion county, a 1942 graduate of the University of Illinois college of agriculture, took over his duties Jan. 1 as assistant farm adviser for Champaign county. The new assistant farm adviser was recently discharged from the air forces.

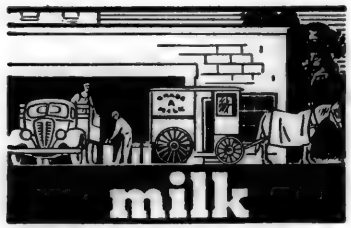
Before going into the army, Castle was a vocational agriculture instructor at Oregon in Ogle county.

FORECAST FOR '46!

You'll bank more money on hogs if you vaccinate early with fresh, potent Farm Bureau anti-hog cholera serum and virus.

REMEMBER: The smaller the shoat The cheaper the shot

See Your Farm Bureau



By Wilfred Shaw

Evaporated milk plants in Northern Illinois paid producers for 3.5% milk $2.55 per cwt. for the first fifteen days' deliveries in December. Evaporated milk plants in Wisconsin paid an average price of $2.636 per cwt. for 3.5% milk for the same period.

The annual meeting of the Champaign County Milk Producers was held Dec. 11, in the Urbana-Lincoln Hotel, Urbana, preceded by a dinner at noon.

The report of William Mueller, manager, disclosed that the association marketed during the past year 9¼ million pounds of milk for 252 thousand dollars. Some ¾ million pounds were handled through the association plant. The association added 75 new members during the year and had no cancellations of membership.

Dr. W. L. Burlison of the U. of I. College of Agriculture was the principal speaker at the meeting. He spoke on "Chemurgy in Agricultural Products Outlets."

The average weighted price for all milk marketed by the 23 member cooperatives of the Illinois Milk Producers' Association for the year ending Sept. 30, 1945, was $3.104 per cwt. These cooperatives marketed during the year 2¼ billion pounds of milk for a total return of approximately 69 million dollars. 20,646 members' milk was handled daily by these cooperatives; an increase of 543 members for the year. The average daily shipment per patron was 295 pounds; an increase of 28 pounds per day over the previous year. The total volume of milk marketed by the 23 member cooperatives was 9.95% above the previous year, and the value of milk marketed increased 8.80% above the previous year.

The Producers Co-Op Dairy of Quincy will hold its 23rd annual meeting Feb. 11, in the Adams County Shipping Association building in Quincy.

The annual meeting of the Quality Milk Association will be held Feb. 19, starting at 11:30 a.m. in the Consistory Temple, Moline, Illinois.

The McLean County Milk Producers Association will hold its annual meeting Feb. 23, in the McLean County Farm Bureau Building, Bloomington.

The Producers Dairy Company, Springfield, will hold its annual meeting Feb. 27, at the Abraham Lincoln Hotel, starting at 10:00 a.m.

Annual meeting of the Sangamon Farmers Milk Cooperative was held Dec. 14, in the Laurel Memorial Methodist Church, preceded by a dinner. Manager Walter Jones reported upon the year's successful activities highlighted by a substantial year's membership increase. Lt. Col. G. Edwin Popkess, editor of the Dairyman's Journal, East St. Louis, was the principal speaker, relating his experiences with the Army in Africa and elsewhere overseas.

Annual meeting of the Peoria Milk Producers and Peoria Producers Dairy will be held Feb. 8, in the American Legion Hall, Peoria.

The following are the blended prices received by producers supplying the respective Illinois markets. All are November prices for 3.5% milk, f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective milk ordinances:

Bloomington	$2.48
Canton	2.75
Champaign	2.75
Chicago	3.20
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.80
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.85
Kewanee	2.55
LaSalle	2.70
Moline	3.0185
Peoria	2.89
Pontiac	2.406
Quincy	2.55
Rockford	3.155
Springfield	2.85
St. Louis	3.66
Streator	2.50

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exception noted) as reported by the respective milk cooperatives. These prices are for October unless otherwise noted:

Baltimore	$3.85
Boston	3.89
Chicago (70-mile zone) (Nov.)	3.20
Cleveland	3.50
Denver (Nov.)	3.08
Detroit	3.54
Indianapolis	3.58
Kansas City, Mo.	3.50
Louisville	3.79
Memphis	3.61
Milwaukee	3.00
New York City	3.86
Pittsburgh	3.54
St. Louis (Nov.)	3.66
St. Paul and Minneapolis	2.94
Terre Haute, Ind. (Nov.)	3.05

ANNOUNCE SPECIAL DIVIDEND

The board of directors of the Illinois Agricultural Mutual Insurance Company has declared a special dividend of 10 per cent of the premium earned on each policy during the calendar year 1945.

This special dividend will be shown on the premium notices as they are sent out to the policy holders whose policies are up for renewal beginning March 1, 1946 up to and including Aug. 31, 1946.

CHAMPAIGN CREAMERY CHANGES NAME

Approval of the name "Prairie Farms Creamery" to take the place of Producers Creamery of Champaign and Producers Creamery of Bloomington was given by the boards of directors at the recent annual meetings of the two creameries.

The change follows the lead of the state organization which authorized the name Prairie Farms Creameries last summer and conforms with the name of the cooperative's most popular product — Prairie Farms Creamery butter.

Transfer of the management of Prairie Farms Creamery of Champaign from Manager Forrest Fairchild of Prairie Farms Creamery of Bloomington was made back to I. C. Hochstrasser. Bloomington manager Fairchild served as acting manager of the Champaign plant while Champaign Manager Hochstrasser was on leave in military service.

Some of the newest developments in dairy manufacturing were described during the Champaign meeting by Dr. G. H. Wilster, chief in dairy manufactures of the Illinois Agricultural Experiment station. Dr. Wilster described a self-cleaning cream separator which is being experimented with by his department, better methods of cleaning milking machines, cheaper heaters and coolers, and cheaper mechanical refrigeration.

Other speakers on the Champaign program included Frank Gougler, IAA marketing director; R. B. Trumpy, head of the quality program of Prairie Farms Creameries, and Harold Enns of Bloomington, president of Prairie Farms Creameries.

NEW ROCK ISLAND ADVISER

Effective Feb. 15, George Reid will leave his post as farm adviser after 10 years with the Scott County Farm Bureau. Reid resigned to continue his farm adviser work in Rock Island county. He goes to Rock Island with the high esteem and best wishes of Scott county farmers.

DuPage, Will, Lake, McHenry, Winnebago, Rock Island, Champaign, Madison and St. Clair were the only counties in Illinois showing increases in population for 1940-45.

Illinois's meat-packing and soybean processing industries are the largest in the world.

Any poultry breeder, hatcheryman or flock owner may cooperate in the National Poultry Improvement Plan by signing an agreement and complying with the provisions of the plan.

EXPLAIN NEW STATE FERTILIZER LAW

Probaby the first thing about the new fertilizer law that will be noticed by farmers will be the registration tags of the Illinois Department of Agriculture on rock prosphate. The new Illinois fertilizer law passed at the last session of the legislature states that the term "commercial fertilizer" now covers "any substance . . . . combination or mixture offered for sale for use in inducing increased crop yields when applied to the soil." It does not include agricultural limestone, marl, burnt or hydrated lime or unprocessed animal manure.

Before any commercial fertilizer may be sold it is now necessary that a statement be filed or registered with the State Department of Agriculture giving the name and address of the manufacturer, also:

1. Weight of each package in pounds
2. Brand name and/or trade mark
3. Guaranteed analysis (in percent)
   (a) Nitrogen
   (b) Available phosphoric acid
   (c) Potash, soluble in water

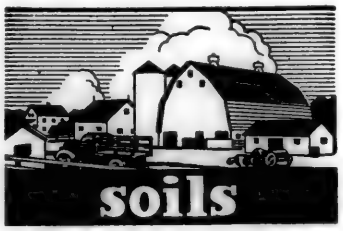
The combined percentage of these constituents, where two or more are included, must now equal at least 20 per cent (There was no lower limit in previous law). The requirement that mixed fertilizer must now contain 20 per cent or more plant food minerals is in line with cooperative efforts toward higher analyses and lower unit costs to farmers.

The vendor (seller) shall brand or attach to each package or in bulk shipments to the invoice a copy of the statement given above. Phosphoric acid in mineral phosphates (such as rock phosphate) shall be claimed as total phosphoric acid, if desired (often listed as P_2O_5). No guarantee for less than one per cent nitrogen or potash shall be recorded except in such grades as contain no guarantee for nitrogen or potash.

An official tag or stamp of the State Department of Agriculture shall be affixed to every package or container of fertilizer. Where material is sold in bulk such as rock phosphate, muriate of potash or superphosphate, the stamps will be in one and five ton denominations and will be attached to the invoice.

Where material is found not carrying proper tags, stamps or guarantees, it is suggested that the farm adviser be notified and he will get in touch with the proper officials.

The State Department of Agriculture shall cause one or more analyses to be made annually of all commercial fertilizers registered in this state. The results of such official analyses shall be made public in reports or bulletins from time to time but at least annually. Certain penalties, of course, are imposed for violation of this law.



By John R. Spencer

"The purpose (Of the AFBF national fertilizer program) is to accomplish in a ten year plan what otherwise might not be done for 50 years.

"But while our nation is now 80 per cent industrial and urban the production of sufficient foods and fibers from the country's six million farms is a matter of the national welfare. Nutritional experts have been warning that mineral-poor soils produce mineral-poor foods which are responsible for malnutrition and ill health. There is no reason why the nation cannot produce fertilizers enough to restore the depleted soil elements." (New York Times.)

Two new local quarries were found in Winnebago county and one each in Will and Pike counties during November by the department.

According to Dr. W. L. Burlison, the Land Grant College Post War Planning Committee estimates Illinois farmers should use 45 million tons of agricultural limestone within the next ten years on their tillable land acres.

There are four types of rock phosphate material now available to Illinois farmers coming from both Tennessee and Florida. Indications are that in the calendar year of 1945 will exceed all previous tonnages of rock phosphate applied.

According to records kept by this department there were more than 30 price increases allowed limestone quarry operators in the year ending Sept. 30 by the OPA. It is necessary that all new producers establish ceiling prices for their material under MPR No. 386. Present information is that OPA control of limestone prices will continue at least until July 1, 1946.

It takes about 150 pounds of nitrogen, 25 pounds of phosphorus and 75 pounds of potassium delivered into the corn plants to produce 100 bushels of corn. This is not a new statement but it is one which must be "kept in mind" by all farmers. Other crops, of course, remove fertility also in different amounts. Consult your farm adviser.

"Hunger Signs in Crops," Dr. E. E. DeTurk's excellent address at the soil improvement conference at the recent annual meeting, has been mimeographed. Revised copies may be obtained by writing to this department of the IAA in Chicago. (The first mimeo copies had a few errors).

Five samples of rock phosphate both bulk and sacked carloads were picked up by this department for spot checking in December.

An item of more than passing interest to all farmers using rock phosphate was in a recent newspaper article which discussed tooth decay. U.S. Public Health studies have shown that teeth of children drinking fluorine free water have a considerably higher incidence of tooth decay than those drinking water containing slightly more than one part per million of fluoride. A carefully controlled study to test the effectiveness of adding one part per million of fluorine to its water supply is being sponsored in Evanston, Ill.

There is from 2½ to 3½ per cent of fluorine as calcium fluoride in rock phosphate which is used so widely for direct soil application in Illinois.

Clark county applied 51,000 tons of limestone and 1500 tons of rock phosphate on farm soils in 1945, according to Farm Adviser Charles N. Glover.

The soil that has an abundant and well-balanced supply of the necessary nutrients has the best chance of producing top yields.

A limestone quarry in Kendall county illustrates the old and the new way of preparing the product. Left shows the old kilns for burning and right is the more modern equipment set up to prepare the limestone by crushing.

REVIEW FARM LABOR PROGRAM IN STATE

The emergency farm labor program for 1945 was reviewed Dec. 20 at a meeting of members of the subcommittee on farm labor of the state agricultural planning council held at the University of Illinois college of agriculture.

Consideration was also given to the present critical farm labor situation and the prospects for 1946. The meeting was presided over by George E. Metzger, IAA field secretary and chairman of the subcommittee.

Taking part in the discussions were Arnold Benson, state director of agriculture; Lee Gentry, chairman of the Production and Marketing administration, Decatur; John M. Fullington of the Farm Security administration; W. D. Murphy, assistant state supervisor of the labor program, E. D. Lawrence, McLean county farmer, and P. E. Johnston, state supervisor of the Illinois emergency farm labor program.

Meanwhile reports from several sections of the state indicate continued difficulty in obtaining experienced farm hands.

Carl McComb, who is in charge of the farm labor office at the McLean County Farm Bureau, reported recently that 19 farm homes were vacant in the Bloomington area because of the lack of farm hands. Sixteen of the houses have electricity.

McComb said many farmers hoped to get the needed help when the war ended and men were released from war factories and the services, but the fact remains that few of these men have applied for farm jobs.

Similar conditions have been reported by farm advisers throughout the state in spite of the fact that the value of farm wages, free rent and other extras are now at an all time high.

HONOR CHAMPAIGN HOME ADVISER

Mrs. Esther K. Thor, Champaign county home adviser, received a national citation for her outstanding home extension work at the annual meeting of the National Association of Home Demonstration Agents in Chicago in December. It was the second time an Illinois home adviser has been so honored.

Mrs. Thor has served six years in Champaign county and five years in Mercer county and five years in Tazewell county. She is a graduate of the University of Illinois and earned her master's degree at the University of Wisconsin.

NEWS and VIEWS

Associated Women Hold Annual Meeting

ILLINOIS' 123,500 Home Bureau members were represented at the annual convention of the Associated Women of the American Farm Bureau Federation by 12 voting delegates.

The meeting was held Dec. 16-17 at the Hotel Sherman in Chicago in conjunction with the annual convention of the American Farm Bureau Federation.

Illinois delegates were: Mrs. Arthur Gundlach, Belleville; Mrs. Archie P. McIntosh, Oreana; Mrs. E. D. McGuire, Makanda; Mrs. W. M. Kimmelshue, Manteno; Mrs. William Parks, Reynolds; Mrs. A. R. Rohlfing, Farmington; Mrs. Elsie Mies, Urbana; Mrs. Loren Johnston, Altona; Mrs. Stanley Castle, president, Alton; Mrs. C. W. Cutler, La Grange; Miss Myra Robinson, Kansas, and Mrs. Charles Converse.

Principal speaker at the Sunday afternoon vesper service was Harold E. Stassen, former governor of Minnesota recently discharged from naval service with the Third Fleet in the Pacific.

Speaking on the subject "Stepping Stones on the Path of Peace," Stassen paid tribute to American farmers and their families for the "phenomenal production of food and farm produce" during the war.

"High industrial production, a profitable agriculture, well-paid jobs for labor, good earnings for management and capital, a stable money, and individual liberty for all, are six inseparable essentials to a successful free economy in America," Stassen said, "and are therefore also stepping stones on the path of peace.

"The rapid strides of science have made us all neighbors around the globe," he said. "It is essential that we learn to live as such. We know that neighbors live together on a basis of good faith.

"I know that it is not necessary to emphasize to this audience the fact that a large portion of the pathway of peace must be built by world-wide cooperation in an effective manner. You know that no nation can insure its peace by actions exclusively inside its own boundaries. And the discovery of the atomic bomb has made imperative the development of government on a world-wide basis."

Harold E. Stassen (above), former governor of Minnesota, addresses 11th annual convention of Associated Women of American Farm Bureau Federation in Chicago Dec. 16.

In the annual message of the president to the delegates, Mrs. Roy C. F. Weagly, president of Associated Women, declared for a world organization "whose underpinning is the earnest desire for peace in the hearts of many millions of men and women.

"The world has become a neighborhood," she said, "we must make it a brotherhood.

"Unless the principles of the Charter of the United Nations' Organization are inculcated in the minds of children in the public schools, there is grave danger that future generations will slide back into the same kind of isolationism as followed after the first World War. Youth must be given the world view essential to the implementing of the Charter. They must be taught their individual and collective responsibility in an international society."

Resolutions

Summary of Resolutions Adopted at the 11th Annual Meeting of The Associated Women of the American Farm Bureau Federation, December 17, 1945

FOREWORD

THE major objective of our family organization is the development of a full and satisfying life for rural people. Adequate standards of living for the farm home and the farm community depend upon adequate farm income. Farm women should understand the problems that confront American agriculture and should assume responsibility through the Farm Bureau in helping to solve them.

HOME

We believe as mothers and homemakers that it is our duty to revitalize our homes with faith, courage, unity, determination, tolerance and understanding.

CHURCH

We urge that our rural families develop a deeper appreciation of spiritual values through larger enrollment in Sunday schools, more liberal financial support, and greater cooperation in church programs. More adequate salaries for better-trained rural ministers and better homes for their families are urgently needed.

CITIZENSHIP

We reaffirm our faith in the American way of life by accepting our responsibilities and privileges as citizens in an active, intelligent manner. We urge farm women to study and discuss local, state, national and international issues in order that they may take effective action.

HEALTH

We believe in the extension of voluntary group prepayment services on some type of an insurance plan that provides greater flexibility and would be more likely to succeed over a wide

for HOMEMAKERS

area than uniform plans on a compulsory basis. The right of the free choice of doctors should be zealously guarded. We believe in comprehensive health education, well-trained doctors and technicians and the establishment of public health centers, hospitals and clinics accessible to all sections of rural America.

EDUCATION

Rural people should be concerned with five major issues in the field of public education: 1. Equalizing educational opportunities for rural children; 2. Spreading the cost of support of schools among all citizens; 3. Raising the standards of rural teachers through better compensation which will encourage the retention of better teachers; 4. Reorganization of school units and administration for efficiency and adequate educational service, and 5. Develop a curriculum related to life and living.

MILITARY TRAINING

We recognize that as a dominant world power, America must maintain an adequate military force. However, we believe this can be done without compulsory conscription. A well-planned enlistment campaign with adequate compensation plus an enlarged national guard will provide the necessary manpower for our armed services.

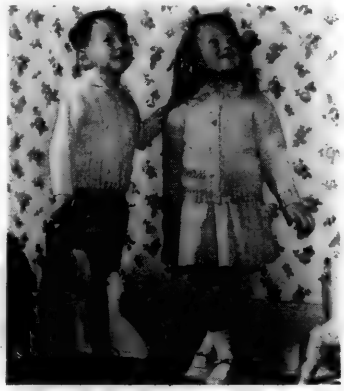
INTERNATIONAL RELATIONS

We support wholeheartedly the principles proclaimed in the United Nations charter and approve the objectives of the United Nations organization. Unless we can have a world free of the fear of war, our plans for the future welfare of our homes and families will never be realized.

We believe the immediate problem of providing food and clothing for the starving peoples of Europe is vital and we give our support to humanitarian programs designed to meet these needs.

We realize that the problem of bringing about peaceful relations between nations is fraught with difficulties. We believe, however, that if goodwill, tolerance and faith and a will to find workable solutions dominates our minds and our hearts, we will find ways and means for progressively realizing our objectives for peace.

HERE'S GIFT SWEATER YOU CAN MAKE



It's always gift time with youngsters in the family. Make brother a smart ribbed pullover and a pearl-buttoned cardigan for little sister. Pockets on the cardigan are trimmed with fancy knit bands. Directions for making these tiny tot sweaters are available to you. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago 5, Ill., enclosing self-addressed stamped envelope.

NUTRITION

Because of the close relationship between soil fertility and human nutrition, we recommend study and discussion of the significant developments now taking place in this field, particularly the fertilizer program of the American Farm Bureau Federation.

We heartily encourage the expansion of the school lunch program to serve better the nutritional needs of all children.

RURAL YOUTH

We urge that more attention be given rural youth activities and that healthful recreation centers be provided with the Farm Bureau assuming responsibility for promoting well-balanced programs.

HOUSING

We believe that there should be provided a program for farm home building equivalent to the well-known program available to urban people.

ELECTRICITY AND TELEPHONE

We appreciate what has been accomplished by the REA and ask that needed appropriations be continued until rural America has been electrified. We urge accelerated research in the use of existing electrical lines for telephone communications.

WAR MEMORIALS

We recommend that where war memorials are being considered, attention be given to establishment of such living memorials as recreation areas, hospitals, and scholarships.

PUBLIC RELATIONS

We recommend that farm women confer on mutual problems with urban women through discussion groups, panels and urban-rural conferences thereby establishing better consumer-producer relations.

LIBRARY

We favor a reasonable use of local and state funds for the extension of library service to rural areas.

SAFETY

We recommend participation in demonstrations and discussions of ways and means to achieve safety in the home, on the farm and on the highways.

Your Favorite Recipe

What is your favorite recipe?

Do you have some special treat you think other homemakers should know about? If so, please write it out plainly and send it to Women's Editor, Illinois Agricultural Association Record, 608 South Dearborn Street, Chicago 5, Ill.

The women of Logan county can have a Home Bureau unit if they want it and they will have the backing of the Logan County Farm Bureau, according to a motion adopted at the recent annual Farm Bureau meeting.

FARM BUREAU TURNS TO POSTWAR TASK

(*Continued from page 7*)

ing as we are returning through fertilizers and soil-building crops."

Congressman Flannagan also pointed out that "in the short span of our existence we have whittled down our top farm land soil from an average thickness of about 9 inches to a present average thickness of about 6 inches."

Another address of paramount interest to farmers was that of Paul G. Hoffman, chairman of the Committee for Economic Development.

Hoffman, who is president of Studebaker Corporation, said, "America is not Wall Street nor Pennsylvania Avenue. It is our farms and our towns. If a sufficiently large percentage of America's 3000 counties are soundly organized, then we will realize that dream of the better America we hear so much about — an America fit for heroes to live in.

Emphasizing the role communities play in the nation's welfare, he declared, "as Main Street goes, so goes the nation." Hoffman said he was greatly encouraged by the Farm Bureau's determination that their agricultural program will call for less, rather than more, "intervention by government". He said the function of government is to provide conditions under which free business and labor can function more effectively.

In the open forum session of the convention, state Farm Bureau presidents outlined the problems in their respective states and discussed general conditions.

Charles B. Shuman, president of the IAA, declared that the big job in Farm Bureau is still that of building membership and the organization. President Shuman declared that the experience in Illinois has indicated that the best approach to a statewide problem is working through the organization from the bottom up, rather than from the top down. He cited the work of the IAA statewide school committee as an example of this approach.

The American Farm Bureau award for Distinguished Service to Agriculture was made to three men. Earl C. Smith, who retired as vice-president of the AFBF, received this high award in a special ceremony at the closing sessions. Other recipients were P. O. Davis, director of extension service, Alabama Polytechnic Institute, and Thomas B. Symons, director of extension service for Maryland University.

Edward A. O'Neal was re-elected president of the AFBF, and Allan B. Kline, president of the Iowa Farm Bureau Federation, was named vice-president to succeed Mr. Smith who was not a candidate for re-election.

IAA President Shuman was named to the AFBF board of directors to complete the unexpired term of Kline.

SUMMARY OF AFBF RESOLUTIONS

(*Continued from page 17*)

farmers, and the increased demand for pulpwood from United States farm woodlots is recognized. Sound forestry practices are necessary to maintain the supply of pulpwood as well as other forest products, and such sound practices cannot be expected unless prices are maintained at a fair level. We recognize the importance to the national welfare of maintaining an adequate supply of pulpwood and other farm woodland products.

In order to assure producers of pulpwood a fair return for their product, we recommend that the board of directors of the American Farm Bureau Federation make, or have made, necessary studies, and support necessary legislation to determine and establish a fair parity price on pulpwood and to obtain a price support which will assure producers a fair price for pulpwood.

IRRIGATION AND WATER DEVELOPMENT

The farm economy of the arid West is dominated by irrigation agriculture. We request the American Farm Bureau Federation to manifest greater interest in this important subject, to study methods whereby the organization can render increased service in this field, and to support the activities of the Institute of Irrigation Agriculture. We further request the board of directors of the American Farm Bureau Federation to consider the calling of a national conference for the careful study of irrigation and other problems involved in water development.

FREIGHT RATE DISCRIMINATION

We request our officers and board of directors to take whatever additional action necessary to remove discriminatory freight rates.

COTTON AND LEATHER IDENTIFICATION

We re-indorse the principle of commodity identification and ask that the Congress enact a law which will extend the benefits of this principle to producers and consumers of cotton and leather on a basis equivalent, in effect, to the law and regulations already provided for rayon and wool.

MEMBERSHIP ACHIEVEMENTS

The greatest membership increase in the history of the American Farm Bureau Federation was obtained during the past year. We commend the state and county organizations throughout the United States and all those who assisted in this magnificent accomplishment. Appreciation is extended especially to those counties and states which attained their goals in the Million Member contest. We recognize that these splendid achievements were accomplished largely through the voluntary, able, and devoted efforts of many Farm Bureau members in all areas of the country.

May we strive continually to improve and increase our organization in order that each member working with his fellow farmers may contribute to a better world.

The Job Ahead...

. . . ***The energies of America, great in war, must be great in peace.***

The brave young people who went forth from our farms and our cities fought for freedom, security, and a better world. Many died. Many of our own whose power in life was strong will rest in an honored and powerful death if we and all men, in our yet living power, do make a freedom and a peace that will be ours and that of our unborn forever. This is our sacred, God-given task. No greater honor can be had for those who died, for those who fought and live, and for those of us who labored at home, than a devotion of our strength, our minds, and our hearts to the cause of freedom, security, and peace for the world.

The farmers of the American Farm Bureau Federation again dedicate themselves, in harmony and union with all American people, to the Nation's new task — leading a war-worn world to peace. (Excerpt from AFBF Resolutions' Foreword 1945)

THE STATE FARM BUREAU PUBLICATION

Back To Work!

By PRESIDENT CHARLES B. SHUMAN

WE HUDDLED together for protection from the sharp January wind as we stood watching the farm sale auctioneer draw a slip of paper from a hat full of names. The lucky man stepped up to claim the 1941 model tractor at the O.P.A. ceiling price and 117 other farmers turned away in disappointment — turned away to face another season filled with costly delays and repairs, as the old worn out machinery is "made to do" another year.

All over America farmers are, this month, planning and working so that they may be ready to produce at capacity. Has not our government called for another year of full production? Full production of farm crops so that the hungry of the world may be fed; so that there will be abundant raw materials for industry; so that inflationary prices may be held in check with a flood of food and fibre! Yes, we farmers will somehow battle through another season of shortages — shortages of equipment and of labor. Let us hope that the supply of baling wire holds out and that our friends in the welding and repair business stay on the job.

No wonder that farmers are angry! After an unsuccessful day looking for repairs, or a cold, greasy day under an old tractor, they come in to look at the headlines of the paper or listen to the news on the radio. Strikes from one end of the country to the other! As this is written, millions of industrial workers are idle on strike or as a direct result of strikes and thousands more go out daily. A few months ago at war's end many of our politicians and economists were predicting widespread unemployment due to the expected slowness of reconversion. A so-called Full Employment Bill was even advocated. Today we have millions of unemployed *by choice,* not because industry could not reconvert nor because there was no demand for their products.

Farmers have little patience with either striking workers or striking industrial plants. Farmers are in no position to decide which side is right in these disputes. They are inclined to believe that *both* labor and industry are at fault. Farmers are in a position, however, to demand that these differences be settled and that our nation go back to work. We say to industry: stop using labor disputes as a screen to restrict production and force upward price adjustments! We say to labor: accept reasonable upward increases in pay, but be willing to justify them by increased efficiency. Abolish slow-downs and "feather bedding". Join with us to give this ideal of abundant production a fair trial.

America came to its high standard of living because of its abundance of natural resources and its hard work to make them available to all. There is no other way!

CO-OP LIVESTOCK MARKETING PROGRAM

up to Farmers

DURING the next month, Illinois farmers through their County Farm Bureaus will have an opportunity to decide on what kind of a long-range cooperative livestock marketing program they want for the state.

From Jan. 30 through Feb. 6, a series of five district livestock marketing conferences was held throughout the state to discuss the "Progress Report on Livestock Marketing" which the Illinois Agricultural Association board of directors is submitting to County Farm Bureaus and other interested groups for consideration.

Attending these meetings were members of the county livestock marketing committees, officers and directors of the County Farm Bureaus and farm advisers. The district meetings were held in DeKalb, Galesburg, Jacksonville, Champaign and Mt. Vernon. County representatives attending the meetings were expected to report back to their County Farm Bureaus.

A printed copy of the "Progress Report on Livestock Marketing" has been submitted directly to County Farm Bureaus by the IAA board of directors for study, suggestions and recommendations. These suggestions and recommendations are to be filed with the IAA board of directors by March 5, 1946. Suggestions are also invited from other interested groups. After all suggestions are received the IAA will adopt a final report and program.

What is the "Progress Report," how was it developed, by whom, and who authorized it?

It all started back in February, 1944. At six district meetings held by the IAA over the state on marketing, livestock producers asked that a statewide committee be set up to study livestock marketing. Such a committee was named by local Farm Bureau leaders representing all parts of the state.

This statewide committee was made up of two representatives from each IAA district; one representative from each of the marketing agencies serving Illinois, including Indianapolis and Evansville, and the marketing committee of the IAA.

At the third meeting of the statewide committee on Jan. 26, 1945, a sub-committee was named to study coordination and availability of marketing agencies and government licensed markets. After 13 full days of study spread over many months, in which representatives of all interested groups were heard, the sub-committee made its report to the statewide committee. Following some days of study, the report was accepted Sept. 6, 1945, and recommended to the IAA board. The IAA board referred it to the IAA marketing committee, who in turn called in all Illinois directors of the marketing agencies on Oct. 5, 1945. Producer Agency representatives expressed some dissatisfaction with certain sections and as a result submitted a counter proposal to the marketing committee of the IAA on Nov. 14, 1945. The counter proposal of the Producer Agencies was given careful consideration.

On Jan. 18, 1946, the IAA marketing committee recommended to the IAA board of directors, general changes in the plan suggested in the statewide committee report.

The action taken by the IAA board in accepting the IAA marketing committee report was tentative. It was further directed that the recommendations be submitted to the County Farm Bureaus for discussion and suggestions, any suggestions to be filed in writing with the IAA within 45 days of receipt of the report by the County Farm Bureaus.

During this period further suggestions can be invited from other interested groups. After consideration of all suggestions, the IAA board of directors will then adopt a final report and program.

That's the development of the "Progress Report" to date. Now let's go back and see what the report is based on.

Summarizing the report of the Statewide Livestock committee, it can be tabulated briefly as follows:

(1) That a marketing system be developed that will be flexible enough to meet changing conditions now and in the future.

(2) To coordinate the purchasing of livestock through agencies now in existence and by the establishing of other buying points that may seem necessary to bring about such coordination.

The committee recommended that a state-wide livestock marketing agency be organized and set up on a straight Farm Bureau cooperative basis.

It recommended a capital stock set up with "B" stock running to the Illinois Agricultural Association, and that the no par common stock should be issued to Farm Bureau members, district marketing agencies, or country buying points.

After such state agency had been established to bring about the necessary control for complete coordination of the sale of livestock, the committee recommended that the agency operations of the Chicago, St. Louis, Peoria, Springfield, Bushnell producers, and the state office of the Illinois Livestock Marketing Association be purchased by the new state marketing association.

This purchase should cover the equipment, personnel, and contractual relations, but should not include any part of the surpluses of these organizations.

This arrangement would leave to the boards of directors of the various agencies so purchased, the responsibility for liquidation of all assets not purchased or taken over by the state livestock marketing agency. This purchase program would bring all of these op-

perating agencies under one board of directors and under common management.

In making this recommendation, the committee recognized many difficulties that might arise in the purchase of terminal agencies serving livestock farmers in other states. In case such difficulties could not be overcome, the committee suggested as an alternative recommendation, namely: that such terminal agencies be completely re-organized so as to provide director representation of states substantially in proportion to the livestock originating in the respective states; that in Illinois, such voting rights be placed in the proposed statewide marketing agency in proportion to the livestock originating within the state.

To complete the livestock buying program, the committee recommends that the state agency develop a statewide order buying company. This so-called order buying company would, in reality, be a sales agency selling livestock for local units already established or to be established just as the state officer of Illinois Livestock Marketing Association does now.

The financing of the state livestock marketing agency would be through the sale of stock to livestock farmers, Farm Bureaus and other farm organizations. Additional concentration points would be set up over the state in the livestock producing areas, as County Farm Bureaus in the area directed, and where local County Farm Bureaus were ready either in one county or more than one county to raise the money to finance the necessary facilities and operations of such a point. The purchase of livestock in these points would be made direct from the farmers on bids secured from buyers by the state-wide marketing agency. Provision is made for the flow of patronage dividends, if any, to the Farm Bureau members patronizing the agencies.

The committee recommended further, that when such state agency is set up, that it provide for a department of research and information which would give consideration to several subjects pertinent to the marketing operations.

It recommended that special consideration be given to the purchase of feeder livestock, pointing out that the interests of the seller of feeder livestock and the buyer of feeder livestock are so opposed, that it is hard to carry on that operation through a selling organization.

The committee also recommended the development of an effective field service and that the proposed state-wide marketing agency give careful study to the possibility of cooperative transportation.

It is also recommended that such state agency give consideration to the construction and operation of a pilot packing plant.

With respect to licensing of markets, it was the conclusion of the committee that such a venture is a national program, and that the Illinois Agricultural Association should make the following recommendations to the American Farm Bureau Federation and the National Livestock Producer Association:

(a) That an effort be made to place the slaughterer of a volume of livestock to be determined under the packer and stockyard act.

(b) That an effort be made to place more of the concentration and country buying points under a regulated license system.

(c) That an effort be made to pass legislation that would restrict the large slaughterers (over a certain volume to be determined) to these regulated markets for the purchase of their supply of livestock.

W. E. Temple, La Salle county, rises to offer his views on new IAA livestock marketing program during meeting in DeKalb, Jan. 30. Meeting was one of a series designed to get farm opinion on program.

This committee made its report to the large committee and its report was accepted and passed on as a recommendation to the Board of Directors of the Illinois Agricultural Association.

Following the report of this committee, the Illinois Agricultural Association board referred it to the IAA marketing committee, who in turn conferred with the officers and boards of directors of the Producer Agencies. All Illinois members of the boards of directors of the Producer Agencies, and Illinois Livestock were called together on Oct 5, 1945. The Illinois Livestock Marketing Association and the Bushnell Producers Commission Association tentatively endorsed the report. The other agencies asked that they be permitted to select a committee to work out an alternative plan to be submitted not later than the middle of November. The report of that committee was received by the IAA marketing committee on Nov. 14, 1945.

The agency committee report seems to agree with the general committee on some points:

(1) That some notable changes have taken place since the organization of the present cooperative livestock marketing system, and that there were changes in the transportation system, changes in the buying practices of packers and the decentralization of processing, and resulting changes in the dis-

1946 FARM OUTLOOK REMAINS FAVORABLE

■ ■ ■

THE 1946 production goals set for Illinois farmers by the U. S. Department of Agriculture call for continuing high levels of production with a sharp eye on the road ahead.

Demand is expected to continue high during the first half of 1946 because of high wage and employment levels, government military demands and overseas needs. Prices may become weaker in the latter part of the year as foreign needs and military demands slacken.

Following is a summary of the Illinois farm outlook as prepared by the University of Illinois college of agriculture extension service:

General Outlook for 1946 — Demand will be good but weaker than in 1945. Farm income and farm prices may decline moderately.

Prices of most Illinois farm products are likely to remain firm in the first part of 1946. Consumer spending will not decline much and shipments of food to foreign lands will be large. As food supplies become more plentiful and foreign needs diminish in the latter part of the year, prices may decline moderately.

Cattle Production — Demand will be good and slaughter large. Subsidies and ceilings may be removed.

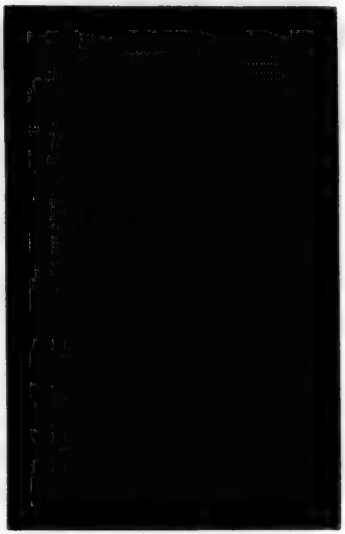
Returns on cattle in 1946 are likely to be lower than in 1945. The large number of cattle and calves on farms and the prospective decline in cattle prices will keep slaughter high in 1946. Demand will continue strong but prices will be no higher than those prevailing last year.

Hog Production — Demand will be good, but civilian meat supplies will be larger. Prices will be lower.

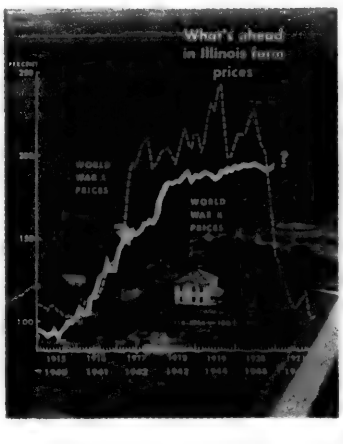
Hog prices will average moderately lower in 1946 than in 1945. Civilian supplies of meats are expected to be about 150 pounds per person in 1946 compared with 130 pounds in 1945. The 1945 fall pig crop is estimated to be 12 per cent larger than a year previous, and preliminary reports indicate a two per cent increase in spring pigs for 1946.

Feed Supplies — Feed supplies are down. Corn quality is lower. Less wheat is available. Demand for feeds will remain strong.

Total U. S. supply of all feed concentrates for the 1945-46 feeding season is two per cent smaller than a year previous. The demand for feed grains, high protein feeds and by-product feeds for livestock will remain strong until late in the year.



Corn is of lower quality and much will be fed to stock before warm weather. Other grains also will remain scarce until late in the year.



Dairy Produce — Returns may be lower. Government action on ceilings and subsidies is the uncertainty.

Although the dairy outlook for Illinois farmers in 1946 is favorable, Illinois dairy farmers will receive moderately lower returns than in 1945. Demand is diminishing for canned and powdered milk and cheddar cheese. Butter demand will continue to exceed the supply. An increase in price, however, may divert more butterfat to the manufacture of butter. Numbers of milk cows are declining and milk production in 1946 is expected to be from one to three per cent lower than it was in 1945.

Sheep — Numbers are low. Fewer lambs are on feed. Demand is good. Wool stocks are high.

Returns from the sale of sheep and lambs, including the subsidy paid directly to producers, are likely to average higher in the first half of 1946 than in the same period in 1945. Fewer fed sheep and lambs will be marketed and the demand will be strong. If subsidies are discontinued June 30, returns may be lower in the latter part of the year unless ceilings are removed. Sheep numbers are at their lowest level since 1928.

Support prices of wool will continue at present levels through June but the 1947 clip will sell at lower prices.

Poultry and Eggs — Egg price outlook is unfavorable. Supplies will be large and demand will decline.

Civilian demand for eggs will be fairly good in 1946 but will decline with more plentiful meat supplies. Unless exports are large, lower prices are in prospect.

Demand for chicken meat is expected to remain fairly strong in 1946 with prices averaging moderately lower. Heavy culling of flocks is recommended.

Lower prices can be expected for turkeys. The upward trend in consumption will continue but production is nearly double the prewar average.

Fruits and Vegetables — With average yields, production of tree fruits in the U. S. in 1946 will be slightly larger than in 1945. The apple crop will be much larger. Larger supplies of fruit, including imported tropical fruits, foretell lower prices for domestic fruits.

Illinois vegetables for processing are likely to be moderately lower in 1946 than in 1945. Demand will be good but canned supplies are at a record high.

Soybeans and Wheat — The need for soybean meal and oil will continue to

A. E. Richardson, Country Mutual Casualty Company manager, addresses IAA insurance Roundup meeting held at Pere Marquette Hotel in Peoria, Feb. 1-2.

YOUR Farm Bureau auto and fire insurance companies now have new names.

As of Feb. 1, the insurance companies that Illinois Farm Bureau members founded and built to their present top positions, will be known as the Country Mutual Casualty Company, Country Mutual Fire Company, and Country Life Insurance Company.

Country Casualty formerly was Illinois Agricultural Mutual Insurance Company, or as most Farm Bureau members called it, "The Farm Bureau auto company."

Country Fire was formerly Farmers Mutual Reinsurance Company, but most folks referred to it as the "Farm Bureau fire company."

The name Country Life remains unchanged.

Why were the names of the auto and fire companies changed?

The reasons for the changes are these: In looking ahead to the next 100 years that the Farm Bureau insurance companies will be serving farmers of Illinois, the boards of directors of these companies suggested that the fire, auto and life insurance companies should have names to show the bond that exists between them. These Farm Bureau insurance companies have been wedded for many years, but they never adopted a common name. Since Country Life had a name that all farmers seemed to like, it was decided to call the auto company, Country Casualty, and the fire company, Country Fire.

The IAA board gave the matter long and careful consideration before adopting the changes in names, and the new names have been approved by the State Department of Insurance.

The changes apply to the names only and in no way involve corporate structures of the companies.

It also was felt that the old names did not adequately describe the two companies. Although Farmers Mutual Reinsurance Company intended originally to do most of its business in reinsurance, in recent years virtually all of its policies have been written directly.

The name Illinois Agricultural Mutual Insurance Company was considered too cumbersome and not as descriptive of the activity of the company as the name Country Casualty.

Another reason for the change was the fact that the three companies have a common field and acquisition program and it was the belief that it would be helpful to the agent and fieldman to be identified with an insurance line with a common name.

Illinois Farm Bureau members can well be proud of their three insurance companies. They built them and they own and control them through farmer-elected boards of directors.

Country Life and Country Fire provide insurance protection of a half billion dollars on Illinois Farm families and their property.

Country Casualty, in addition to its other lines of insurance, insures more automobiles in the state of Illinois than any other casualty company.

Country Casualty was established in 1926 as Illinois Agricultural Mutual Insurance Company. On Jan. 1, 1946, it had the following policies in force among Illinois Farm Bureau members: auto, 135,364; employer liability, 13,715; calf, 473; cargo, 1,934; Farm Bureau liability, 60, and miscellaneous, 99.

Country Fire, was founded in 1925 as Farmers Mutual Reinsurance Company. On Jan. 1, 1946, it had approximately 45,000 policies among Illinois Farm Bureau members including fire, windstorm and extended coverage in an aggregate amount of approximately 300 million dol-

(Continued on page 8)

At speakers' table during IAA insurance Roundup dinner in Peoria, Feb. 1-2, are (left to right): Vice President F. E. Morris, President Charles B. Shuman, Country Life Manager Dave Mieher, IAA Counsel Donald Kirkpatrick, Earl C. Smith, former president, and C. E. Yale, 1945 president of Illinois Farm Advisers Association.

FARM OUTLOOK REMAINS FAVORABLE

ILLINOIS PRODUCTION GOALS FOR 1946

Beef Cattle — Reduce by two per cent.
Corn — Increase acreage by two per cent.
Spring Pigs — Same as 1945.
Dairy Production — Same as 1945.
Sheep — No reduction.
Oats — Increase acreage by six per cent.
Eggs — Cull more hens. Produce 17 per cent fewer eggs.
Chickens — Raise 19 per cent fewer.
Soybeans — Reduce acreage 17 per cent.
Turkeys — Raise seven per cent fewer.

Shorts in the News

The board of directors of the Menard County Farm Bureau has purchased 2½ lots south of the Farm Bureau building in Petersburg. The Farm Bureau now owns a half block on Main street. The new property will be used for expansion when desired.

J. G. McCall, Jackson county farm adviser, has announced he will become Perry county farm adviser after his resignation from his present post March 1.

McCall has served at Murphysboro since March 1, 1930 and during that time was farm adviser for the Jackson-Perry Farm Bureau until last year when the two counties split into separate Farm Bureaus.

Harold P. Templeton, former fieldman with the Illinois Agricultural Association livestock marketing department, has been employed as agricultural relations field representative by the Illinois Chain Store Council. Templeton was expected to be discharged from the army this month to take over his new job. He is a former Champaign county assistant farm adviser.

Three Illinois farm advisers were among the nation's 85 county agents who received distinguished service awards at the annual meeting of the National Association of County Agricultural Agents in Chicago in December. They were E. A. Bierbaum, Union; John R. Gilkey, Macon, and H. H. Lett, Wabash.

I. F. Green, Peoria county farm adviser, is resigning and plans to take a job with a Peoria bank within a few weeks. Green graduated from the University of Illinois college of agriculture in 1930 and went to Peoria county after teaching vocational agriculture at Sparta and after serving as farm adviser in Bond county.

A feature story of the daily activities of B. W. Tillman, St. Clair county farm adviser, appears in the December issue of Country Gentleman under the title "County Agent — He Looks to the Future." Tillman has been St. Clair county farm adviser for more than 26 years.

Earl C. Smith, retiring IAA president, and Mrs. Smith receive chest of silver from IAA staff at dinner in Edgwater Beach hotel, Chicago, Jan. 9. Presentation is made by IAA Counsel Donald Kirkpatrick (right).

A. C. Kamm, Saline county farm adviser for the past four years, will succeed E. O. Johnston as Piatt county farm adviser. Johnston resigned to become head of the new plants food division of the Illinois Farm Supply Company in Chicago. Kamm is a former University of Illinois star basketball player.

H. H. Alp, extension poultryman with the University of Illinois college of agriculture for nearly 20 years, will leave the university March 1 to work for Lester J. Norris, Kane county banker and industrialist at St. Charles. His new work will be in the field of public relations and he also will serve as agricultural adviser to the state bank at St. Charles.

The nation's largest live stock show, the International Livestock Exposition, will be held Nov. 30 to Dec. 7, 1946, after a wartime lapse of four years. The show will be held at the Chicago Stock Yards. The announcement was made by the president of the exposition, Henry W. Marshall of Lafayette, Ind.

W. A. Viehe, president and charter member of the Franklin County Farm Bureau, died at his home in Ewing, Jan. 19 after an illness lasting only a few hours. Mr. Viehe was vice president in 1945 and was named president at the annual Farm Bureau meeting last November.

Texts on the addresses of Congressman Everett M. Dirksen and Rev. George M. Gibson given at the IAA annual meeting are still available in a limited number. Persons wishing copies of these speeches may write the IAA Publicity Dept., 608 South Dearborn St., Chicago 5, Ill.

Ward Cross of Ogle County, recently discharged from the armed forces as a captain, has assumed his duties as DeKalb county assistant farm adviser. He is a graduate of the University of Illinois college of agriculture, class of 1941. He will be in charge of 4-H activities and will assist with the extension program.

Floyd M. Smith, former Sandoval high school agriculture teacher, has taken over his new job as Clinton county farm adviser. Smith graduated from the University of Illinois college of agriculture in 1937 and owns a farm northwest of Patoka. He is married and has three daughters and a son.

Cap Mast, former director of publicity for the IAA, has just been announced as the new editor and publisher of the Agricultural Leaders' Digest. He succeeds the late Estes P. Taylor who devoted 23 years of his life to editing and publishing the magazine.

Cap was assistant farm adviser and 4-H club leader in LaSalle county before and after he was graduated from the U. of I. College of Agriculture. He later served assistant editor of Prairie Farmer, 1936-37. From 1937 to 1940 he was head of the field service department of the IAA, and in 1940 was named head of the publicity department to succeed George Thiem, now of the Chicago Daily News. Cap left the IAA in December, 1944, to become editor of "The Business of Farming," published by U. S. Gypsum Company.

IT'S COUNTRY CASUALTY

(*Continued from page 7*)

lars. In addition, 25,000 policies, providing 94 million dollars of hail insurance coverage on growing crops, were written in 1945.

Country Life, established in 1928, had more than $250,000,000 of life insurance in force on Jan. 1, 1946. The record established in writing this amount of life insurance in 17 years of operation has never been equalled in the insurance field.

Managers of the three IAA associated companies are: Country Life, Dave Mieher; Country Casualty, A. E. Richardson, and Country Fire, J. H. Kelker.

Farm Supply COMPANY HOPES TO EQUAL 1945 FEED DELIVERIES

First picture of the 1946 IAA board of directors shows left to right: Ronald Holt, Galva, 15th district; J. King Eaton, Edwardsville, 22nd; Dan L. Clarke, New Berlin, 21st; Otto Steffey, Stronghurst, 14th; Charles Lauritzen, Reddick, 17th; K. T. Smith, Greenfield, 20th; Chester McCord, Newton, 23rd; C. E. Yale, Lee county, Farm Advisers' Assn. representative for 1945; (in back of McCord) F. E. Morris, Buffalo, vice-president; Charles B. Shuman, Sullivan, president; Paul Mathias, secretary; Shirley Manis, office secretary; C. J. Elliott, Streator, 12th; Harvey Adair, Chgo. Hts., 1-11th (back of Elliott); Lyman Bunting, Ellery, 24th; August G. Eggerding, Red Bud, 25th; Homer Curtis, Stockton, 13th; R. V. McKee, Varna, 16th; John T. Evans, Hoopeston, 18th, and Milton Warren, Mansfield, 19th.

ILLINOIS Farm Supply Company deliveries of high protein feeds for livestock in 1946 are expected to almost equal 1945 deliveries, according to J. J. Lanter, feed division director.

Lanter pointed out, however, that the feed supplies for 1946 depend upon the amount of protein meal made available by processing plants.

"By forcing the return of scarce protein meal into normal retail channels," he said, "the new regulations issued by the U. S. Department of Agriculture on the sale of protein supplements should help Illinois Farm Supply Company obtain larger supplies for its patrons."

Restrictions on the use of protein meal in the manufacture of mixed feeds for livestock and poultry went into effect Jan. 16.

The order was issued when heavy consumption by a record number of poultry on farms and a near-record volume of cattle feeding made heavy inroads on the nation's feed supply, creating protein shortages in many parts of the country.

The situation was further aggravated by some processors going into the feed manufacturing business, thereby depriving established feed manufacturers of their normal sources of supply.

The government order provides that no manufacturer may use more high protein meal in making mixed feeds for livestock than the quantity so used during the corresponding calendar quarter of 1945.

It also provides that no person may use in the manufacture of poultry feed a larger quantity of protein meal than the following percentages of the quantity so used in the corresponding month of 1945: January and February — 100; March — 95; April — 90, and all other months of 1946 — 85 per cent.

The dealer also is restricted in the amount of protein meal he may sell to a patron. The order provides that no feeder may receive more than one ton at a time and that no feeder may receive more frequent deliveries of protein meal in 1946 than he received in 1945.

Lanter explained that in his opinion the government order would not correct everything in the feed business but that it would go a long way to alieviate maldistribution in the industry.

Another factor that is disrupting the normal channels of trade is the practice of swapping for mutual advantage. Some processors have been forced to offer protein meals in exchange for beans in order to get the processing materials they need. In many instances, those in possession of beans are demanding more meal than their actual needs and using the surplus to trade for other commodities.

By following the 1946 farm production goals set by the U. S. Department of Agriculture (explained on another page of this issue of the RECORD) and by using the available supply of supplement where it will do the most good, livestock feeders will be able to accomplish as much and without any more hardship than was encountered during the war years.

JOHN R. SPENCER, DIRECTOR OF SOIL IMPROVEMENT DEPARTMENT, RESIGNS

John R. Spencer, director of the Illinois Agricultural Association soil improvement department since 1937, has resigned to take employment with a Lee county limestone company. His resignation takes effect March 1.

J. R. Spencer

During Spencer's nine years with the IAA, the application of limestone and rock phosphate on Illinois farm soils has increased each year to the largest amount of any state in the nation — more than four million tons of limestone and more than 250,000 tons of rock phosphate annually.

His work was chiefly concerned with quality supervision of agricultural limestone produced by the 150 quarries serving Illinois farmers, and similar work on rock phosphate shipments.

Spencer was born in Geneseo in Henry county and entered the University of Illinois college of agriculture in 1915, leaving in 1918 for 16 months service in World War 1. He finished college in 1920 and worked in Kentucky with agricultural extension service and later as a county agent.

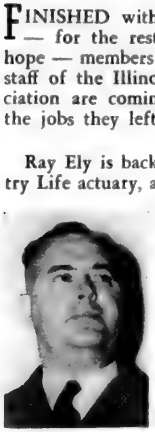
In 1925 he returned to Illinois as farm adviser in Wabash county and in 1928 he went to Rock Island county as farm adviser where he served until he came to the IAA in 1937.

Spencer is married and lives with his wife and two children, a boy and a girl, at their home in Naperville, a Chicago suburb. He formerly owned and operated a 170-acre grain and stock farm in Kendall county.

Servicemen Return To Jobs They Left For War

FINISHED with war and soldiering — for the rest of their lives, they hope — members of the Chicago office staff of the Illinois Agricultural Association are coming back to take over the jobs they left a few years ago.

Ray Ely is back on the job as Country Life actuary, a position he had held since 1941. Ely entered the army as a captain in 1942 and was scheduled to finish his terminal leave Feb. 21. He served on the faculty of the officers training school at Fort Benning, Ga., and spent the last six months of 1945 in the Philippines. During his army career, Ely rose to the rank of lieutenant colonel.

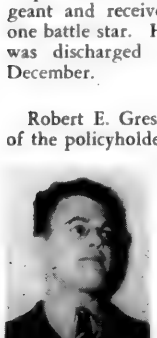


Ray Ely

Robert Garry, Country Life auditor, started work with the company in 1938 and went into the service in 1942. He trained at Camp Crowder, Mo., and Fort Monmouth, N. J., before being sent overseas. He spent 22 months in Hawaii and Saipan. Garry was a signal corps technical sergeant and received one battle star. He was discharged in December.

Robert Garry

Robert E. Gresley, who is in charge of the policyholders service department of Country Life, has been with the company since 1935. He went into the service in 1943 and trained mainly in Texas. Gresley was overseas 15 months, serving in England and France. He was discharged in October as a corporal with one battle star.



R. E. Gresley

Urban Henderson of Country Life records department has been with the company since 1937. He joined the signal corp in 1941 and received most of his training at Camp Roberts, Calif. He was overseas 14 months, serving in England, France, Belgium, Holland and Germany. He was discharged in October as a master sergeant with three battle stars.

U. Henderson

George Dirreen of Country Fire's underwriting department came to the Chicago office in 1943 after three years of field work downstate. The same year he went into the navy and received his boot training at Farragut, Ida., and saw 22 months service at sea as a radar operator third class aboard a destroyer which was damaged in a kamikaze attack. He saw service in New Guinea and the Philippines and was dicharged in September with six battle stars.

G. W. Dirreen

Henry H. Belfield of Country Fire's accounting department has been in the employ of the company since 1938. He joined the service in 1942 and received most of his training in Florida with the army air forces. He spent a year overseas in Italy as a radar technician and was discharged as a sergeant with four battle stars in November.

H. H. Belfield

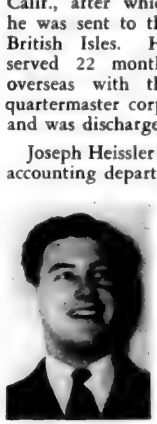
Lyman Peaks, chief underwriter with Country Fire entered the employ of the company in 1937. He went into the navy in 1943 and received his training at Purdue university and a school in Washington, D. C. He spent 14 months in the south Pacific at New Guinea and the Admiralty Islands and was discharged in November with the rating of electrician's mate, third class.

Lyman Peaks

George K. Charvat of Country Casualty's claims mail department started work with the company in 1940 and entered the service in 1941. He received most of his training at Camp Forrest, Tenn., and at Camp Young, Calif., after which he was sent to the British Isles. He served 22 months overseas with the quartermaster corps and was discharged in October.

G. K. Charvat

Joseph Heissler of Country Casualty's accounting department joined the company in 1941 and went into the army in 1942 receiving most of his training at Fort Monroe, Va., in coast artillery. He spent 18 months in the Aleutians and was discharged as a technician, fifth grade.



Joe Heissler

William H. Quinn, claims examiner with Country Casualty, entered the employ of the company in 1941 and joined the army air forces the following year. He received most of his training in Denver, Savannah and Atlantic City and spent 27 months overseas in England, France, Germany, Belgium, Holland and Luxembourg. Quinn was discharged as a sergeant in October with five battle stars. He is a farm bureau member in McLean county.

W. H. Quinn

George W. Krogman of Country Casualty's accounting department has been employed by the company since 1930. He joined the army signal corps in 1942 and received most of his training in California. He was overseas for 22 months in England, France, Holland, Germany and Belgium. He devoted much of his time to radio repair and was discharged last

G. W. Krogman

November as a technician, third grade with five battle stars.

Howard Marshall, assistant claims superintendent with Country Mutual Casualty Company, came to the Chicago office in 1935 and entered the army air forces as a lieutenant in 1942. He received training in air intelligence at Harrisburg, Pa., and provost marshal work at Camp Custer, Mich. Overseas 18 months, he was given additional training at universities in Sorbonne, France and Naples, Italy. He also served in England, Germany, Belgium, Corsica and Luxembourg. Marshall was discharged with the rank of captain last November. He has five battle stars.

H. J. Marshall

Richard I. Dodson, claims examiner with Country Casualty, joined the company in 1941 and went into naval service in 1942. He received his training at Great Lakes, Memphis and San Diego and spent 15 months overseas chiefly in the Marshall and Gilbert Islands. Dodson was discharged at San Diego in October as an aviation radioman, first class. He has two battle stars.

R. I. Dodson

Lawrence C. Vork of Illinois Farm Supply's cost accounting department started doing bookkeeping for the Ford County Service Company while in high school and about two years after graduating from college in 1933, he came to the Chicago office of the Illinois Farm Supply Company. He entered the armed service in 1942 and became a member of the inspector general's department, and later the budget and fiscal department of the army air forces. He was recently discharged with the rank of lieutenant.

L. C. Vork

University of Illinois Circular 596 reports on performance tests of winter wheat varieties in Illinois for 1944-45. Copies are available from the county farm adviser or by writing to the College of Agriculture, Urbana.

SCHOOL SURVEY PROMISES GREATEST IMPROVEMENT *Since 1855*

NINETY-THREE counties have voted to make a study of their school conditions with the idea of proposing changes which would be for the benefit of pupils. Including the votes in the 9 counties that voted against the survey, 11,261 board members out of 15,308 voting agreed to set up a county committee to make the study.

This action definitely launches the state on a program of local study, local planning and local adjustments brought about by the cooperation of local people.

Why was the school survey program proposed? First, because the school survey program promises greater improvement in Illinois' public school systems than any other step taken since 1855.

The schools set up in 1855 served the need for that day. They were adjusted to communities with mud roads, slow transportation, large families, and to a people who needed only a general education.

With the coming of better roads, faster transportation, smaller families and the need of more specialized training, the school organization of 1855 does not fully meet the needs of pupils today.

Here are some more reasons for the school survey program. Enrollments in rural elementary schools have decreased 29% from 1920 to 1940 and 69% from 1880 to 1942.

Fifteen hundred districts have ceased to function normally as schools and transport their few pupils to other schools.

There are 1,092 districts that have fewer than 5 pupils in average daily attendance and 2,211 districts with fewer than 7.

Approximately 73% or 7,278 districts have fewer than 15 pupils.

Enrollments in one-room schools is less than half of what it was a generation ago.

For example, there are 295 boys and girls in grades by themselves in Macoupin county. Vermilion has 232; DeKalb 199; Winnebago 130; and so on.

Over half of our 900 high schools have fewer than 100 pupils and over two-thirds have fewer than 150. Small high schools cannot broaden their program sufficiently to include vocational agriculture, home economics, commercial and perhaps general shop courses without running into very high per capita costs. A one hundred and fifty pupil enrollment seems to be the point at which small high schools can offer the most education for the money spent.

Also it is becoming extremely difficult to secure good teachers in rural schools. About 8 out of 10 teachers on emergency certificates are in rural schools. Many have no training beyond the high school. Only about 15 teachers in training now are planning to teach in rural schools. Only 12.4% of the teachers now in training are planning to teach in elementary schools, city or rural. The others are training for high school jobs. We need approximately 2½ times as many elementary teachers as high school teachers. Salary is part of the answer, but we shall have to improve the school organization, working and living conditions of the teachers to get them back into the elementary field.

There is considerable inequality between districts in their ability to finance their school programs today, due largely to the wide difference in the assessed valuation of school districts.

We have districts with assessed valuations of $8,000 and others with $5,000,000. We have districts with no school tax rates, districts with 3 cent tax rates, and districts that levy the limit under the law and still cannot finance their schools locally. When these districts were set up in 1855, the tax was on agricultural land mainly. Few railroads or industries existed to create inequalities between districts. The tax base should be broadened and the benefits of such special advantages should be distributed over the larger school district.

Running a school is a good deal like running a farm. The farmer recognizes that to make the most efficient use of his equipment, his labor and his managerial ability, he needs a reasonable acreage.

The vaccination of calves four to eight months old is a recognized aid in the control of brucellosis disease.

Attending the annual meeting of the Sanitary Milk Producers in East St. Louis, Jan. 17 were, left to right: Alden Snyder, Montgomery county farm adviser; Charles Whitlock, chairman, Producers Creamery, Carlinville; Pat Regan, University of Missouri dairyman; C. S. Rhode, University of Illinois dairyman; and O. O. Mowery, Macoupin county farm adviser. More than 1,600 attended meeting.

ANDERSON TELLS MILK PRODUCERS HE'S FOR HIGHER PRICES

TO MEET the 1946 national production goal of 120.5 billion pounds of milk, Secretary of Agriculture Clinton P. Anderson recommended higher prices or a continuation of subsidy, when he spoke in East St. Louis Jan. 17 at the 16th annual meeting of Sanitary Milk Producers.

Anderson said the government at one time intended to remove food subsidies in April but that the continuing high food prices made it highly improbable.

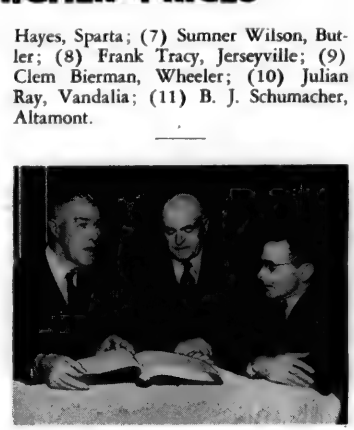
He emphasized the bright outlook for the dairy industry because of the growing desire among consumers for more dairy products. He pointed out, however, that the demand would continue just so long as people have jobs and money to spend.

President R. D. Pennewell of Palmyra, Mo., stated that the association has asked for a federal milk hearing to obtain fair prices for milk.

Manager A. D. Lynch reported an average price of $3.44 per cwt. for 1945, a decrease of five per cent from the previous year. Total production was 358,895,080 pounds valued at $12,364,042.03.

Among the speakers on the program was Wilfred E. Shaw, IAA director of milk marketing and secretary of Illinois Milk Producers Association, who also presided at the election of directors.

Directors elected from the Illinois districts of the association were: (1) J. J. Antenen, Marine; (2) Orville Plocher, Highland; (3) John Voss, Breese; (4) August Dieckmann, Lebanon; (5) Emil Klingenberg, Okawville; (6) Russell Hayes, Sparta; (7) Sumner Wilson, Butler; (8) Frank Tracy, Jerseyville; (9) Clem Bierman, Wheeler; (10) Julian Ray, Vandalia; (11) B. J. Schumacher, Altamont.



Officiating at sessions of the 24th annual meeting of the Peoria Producers Commission Association in Peoria, Jan. 9 were, left to right: President George Wilson, Toulon; Secretary-Treasurer Seaton Moon, Hermon, and General Manager T. M. Smythe, Peoria.

Peoria Producers Hold Annual Meeting

A total of 247,901 head of livestock valued at $10,440,491.76 was marketed cooperatively through the Peoria Producers Commission Association last year, according to the report made by Manager T. M. Smythe at the 24th annual meeting of the association in Peoria, January 9.

Smythe told the assembly that the average organized farmer cannot be expected to patronize cooperatives through loyalty alone. To serve the farmer, he said, our cooperatives must be aggressive and must continually explore new and better services if they are to command the respect of the farmer.

Other speakers on the program included George Metzger, IAA field secretary; Sam F. Russell, IAA director of livestock marketing, and H. J. Gramlich, North Western Railway agricultural agent.

It was also the 17th annual meeting of the Peoria Livestock Marketing Company, whose directors are the same as those of the Peoria Producers. The major activity of this company is the purchase of cattle in the west to fill midwestern feeder orders. During 1945, the company filled orders for 6,364 feeder cattle and 14,596 feeder lambs.

Directors re-elected to Peoria Producers Commission Association were President George Wilson, Stark county; Vice President J. Frank Felter, Woodford county, and C. W. Ackerman, Tazewell county.

Manager Smythe declared he expected the outlook on government restrictions to improve in the coming year but that the near future would appear to be more difficult due to the lower production and strong competition.

Farm Supply Barge Damaged By Fire

An Illinois Farm Supply Company oil barge was badly damaged by fire in early December near Helena, Ark., when it drifted untended down the Mississippi river after having accidently been set afire.

Damage, covered by insurance, was estimated at $4,000 to the barge and $1,500 to the cargo. No one was injured.

According to witnesses, the Farm Supply barge was tied up at the dock with another company's barge which was being loaded. Suddenly the barge being loaded burst into flames and the fire soon spread to the Farm Supply barge.

Witnesses do not agree as to whether the tie lines were cut or burned, but the Farm Supply barge was soon set adrift. The barge was taken in tow a few hours later, after it had drifted 40 miles down the Mississippi, by an Illinois Farm Supply Company boat coming upstream from New Orleans.

Bang's disease causes great economic loss, not only from infected cows which become sterile, but also from dead and weak calves and lowered milk production.

..."AS FARMERS FORWARD GO"

ORGANIZATION NOTES
By O. D. Brissenden

LA SALLE county, after a successful membership drive, estimates current membership Feb. 1 as over 3300, which, subject to latest figures from other big counties, may put LaSalle in first place in total membership. COD Earl Hayes and the organization committee predict further gains in 1946.

Whiteside county passed the 2,000 mark in membership on Dec. 12, when former Air Force navigator Ronald Bradley was signed as a member by Claire Gsell, also a former navigator. Current membership at year's end was 2015.

Marion county reports 81 contracts signed in the north-south competitive campaign that ended Jan. 10. E. L. DeLay and Glen Jones were the respective captains.

Champaign, another of the state's large counties, launched the "Battle of the Bucks" January 15, with membership then standing at 3100. No report on them as of Feb. 1.

Effingham county's drive ended Dec. 4 with 75 new contracts. Wood Loy and Salvester Zerrusen led the two teams in a 19th-20th century contest.

Jan. 1, 1946, was another memorable day for IAA organization workers, for it marked the attainment on a statewide basis of the long-range goals set in 1944. As of that date, membership stood at 118,845, or 441 over the total of the county goals.

These goals were set in membership maintenance conferences in 1944, shortly after the successful conclusion of the drive for 100,000 members. Each county organization committee, in consultation with key executives of the county and the IAA director of sales service and assistant organization director, determined for itself what the goal should be.

At this year's membership maintenance meetings, the goals are being reconsidered and new objectives set. It looks as if the total goals for attainment this year in the state will add up to well over 125,000 members.

Membership maintenance meetings, as of Feb. 1 had been held in 21 counties with a total of 40 counties participating. Attendance and interest are both running ahead of last year's successful series. According to schedules, nearly 90 counties will participate this year.

Eleven new county organization directors, nine of them World War II vets, have started work in District II, presided over by L. Burl Hornbeck. A brief account of each follows:

Henderson County—Don Allison, for several years an employee of the Henderson County Service company.

Stark County—Louis Bogner, former organization director, and a veteran. Louis will also manage the cold storage lockers.

Winnebago—Eugene Stadel, veteran, and former COD and assistant adviser in Marshall Putnam, and former 4-H club worker in Winnebago.

Schuyler—Lymal E. Ransom. He will also act as a special agent under GA Earle Derry.

Adams—Ward Buzzard, to be COD and special agent. He is a veteran of several years' service.

Pike—Carrol Johnson, a veteran, hired as COD and also to assist the Farm Adviser. He is a Pike county native.

Marshall-Putnam—Paul Laffey, to be COD and Assistant Adviser. He is a veteran, and a native and former 4-H club member of Hancock county.

Scott—Earl Gathman, formerly a farmer and special agent in Sangamon county, will be COD and general agent.

Whiteside—Claire Gsell, Air Force vet, started to work as COD December 1.

Brown—Nelson Workman, veteran, and former teacher, to be COD and General Agent. He began work Nov. 15.

Tazewell—Charles Masching, veteran, former General Agent in Tazewell, to be COD and special agent.

With the presentation of 50 new members to retiring President Lester S. Davison at the 31st annual meeting of the Woodford County Farm Bureau, Jan. 19, membership in the organization reached the all-time high of 1522 members — above the goal of 1500 set by the organization committee headed by Peter R. Schertz two years ago, when the membership stood at 1214 members. At that time a long-time goal of 1500 members by annual meeting in 1946 was recommended by the organization committee and adopted by the board of directors.

Attainment of the goal was the result of a last-minute campaign starting Jan. 1 with the membership at the 1472 level, and ending Saturday when Ed Sutter, organization director, presented 26 contracts to President Davison, as the results of the efforts of his membership workers and insurance department while George Ludwig turned in 24 contracts secured by his employees, directors and membership workers.

Mr. Sutter also announced that as a result of the campaign the new member goal for 1946 set by the Illinois Agricultural Association had also been reached.

Add Field Man To Organization Staff

John C. Howlett, 34, who had been associated with Farm Bureau for nine years prior to entering the army, has been employed as a field man in the IAA organization department.

J. C. Howlett

Organization Director O. D. Brissenden said Howlett, who was reared in Edgar county, would devote most of his time to assisting the three district organization directors — Harry Claar, John C. Moore and L. B. Hornbeck.

Howlett attended Indiana university and started his association with Farm Bureau in 1933 when he worked at an Edgar County Supply Company service station. In 1934 he became a special agent for IAA insurance companies in Edgar county and three years later went to Fayette county as organization director and general agent.

In 1938-39 he was organization director of Iroquois county and in 1939-42 served as general agent in Christian county.

He entered the army air forces in 1942 and spent 21 months in the Pacific from New Caledonia to Tokyo. Most of his time was devoted to radar and the direction of night fighters. He went on terminal leave Dec. 1 when he was discharged as a Captain. Howlett's wife and 18-months-old son live on a farm near Paris, Edgar county.

"Free enterprise means the right to engage in business, to own my own business and to run my own business — but not to infringe upon the rights of others or to jeopardize the common good." Secretary Clinton P. Anderson.

Country Life Has ¼ Billion Coverage

Successful conclusion of Country Life Insurance Company's campaign to have a quarter billion dollars worth of insurance written by Jan. 1 has been announced by Manager Dave Mieher.

After a well-organized campaign which saw Country Life agents write $30,500,000 during the calendar year 1945, final results showed total business of $250,500,000 as of Jan. 1.

The $30,500,000 gain was the greatest acquisition of business in the 17-year history of the organization. Gain in force for 1945 amounted to $24,000,000, also the greatest gain in force for any year in the company's history.

Country Life Insurance Company is an affiliate of the Illinois Agricultural Association and operates within the boundaries of Illinois. It sells almost exclusively to farm people.

It Takes Plant Foods

To Produce Good Crops

ONE of the biggest jobs facing farmers today is the rebuilding of their depleted soils!

As George D. Scarseth, research director of the American Farm Research Association, points out:

"We must restore fertility to our soils just as factory owners replace worn out machinery in their manufacturing plants.

"Farmers can view their efforts as an industry manufacturing the most important products in the world today."

Like the manufacturer, the farmer must have efficient facilities to achieve efficient production. That's why he wants high grade fertilizers fitted to his needs.

The American Farm Bureau Federation believes that if the farmer is to have a fighting chance of securing high grade fertilizers to rebuild the plant food elements in the soil, it will be necessary to have a national fertilizer program.

Farm Bureau representatives have worked more than two years to draft such a program. Main essentials of this program are contained in the Bankhead-Hill-Flannagan bills now pending in Congress.

The basis of this program is supported by findings of the top scientists of the country.

What is the program? Here are the main essentials:

The Congress would declare it to be a national policy that the natural reserves of phosphate and potash are to be conserved primarily for agriculture.

Development of phosphate and potash reserves on land now controlled by the Department of the Interior, and provisions for a certain amount of exploratory work to be carried out on public domain lands.

Development of experimental phosphate and potash plants by the Department of Interior. On or before five years, plants are to be sold to farmer cooperatives. If not purchased by cooperatives, they must be sold to others or closed.

The experimental plants to be built by the government would produce less than 10 per cent of the total supply of fertilizers that would be needed in the national program.

Production of high-analysis fertilizers is the main objective of the plants. Present fertilizer mixtures contain an average of only about 20 per cent plant food.

This 20 per cent can be at least doubled, and maybe tripled in some instances, thus greatly reducing the cost per unit of plant food to the farmer.

Authorization to the Farm Credit Administration to make loans to cooperatives for the purchase of plant food mineral reserves and production facilities.

Congressional appropriation of $10,000,000 to $20,000,000 annually for educational and demonstration projects for as many years as needed—the money to be allocated equally to the states.

The state extension is to have authority to determine in what manner the demonstration is to be carried on within the state and the counties of the state.

Establishment of a grass roots committee to advise the Congress and the Secretary of Agriculture what measures should be taken, within the law, to improve and maintain soil fertility.

HOLD CONFERENCE ON RURAL EDUCATION IN SPRINGFIELD

EMPHASIZING the growing importance of rural schools and their organization to the people of Illinois, a conference on rural education, called by Governor Dwight Green, was held Jan. 18-19 in Springfield.

More than 300 people from throughout the state attended the meeting to discuss rural education problems and a set of resolutions was drawn up and approved unanimously.

Members of the committee which drafted the resolutions were: Goffrey Hughes, Franklin county superintendent of schools, chairman; John K. Cox, Illinois Agricultural Association director of school relations; Mrs. E. D. McGuire, Jackson county member of the IAA state-wide school committee.

Earl Hughes, McHenry county school survey committee member; Luther Black of the office of the state superintendent of public instruction; Chris DeYoung, dean of Illinois State Normal University; Robert R. Kimbell, DuPage county school survey committee member.

Also attending the conference as a representative of the IAA was L. H. Simerl, director of the department of research and taxation.

Following is a summary of the resolutions:

State Assistance

The conference recommended to the governor and the General Assembly the early enactment of legislation amending the present law pertaining to the distribution of state financial assistance to special aid rural school districts in such manner as to encourage reorganization of such districts.

Farm-to-Highway Roads

Because good secondary roads go hand in hand with better rural schools, the conference commended the governor and the General Assembly for their action in regard to the $15,000,000 road surfacing bill and urged that they give very careful consideration to recommendations for future aid to township or farm-to-highway roads. (The farm-to-highway roads bill was drafted and sponsored by the IAA).

County School Surveys

The conference recommended that the General Assembly, early in its next general session, provide funds for each county which voted for a school survey. This recommendation was made because

more counties voted school surveys than was expected when appropriation of funds was made for carrying out the law.

It was also recommended that because certain counties have failed to approve the selection and operation of a county school survey committee, and it would seem that many in such counties are in favor of such a survey being made, that legislation be enacted at the earliest time in order to give these counties an opportunity to conduct another vote under the provisions of the present county school survey law.

Buildings and Development

The conference urged the establishment of larger administrative community units for development purposes in student teaching in connection with the state university and state teachers colleges and that off-campus student teaching be encouraged.

Since many new school buildings will be needed in the post-war period, it was recommended that a specialist in school buildings be added to the staff of the state superintendent of public instruction to render advisory services on such school construction.

Because further enabling legislation will be needed to facilitate the reorganization of school districts, as recommended by county school survey committees and since such further legislation might change the recommendations of the survey committee in many counties, it was recommended:

That the county school survey committees be urged to make full use of the time provided by the school survey law for study of the problems of school district reorganization, and to avoid hasty and ill-considered action which might prevent them from taking advantage of possible further enabling legislation.

U. OF I. STUDIES USE OF PENICILLIN ON ANIMALS

Further studies on the effects of penicillin in the treatment of animal diseases are being conducted by veterinarians of the department of animal pathology and hygiene at the University of Illinois college of agriculture. The new drug is now available to practicing veterinarians.

After a thorough study of the effects of penicillin in the treatment of mastitis in cattle, University veterinarians reported: "Penicillin is probably the most efficient treatment employed to date in the treatment of mastitis. The non-toxic and non-irritating properties of penicillin, not to mention its economy, will find favor with practicing veterinarians and dairy cattle owners."

Farm Supply Reorganizes Its Administration Setup

REORGANIZATION of the administration of Illinois Farm Supply Company, under consideration for several months, went into effect Jan. 1 according to an announcement by Manager C. H. Becker.

Under the new set-up, administration will be carried out through six principal divisions — petroleum, feed, plant food, general purchasing, distribution, and research.

G. W. Bunting

The four operating divisions, namely petroleum, feed, plant food, and general purchasing will supervise procurement and the movement of goods.

The distribution division will furnish educational and promotional material, promote public relations, conduct advertising campaigns and train and develop personnel.

The research department will carry on investigations and collaborate in research activities with other agencies and organizations for the benefit of the farm supply business.

Director of the newly created research division is G. W. Bunting, former director of purchasing. Bunting also organized the plant food division last year and has been associated with Illinois Farm Supply since its infancy. He was reared on a farm in Edwards county and is a graduate of the University of Illinois.

E. O. Johnston

Heading the new plant food division is former Piatt County Farm Adviser E. O. Johnston, who is scheduled to assume his new duties March 1. Johnston will handle procurement and development of plant foods and inoculants.

Johnston was born in Pike county where he operated a farm after his graduation from the University of Illinois in 1925. Since 1935, he has served as farm adviser in Piatt county gaining a splendid reputation for his work in the field of plant foods.

Head of the new general purchasing division is William Cole, who has been associated with Illinois Farm Supply since 1935. He was reared on a farm in Henry county and attended business college in Quincy.

William Cole

After working in Henry, Stark, Fayette and Warren counties, he went to the Chicago office in 1941. For the past year he has been serving as manager of the Jacksonville district.

Heads of the remaining divisions are: Morris Crandall, petroleum; J. J. Lanter, feed, and W. B. Peterson, distribution. Crandall was formerly superintendent of transportation. The transportation and petroleum departments were combined to form the petroleum division.

Another change in the petroleum division is the appointment of Jack Dorward as head of the lubricating oil purchasing and development department at Kingston Mines. Dorward has been manager of the Iroquois Service Company at Watseka for the past 4½ years. He has a master's degree in chemistry from Iowa State College.

BOOKLET FOR VETERANS

Returning war veterans and war workers, who are planning to begin farming now that the war is over and who are faced with the problem of acquiring the necessary capital, may be interested in Bulletin No. 512 issued by the University of Illinois college of agriculture.

Prepared by B. D. Parrish, formerly of the department of agricultural economics, and L. J. Norton, acting head of the department, the pamphlet deals with the capital requirements of farms in McHenry county, a dairy county in the Chicago milkshed, during the period 1940-42.

George Peters, Vermilion county, has been named assistant manager of the Champaign County Livestock Marketing Association yards at Urbana. He took over his new work Jan. 1.

ILLINOIS FARM SUPPLY CO.

608 SOUTH DEARBORN ST., CHICAGO 5, ILLINOIS

NEW SAFETY LAW APPLIES TO TRACTORS

Does the new safety responsibility law apply to farm tractors which are not required to have a license to operate on the highways?

Answer — Yes, according to the legal department of the Illinois Agricultural Association. The new law does apply to a tractor involved in an accident with another vehicle either on or off the highway.

If unable to meet the financial requirements of the new safety responsibility law with insurance or property, the driver involved may have his driver's license revoked denying him the right to operate any motor vehicle.

Would Country Mutual Casualty Company file a claim for a farmer on a tractor accident if he had a Farmers General and Employers Liability policy?

Answer — Yes. Local adjuster would have to get full description of tractor including motor number, etc., as in case of a truck. Country Casualty would file only for owner, not operator, unless owner was operator.

What steps must I take to meet requirements of the new financial responsibility law if I'm involved in motor vehicle accident resulting in injury or damage over $50?

1. Obtain accident report from public offices in your community or any Farm Bureau office.

2. Complete blank and forward to the Department of Public Works and Buildings, Springfield, Illinois, within 24 hours if anyone was injured or killed and within 10 days if only property was damaged to an amount exceeding $50.

3. Department of Public Works and Buildings examines accident report and determines whether you must establish your "ability to pay."

4. Raise sufficient cash or security or be protected by an insurance policy if the state asks you to show financial responsibility.

Ability to pay means that you have available $11,000 in cash or other acceptable security to deposit with the state to pay judgments obtained against you as a result of the accident, or show that you are adequately covered by insurance.

Country Mutual Casualty Company, formerly Illinois Agricultural Mutual Insurance Company, offers $15,000 protection on public liability and property damage protection — more than is required by the new law.

By Wilfred Shaw

The following 1945 market statistics from the St. Louis market have been released by W. C. Eccles, milk market administrator: Average daily production in 1945 increased 4.84% over 1944 and 11.5% over 1943. The monthly average number of producers shipping milk in 1945 was 3,571 compared to 3,691 in 1944. Class I sales in 1945 were 6.47% above 1944 and 7.19% above 1943.

The annual meeting of the Pure Milk Association, Chicago, will be held at the Sherman Hotel, Chicago, March 12, starting at 10 a.m., according to A. H. Lauterbach, manager.

The annual meeting of the Midwest Dairymen's Company of Rockford will be held March 26 starting at 10:30 a.m., reports H. W. Mainland, manager.

The northern Illinois evaporated milk plants paid producers $2.55 per cwt. for 3.5% milk for the first half of January. The average of prices reported paid to producers by the evaporated plants used in the Chicago Federal milk market order for the first half of January was $2.671 per cwt. for 3.5% milk. These plants are mostly located in Wisconsin.

Recently discharged from the Army after several years service each were: Andy W. Colebank, Chicago, who was milk market administrator of the Chicago Federal order when he joined the Army two years ago; and Fred Shipley, St. Louis, who was for seven years the market administrator of the St. Louis federal order. Mr. Colebank has again resumed his duties as Chicago milk market administrator. Mr. Shipley's future plans are unannounced as yet.

At a federal milk marketing hearing held in January, the Pure Milk Producers Association of Kansas City, Mo., asked for abandonment of their base rating plan which has been in effect and proposed instead withholding 20 cents per cwt. during spring months to be paid back during fall months as an incentive for more even seasoned production. A program of this type is in effect in the Louisville market in the federal order.

Butter storage stocks in the U. S. were 55 million pounds on Jan. 1, 1946 or 54 million pounds lower than on December 1, 1945. Cheese storage stocks were 118 million pounds on Jan. 1, 1946 compared to 131 million pounds on Jan. 1, 1945.

Evaporated, condensed, and dry milk stocks were, on Dec. 1, 1945 from 21% to 85% lower than a year ago the same date.

Milk production in 1946 is expected to be lower than the all time high in 1945 of 123 billion pounds. The USDA goal for 1946 has been set at 120½ billion pounds or the same goal as for 1945. The 1946 milk production will depend upon milk prices and pasture and feed conditions. The number of cows milked will be lower in 1946 than in 1945.

The following are the blended prices received by producers supplying the respective Illinois markets. All are December prices for 3.5% milk f.o.b. dealers platforms (except Chicago) and are for milk meeting the respective city milk ordinances:

Bloomington	$2.48
Canton	2.75
Champaign-Urbana	2.75
Chicago	3.23
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.79
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.85
Kewanee	2.55
LaSalle-Peru	2.70
Moline-Rock Island-Davenport	3.18
Peoria	2.89
Pontiac	2.41
Quincy	2.60
Rockford	3.165
Springfield	2.85
St. Louis-Mo.	3.51
Streator	2.50

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers platforms (with exceptions noted) as reported by the respective milk cooperatives. These prices are for November unless otherwise noted:

Baltimore	$3.82
Boston	3.93
Chicago (70 mile zone) (Dec.)	3.23
Cleveland	3.50
Dayton-Springfield	3.32
Denver (Dec.)	3.01
Detroit	3.62
Duluth	2.96
Kansas City	3.50
Louisville	3.47
Madison	2.99
Memphis	3.61
New York City	3.98
Pittsburgh	3.61
Seattle	3.04
Sioux City (Dec.)	3.05
St. Paul-Minn.	3.00
Terre Haute	3.05

Edwin Gumm, Galesburg, was elected president of the Illinois Milk Producers Association at a director's meeting of IMPA Jan. 10 at Chicago. B. J. Schumacher, Altamont, was re-elected vice president, and Wilfred Shaw of the IAA was re-elected secretary-treasurer. Mr. Gumm is starting his second year as president of the IMPA. He is also president of the Galesburg Pure Milk Association and vice-president of the Knox County Farm Bureau. Mr. Schumacher has been a member of the board of directors of Sanitary Milk Producers, St. Louis, since it was organized and is Sanitary Milk Producers representative on the IMPA board of directors.

A hearing upon proposed amendments to the Chicago Milk Marketing order No. 41 has been set for Feb. 19 at the Hamilton Hotel, Chicago. This hearing was requested by the Pure Milk Association and similar hearings were likewise requested upon the Suburban Chicago Milk Marketing order No. 69 and upon the federal order No. 67 covering St. Joseph county Indiana markets. These hearings will be held following the Chicago hearing.

Rural Youth

By ELLSWORTH D. LYON

New Rural Youth presidents elected in the state recently include: Dale Lepper, Adams; Charles Miles, Bond; Charles J. Ashbaker, Brown; Russell Jurgens, Cass; Gertrude Shuler, Christian; Ray Farris, Clark; Eugenia Specht, Clay; Raymond Kloss, Cook; Robert Guehler, DeKalb; Donald Brummel, DuPage; Charles Krabel, Edgar; Elmer Smith, Edwards; Harold A. Johnson, Ford; Evan Akin Pickard, Franklin; Henry Willen, Greene.

Katherine Gibbs, Hamilton; Willard Nelson, Henry; Leon Anderson, Iroquois; Carnett Cornett, Jackson; Don Emmerich, Jasper; Howard Knaack, Kane (North); Melvin Peterson, Kane (South); Deane Kramer, Kankakee; Arthur Skytle, Kendall; Sumner Johnson, Knox; Robert Temple, LaSalle; Christine Ryerson, Livingston; Lorene Knecht, Logan; Walter Theobold, Macoupin; James Downey, Marshall-Putnam; Clarence Meinders, Massac.

Delbert Woodford, McDonough; Orville Pagles, McHenry; Glenn Gieske, McHenry (Crystal Lake); Glenn Eppel, McHenry (Greenwood); Marvin Menge, McHenry (Hartland); Walter F. Lottig, McHenry (Hebron); Ruth Polnow, McHenry (Marengo); Helen Johnson, McHenry (Pleasant Valley); Carol Harrison, McHenry (Ringwood); Wayne Lage, McLean; Carl Niehaus, Montgomery; John McFadden, Morgan; Mary Ellen Buisker, Ogle (Forreston); James Baker, Ogle (Mt. Morris); Edwin Dew, Ogle (Polo).

Russell Scheeler, Peoria; Roy Eichhorst, Pulaski-Alexander; Russell McConachie, Randolph; Marlyn Burgener, Richland; Ellen M. Bartsch, Rock Island (North); William Grommet, St. Clair; Bob Alvy, Saline; Karl Luthy (Schuyler); Melvin Thomas, Stephenson; Ruth Huser, Tazewell; Kenneth Zimmerman, Wabash; William Gullberg, Warren; Violet C. Rixmann, Washington; Glenn Sailer, White.

Howard Eldrenkamp, Whiteside; Carl Anderson and Warren Leech, co-chairmen, Whiteside (Morrison Merrymakers); LeRoy Hudson, Whiteside (Newton Notions); Mary Nelle Satterfield and Ray Woodworth, co-chairmen, Whiteside (Prophetstown Warriers); Jim Wink and Rose Mary Megli, co-chairmen, Whiteside (Twin City Ripples); Warren Carlson, Winnebago, and William Romersberger, Woodford.

The State Rural Youth committee has placed certain responsibilities upon the membership for 1946. Here they are:

Adopt a slogan for 1946 — namely "Serve Your Community and Know Your Neighbor."

Since the Red Cross is still greatly needed, the committee recommends continued cooperation with the local Red Cross in 1946. This would mean (a) get acquainted with the needs of the Red Cross in the county. Ask a worker to come in and explain the Red Cross program and tell your group where it can help, (b) fulfill

the needs of the Red Cross wherever possible.

Advertise Rural Youth. It is the opinion of the committee that in 1946 more should be done to place Rural Youth before the public, especially the young people of Rural Youth age, than has been done before. This program of advertising Rural Youth might be done through (a) good newspaper publicity of Rural Youth meetings, (b) well written news items for the county Farm Bureau newspaper and bulletins, (c) wider use of the Rural Youth emblem on clothing, autos, windshields, pins and letterheads, (d) Rural Youth slides and, if possible, a movie of Rural Youth activities.

The committee further recommends good educational programs at Rural Youth meetings so that newcomers will realize the importance of Rural Youth to farm youth and may consequently join the organization.

The committee recommends that county youth leaders invite youth from nearby counties as speakers on topics of vital interest to farm youth and that other intercounty activities be encouraged.

The committee also recommends that Rural Youthers lead recreation for local groups or teach games to leaders of local groups and offer any other possible help to the local community which may be needed and which Rural Youth can provide. It is the opinion of the committee that such help will make Rural Youth of vital importance wherever a Rural Youth group exists.

It is advisable that all Rural Youth officers keep the sponsoring organizations — Farm Bureau and Home Bureau — informed of all activities within the group, as close working relationships will mean better organizations and greater development of the personalities of farm youth.

COUNTRY CASUALTY BUSINESS IS HEAVY

The flood of applications for automobile insurance arriving daily in the office of Country Mutual Casualty Company would indicate that Farm Bureau members don't intend to be caught out on a limb if involved in automobile accidents.

Country Casualty, formerly Illinois Agricultural Mutual Insurance Company, received approximately 8,000 applications for auto insurance during the two months of December and January according to Manager A. E. Richardson.

This was the largest amount of new business in the history of the organization for two consecutive months. Of the 8,000 applications, 3,761 were accepted in December and approximately 4,300 were accepted in January.

Under the new financial responsibility law, which took effect Jan. 1 in Illinois, a person involved in an accident may be required to establish his ability to pay or offer security amounting to $11,000. Country Casualty's public liability and property damage policy offers $15,000 in protection.

If you have not yet received your policy, it is because the office force is swamped with work. Manager Richardson asks that you please have patience and promises that you will receive your contract as soon as possible.

Winners of 4-H Club county tractor maintenance project contest are shown as they toured the University of Illinois where they were given a special three-day short course in tractor care at the college of agriculture.

4-H Winners Tour University

Eighteen 4-H Club winners of their county tractor maintenance project attended a three-day tractor short course Jan. 14-16 at the University of Illinois college of agriculture.

In addition to attending classes in tractor care and maintenance, the boys visited points of interest on the campus, including the Illini Union, materials testing laboratory, natural history museum, university south farm, and the university power plant. They also attended the Illinois-Northwestern basketball game and concluded their visit with a tour through the studios of WILL, the university radio station.

Those attending the short course were: Marshall Mollet, Bond; Leonard Brandenburg, Carroll; Fred Schaefer, Clark; William Samford, Edgar; Edgar Plapp, DeKalb; Robert Lawrence, Ford; Raymond Johnson, Henry; Ted Carlson, Kane; Robert Temple, La Salle; Luke Oberwise, McHenry.

Harold Schroeder, McLean; Evan Wissmiller, McLean; Ralph Kipp, Randolph; John Hawkins, Richland; Scott Pearson, Shelby; Dick McFarland, Vermilion; Dick Speer, Warren, and Dean Larson, Whiteside.

Poetry By Claar

You may be well aware of Harry Claar's knack at lining up new members for Farm Bureau, but have you heard of the reputation the genial organization director of District 1 has built up for himself in the field of philosophy and poetry?

Further exposing Harry's little-known genius for expression, we herewith lift his ode to a match from the columns of Pacemaker, Illinois Farm Supply Company's publication. It is entitled "A Bit of Philosophy."

People, like matches, all have heads
  And each contains some hell!
As long as they retain it there
  Everything goes well!

Their hell is released by friction;
  In both it works the same.
When heat begins to generate
  There's danger of a flame.

The ever ready type is bad,
  For none can surely tell
How little friction may release
  A sudden burst of hell!

The sulphur type burns slow indeed;
  They take time out to think.
But when their hell is once released,
  They raise an awful stink.

The safety type retain their hell
  When other heads explode.
After the hell, all quiets down;
  They carry on the load.

Beware of the hell that you possess—
  Observe the match in flame.
Your hell released, will sure destroy
  Your position, your name, and fame!

The moral of this little rhyme
  You surely will discern.
Don't ever let that spark of hell ignite.
  Don't EVER LET IT BURN!

DR. CASE REVIEWS WORLD FOOD NEEDS

HOME-PRODUCED food in Europe is estimated to be at least 25 per cent less than in prewar years; yet if food imports to Europe equal prewar imports, the average person should receive about 80 per cent of his prewar food supply, reports H. C. M. Case, University of Illinois agricultural economist, recently returned from Europe.

Dr. Case

For the past year Dr. Case has been on leave of absence as head of the department of agricultural economics at the University and has been in London and Europe serving with the United Nations Relief and Rehabilitation Administration. He served as executive chairman of a working committee to determine the home-produced food supplies in European countries for 1945. Serving with him were representatives of the British Ministry of Food, American agencies, representatives of the various European countries and the allied army and UNRRA.

Dr. Case asserted that if the average European received 80 per cent of his prewar food supply, there would be no starvation. However, he pointed out that it would be impossible to distribute food equally either between countries or within any one country.

He emphasized that the food situation would be critical in some areas where population is dense and where transportation is badly crippled. In the formerly enemy-occupied territory, critical areas include parts of Italy, Greece, Jugoslavia, Rumania, Hungary, Czechoslovakia and Poland. Likewise the food situation in all of Germany and Austria, with over 75,000,000 people, is desperate without large imports, and the apparent abundance of food found in Germany by the allied armies has melted away. The 1945 crop production is much below prewar production, while the population is rapidly increasing from the transplanting of Germans from other countries to a Germany that has been reduced in size. It is estimated that over 12,000,000 will be transplanted into Germany, which helps to relieve some of the other countries.

Europe, including Great Britain, has about 400,000,000 people, or three times the population of the United States, crowded into an area two-thirds as large. It has always been necessary to import large quantities of food, Case said, adding that the problem of relief is further complicated by the most severe drought in 20 years in the entire Mediterranean basin, which has reduced anticipated home production. If Europe is to live as well this year as in prewar years it will require the importation of double the prewar amounts of imported food, or between 40 and 50 million tons of food and feed.

USE OF DDT ON FARM *Requires Caution*

Newspaper accounts of the magical properties of the war-born insecticide DDT have created wide interest among farmers especially since limited quantities have become available for agricultural and civilian use.

Even though several million pounds of DDT have been used by the army, navy and public health service, the bureau of entomology and plant quarantine of the U. S. Department of Agriculture warns that the knowledge of practical uses of DDT insecticides in agriculture and about the home are still far from complete.

DDT is suitable as an insecticide only when suitably prepared. Various strengths in solution are necessary for different purposes.

Of pleasing interest to farmers and everyone else is the deadly effect of the new insecticide on the common disease-bearing housefly. Nothing is more effective in ridding houses, barns and animals of this pest.

Care should be taken, however, that animals are sprayed with DDT in water solution or in powder form. In oil solution DDT is absorbed through the skin and has a toxic effect.

The Department of Agriculture reports after preliminary tests that DDT offers great promise in the fight against insects that plague man and his livestock. Among the insects against which DDT is effective are: body lice, bedbugs, flies of several species, mosquitoes, clothes moths, carpet beetles, silver fish, ticks, cockroaches, fleas, ants, corn borers, tip moths, locust leaf miners, sawflies, catalpa sphinx, evergreen bagworms, webworms, cankerworms, termites, leaf hoppers, tree hoppers, spittle bugs, and codling moths.

It is also deadly when applied to most potato plant pests, cabbage and other caterpillars, some aphids and in attacking insects which destroy forage crops in the field and in storage.

Because of the poison hazard, the use of DDT is not recommended on stored grains or cereal products that are to be used for food by humans or animals. It can, however, be used in the vicinity of the stored food or plant seed in such a way as to be almost 100 per cent effective.

Most important drawback to the use of DDT is that it is fatal to insects and birds that are man's allies, as well as to his enemies. Honey bees, for instance, can be killed as readily by DDT as houseflies. Many plants are retarded by the effects of the new insecticide although insufficient data has been compiled on this factor to merit definite conclusions. Light applications, however, appear to be injurious to squash and other cucurbits.

Conflicting reports have been received on the effectiveness of DDT on some species of ants, cockroaches, spiders, and ticks, but the bureau of entomology reports that it is rather ineffective against the screwworm, the heel fly or cattle grub, the chigger and the poultry mite.

Until more complete information is available, it is recommended that persons impatient to use the new insecticide do so with caution by treating small areas until it is certain the job is being done satisfactorily.

A five per cent DDT water suspension sprayed on barn walls will kill flies and other insects after contact.

Housewife applies 10 per cent DDT powder behind baseboard in her home. DDT rids home of many insect pests.

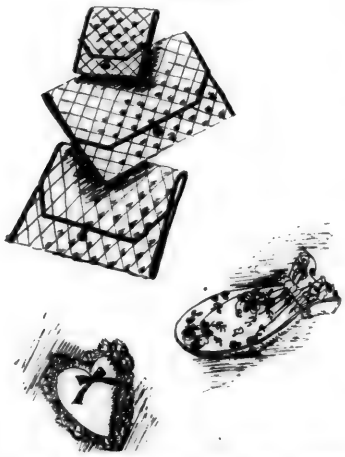
NEWS and VIEWS

ROMANTIC NOTIONS FOR THE BRIDE



These romantic notions for brides make charming little shower gifts. The quilted cases for handkerchiefs, hosiery and lingerie can be made from three-fourths of a yard of material. Scraps of satin or velvet make dainty heart-shaped sachets with a frilled edge of lace. Powder mitt has a floral-print top and terry cloth bottom. For instructions on how to make these notions write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago 5, Ill., enclosing self-addressed stamped envelope.

Honey is Improved By Slight Thinning

Honey does a better job of sweetening cold fruits, dry cereals and iced tea if it is thinned slightly, says Miss Grace Armstrong, extension nutritionist, University of Illinois College of Agriculture.

To thin honey, add about a tablespoon of water to a cup of honey. Hold over low heat or hot water until the mixture heats through and the honey and water combine. Avoid high heat, which destroys the delicate flavor and is likely to scorch honey.

Keep your thinned honey covered and in the refrigerator, or it may mold within a month, Miss Armstrong cautions. It is best to make up small batches for household use.

Honey as it comes from the jar is the right thickness for pancakes, hot biscuits, cooked cereals and sandwiches, and it need not be kept cold to avoid spoilage. Kept at room temperature it is easier to handle than if chilled, when it becomes thicker than "molasses in January."

Use honey in place of sugar while sugar supplies continue short, Miss Armstrong suggests. Your family will like its delicious flavor when you serve them HONEY ICE CREAM.

1 pint milk	1 cup honey
6 egg yolks	1 pint cream

Heat milk in double boiler, keeping the temperature of the water below boiling. Beat together the honey and egg yolks, add the hot milk and return to the double boiler. Cook until it thickens. Add the cream, and when cool, freeze.

Home Bureau Retreat Set For Aug. 25,26,27

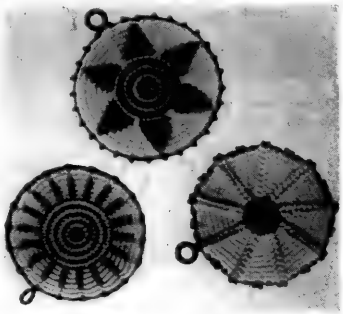
Camp dates for the annual Home Bureau Retreat have been set for August 25, 26 and 27, according to plans made at a meeting in Bloomington of representatives of 10 of the 14 participating counties.

The 1946 retreat will be held at the camp on Lake Bloomington as in former years. Accommodations are available at the camp for 120 women.

Reservations for the camp must be in the hands of Mrs. Charles Grossweiler of Pekin, secretary, before August 15, 1946. Reservations must be accompanied by a $1 fee which will be applied on the $5.25 registration fee at the camp.

An interesting program for the retreat is being planned and will include recreation, leisure crafts, music and nature study. Book reviews and special talks also will be given by Illinois Home Bureau Federation members.

GAY POT-HOLDERS LEND NOTE OF COLOR



The solution as to what to make for Mother is in these gaily crocheted pot-holders. She'll love them as much as you'll enjoy making them. Instructions for these pot-holders No. 3204 may be obtained free of charge. Print name plainly. Write to the WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago.

SLEEVELESS PULLOVERS FOR SPRING

If you or your menfolk don't have one of these neat, unfussy styled pullover sweaters for spring, you will be anxious to make your own. Both are knitted of worsted floss, a medium weight yarn. Instructions may be obtained free of charge by sending a self-addressed stamped envelope to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION, 608 South Dearborn Street, Chicago 5, Ill.

4-H Clubs Build Skills, Character

WHY belong to a 4-H Club?

If you don't belong and want to know why others are so enthusiastic about the 4-H Club program, here are 10 good reasons prepared by a national advisory group after a year's study of rural youth problems:

1. *Developing* talents for greater usefulness: This is one of the major aims of 4-H club work. Tomorrow's leader will need skill. Talents developed by young leaders are later passed on to the whole community.

2. *Joining* with friends for work, fun, and fellowship: 4-H clubs acknowledge the need of balancing work with fun and the work program dovetails with the social needs of boys and girls.

3. *Learning* to live in a changing world: Science and research are changing farming practices all the time. Young folks can make these changes easier, sometimes, than the older ones. In the future, there may be more necessity to keep up not only with new discoveries but with changing economic conditions and markets.

4. *Choosing* a way to earn a living: Through 4-H clubs, those best fitted to stay on the farm can see the possibilities of making a living, and those who leave the farm can develop some skill and strengthen their moral fiber through club work.

5. *Producing* food and fiber for home and market: This phase of 4-H club programs will mobilize young people to help them raise the total of farm income by teaching them how to analyze the farming pattern on the home farm and develop supplemental enterprises.

6. *Creating* better homes for better living: In nearly every 4-H club activity, at least some emphasis is placed on the home. Young people are constantly learning how to make the home more attractive and convenient, to share responsibilities, and to live happily together.

7. *Conserving* nature's resources for security and happiness: The conservation of natural resources is acknowledged as important to the welfare of the Nation. There are many ways in which young folks can share in this.

Uncle Sam's Favorites

Courtesy, Chicago Daily News

8. *Building* health for a strong America: 4-H club boys and girls enroll in health projects. They check their food and health habits, give demonstrations on safety, take health examinations, correct remediable defects, and take advantage of protective immunization as recommended by their health officer.

9. *Sharing* responsibilities for community improvement: Through 4-H work, young people can harness their energy to improve the social desirability of their communities as places to live in.

10. *Serving* as citizens in maintaining world peace: Realizing that good citizenship begins at home and that good neighborliness among nations is dependent on good neighbors in the community, 4-H club work offers programs in getting acquainted with those of other nations and studying international relations.

Mrs. Ruth Widmer, former Fulton county home adviser, has assumed her duties as home adviser in Boone county. Mrs. Widmer moved to Illinois from Colorado where she had been connected with the extension service of that state. She is a graduate of Iowa State Teachers College.

be great in 1946. The support price to farmers will probably be lower but strong demand may hold soybean prices above the support level.

Prices for the 1946 wheat crop may be only moderately lower unless production is large in the U. S. and in other countries producing surpluses.

CO-OP LIVESTOCK MARKETING PROGRAM

(*Continued from page 5*)

tribution of livestock and livestock products.

(2) That it is highly advisable that a marketing system be developed that will be flexible enough to meet these existing changes now and in the future.

(3) That all authorities on cooperative livestock marketing recognize the importance of a closer coordination between existing marketing agencies.

(4) That more intensive field work should be done.

(5) That cooperative trucking agencies should be encouraged and promoted, the object to be closer contact with livestock producer members, better service and to reduce cost.

(6) That serious consideration should be given to improving the purchasing and distribution of feeder livestock.

The agency committee report points out, however, by way of disagreement, that the recommendation of the Illinois Agricultural Association committee for the organization of a state-wide marketing agency on a straight Farm Bureau basis is unsound. The report says, "In cooperative marketing the principle of one member, one vote, is fundamental, and in our opinion should be maintained. We believe in one member, one vote, and that the member must be a producer of the commodity which the association was developed to handle."

The agency committee report points out some of the difficulties that would be encountered in setting up a state agency, because of the flow of livestock in inter-state channels. The agency committee report states, "We believe all outlying units or country points should be owned locally, financed locally, and operated locally, under the direction of their own boards of directors. We believe that livestock marketing in the country would be much more effective if markets were set up with enough volume to attract and hold numerous buyers. We believe it is universally recognized that if you are to have any appreciable bargaining power, you must have control of enough volume of livestock so that you can attract and hold numerous buyers in order to generate real competition."

The agency committee recommends in its report, that a committee be set up to study the whole problem of livestock marketing, and that such committee be made up of:

One representative from each of the six Producer Agencies serving the state — Chicago Producers, St. Louis Producers, Peoria Producers, Springfield Producers, Indianapolis Producers, Evansville Producers.

One representative from Illinois Livestock Marketing Association.

One representative from the Illinois Agricultural Association.

One representative from livestock department of the University of Illinois.

One representative from the Illinois State Grange.

The representatives are to be selected by their respective organizations.

It proposed that the 50 cents per car now being paid by the sales agencies into the general field service fund be diverted, starting Jan. 1, 1946 to the use of this committee to defray the expense of their meeting and any research and study program they may instigate. This committee to be given authority to employ suitable personnel to make a complete study and analysis of marketing service as being rendered the State under present structure and to submit changes and additions needed to improve the service to the livestock producers. The committee after receiving full and complete reports, and having in their hands sufficient information, will present to the groups participating their recommendation for an action program.

It suggested a few of the principal fields in which research should be started at once:

(1) Study and submit a workable plan for correlating livestock sales.

(2) Make a study of the east central Illinois area and determine the type of market, or markets, needed to best serve the producers of this area, and preserve bargaining power.

(3) Study the marketing problems of the northwest Illinois area and recommended procedure to be followed to put the large volume of hogs produced in this area back into a co-related cooperative sales program.

(4) Study field service and recommend a plan for improving and intensifying same.

(5) Make a study of cooperative trucking service and recommend a plan for developing same.

(6) Study and recommend ways and means for improving stocker and feeder buying service.

The marketing committee recommended to the board of directors on Jan. 18, 1946, general changes in the plan suggested in the statewide committee report, substantially as follows:

1. Set up a statewide livestock marketing agency. The corporate structure would follow substantially the recommendations of the special committee. Farmers might hold a direct membership in the State agency, i.e., all Farm Bureau members might be considered as members of this State agency, or the individual farmer might have his membership in a local agency and the local agency would be the member of the state association.

2. This State agency could purchase and take over the operations of the Illinois Livestock Marketing Association and the internal producer agencies wherever satisfactory arrangements could be worked out.

3. With respect to Chicago and St. Louis and the Producer Agencies outside of Illinois, a contract might be entered into between the statewide agency and these Producer Agencies whereby:

(a) Business with Farm Bureau members in Illinois would be considered as business of the statewide agency. Any patronage dividends would go to the statewide agency.

(b) Representation on the boards of directors of the Producer Agencies would be allocated among the several states in proportion to the amount of livestock originating in the respective states. This possibly would require some amendment of the article of incorporation and by-laws of the Producer Agencies.

(c) The statewide agency would represent all Farm Bureau members in Illinois in nominating and electing directors to the board of directors of the respective Producer Agencies. However, Illinois livestock farmers would have representation on the boards of directors of these agencies in proportion to the volume of livestock originating in Illinois.

4. The statewide agency would be expected to develop over the years the other services outlined in the report of the special committee.

No disease attacks young chickens four to 20 weeks of age with greater rapidity or causes higher mortality than coccidiosis.

NOW that war-time restrictions are off, the Petroleum Industry has gone all-out to produce high-quality fuels for peace-time work.

Illinois Farm Supply Company fuels are abreast with all advances in the industry with the result that you are now getting the finest fuels obtainable.

You'll be pleased....

with the way your motor responds to this new Magic Aladdin gasoline.

Experience gained in developing military gasolines are now used to produce the new, powerful Magic Aladdin. Its high anti-knock and quick-starting features make it the first choice of farmers for passenger cars, trucks and high compression tractors.

■ **Have your carburetor and timing system adjusted to handle the new snappier gasoline.**

KLEER MOTOR

A clear, unleaded, well-refined gasoline that is used widely by farmers in tractors and stationary gasoline engines. It is also used by many for cooking and lighting.

T-40 TRACTOR FUEL

A high octane tractor fuel built to perform and give outstanding results in tractors designed for heavy fuels. Great care goes into the refining of this fuel. Exceptional performance justifies its wide acceptance among tractor operators. T-40 is exempt from the state motor fuel tax.

FS/50 TRACTOR FUEL

A volatile-type tractor fuel combining some of the characteristics of gasoline with other qualities of heavier fuels. Due to its higher octane and volatility, it responds more quickly to the governor and doesn't "load up" when idling. State motor fuel tax required, but applications for refund accepted as in the case of gasoline used in field work.

PIG PROGRAM

Start Right — Grow Right

These Critical Periods Determine Profit or Loss

One of the most common causes of unprofitable hog production is the failure to raise a large, healthy litter at weaning time. The cost of raising a large litter is not much greater than that of the small litter. The health and strength of pigs at weaning time has a very definite effect on gains which follow.

Nutritional research has shown that the healthy litter really begins with proper feeding of the sow during gestation and continuing through lactation. Improper rations will result in small, unthrifty and unprofitable litters at weaning time.

Blue Seal Sow Supplement is a highly fortified feed which contains the high quality protein, minerals and vitamins needed to supplement farm grains to insure large, strong litters.

From weaning time to 75 pounds weight represents another critical period, according to swine authorities. The young pig grows very rapidly and the needs for nutrients during this period are very exacting.

The high quality proteins, vitamins and minerals which are so necessary for rapid development at this stage are amply provided in Blue Seal Pig Supplement.

As soon as the pigs are old enough to eat, start self-feeding Blue Seal Pig Supplement along with farm grains. Start self-feeding in a creep and continue until the pigs reach 75 pounds.

Keep them growing right from the start.

Follow Through with Good Sanitation

All efforts to follow a program of good feeding practice is of no avail unless a good sanitation system is maintained to combat filth-borne diseases and internal parasites.

Here is a good 4-point program which will do much to stop losses due to disease and parasites:

1. Wash and disinfect farrowing house.
2. Scrub sow before placing in farrowing pen.
3. Haul sow and pigs to clean pasture.
4. Leave the pigs on this clean pasture until they reach a weight of 100 to 125 pounds.

THE ILLINOIS PLAN

The "Illinois Plan" for swine feeding is a system of feeding developed at the university. This plan, as explained in the "I.A.A. Record" of May 1944, is based on feeding four different supplements.

I. A protein supplement to be fed during the gestation and lactation periods.

II. A protein supplement for pigs from two weeks old to 75 pounds weight, fed in the creep.

III. A protein supplement for dry-lot fattening of pigs from 75 pounds to market weight.

IV. A protein supplement for growing-fattening pigs on pasture from 75 pounds to market weight.

BLUE SEAL

THE BLUE SEAL PLAN

The Blue Seal Plan of swine feeding follows the Illinois Plan. The following Blue Seal Hog Feeds have been formulated to carry out this program:

I. Blue Seal Sow Supplement—To be fed during the gestation and lactation periods.

II. Blue Seal Pig Supplement—For pigs from two weeks old to 75 pounds weight, fed in creep.

III. Blue Seal Hog Supplement—For dry lot fattening of pigs from 75 pounds to market weight.

IV. Blue Seal Summer Supplement—For growing-fattening pigs on pasture from 75 pounds to market weight.

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

Subsidies

By PRESIDENT CHARLES B. SHUMAN

RECENT headlines spread across the front pages of daily papers were disturbing — "U. S. MUST EAT LESS FOOD." This headline was followed by a humanitarian appeal based upon the needs of a hungry world and asking us to voluntarily reduce our present all-time high rate of food consumption.

Why are we in America eating too much food? Any knowledge of elementary economics will furnish the answer. If we are using too much of any commodity it is because that commodity is too cheap in price as compared with the price of other goods. Food is cheap in relation to other commodities. It is being used carelessly and to excess. Government statistics show that even before recent wage increases the factory worker today was able to buy more food with the pay for an hour's work than at any other time in history!

Why is food low in price compared with other commodities? Most farmers know the answer. Consumers have been enjoying an unusual type of bargain sale. Every time the housewife goes into the grocery store, Uncle Sam goes in with her and pays part of the cost of her purchases with money from the federal treasury. Money raised by taxation is going by the billions to reduce the price of food through these consumer subsidies so that the best paid people in the world may buy their food below actual cost.

Why haven't these indefensible consumer food subsidies been ended? Responsible government officials are now saying that they cannot remove subsidies at this time. One argument advanced is that the removal of subsidies now would result in increased food prices and start a renewed inflationary spiral. There will never be an opportune time. As far as inflationary effect is concerned, subsidies themselves are highly inflationary. First, by reducing the price to the consumer they release more money for further inflationary pressure. Secondly, since they are paid from the federal treasury, subsidies increase the federal deficit and deficit financing is very inflationary.

When will the time be right for subsidy removal? Our friends in government say that they must not be removed until such time as there is sufficient production so that subsidy removal will not increase consumer prices. In other words, this means that they do not favor subsidy removal until demand and supply conditions are such as will result in the full brunt of subsidy removal falling on the farmers in the form of reduced farm prices.

To farmers these are fighting words. Farmers are by nature sympathetic to those less fortunate. They want to produce enough to help the hungry of the world. However, if we are to meet this challenge and increase production under continued price control, we demand that all food subsidies be removed and that they be removed now. We insist that now is the logical time to remove subsidies, while consumers are well able to pay fair prices for their food, rather than during a time of falling prices, when the farmer must certainly carry all of the load.

The Illinois Agricultural Association RECORD is published monthly except August by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

LABOR, MACHINERY STILL BIG PROBLEMS

FARMERS will face about the same production problems in 1946 that they did in 1945. Labor, for the most part, will be just as scarce this year as last. Supply of new machinery and parts has improved slightly to date, but any appreciable change in the picture will depend on whether or not the strike situation calms in the coming months.

That's about the outlook some 2000 farmers and homemakers faced as they attended Farm and Home Week at the University of Illinois in February. Because of this outlook, the program emphasized about the same points as those stressed in 1944, the last year Farm and Home Week was held on the university campus. While there was some discussion of conversion from wartime to peacetime production, continued demands for heavy production indicate that 1946 will not see a large scale shifting in operations.

Emphasis was again placed on making the best use of labor and machinery and there was considerable interest shown in the exhibits of new farm machinery, farm building designs and labor-saving devices.

On the economic side, the outlook for 1946 continues favorable. L. J. Norton, chief in agricultural marketing at the University, in summarizing the highlights of the livestock situation, said that "stockmen will enjoy good markets during 1946." He added, as farmers well know, that feed supplies may be a limiting factor to livestock production in some cases.

Norton said that costs of feed will tend to work higher because demands for feeds exceed supplies at current prices. Price ceilings will tend to limit advances in cost. The recent order regarding distribution of protein feed should not reduce the quantities going to livestock feeders, he said.

Current and prospective pig crops, he reported, are not much above the 1940-41 level and are 30 per cent below the high 1943 crop. If the demand for pork and lard continues good, pig crops of this size will not cause much trouble when they come to market, Norton believes. Hog prices next winter are likely to be well above the government support level, which has been set at 90 per cent of parity price with allowance for prewar seasonal variations.

F. G. Francis of the university animal husbandry department said he believed that a drop in live cattle prices is inevitable in event the subsidies are not extended beyond the June 30 deadline. This was in agreement with Norton's theory that elimination of subsidies would probably weaken prices, except in the better grades of cattle.

Francis added that "should the ceiling be removed at the same time as the subsidies are discontinued, the whole business might straighten itself out following a short period of readjustment."

R.W. Bartlett, professor of agricultural economics, also had a good word to say about milk prices. He thinks that the farm price of milk is likely to be sustained at a high level during the next year. He advised, however, that dairy producers, especially in the larger market-milk areas, would be wise to get ready to adjust their production so that it will be more uniform throughout the year. In this way, he pointed out, they can take advantage of higher prices likely to be paid in the months of short production.

Grain farmers were warned by George C. Decker, entomologist, Illinois Natural History Survey and Illinois Agricultural Experiment Station, to expect some trouble from corn borers again in 1946.

"North-central Illinois," he said, "is the corn borer capital of the world at the present time, with more corn borers per acre per farm than any other section of the country."

He said that it is reasonable to expect more borer damage in 1946 than in 1945 unless weather conditions this spring and early summer are extremely unfavorable for the borer.

Frequent rains during the late summer and fall months were unfavorable for the development of second-genera-

The big three of Illinois agriculture chat during general session of Farm and Home Week. Left to right: Charles B. Shuman, Illinois Agricultural Association president. Arnold P. Benson, director of the Illinois State Department of Agriculture, and H. P. Rusk, dean of the state university College of Agriculture.

The Farm and Home Week audience jams the lobby of the auditorium building at the University of Illinois during a general session intermission.

Taking part in the discussion, "How Can Rural Schools be Reorganized?" at the Farm and Home Week rural schools session were, left to right: John Cox, IAA director of rural school relations; Charles McIntosh, Piatt county superintendent of schools; Mrs. Carl Schmiedescamp, Quincy, and Luther Black, assistant state superintendent of schools. At right, a group of Rural Youth look over the farm machinery exhibit at the ag engineering building. L. to R., William Grommet, St. Clair county; Alfred Mangold, Mason; Gale Williams, White; John Rollins, Knox; Karl Seibert, St. Clair; Russ Florreich, St. Clair.

tion chinch bugs, and the outlook for 1946 is much improved, he reported.

Grasshoppers are not expected to develop into a serious outbreak in 1946, with the possible exception of an area including Madison, Bond, Fayette and parts of adjoining counties.

The overwintering population of codling moth going into 1946 is decidedly lower than it was a year ago, Decker said, but this reduction does not warrant a letup in control operations. Oriental fruit moth and plum curculio were both on the increase in numbers in 1945, and peach growers were cautioned to be on the alert and prepare to spray and dust during the early spring and preharvest period.

Decker predicted little damage from the grape colaspis and sweet clover weevil. He further reported that use of DDT on agricultural crops is still in the experimental state and urged prospective users of the insecticide to follow closely the manufacturer's direction.

The new president of the IAA, Charles B. Shuman, and the new state director of agriculture, Arnold P. Benson, were introduced to Farm and Home Week visitors at the opening general session by Dean H. P. Rusk of the College of Agriculture.

Introducing President Shuman, Dean Rusk said: "I believe the IAA has found a man of uncommon ability to direct the activities of the most powerful and important farm organization in the country." Dean Rusk also mentioned that the University is proud to claim President Shuman as one of its own, as he was an honor graduate of the College of Agriculture in 1928 and later received the degree of master of science in agronomy in 1929.

President Shuman declared that he was happy to be on the platform with Dean Rusk and Director Benson, asserting that the College of Agriculture, the state Department of Agriculture, and the IAA, constituted a three-horse team working in the interests of the farmers of the state.

"We need educational research, and we need laws," President Shuman said in referring to the College of Agriculture, and the Department of Agriculture, "and we need a strong organization to see that these programs and laws are effectively put into operation."

President Shuman pledged the efforts of the IAA toward a continuance of the fine relationship that has existed between the College of Agriculture and the State Department of Agriculture.

Director Benson declared that the two agencies, the College of Agriculture and the IAA represent the farmers and the rural interest of the state and that he was happy to cooperate with them in every worthwhile and forward-looking program in which farmers are interested. He expressed pleasure at meeting President Shuman and lauded him for his grasp of rural and community problems of Illinois.

Perhaps the most interesting address given at the general session was that of Philip Morrison who worked on the atom bomb project.

A University of Illinois physicist from 1941 to 1943, Morrison compared the bombs dropped on Hiroshima and Nagasaki with the first airplane built by the Wright brothers. The Wright brothers' plane is far outdated by the present B-29s, he said, and the first atomic bomb likewise marks the beginning of a new technology as the first airplane was the beginning of a new era.

Voting Records of Illinois Issues Affecting Farmers..

GOOD IDEA TO CHECK IAA LEGISLATIVE ANALYSIS OF YOUR DISTRICT BEFORE VOTING IN THE ILLINOIS PRIMARY ELECTION ON APRIL 9

IN ACCORDANCE with action taken by the voting delegates of Illinois Agricultural Association at an annual meeting several years ago, the Board of Directors has authorized and directed the publication of the following statement, together with the records of the members of the General Assembly as determined by their votes and general attitude on matters of important legislation directly affecting farmers, as supported or opposed by the Illinois Agricultural Association. There are numerous measures of considerable interest to agriculture in the 1945 session upon which the Association took a position. However, the Association regarded the bills for the assessment of property at its full value (which the I.A.A. opposed), the Gateway Amendment to the Constitution and the companion party circle bills and the bill making an appropriation for farm-to-highway roads as the most important legislation affecting farmers. The voting record of downstate legislators on these measures was given in the September, 1945, issue of the RECORD. In view of the fundamental importance of these measures, this report is weighted heavily by the vote and attitude of members of the legislature on these issues.

Basis of Report

This report is based entirely upon the legislator's record and attitude as observed in Springfield. The Association has not given and obviously cannot be aware of, or give consideration to, the record or attitude upon local problems which may affect the voters' decision.

The first column of the report tabulated below lists the number of regular sessions of the General Assembly during which the respective members have served. The second column carries the legislative record of the legislators as determined by their votes on agricultural legislation during the last regular session, together with their general attitude on legislation supported or opposed by the Illinois Agricultural Association throughout their terms of service.

Ratings Used

A member, to receive a rating of "Excellent" must not only have a satisfactory voting record, but his general attitude in

ARE TAXES GOING TO BE HIGHER?

Are your taxes going to be higher this year? That's more than a $64 question in many cases. If you want to, you can help decide the question. Here's why.

From 75 to 90 per cent of all farm property taxes are levied by the township and school districts in which the property is located.

Therefore, you and your neighbors can control the greatest part of your total property tax bill. Most of the remainder is controlled by the county board of supervisors.

All tax levies for relief, the payment of salaries and expenses of township officers and all other township purposes (except roads and bridges) are made by the VOTERS PRESENT at the annual town (township) meeting.

THIS MEETING IS HELD AT 2 O'CLOCK OF THE DAY OF THE TOWNSHIP ELECTION WHICH THIS YEAR IS TUESDAY, APRIL 2.

With the exception of the levy for relief purposes, there are no legal limits upon the tax levies which may be made in the town (township) meeting.

Resident taxpayers must be present if they wish to exercise any control over the township tax levies.

If farm taxpayers are not present they leave this responsibility to other persons who may not be concerned with efficiency and economy in township affairs.

In order to keep your township taxes from being increased unduly, MARK ON YOUR CALENDAR THE DATE OF TUESDAY, APRIL 2, AND ATTEND YOUR ANNUAL TOWNSHIP MEETING ON THAT DAY.

VOTE IN THE PRIMARIES APRIL 9

In line with its long-established policy, the Illinois Agricultural Association publishes herewith the voting records of members of the Illinois General Assembly.

Many of these legislators are candidates for office in the primaries on April 9. The Association urges its members to study carefully the information published in this issue of the RECORD and to actively support for nomination and election those representatives who, by their records, have proved themselves worthy of confidence of farmers.

Farm people represent only a minority of the population. Only through their united action at the polls, wherein they place the interests of agriculture above parties and personalities, can they hope to maintain fair representation in law-making bodies.

State Legislators on

X	X	X	X	X	X	X	X

recent legislative sessions must have been generally recognized as actively supporting the Illinois Agricultural Association's legislative program. To achieve an "Excellent" record a member must also have served more than one two-year legislative period and must have taken a favorable position on highly controversial legislative proposals.

First term members, to secure a "Very Good" rating, must have a satisfactory voting record and must have actively supported the Illinois Agricultural Association's legislative program. This rating is the highest given any first term member.

In recommendation with the directions given by the delegates of the Illinois Agricultural Association, members of the Association are advised that all members of the present General Assembly seeking re-election who are rated as "Excellent" or "Very Good" are entitled to support by all members and friends of the Illinois Agricultural Association in the coming primary and general election.

The records of members rated as "Good" are worthy of careful consideration in comparison with the qualifications of new candidates seeking office.

Randell, FCA; Prof. Sleeter Bull and Prof. William Everitt, both of U. of Illinois; Dana Cryder, Ill. Cooperative Locker Association; Rev. Fred Harrison, Congregational church, Ottawa; L. B. Mann, FCA; Fred Ringham, St. Louis Bank for Cooperatives, and Norman Ralston, locker plant operator from Rockford, Ill.

Plan Further Locker Expansion

SPIRITED discussions on the future of refrigerated locker service and its place in the Farm Bureau organization were held at conferences in Ottawa, Feb. 18-19, and in Springfield, Feb. 25-26.

The conferences were called by the Illinois Cooperative Service of the Illinois Agricultural Association to acquaint locker managers and Farm Bureau leaders with the new Illinois Cooperative Locker Association set-up, legal requirements on locker operation, efficient handling and merchandising of frozen foods and the problems facing further expansion in the Illinois Cooperative Locker Association.

The meetings were presided over by Dana Cryder of Kendall county, president of the Illinois Cooperative Locker Association.

Leading the discussion on the future course of the association, L. W. Braham, manager of Will County Cooperatives, Inc., and former Will county farm adviser, declared that if the farmer cooperatives do not move into large-scale slaughter processing, "others will come along, hire the best farm talent from among us and take the lead in this field."

George Metzger, IAA field secretary, reminded the locker managers of the importance of maintaining bargaining power in the purchase of locker supplies. He also pointed out the need for a strong state locker association with a board of directors responsible to the Farm Bureau membership of Illinois.

Interest in the planning of slaughter plants and slaughter processing plants has been spreading rapidly throughout the state, Frank Gougler, IAA produce marketing director, told Farm Bureau leaders at both meetings.

Farm Bureau people have already made plans to set up slaughter processing plants in Champaign, McLean, La Salle, Will, Kendall, Marshall-Putnam and Adams counties. The plants will cost in the neighborhood of $60,000 to $75,000 although the one planned for Will county will cost an estimated $125,000 and will include lockers and facilities for the handling of poultry.

Dana Cryder

L. W. Braham

These slaughter processing plants will be centrally located in an area in which there are four or five locker plants. The central slaughter processing plant will kill, cure, smoke and chill meat and render lard for all of the locker plants in its area.

This centralization will enable the locker plants to devote their chill rooms and other space to the installation of more lockers, some of which are badly needed.

Macoupin county has already laid plans for a slaughter processing plant at Carlinville which will cost in the neighborhood of $75,000. Bids have already been called for and if this plant is finished in the not too distant future, it may become a model for other counties planning similar plants.

Another project which has been coming to the fore in locker plant and slaughter processing discussions is centralized rendering on a cooperative basis.

First interest in this project appeared to be centered in Southern Illinois, Gougler said. Ten counties in the Carbondale area have already appointed a committee to study and develop further the case for centralized rendering.

If a favorable report is returned and other counties show interest, the rendering plants would be planned on a statewide basis for the rendering of dead animals and the by-products of locker plants and slaughter processing plants.

The slaughter processing plants would be controlled by the management of the locker plants and would require no new organization. The rendering plants, however, would require separate financing and control.

Others on the locker programs included: Paul Mathias, IAA secretary; Prof. Lee A. Somers, College of Agriculture horticulture department; Miss Frances Van Duyne, College of Agriculture food specialist (see women's page); T. L. Gould, Lafayette Food Lockers, Lafayette, Ind.; F. R. Oakley, former Peoria Star editor.

Prof. William L. Everitt, head of the U. of I. department of electrical engineering; Prof. Sleeter Bull, College of Agriculture meats department head; C. G. Randell, L. B. Mann, and Paul C. Wilkins, of the Farm Credit Administration at Washington; Fred C. Ringham of the St. Louis Bank for Cooperatives; George R. Schlageter of Streator, and Ellis Kugler, Co-op Locker Service manager, Champaign.

Men who took part in the locker conferences held in Ottawa, Feb. 18-19.

FARMERS EXCEL AT RARE WINTER SPORT

By Jim Thomson
Ass't Editor, IAA Record

CAN you toss a rock? Can you wield a broom with more than usual zip and zest?

So you think only boys and housewives do such things? Well, you'll find out differently if you talk to farmers in the neighborhood of Triumph, a village of 200 in northwestern La Salle county.

Because for 61 winters three generations of these farmers have belonged to the most exclusive rock-tossing, broom-wielding fraternity in downstate Illinois. It is the only organization of its kind in Illinois outside of Chicago.

When the crops are in and freezing winds sweep across the brown stubble-fields of northern Illinois, members of the Waltham Curling Club pull on their jackets and overshoes, gather up their brooms and curling stones, and head for the three-rink shed at Triumph for a night of their favorite winter sport.

The club membership of 133 is composed chiefly of farmers and practically all of the farmers are members of the La Salle County Farm Bureau. Farm Adviser Fred A. Painter pointed out that the Ophir and Waltham township area from which the curlers come has for many years been a stronghold of farm organization in the county.

Back in the winter of 1884-85, a tall, black-bearded Scot named John Currie, recently arrived from Ayrshire, saw in the northern Illinois winter season ideal conditions for the 400-year-old Scottish game of curling. Far better than his native Scotland, he decided, because winters here were longer and much colder.

THE COVER

Cover picture shows a group of La Salle county farmers playing a game their grandparents started more than 60 years ago. Left to right: Farm Bureau Director Willis Wilson, Don Finley, Art Krieser and Eldon Worsley.

And according to club secretary-treasurer Willis Wilson, a county Farm Bureau director, that is what the curlers welcome — a generous amount of cold weather. It is never too cold to curl, Wilson maintains.

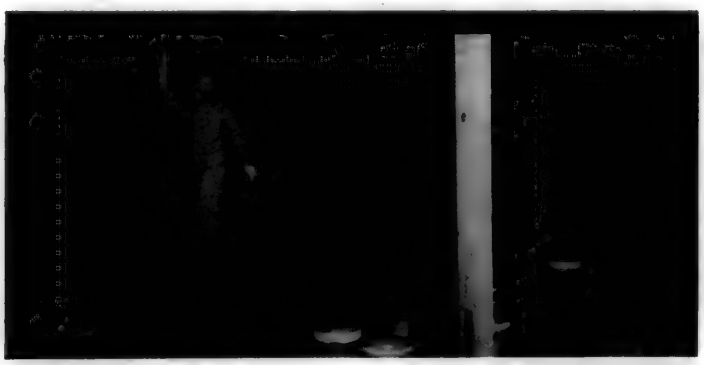
Curling is a sport that requires an extraordinary sense of timing, control and teamwork. In some ways it is similar to bowling, but curlers tell you it requires far more skill and daring.

The curling rink is 46 yards long, more than twice the length of a bowling alley. At each end of the rink is the "house," a circle 12 feet in diameter enclosing three concentric bands generally colored red, white and blue, giving the appearance of a giant target.

Four men comprise each team, including a captain or skipper who directs his team's strategy from behind the house. The object of the game is to slide the curling stone as close to the center of the target as possible. Defensive players on the team try to get their rocks in "guard" position, thereby setting up a blockade on the ice to add to the difficulties of the opponent.

The curling stone or rock, as it is more commonly called, is shaped like a pumpkin that has been stepped on. It is hewn from granite of flint-like hardness and has a handle attached to the flattened top. A player uses two rocks matched for weight and size. Each rock weighs approximately 40 pounds and virtually all are imported from Scotland at a cost of about $38 a pair.

To the bowler accustomed to throwing a 16-pound ball, tossing a 40-pound curling rock is like heaving the kitchen stove across the rink. Actually, however, it does not require as much effort as one might think.



This view across two rinks shows two curling games in operation at the same time. La Salle County Farm Bureau Director Jimmy Webber (left) looks over his shoulder to watch well-played "rock" (right) slide near center of target.

There are many schools of thought on delivery but most players appear to throw the rock with a long easy gliding motion sliding it across the ice.

The most spectacular aspect of the game is the activity of the sweepers who brush the ice with the spirit and enthusiasm of a harassed housewife expecting visitors at any moment.

Brushing is done just ahead of the stone as it moves across the ice in order to clear the way of all dirt and any minute objects which might be in the path of the stone. A small piece of paper, a match, or dirt from the boots of the players can throw a rock off its course and upset the calculation of its speed by the skipper.

Skillful play puts four stones near center of target. Latest move has players spellbound for a moment. Left to right: Melvin Hagenbuch, Ivan Bunton, and Charles Hagenbuch.

The sweepers are teammates who stand on either side of the rink watching a third member of the team throw his curling stone. If his delivery is too slow, the skipper calls on the sweepers to "bring it in." At his word, the sweepers spring into action and brush with devilish fanaticism.

Triumph curlers maintain that a stone can be advanced as much as 15 feet by expert sweeping.

The skipper occupies a unique place in the game of curling. He holds a position similar to the anchor man in bowling, yet his responsibility is far greater. He stands behind the target advising while his teammates slide their rocks toward him from the hack, or playing position, more than 40 yards away.

At a glance, he must be able to judge the speed of the stone a few seconds after it has been played by his teammate so he can tell his sweepers what to do.

Finally he must play his team's last shots which are generally the most difficult and most important plays of the game since they more often than not decide its outcome. The difficulty of his play is heightened when the rink is cluttered up with the 14 rocks of his opponents and teammates which have already been thrown.

Skipper Ivan Bunton (left) tells his sweeper teammates in background to brush a clear path for approaching stone so it will reach target at his feet. Opponent Graeme Currie (right) watches the play hopefully.

For competition, the Waltham curlers generally go to Milwaukee, which is the largest curling center nearby. Each year curlers from our northern states, and Canada congregate in Milwaukee for matches of national curling importance and each year there are generally several representatives in the competition from the Waltham Club. Several have won awards at Milwaukee for their prowess with the curling stone.

Included in the overwhelming farm membership of the club are a doctor, a lawyer, two bankers and an Illinois Farm Supply Company driver.

Club officers are: Arthur Jones, president; Everett Chalus, vice president; Willis Wilson, secretary-treasurer, and Directors Graeme Currie and Eldridge Dana. All of the officers are Farm Bureau members except Dana, who gave up his membership when he moved to the village.

Several years ago, the Waltham Curling Club was invited to play at the University of Illinois skating rink during Farm and Home Week to give other Illinois farmers a chance to see this unique game.

Because another event had taken place shortly before their arrival at the rink, the ice was not correctly prepared and the exhibition turned out to be a fizzle. The spectators who were on hand to watch the game were greatly disappointed.

Their disappointment was mild, however, compared to the chagrin of the Waltham curlers, who had looked forward to the event for several days. They hope they may again be given the opportunity to put on an exhibition of curling for Farm and Home Week, but the next time they will insist that everything be done right, including the preparation of the ice, so no one will be disappointed.

Farm Bureau Director Jimmy Webber throws stone. Broom is held in left hand for balance. Spectators watch through glass partition in background.

Until 1940, most of the curling had

Shorts in the News

Lt. Fred P. Bierer, recently returned from two years service in the Navy, has been named manager of the Fruit Exchange Supply Company, subsidiary organization of the Illinois Fruit Growers Exchange, IAA associated company located at Carbondale.

Prior to entering the service, Bierer was assistant sales manager for the Illinois Fruit Growers Exchange, but devoted most of his time to the Supply Company.

Bierer will work with L. L. Colvis who will continue as general manager for both the Illinois Fruit Growers Exchange and Supply Company. Colvis is also director of fruit and vegetable marketing for the IAA.

Bierer was graduated from the University of Illinois in 1937 where his main interest was in horticulture. He then spent several years on his own fruit farm and served two years as the youngest member of the board of directors of the Fruit Growers Exchange.

Robert J. Howard of Boone, Ia., has been named assistant farm adviser for Kane county. He will have direction of Rural Youth, 4-H Clubs and other extension activities with Farm Adviser A. C. Johnson. Howard is a graduate of Iowa State College and was recently discharged after serving three years with the armed services.

Kenneth A. Stocker, Jacksonville, has been employed as assistant farm adviser and youth adviser at the Woodford County Farm Bureau. He began work March 1.

Recently discharged from the service, Mr. and Mrs. Stocker and their daughter will move to Eureka as soon as housing can be secured.

Stocker is a native of Morgan county and was graduated from the University of Illinois in 1942. He was assistant farm adviser in Madison county prior to entering the service.

John L. Diamond, Edwards county farm adviser for the past 2½ years, has taken over his duties as Peoria county farm adviser, succeeding I. F. Green, who resigned to work for a Peoria bank.

Diamond is a 1938 graduate of the University of Illinois College of Agriculture. He taught vocational agriculture at Greenville high school and served as assistant farm adviser in Peoria county in 1942-43. He is married and has two children.

W. A. Viehe, president of the Franklin County Farm Bureau, died at his home in Ewing, Jan. 19. He was a charter member of the Farm Bureau and had served on the board of directors for seveal years before becoming president. Mr. Viehe was a firm believer and champion of farm cooperatives, working hard the past year in promoting and organizing the Franklin County Service Company.

Eugene F. Hugo, recently discharged from the Army after more than four years of service, is the new assistant in the St. Louis office of the Illinois Grain Corporation. Illinois Grain is an associated company of the Illinois Agricultural Association.

During his Army service Hugo worked two and one-half years as special agent, Counter Intelligence Office, Washington, D. C. He received his training for this work at the Counter Intelligence Corps investigators' school in Chicago.

Hugo also served one and one-half years as special agent in the Counter Intelligence Corps in the European theater of operations in France, Holland and Germany. His duties consisted chiefly in arrest and apprehension of enemy wanted personalities. Arrests included officials in the German high command, the Gestapo, storm troops, the SS corps.

Karl F. Adams of McLean county was elected president of the Illinois Society of Farm Managers and Rural Appraisers at the organization's annual meeting held in connection with Farm and Home Week at the University of Illinois.

He succeeds George Maxwell of Champaign county. C. M. Cassidy of Macon county was elected vice president. O. H. Mendenhall, Champaign county, and J. B. Andrews, Champaign county, were reelected treasurer and secretary respectively.

A dividend of four cents per bushel on grain purchased was distributed in early March by the Savoy Grain and Coal Company to its 250 patrons.

The total dividend, according to President L. G. Johnston, was approximately $20,000 — about three-fourths of the total dividend paid a year ago.

In addition to the patronage dividend in grain, the company paid five per cent on preferred stock. Grain handled by the elevator during the past year amounted to 650,000 bushels.

Officers of the Illinois Farm Advisers Association elected during Farm and Home Week are left to right, front row: I. E. Parett, Vermilion, director; W. F. Coolidge, Livingston, vice president; W. B. Bunn, Pike, president; O. O. Mowery, Macoupin, secretary, and Ray V. Watson, Mason, director. Back row, all directors: Glenn C. Smith, Pope-Hardin; C. S. Cutright, Effingham; Charles E. Yale, Lee, 1945 association president; A. J. Rehling, Henderson, and H. S. Wright of Du Page

A corn plant uses about 368 pounds of water to produce one pound of dry matter, while cucumbers use 713 pounds of water and pumpkins 834 pounds of water to make one pound of dry matter.

INCORPORATE ILLINOIS GRAIN TERMINALS COMPANY

ANOTHER forward step in the IAA's comprehensive plan for cooperative grain merchandising was taken in February with the incorporation of the Illinois Grain Terminals Company.

This company will acquire elevator facilities at the terminal markets and barge equipment for the movement of grain on the Illinois and Mississippi waterways.

What does the establishment of a grain merchandising cooperative like the Illinois Grain Terminals Company mean to the average grain farmer of Illinois?

Let's look at cooperative grain marketing developments to date. Heretofore, the Farm Bureau's statewide grain marketing efforts have been confined to the commission and brokerage business. In other words, the Farm Bureau's program was to sell grain for its member elevator companies. Farmers profited in the savings in commissions by selling through their own cooperative.

Now in recent years there has been a demand on the part of farmers' elevators of the cooperative type and the Farm Bureaus, adjacent to both the Mississippi and Illinois rivers, for an expanded program of merchandising. This would enable the grain producer to sell his grain to his local elevator which will as a member of the state company, sell the grain to Illinois Grain Terminals Company. Illinois Grain Terminals will in turn sell the grain to processors, millers, etc. In this way, the farmer will have a direct channel from his farm to the consumer.

By having control of his grain from the farm all the way to the consumer, the grain producer is in a position to share in the earnings of the grain merchandising business. The earnings, of course, of the grain merchandising business have always been far greater than that of the grain commission or brokerage business.

Along with the Illinois Grain Terminals Company, the Illinois Grain Corporation, the IAA's statewide commission company, will continue to render a commission and brokerage service to its member elevators, to the Farmers Grain Dealers Association of Iowa, and the Indiana Grain Cooperative, Inc.

Since the Illinois Grain Terminals Company is a Farm Bureau-sponsored company, it will be tied into the Illinois Agricultural Association by the issuance of Class B stock which will be held by the IAA.

Incorporators of the new company are: Harvey W. Adair, Chicago Heights; C. J. Elliott, Streator; Lyman Bunting, Ellery; August Eggerding, Red Bud; Homer Curtiss, Stockton; R. V. McKee, Varna; John T. Evans, Hoopeston; Milton W. Warren, Mansfield; Ronald R. Holt, Galva; J. King Eaton, Edwardsville, and Charles Lauritzen, Reddick.

Backbone of the business of the Illinois Grain Terminals Company will probably come from river operations that are being organized by County Farm Bureaus on or near the Illinois and Mississippi rivers.

Three such companies already have been organized. They are: Prairie Grain Company which will serve producers from Seneca to Peoria in the following counties, LaSalle, Lee, Marshall-Putnam, Henry, Stark, Peoria, Woodford, and Bureau. Directors of Prairie Grain are: H. T. Marshall, Serena, president; Carl O. Johnson, Varna, secretary-treasurer; Harry E. Meyers, Kewanee; Wesley Attig, Ashton; E. R. Kuntz, Princeville; Albert Hayes, Chillicothe; Ray H. Jackson, Toulon; C. E. Studley, Princeton, and H. S. Lamp, El Paso.

Havana River Grain Company which will serve producers in Fulton, Schuyler, McDonough, Mason, Cass, Menard and Logan. Directors are: Howard Stone, Mason City, president; Andrew Larson, Havana, vice-president; Leo Walters, Prairie City, secretary; Alex Howe, Havana, treasurer; Clarence Fulks, Littleton; W. Irving Brown, Oakford; J. P. Armstrong, Chandlerville, and F. C. Sparks, Lincoln.

Western Illinois Grain Company which will serve producers in Hancock, McDonough, Warren, and Henderson. Directors are: Emory W. Ward, Ferris, president; Irving M. Graham, Carthage, vice-president; Leo W. Worden, LaHarpe; Marion E. Herzog, Blandinsville; R. E. Keithley, Macomb; Ira W. Huston, Roseville; E. H. Kirkpatrick, Roseville, treasurer; L. W. Ross, Stronghurst, and Otto W. Steffey, Stronghurst, secretary.

On March 1, the Western Illinois Grain Company made final settlement for the purchase of the Dallas City Grain & Feed Company which owned elevators at Dallas City, Adrian, Ferris, and McCall. Personnel of the older company will be continued in the employ of the Western Illinois Grain Company.

Prairie Grain Company has established quotas for stock selling campaign in the various counties that it will serve and have approved the sale of $150,000 in stock.

Havana River Grain Company is now engaged in a stock selling campaign in the six counties it will serve, and will acquire 300 feet of river frontage from the Farmers Elevator Company at Havana for the erection of a new elevator.

Farm and Home week visitors at the University of Illinois look over a hay drier which consists of blower and ducts designed to circulate air through stored hay. Gadget makes it possible to store newly cut grass in the barn.

DEAN RUSK LAUDS FARM BUREAU AT SMITH AWARD

★ ★ ★

SINGULAR tribute to the Farm Bureau movement and the men who made it what it is today was paid by Dean H. P. Rusk at the annual meeting of the Illinois Farm Managers and Rural Appraisers Association held in conjunction with Farm and Home Week at the University of Illinois.

Dean Rusk's compliments came during the presentation of a plaque by the association to Earl C. Smith, former president of the Illinois Agricultural Association, in appreciation of his outstanding service to agriculture.

O. D. Brissenden, IAA organization director, received the plaque for Mr. Smith, who was in Florida at the time of the managers and appraisers meeting.

"In no other state," declared Dean Rusk, has farmer support of the extension program equaled farmer support in Illinois — in no other state have farmers put into the program as much money, time and energy.

"Under the Illinois system of farmer sponsorship and participation in management and finance, this program (Farm Bureau) soon brought into close working relationship the most forward-looking farmers of each county. It was inevitable that when such men were banded together for the study of agricultural interests, and for the promotion of these interests, they should recognize important problems outside the production field.

"The determination to do something about these economic problems," Dean Rusk continued, "led to state and national organizations of the Farm Bureau and to the beginning of the most powerful farm movement this country has ever known.

"The strength and force of the Farm Bureau movement did not come all at once or by accident," he said. "It grew in strength and accumulated greatness as local, county, state and national leaders forged to the front.

"While it is true that a great movement once under way does much to develop its own leadership, it is also true that the momentum and influence of most worth-while movements depend upon the caliber of the men who sponsor them.

(Courier Photo)

Award made to Earl C. Smith, former IAA president, for outstanding contribution to agriculture is received by O. D. Brissenden, IAA organization director, from Dean H. P. Rusk, College of Agriculture. Plaque was presented in Urbana during Farm and Home Week by the Illinois Farm Managers and Rural Appraisers Association.

"Great movements do not make great men out of mediocre material — rather they tend to uncover latent greatness and to develop it.

"You will agree," Dean Rusk stated, "that no organization has spoken more clearly or more effectively in the public forum and in the legislative halls than has the Illinois Agricultural Association.

"He was no common man who rose from the ranks to the leadership of this great organization and who was returned to this important position year after year for two decades. Earl C. Smith is indeed an uncommon man.

"His fame will grow as the years lend perspective to his work and as the historian assesses the man and evaluates his influence on our times. The Illinois Farm Managers and Rural Appraisers Association not only honors Mr. Smith but honors itself by presenting this handsome plaque to him in appreciation of his outstanding service to agriculture.

"The engraving reads as follows: 'To Earl C. Smith in recognition of his many years of faithful service to the farmers of Illinois and organized agriculture the Illinois Farm Managers and Rural Appraisers Association presents this plaque February 15, 1946.'

"On behalf of the association," Dean Rusk continued, "I take a great deal of pleasure in presenting this plaque to Mr. Smith's representative, and I charge you, Mr. Brissenden, to deliver this to Mr. Smith with the heartiest congratulations of the membership of this association and the best wishes of all of us."

During the past 40 years agricultural employment decreased 15 per cent and production per farm worker increased 86 per cent.

Elementary rural school population decreased 72 per cent from 1880 to 1943.

MERRILL GREGORY ASSISTANT EDITOR OF WALLACE'S FARMER

★ ★ ★

Lt. Merrill C. Gregory, who has been on leave of absence from his job as editor of the IAA RECORD since September of 1941 while serving in the armed forces, has accepted the position of assistant editor of Wallace's Farmer and Iowa Homestead. Wallace's Farmer is published in Des Moines, Ia., Lieutenant Gregory's home town.

M. C. Gregory

Lieutenant Gregory returned in January from the European theater where he had been serving in the Signal Corps since the first of 1945. He held the rank of first lieutenant at the time of discharge.

Lieutenant Gregory entered the Army in 1941 as a private and later was made a sergeant while serving as chief censor on detached duty at a radio station in Hawaii. After more than two years in the Pacific he entered Officers Candidate school and was commissioned a second lieutenant in 1944. Early in 1945 he was sent to Europe and saw action in the final phases of the war on the Western front.

Lieutenant Gregory, a graduate of the Missouri School of Journalism, joined the IAA staff as editor of the RECORD in January, 1940. Prior to 1940, he was assistant editor of the Nation's Agriculture, AFBF publication for two years. He also served for a time as assistant editor of Prairie Farmer and handled publicity for the state rural electrification committee in Springfield.

Merrill is the son of the late Clifford V. Gregory, one of the greatest farm editors of his time who did more than any other one editor to build Farm Bureau and to champion farmers' rights. He was active in the McNary-Haugen fight and helped to write the first AAA. Cliff Gregory was one time editor of Prairie Farmer and later associate publisher of the Wisconsin Agriculturist and Farmer. He died Nov. 18, 1941, at the age of 58.

About 85 per cent of the wood used in Illinois now is being imported from other states.

DEAN RUSK LAUDS FARM BUREAU AT SMITH AWARD

(Courier Photo)

Award made to Earl C. Smith, former IAA president, for outstanding contribution to agriculture is received by O. D. Brissenden, IAA organization director, from Dean H. P. Rusk, College of Agriculture. Plaque was presented in Urbana during Farm and Home Week by the Illinois Farm Managers and Rural Appraisers Association.

SINGULAR tribute to the Farm Bureau movement and the men who made it what it is today was paid by Dean H. P. Rusk at the annual meeting of the Illinois Farm Managers and Rural Appraisers Association held in conjunction with Farm and Home Week at the University of Illinois.

Dean Rusk's compliments came during the presentation of a plaque by the association to Earl C. Smith, former president of the Illinois Agricultural Association, in appreciation of his outstanding service to agriculture.

O. D. Brissenden, IAA organization director, received the plaque for Mr. Smith, who was in Florida at the time of the managers and appraisers meeting.

"In no other state," declared Dean Rusk, has farmer support of the extension program equaled farmer support in Illinois — in no other state have farmers put into the program as much money, time and energy.

"Under the Illinois system of farmer sponsorship and participation in management and finance, this program (Farm Bureau) soon brought into close working relationship the most forward-looking farmers of each county. It was inevitable that when such men were banded together for the study of agricultural interests, and for the promotion of these interests, they should recognize important problems outside the production field.

"The determination to do something about these economic problems," Dean Rusk continued, "led to state and national organizations of the Farm Bureau and to the beginning of the most powerful farm movement this country has ever known.

"The strength and force of the Farm Bureau movement did not come all at once or by accident," he said. "It grew in strength and accumulated greatness as local, county, state and national leaders forged to the front.

"While it is true that a great movement once under way does much to develop its own leadership, it is also true that the momentum and influence of most worth-while movements depend upon the caliber of the men who sponsor them.

"Great movements do not make great men out of mediocre material — rather they tend to uncover latent greatness and to develop it.

"You will agree," Dean Rusk stated, "that no organization has spoken more clearly or more effectively in the public forum and in the legislative halls than has the Illinois Agricultural Association.

"He was no common man who rose from the ranks to the leadership of this great organization and who was returned to this important position year after year for two decades. Earl C. Smith is indeed an uncommon man.

"His fame will grow as the years lend perspective to his work and as the historian assesses the man and evaluates his influence on our times. The Illinois Farm Managers and Rural Appraisers Association not only honors Mr. Smith but honors itself by presenting this handsome plaque to him in appreciation of his outstanding service to agriculture.

"The engraving reads as follows: 'To Earl C. Smith in recognition of his many years of faithful service to the farmers of Illinois and organized agriculture the Illinois Farm Managers and Rural Appraisers Association presents this plaque February 15, 1946.'

"On behalf of the association," Dean Rusk continued, "I take a great deal of pleasure in presenting this plaque to Mr. Smith's representative, and I charge you, Mr. Brissenden, to deliver this to Mr. Smith with the heartiest congratulations of the membership of this association and the best wishes of all of us."

During the past 40 years agricultural employment decreased 15 per cent and production per farm worker increased 86 per cent.

Elementary rural school population decreased 72 per cent from 1880 to 1943.

MERRILL GREGORY ASSISTANT EDITOR OF WALLACE'S FARMER

Lt. Merrill C. Gregory, who has been on leave of absence from his job as editor of the IAA RECORD since September of 1941 while serving in the armed forces, has accepted the position of assistant editor of Wallace's Farmer and Iowa Homestead. Wallace's Farmer is published in Des Moines, Ia., Lieutenant Gregory's home town.

M. C. Gregory

Lieutenant Gregory returned in January from the European theater where he had been serving in the Signal Corps since the first of 1945. He held the rank of first lieutenant at the time of discharge.

Lieutenant Gregory entered the Army in 1941 as a private and later was made a sergeant while serving as chief censor on detached duty at a radio station in Hawaii. After more than two years in the Pacific he entered Officers Candidate school and was commissioned a second lieutenant in 1944. Early in 1945 he was sent to Europe and saw action in the final phases of the war on the Western front.

Lieutenant Gregory, a graduate of the Missouri School of Journalism, joined the IAA staff as editor of the RECORD in January, 1940. Prior to 1940, he was assistant editor of the Nation's Agriculture, AFBF publication for two years. He also served for a time as assistant editor of Prairie Farmer and handled publicity for the state rural electrification committee in Springfield.

Merrill is the son of the late Clifford V. Gregory, one of the greatest farm editors of his time who did more than any other one editor to build Farm Bureau and to champion farmers' rights. He was active in the McNary-Haugen fight and helped to write the first AAA. Cliff Gregory was one time editor of Prairie Farmer and later associate publisher of the Wisconsin Agriculturist and Farmer. He died Nov. 18, 1941, at the age of 58.

About 85 per cent of the wood used in Illinois now is being imported from other states.

Interest Grows in Work of School Survey Committees

★ ★ ★

WITH school survey committees at work in 93 counties in Illinois, more and more folks are becoming interested in the work that these public-spirited groups are performing.

In the first place, each school committee is made up of nine members, five representing rural districts and four from urban districts. These members were elected by the school directors and board members of their respective counties.

School survey committee members work without pay, but their responsibilities are great and their duties are clearly outlined in the School Survey Law passed by the last session of the state legislature.

Here are the powers and duties of the committees as outlined in the law:

(a) To study the school districts of the county and their organization for the purpose of recommending desirable re-organization which in the judgment of the committee will afford better educational opportunities for the pupils and inhabitants of the county, more efficient and economical administration of public schools and a more equitable distribution of public school revenues;

(b) To confer with school authorities and residents of the school districts of the county, hold public hearings, and furnish to school board members and to the public information concerning re-organization of school districts in the county; and

(c) To make reports of its study and recommendations, including a map or maps showing existing boundaries of school districts and the boundaries of proposed or recommended school districts, concerning the re-organization and financing of the school districts of the county.

The law also calls for public hearings in each proposed new district followed by a vote. Some of the reasons why the County School Survey procedure is necessary were stated in last month's issue of the IAA RECORD.

In less technical language the committee will study the assessed valuation, enrollments, tax rates, teacher supply, roads, community sentiment, and other things which have to do with the efficiency and economy of the schools. They will collect figures and study maps pertaining to the school districts and transportation problems.

This data will provide them with a back log of information which will guide them in making recommendations for a re-grouping of districts into a more efficient, economical pattern, wherever feasible.

Copies of the recommendations of the county school committee are to be submitted to each school board member in the county in a tentative report. Following the submission of the tentative report to the people for their study, public hearings will be called in each proposed new district. At these public hearings comments and suggestions from local people on proposals made by the committee will be sought. Copies of the report will also be sent to the members of the State Advisory Commission, who also may make suggestions.

The county committee will then make a final report based on their tentative report but with a proper regard to suggestions growing out of the public hearings and these coming from the State Advisory Commission. Within nine months after the final report is distributed to the school board members of the county, the people in any reorganized district proposed by the Committee will have an opportunity to vote on the proposals of the county committee.

In reality where the county committee proposes a larger district, that recommendation legally applies to the establishment of a larger district for administrative and financial purposes only. The county committee's recommendations legally have nothing whatever to do with the number of schools operated in the proposed larger district.

The local people will determine whether the district proposed by the committee shall be created and the board members representing them will decide how many schools should be operated and what schools can reasonably be closed for the sake of efficiency and economy.

Although the proposals of the county committee legally extend only to the recommendation of larger districts that can provide better educational opportunities while eliminating unnecessary waste yet the committee should, in view of their fund of information and impartial over-all viewpoint, make recommendations regarding attendance units, location of building sites, etc., in the proposed new districts. While the new districts are not obligated to follow such recommendations, local people may find such recommendations from the county committee helpful.

PRES. SHUMAN ATTENDS FEED SHORTAGE MEETING

Charles B. Shuman, president of the IAA, attended a conference on the food and feed shortage Feb. 19 in Washington called by Secretary of Agriculture Clinton P. Anderson. Other leaders attending the conference were President Edward A. O'Neal of the AFBF; H. A. Praeger, Kansas Farm Bureau president; Vice-President Howard Hill of Iowa Farm Bureau Federation; Herbert Voorhees, New Jersey Farm Bureau president, and W. R. Ogg of the Washington AFBF office.

In the discussions, the major recommendation made by Farm Bureau officials was that the promises and pledges made to farmers by high government officials be kept.

Farm Bureau representatives also voiced opposition to all suggestions to reduce the ceiling price on heavy weight hogs. An increase in ceiling price for hogs weighing less than 240 pounds was favored, provided the increase was made possible through upward adjustment of retail prices and not through an increase in subsidy.

Farm Bureau representatives opposed all proposals which necessitated an increase in subsidy payment.

It was also recommended that more railroad cars be made available for shipment of corn from areas of surplus to deficit regions.

FRUIT GROWERS WILL MEET APRIL 4

Annual meeting of the Illinois Fruit Growers Exchange and Fruit Exchange Supply Company has been set for April 4. The meeting will be held in Carbondale in the Old Science Building on the campus of Southern Illinois Normal University.

HIRED MAN INJURED IN FARM ACCIDENT

TODAY'S FARM is just about as highly mechanized as any modern factory. Hazards to workers are always present, but where there is machinery there is a still greater hazard. As a business man and employer you must reckon with the danger of financial liability in case one of your farm hands is injured while at work in your employ. The only sensible way to safeguard your operations . . . to spread the risk . . . is to insure your workers in the COUNTRY MUTUAL CASUALTY COMPANY. You will feel safer, and your farm workers will feel better to know that they are protected by this strong company in case of injury. See your local Farm Bureau insurance representative for further details.

WHAT THIS POLICY DOES:

1 **Protects you against claims by non-employees who sustain injury or damage because of claimed negligence — $5,000 one person, $10,000 one accident.**

2 **Provides protection for claims made by injured farm workers or domestic servants — $5,000 one injured employee, $10,000 one accident.**

3 **Pays for reasonable and necessary medical, hospital, dental, surgical, ambulance, registered nurse service, and medical supplies for injured employees up to $250.**

SPRING WORK PREPARATORY SALE

The Key to SMOOTH MOTORS

Good, clean spark plugs are essential to the smooth operation of cars and tractors. Edison Spark Plugs are designed specifically for each type and heat range of motor.

Note these Edison-engineered features:

1. **Albenite Insulator**—A special porcelain with great strength and resistance to sudden temperature changes.
2. **Thermo-Electric Seal**—Heat-sealed under high voltage crimping assures gas tight, leakproof one-piece construction.
3. **BUILT-IN Leakproof Gasket**—This patented gasket insures a compression type seal between the engine block and spark plug—needs no replacement.
4. **EDISPARK Electrode Construction**—Condenser-action "flat" gap construction prevents rapid gap growing and arcing.

Whether your motor requires hot or cold spark plugs, you can satisfy your needs with

EDISON SPARK PLUGS

Don't Let Shortages Delay You!

Be sure to keep plenty of farm fuels on hand—FS/50 and T-40 Tractor Fuels and Kleer Motor Gasoline are popular for most tractors and the *new* Magic Aladdin Gasoline is just the thing for high-compression tractors.

And don't take any chances on running low on Blue Seal Motor Oil. This oil has been a favorite with Illinois farmers for many years. It certainly proved itself during the war and is now ready to again prove its peace-time value.

Always provide an adequate supply of

BLUE SEAL MOTOR OIL

PREVIEW

The New

BLUE SEAL FLY SPRAY

will contain

D. D. T.

This powerful ingredient has been included with other active ingredients to produce the best Fly Spray obtainable. The new Blue Seal Fly Spray has a long time repelling quality, is easily sprayed, and is not sticky. When used repeatedly on inside barn walls and stalls, it has sufficient lasting power to kill flies alighting on the surface several days after it was sprayed. This spray is not recommended for household use where the new Blue Seal Fly *Killer* should be used.

Keep that Machinery WELL GREASED

Poorly lubricated machinery can be the source of many troubles. Avoid breakdowns, heavy-pulling loads, squeaks, wear and tear with farm-tested Blue Seal Greases. There is a special grease for each type of work. Explain your grease requirements to your Blue Seal salesman. He will recommend just the right Blue Seal grease to take care of your needs and deliver it right to your farm.

Rural Youth

By
ELLSWORTH D. LYON

The Rural Youth slogan for 1946 — "Serve Your Community and Know Your Neighbor" — was made the banquet theme for Knox county. The county Rural Youth orchestra provided music for the crowd of 212 from 12 counties. Other activities of this group included a discussion at the February meeting on the subject, "What Rural Youth Can Do For 4-H Clubs," sponsoring of a basketball team for league play at the Galesburg Y.M.C.A., a play party every two weeks for the community of Galesburg in cooperation with the "Y" and the recent installation of Fulton county officers at their annual banquet.

Other recent banquets reported are the following: Peoria, March 6, the first time since 1941; McLean, Feb. 7, with an attendance of 150 from six counties; Mason, Feb. 16, with installation of officers; Fulton, Feb. 21, with installation service led by Knox county. Pulaski-Alexander held its annual banquet March 15. Jasper held its banquet March 14.

McLean county Rural Youth enjoy a dance during a recent meeting.

Edgar continues to lead recreation for the children's home in Paris.

The theme for Richland's fifth annual banquet was, "The Atomic Age."

"The Two-Family Farm" provided helpful discussion for Wabash and Kankakee in their January meetings. McHenry reports new members gained. Keep going McHenry!

The movie, "King of Waters," was shown by Randolph at the February meeting. A basketball game each week is played by the boys.

Brown County Rural Youthers are shouldering responsibilities of leadership in their county. Four are in the Farm Bureau-Farm Management Service. Three are assistant 4-H Club leaders. This year a Rural Youther is organizing and leading a 4-H Club in his community.

Franklin is now sponsoring a membership drive. Lewis Van Horn and Jimmie Rowland are the captains in a two-team outfit.

Welcome Williamson into the Rural Youth Fellowship. Nice to see growth in your new organization, even at second meeting. Congratulations!

St. Clair is very much on the alert. They appeared on two radio programs in February and led recreation for two church socials as well as for the Clinton County Home Bureau Family Night.

Clark discussed "Soil and Nutrition" at the February meeting with C. N. Glover, farm adviser, as leader.

In keeping with the state slogan Adams is leading recreation and training recreation leaders for various groups. Recently two members led such an activity for a statewide church youth meeting.

Cook scheduled O. D. Brissenden, organization director of the IAA, for its March banquet.

Winnebago would not be defeated when the weather failed to provide ice for a planned skating party. The event was turned into a hayride party and weiner roast with a good time for all.

Woodford is planning a dance for the last week in April, according to an announcement by president, Bill Romersberger.

Iroquois announces the following program series made up from suggestions by the members: Etiquette, Modern Farm Home, Safety, Indian Lore, History of Iroquois County, Current Events.

White County served the community in February by entertaining the Carmi Kiwanis Club.

Hamilton sponsored a box supper in February. President, Katherine Gibbs, reports the event successful with boxes averaging $5.

Tazewell, very much on the beam reports as follows: (1) February 28 — film on "Landscaping" and a discussion of the new Illinois Rural School Law; (2) March 21 — joint meeting with Woodford; (3) Last week in March — The three-act comedy, "Professor, How Could You?" A membership drive is conducted each month in the community where the meeting is held.

McLean county Rural Youth officers for 1946 are, left to right: Betty Lawrence, secretary; Irene Miller, recreation leader; Wayne Lage, president; Dorothy Beeler, treasurer; Genevieve Rhoda, song leader. Vice president Russell Keim and Reporter Lorraine Dalton were not present when picture was taken.

GRAIN CEILINGS ARE RAISED

Effective March 4, ceiling prices on grains were raised in order to adjust live stock feeding to reduced supplies of grain.

The joint announcement made by the Secretary of Agriculture and OPA raised ceilings as follows: wheat, 3 cents a bushel; corn, 3 cents; barley, 4 cents; oats, 2 cents, and grain sorghums, 9 cents per 100 pounds. Ceiling prices for rye, which go into effect June 1, will be increased 4 cents per bushel.

Other steps outlined in the program include:

1. No change will be made in hog ceilings prior to Sept. 1, 1946, but consideration will be given to lowering the ceiling price on heavier weight butcher hogs after that date. Consideration also will be given to lowering the subsidy on heavier hogs before Sept. 1.

2. The present subsidy of 50 cents per 100 pounds for finishing cattle to top grades will be terminated on June 30.

The announcement also said the grain price increases were being made as a cushion for possible increases in parity in the next few months. As parity increases, as it has each month since the end of the Japanese war, the law requires that ceilings be changed to take care of parity increases.

URGE MATERIALS FOR FARM BUILDINGS

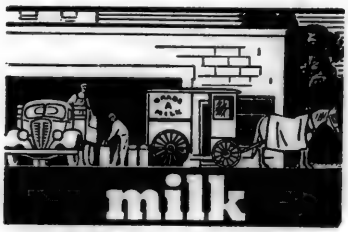
Recommendation has been made by the American Farm Bureau Federation to Wilson W. W. Wyatt, administrator of the National Housing Agency, that the housing program make provisions to assure farmers needed building materials.

The telegram sent by AFBF President Edward A. O'Neal to Wyatt stated:

"Respectfully urge that you make adequate provisions in your housing program to assure that farmers will be able to secure urgently needed building materials for repair and replacement of essential farm buildings. This is vitally important to farmers in meeting their food production goals.

"Appropriate provisions also should be made to enable farmers to secure building materials for critically needed rural housing.

"Farmers also should have equal opportunity with others in obtaining needed materials to construct housing for veterans who are tenants, sharecroppers and farm workers."



By Wilfred Shaw

The following are the blended prices received by producers supplying the respective Illinois markets. All are January prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective city milk ordinances:

Bloomington	$2.48
Canton	2.75
Champaign-Urbana	2.75
Chicago	3.20
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.78
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.85
Kewanee	2.55
LaSalle-Peru	2.70
Moline-Rock Island-Davenport	3.15
Peoria	2.89
Pontiac	2.406
Quincy	2.60
Rockford	3.14
Springfield	2.85
St. Louis, Mo.	3.51
Streator	2.50

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted), as reported by the respective milk cooperatives. These prices are for December unless otherwise noted:

Baltimore	$3.85
Boston	3.92
Chicago (70-mile zone) (Jan.)	3.20
Cleveland	3.51
Denver (Jan.)	3.01
Detroit	3.60
Duluth, Minn.	2.85
Hartford, Conn.	3.99
Kansas City	3.50
Knoxville, Tenn. (Jan.)	3.55
Madison, Wis.	2.98
Memphis	3.61
New York City	4.08
Pittsburgh	3.62
Seattle (Jan.)	3.10
Sioux City, Iowa (Jan.)	3.05
St. Joseph, Mo. (Jan.)	3.30
St. Louis (Jan.)	3.51
Toledo	3.44

A. E. Meyer of Davenport, Ia., has been employed as manager of the Quality Milk Association by the association board of directors. He will succeed C. G. Huppert, manager for the past nine years. Offering his final report to the 425 members attending the organization's 16th annual meeting in Moline, Feb. 16, retiring Manager Huppert declared the association has marketed 17 per cent more milk over the previous year and had added 167 new members to its rolls during the year. Wilfred Shaw, IAA director of milk marketing, addressed the meeting.

The annual meeting of the Mid-West Dairymen's Company of Rockford will be held Tuesday, March 26, starting at 10:30 a.m., at the Faust Hotel, Rockford. Principal speaker, according to Manager H. W. Mainland, will be Prof. R. D. Froker of the agricultural economics department, University of Wisconsin.

Cash refunds of $16,625 to producers were declared at the 24th annual meeting of the Producers Co-Op Dairy held Feb. 11 in Quincy. The refunds included $9,329 as patronage refunds and producer equities totaling $7,296. Total sales increased $33,000 during the year for a new high, according to reports by President Anthony Grawe and Manager M. B. Crocker. Speakers on the program were Edwin Gumm of Knox county, president of the Illinois Milk Producers Association, and Wilfred Shaw, secretary. Reelected as directors for three-year terms were Wilbur Coe and Henry Sommers. John Allison was elected to succeed retiring director Ben Putnam, who was not a candidate for reelection after serving on the board for many years.

Manager Ryland Capron of Peoria Milk Producers and Manager Ed Rush of Peoria Producers Dairy reported substantial increases in business during the past year in their reports to the 400 members attending the organizations' annual meetings Feb. 8 in Peoria. Manager Capron reported increased membership and Manager Rush declared the past year's sales were 18 per cent above any previous year. Patronage refunds, stock dividends, and membership equities paid to members of the two organizations totaled $25,001.51. Principal speaker was L. G. Fletcher of the Caterpillar Tractor Company of Peoria. With the exception of John Hagenstoz of Tazewell county, all directors were reelected. Hagenstoz was not a candidate and was succeeded by Lester Keil of Tazewell.

Illinois' 1945 "Corn King," Walter Stack, McLean county, is flanked by a pair of grain-raising champions also honored during Farm and Home Week in Urbana. Pillsbury awards were made to Jesse Riley (left), Macon county, for his wheat and to C. E. Canterbury (right), Sangamon county, for his soybeans. *(Courier Photo)*

Historians report that many centuries ago the Chinese used dried and powdered skins of toads as a treatment for wounds. This ancient practice was considered a silly superstition until recently, when it was found that powdered toad skins contain a considerable amount of modern drug adrenalin.

AULT NAMED FARM SUPPLY ASS'T TREASURER

A. M. Ault, former director of the petroleum division, has been named assistant treasurer of the Illinois Farm Supply Company.

A. M. Ault

The new position was created at the request of Robert A. Cowles, Illinois Agricultural Association treasurer, who also serves as Illinois Farm Supply Company treasurer. Increasing business, sometimes amounting in volume to a half million dollars a day made the need for an assistant treasurer imperative.

Ault is a graduate of the University of Illinois College of Commerce and has been associated with Illinois Farm Supply for 11 years. He was manager of service companies in Jo Daviess and Marshall-Putnam counties before joining the field staff of Illinois Farm Supply in 1939. In 1941 he came to the Chicago office as head of the petroleum division.

ILLINOIS WINTER WHEAT ACREAGE DECREASES

A six per cent decrease in the state's winter wheat acreage was reported March 1 by A. J. Surratt, state and federal farm statistician.

Surratt blamed the decrease in wheat acreage and labor and equipment shortages and the late harvest of soybean and corn crops.

"Shortage of farm labor and equipment strung out the harvest of beans and corn through the winter and many farmers did not have time to prepare the soil for winter wheat plantings," Surratt said.

Surratt said that unless conditions improved some husking of corn and combining of beans would go into March. There is still some unfinished work in the southern half of the state, he said.

DR. BOLAND INJURED

Driving on his way to Fort Sheridan from Chicago to receive his discharge from the Army, Lt. Col. John E. Boland, Country Life medical director on leave of absence, wound up in Gardiner General Hospital after a collision with an empty school bus. The accident occurred Feb. 25 on the outskirts of Chicago. Dr. Boland sustained a fractured left leg and lacerations to the left ear.

More Servicemen Return To Old Jobs With IAA

SERVICEMEN returning to their old jobs in the Chicago offices of the Illinois Agricultural Association include a member of Country Life's tab department who married an Australian girl.

The Country Life employe is Robert H. Jones and his wife is the former Elsie Washington of Melbourne. Jones hopes his wife, a former WAAF, will join him in several weeks.

Dick Hummel

Robert Jones

Jones has been with Country Life since February, 1942. He went into the service in April, 1943 and did most of his training in Arkansas before going overseas in October, 1943. He spent 23 months in Australia and later served in the Philippines before returning to the United States in January, 1946 when he was discharged. He was a technician, third grade in the signal corps and received one battle star.

Also back in Country Life's tab department is Dick Hummel, who has been with the company since the fall of 1940. He went into the ground service of the air forces in February, 1943 and received most of his training in Kansas. He went overseas in October, 1944, serving with B-29 crews on Saipan, Guam and Iwo. After 16 months, he returned home and was discharged in December as a sergeant with three battle stars.

Burton Erickson, an employe of Country Life since December, 1939 is back in the auditing department. He joined the service in December, 1942 and received his training at Fort Lewis, Wash. Beginning in June, 1943, he spent the next 31 months overseas in Hawaii, New Guinea, Morotai, Philippines and Japan. He was discharged in January with two battle stars.

Burton Erickson

Leo F. McGrane joined the Country Life office staff in November, 1939 and went into the army three years later. He received his basic training in Alabama before going overseas in July, 1943. After service in Australia, New Guinea, Philippines, Japan and New Caledonia, he returned to the United States in December, 1945 with the rating of staff sergeant. He holds two battle stars and is now employed in the policyholders service department.

L. F. McGrane

Robert A. Petersen of Country Casualty's claims department joined the company in May, 1943 and went into the service in August of the same year. He received his training as an infantryman in Texas before going overseas in January, 1944. Petersen returned to the United States two years later after service in New Zealand, New Caledonia, Japan and the Philippines. He holds one battle star and was discharged in January as a technician, fifth grade.

R. A. Petersen

John J. Marren of Country Casualty's claims department has been with the company since July, 1939. In September, 1941, he went into the army receiving most of his training at Newport, Ark. He went overseas in September, 1945 serving in Hawaii and with the ground services of the air forces in the Marianas. He was a radio mechanic and returned home in December, 1945. He was discharged shortly thereafter as a private, first class.

J. J. Marren

Harold W. Larson of Country Casualty's accounting department, has been with the company since October, 1937. He went into the service in September, 1942 and received most of his training at Fort Knox, Ky. He was overseas from July, 1945 through October, 1945 serving in Guam, Hawaii, the Marshalls and the Philippines. He served with the infantry and armored services as a technician, third grade and was discharged in January.

H. W. Larson

Alfred Arentz has been employed by Country Casualty since June, 1941 and is back in the records department. He went into the naval service in October, 1942 and received his boot training at the Great Lakes Naval Training Center before going overseas in December, 1943. Arentz served in Hawaii, Japan, Okinawa, Philippines, Marshalls and Carolines before coming home in May, 1945 with 10 battle stars. He was discharged in January as a gunner's mate, second class.

Alfred Arentz

LUDWIG IS MISSOURI F. B. INSURANCE MANAGER

Albert Ludwig, assistant superintendent of claims in the Chicago office of Country Mutual Casualty Company, resigned his job March 1 to become manager of the Missouri Farm Bureau Mutual Insurance Company at Jefferson City, Mo. Ludwig went to the Chicago office from Randolph county in 1935, where he served as general agent. He lived with his wife and daughter in Oak Park.

Albert Ludwig

Approximately 28 per cent of Illinois crop land is level. About 45 per cent has more than a 2 per cent slope. Nine per cent is river and creek bottomland.

In general livestock areas, year-to-year earnings tend to be higher where from 15 to 25 per cent of the tillable land is kept in legumes and grasses.

Chemicals can be used in weed control where suited, but one should not depend upon them as a cure-all.

THERE GOES MRS. HAMFAT AND HER NEW FAMILY

FARMERS EXCEL AT RARE WINTER SPORT

(*Continued from page* 11)

been done outdoors without very much shelter but in that year a building housing three rinks and a clubroom was constructed by farmers and villagers donating their labor. Total cost of the building, according to the youthful, dark-haired secretary-treasurer, was $2,500. Club dues are $5 annually.

The Waltham Curling Club has contributed much to the feeling of cooperation among these La Salle county farmers. An artificial breeding association was organized after preliminary talks among farmers at the curling club, and the first soil conservation district in that section

Brushing furiously, Sweepers Bruce Munson (left) and John Anderson clear the ice of all obstructions as curling stone (at Munson's feet) slides toward Camera. Munson is a relative newcomer; Anderson has played many years.

of the state was organized there after one of the curlers took the floor to advocate a soil conservation program during a gathering of the players.

From the stove-heated clubroom spectators can sit in comfort and watch the curlers through large glass partitions.

The curlers are a friendly lot who are pleased to have visitors come in, watch the game and ask questions. Some day they hope curling will be adopted elsewhere in downstate Illinois to provide some competition. They would like that.

But till that day they will go on swishing their brooms and sliding their rocks across the ice, talking about crops and prices and keeping the frosty air ringing with their shouts, their laughter and their good-natured griping when a shot isn't played just right.

The 1946 Illinois broomcorn goal is 16,000 acres compared with 7,000 acres produced in 1945, 14,000 in 1944 and a 35,000-acre average for 1934-43.

PRE-SEASON SALE OF BLUE SEAL INOCULANTS

SAVE 12½%

ON EARLY ORDERS OF SOYBEAN INOCULANT

This saving is made possible through large volume cooperative buying of quantities accurately determined by actual needs. Early ordering enables the manufacturer to supply the needed quantity without wasteful left-overs which cannot be used next year. This inoculant is supplied fresh and must be used before expiration date stamped on each package.

BLUE SEAL INOCULANTS MAY BE PURCHASED FROM ANY OF THE FOLLOWING AUTHORIZED DISTRIBUTORS:

NEWS and VIEWS

PEARL BARNES HEADS STATE HOME BUREAU

Miss Pearl Barnes, former president of the Mercer County Home Bureau, was elected president of the Illinois Home Bureau Federation at the annual meeting held in Urbana Feb. 12 in conjunction with Farm and Home Week.

Mrs. James C. Graham, also of Mercer

Miss Pearl Barnes Mrs. J. C. Graham

county was elected secretary. About 300 Home Bureau women took part in the election. Directors named were: Mrs. D. M. Ames, Coles county; Mrs. Frank Garwood, Christian county, and Mrs. G. Willard Hall, Bureau county.

Holdover officers are: Mrs. R. W. Stamey, vice president, Champaign county; Mrs. George Johns, treasurer, Winnebago county, and directors Mrs. Walter Horrabin, McDonough county; Mrs. J. W. Cory, La Salle county, and Mrs. Herbert Sutton, White county.

Miss Barnes taught school for seven years after leaving college and later took an active part in 4-H and Home Bureau work. Last year she was honored by the University of Illinois on the completion of 15 years of club leadership. In 1942, she was elected director from the northwest district to the Illinois Home Bureau Federation board.

Mrs. Graham has been affiliated with Home Bureau work as long as Miss Barnes. She was chairman of the Aledo Home Bureau for two years. Her father, H. B. Smith was a charter member of the McDonough County Farm Bureau and her mother was a charter member of the McDonough County Home Bureau. Her husband is superintendent of schools at Aledo and they are the parents of two sons, Harris, 8, and Ron, 6.

My Favorite Recipe

CHERRY CAKE

Melt ¼ cup of butter in pan and sprinkle ½ cup of sugar over bottom of pan, then cover with 2 cups of strained, pitted cherries. Now mix 2 cups of sifted cake flour, ½ tsp. salt, 3 tsps. baking powder, ½ cup sugar. Sift dry ingredients together.

Add alternately a mixture of 1 beaten egg and 1 cup of milk with ¼ cup melted shortening to the dry ingredients. Beat final mixture well for 2 minutes, then pour over cherries and bake at 375° for 20 to 25 minutes.

Add a little sugar and water to the drained juice of the cherries if it is tart, making a thickened sauce to pour over the cake after it is turned out on the plate.

Mrs. Michael Frake, Cook County

"SLUGG'UM"

Break 1 lb. of hamburger into small bits adding 2 small chopped onions. Place into a deep skillet and tender. Add 1 green pepper and 2 small pieces of chopped celery. Cook until all is tender.

Add 1 no. 2 can of tomatoes and ½ bottle of tabasco flavored ketchup.

Season to taste with salt, pepper, sugar and 1 tsp. of paprika. Simmer for 15 minutes. Serve hot.

Mrs. Archie French, Pulaski County

LATEST REFRIGERATION RESEARCH DISCUSSED

THE latest research in quick-freeze processing of fruits and vegetables was outlined at a conference of refrigerated locker men in Ottawa, Feb. 18, and in Springfield, Feb. 25 by Miss Frances Van Duyne, University of Illinois College of Agriculture food specialist.

The conferences were called by the Illinois Cooperative Locker Service of the Illinois Agricultural Association to acquaint locker leaders and managers with the latest service, research and management aspects of the locker business.

Miss Van Duyne discussed the research taking place at the university in the quick-freezing of mushrooms, squash, apples, cantaloupe, grapefruit, peaches, tomatoes, beans and berries.

For example, she explained that the discoloration resulting from the quick-freezing of peaches can be avoided by the addition of ascorbic acid dissolved in the packing syrup.

Further information on quick-freezing of fruits and vegetables may be obtained by writing to Miss Van Duyne at the University of Illinois College of Agriculture, Urbana, Illinois.

Miss Doris Mollet became home adviser of Edwards county following her graduation from the University of Illinois Feb. 1. She graduated from Greenville high school in 1940.

McLean and Bond counties are honored as winners of first and second places respectively in the Illinois Safe Homes program for the prevention of home accidents. Left to right: Miss Gladys Ward, University of Illinois home management specialist; Mrs. Ed Glasser, McLean county, Miss Lita Bane, home economics head; Mrs. Arthur Burkhart, Bond county, and Miss Nora Bare, Christian county home adviser.

for HOMEMAKERS

Back Request For Home Ec Building

A RECOMMENDATION that plans be made for the immediate erection of a building adequate to meet the needs of the University of Illinois department of home economics and home economics extension service has been made by the Illinois Home Bureau Federation.

The recommendation was made in the form of a resolution adopted at the federation's annual meeting held in Urbana, Feb. 12 in conjuction with Farm and Home Week. Presiding over the meeting was Mrs. Stanley Castle of Madison county, president of the federation.

A year ago, Mrs. Castle appointed a committee to study the need for a new home economics building with Mrs. John Clifton of Iroquois county serving as chairman.

In the committee report offered at the annual meeting, it was pointed out that enrollment increased from 358 in 1913 to 870 in 1941 besides the number of home economics courses have increased from 18 to 49. Present classes are crowded, the report said, and better laboratory facilities are needed.

During the afternoon session, O. D. Brissenden, IAA organization director, brought greetings to the federation from the IAA. Other speakers included Mrs. Kathryn Burns, state leader of home economics extension and Mrs. Raymond Sayre, vice president of the Associated Women of the American Farm Bureau Federation, who spoke on the "Peace-time Challenge to Women."

Officers for the coming year elected and installed at the meeting were: Miss Pearl E. Barnes, Mercer, president; Mrs. James C. Graham, Mercer, secretary; Mrs. D. M. Ames, Coles, east central district director; Mrs. Frank Garwood, Christian, south west district director; and Mrs. Willard Hall, Bureau, north west district director.

Total membership of the Illinois Home Bureau Federation is 30,507 as of Jan. 1, according to a membership report made at the federation's annual meeting.

This represents a net gain of 1898 members during the last half of 1945. The state quota for new members this year as set by the 78 counties with Home Bureaus is 3521 to be met by July 15, 1946.

ADD TOUCH OF SPRING TO WINTER COSTUME

McLean Wins Home Safety Program Again

For the second successive year, McLean county has been named winner of the Illinois Safe Homes Program for the prevention of home accidents.

The award to the McLean county delegation was made at the Home Bureau meeting held in Urbana, Feb. 12, during Farm and Home Week.

McLean county had the largest number of enrolled families in the program reporting no home accidents during the year. Second was Bond county with the lowest percentage of accidents among the total number of families enrolled.

Gladys Ward, university home management specialist, reported that of the 9,512 families in 45 counties enrolled in the program, 5,371 had no home accidents to report. Falls, cuts and burns are the accidents that occur most frequently, according to Miss Ward.

Mrs. Mildred McBride, Vermilion county home adviser for the past six years, started work Feb. 1 as Will county home adviser.

Miss Dorothy Romersberger, former Jersey county home adviser, became Rock Island county home adviser Feb. 1.

Illinois Home Advisers Association officers, elected during Farm and Home week at the University of Illinois are, left to right: Miss Dorothy Footit, Moultrie county, vice president; Mrs. Helen Drew Turner, Edgar, treasurer; Miss Nora E. Bare, Christian, first vice president; Miss Jean S. Moehn, Hancock, president, and Miss Margaret Van Scholk, Wayne, secretary. Officers serve one year term.

LABOR, MACHINERY STILL BIG PROBLEM

(*Continued from page 5*)

Morrison reported on his trip with other scientists to view the bomb damage in Japan and declared that our buildings were not strong enough to withstand the force of atomic bombs. The young physicist saw the first experimental bomb dropped in New Mexico and reported that great winds also follow the explosion blasts.

Morrison said there was no defense against the atomic bomb. "The only defense is not to be there when it lands. There is no known means of exploding the bomb while it is far away."

Morrison also warned that the atomic bomb secret cannot be kept. "We discovered the atomic bomb through hard work. Any other industrial nation can do the same thing. The fundamental principles behind the atomic bomb are and have been known by scientists of the world for some time. The thing that these scientists didn't know was that an atomic bomb could be made. Now they know it can be done, and there's nothing to stop them from developing one," he said.

The physicist emphasized the fact the United States in developing the atomic bomb has a responsibility in seeing that atomic energy will be used for peace instead of war.

Atomic energy, he pointed out, is something brand new under the sun. Since it is so new and there are no economic interests involved, Morrison believes that a real opportunity exists for the first time in history to establish a project of cooperative international control.

"There is a chance for a beginning among nations to make an end to war. War is intolerable now with the atomic bomb possible," Morrison said. He warned, however, that we have only a short time in which to work toward international cooperation on the atomic bomb while the discovery is still new. If we do not solve the problem now, he added, the opportunity to meet such a terrible thing will never come again.

Another general sessions speaker was Noble Clark, associate director, agricultural experiment station, University of Wisconsin, who also addressed one of the homemakers' sessions.

In his talk to homemakers, Clark said, "We have an unfulfilled obligation to our farm young people, and it's time we do something about it."

Educational programs for rural people, he said, should take into account

Farm Advisor W. H. Tammeus of McHenry county looks over Farm and Home Week exhibit of a wooden cattle guard.

that there are farm openings for fewer than three out of every five farm boys who reach the age to start work for themselves. He also stressed the need for action to improve rural health and recreation facilities.

In his address at the general sessions, Clark attacked programs of subsidization and of governmental price fixing for farmers, as well as two-price systems.

Clark raised the question if it would not be better to take the money spent by the government for farm programs and use it to train surplus farm labor for non-farm jobs. He pointed out that the productive capacity of the farm is outrunning the nation's consuming capacity, and fewer persons are needed in agriculture.

Clark's speech aroused considerable interest and a small group remained after his speech to further question him on some of his proposals. Many questions were left unanswered as Clark left to catch his train.

Prof. Benjamin Koehler shows Farm and Home Week visitors how seed treatment improves germination. Shoots at right did not receive treatment.

By G. H. Ittner

New members of Illinois Grain Corporation, IAA associated company, not previously reported are: Macoupin Elevator Company, Carlinville, John L. Crist, manager.

Paxton Farmers Grain Company, Paxton, Forrest Hunt, manager.

Stark County Service Company, Toulon, Marvin Kottmann, manager. Harry Hall manages the elevator at Speer.

Bunker Hill Farmers Cooperative Company, Bunker Hill, E. S. Wade, manager.

New managers of member companies not previously reported include: Bond County Service Company, Spencer Johnson, formerly manager at Dixon.

W. P. Sterrenberg, recently discharged from service, manager at Farmers Grain Company of Charlotte.

Oliver B. Suttle, formerly of Fisher, manager at Farmers Grain Company of Beason.

Homer W. Wolfensbeiger, formerly manager of Jo Daviess, manager of Grundy Grain and Supply Company.

Charles Votsmier, formerly with Egyptian, manager of Montgomery Service Company. Allen J. Stierin manages the elevator at Farmersville and Fred Heck the one at Butler.

M. J. Schlesinger, formerly manager at Welland, now at Sublette Farmers Elevator Company.

Ralph Butts is acting manager at White Hall where the veteran manager, R. L. Davis, is recovering from a severe injury suffered from a fall several months ago.

Vernon DeGrush manages the Verona elevator of the Grundy Grain and Supply Company.

Robert Welty, son of Manager Day Welty at Eldena, has taken over the management of the new Erie Grain Company. Robert has been in service. Arthur James has been acting manager.

This has been a year of good financial reports of farmers' elevator companies.

The Carrollton Farmers had net savings of $22,000, $15,000 of which was paid as patronage dividends.

The Anchor Grain Company reported net savings of $21,585.57.

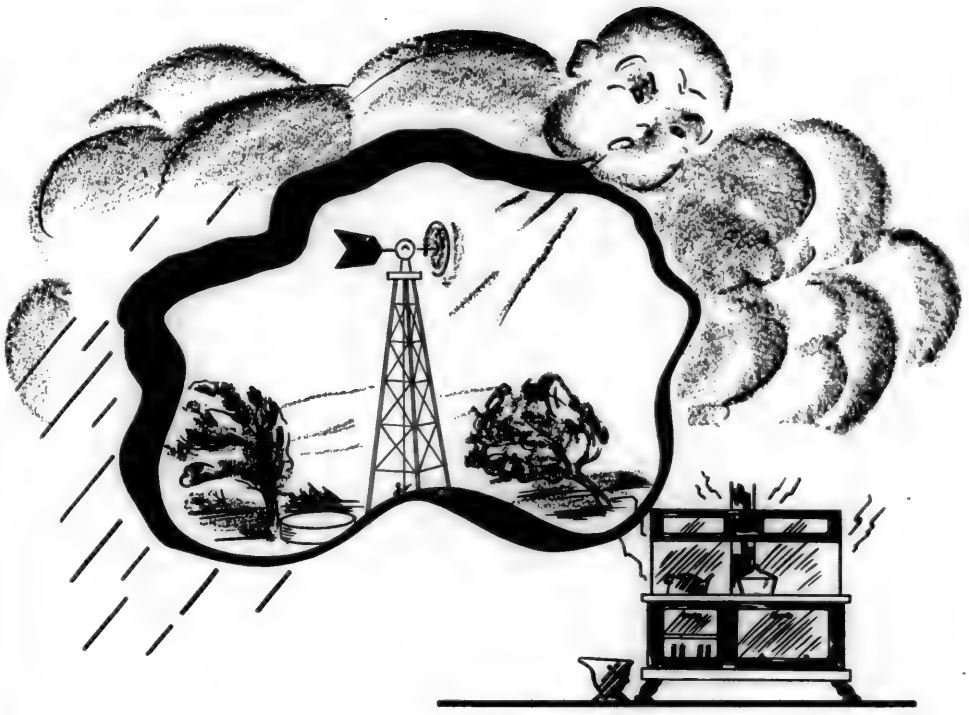
At Alhambra, where they are processing soybeans, Manager E. S. Apple reported a net saving of $21,624.93, of which $15,000 was paid as patronage dividends.

Roy H. Phillips, manager at Nokomis, had a net of $12,850.93, the greater part of which was paid in patronage dividends.

The Farmers Elevator Company of Ransom reported net savings of $15,656, most of it being distributed as patronage.

Newark Farmers Grain Company had a net of $28,610.67, with a major share in patronage.

Executive committee of the Illinois Grain Corporation attended the recent meeting in Chicago of the National Federation of Grain Cooperatives. The committee resisted efforts on the part of the federation to shift all available cars to the wheat area.



Good Servants . . .
BUT BAD MASTERS

The wind that turns our windmills, the friendly fire that warms our morning coffee . . . these are good servants, but they are treacherous. The same soft breeze and friendly flame can level our farmstead in an hour. And so it is a wise farmer who combines care with foresight and insures himself against loss when wind and fire become masters.

See your Farm Bureau insurance agent today. Learn how little it costs to enjoy complete protection against wind and fire.

VISION WITHOUT VOICE...

will not be enough

The giraffe is unique in the animal world — he has hawk-like vision but is incapable of making a single vocal sound. Among us humans, however, vision without voice is all too common. Farmers, individually, may possess great wisdom, sound vision — but without an organized voice to make their thoughts heard, they too are voiceless. The Farm Bureau provides this organized voice for over 100,000 Illinois farmers.

In the transition period ahead it will be important that we think straight and plan right. It will be just as important to make our opinions and wishes known to policy makers. So get your neighbors to join the Farm Bureau now. Our strength grows as our numbers grow.

THE GIRL JIM LEFT BEHIND HIM

IM was a renter, and just a young man when he died, too.

Yet, he left a $20,000 estate.

No, Jim didn't strike oil on his rented farm. But when opportunity knocked, a few years ago, in the form of his Country Life representative, Jim listened.

With the stroke of a pen, and a moderate annual premium, Jim created for his family an estate equal in value to a large farm.

If your position is like Jim's was — no land, and just a small cash reserve — then your Country Life man has an important story to tell you.

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

Price Control vs Inflation

By PRESIDENT CHARLES B. SHUMAN

THIS is a story recently told to me, which I think has particular significance: "Our party line phone jangled insistently one morning recently and quite by chance I found it convenient to listen in while one of my neighbors arranged with the elevator manager for the sale of the remainder of his corn crop. It was a curious transaction. The price was not even mentioned — both parties knew that the O.P.A. ceiling price at that time was $1.10. As my neighbor put it, he wanted to know how much 'wampum' he would get if he delivered the corn to this particular elevator. He mentioned other trades that he knew about wherein the seller of corn had received delivery of a new tractor, a new car, fence posts, feed or other scarce items, all at legitimate ceiling prices. After considerable haggling, terms were reached whereby my neighbor was to receive four pairs of nylon hose for his wife and two tons of feed, all at ceiling prices."

All over America this same type of barter is taking place in all types of scare goods. Our system of exchange through the method of pricing is rapidly disintegrating. For centuries we have found that the use of money was superior to barter of goods as a method of exchange. Through these same centuries, civilized man has also found that a free pricing system was necessary to regulate production and consumption of goods and to keep these two forces in balance. Today under the guise of inflation control we witness the chaos that results from discarding this time-proven natural system of regulation in favor of a rigid man-controlled price structure.

Ordinarily prices tell us when a commodity is plentiful and we use it freely. Other times prices tell us there is a scarcity and we use less of the commodity. Today we use too much feed or eat too much meat because price falsely says, "Go ahead, there is plenty."

Does price control check inflation? Most of us, remembering the experience of World War I, think of inflation in terms of soaring prices. Today we know that legal prices can be arbitrarily held down and at the same time we can have inflation through lowering of quality, tie-in sales, barter, black markets and other devices.

How do wage increases affect inflation? We are now witnessing a unique but impossible attempt to hold prices down and at the same time raise wages. Most of us know that the principal item in the cost of producing all commodities is labor. Therefore, it is clearly impossible to hold the line on prices after the politically expedient 18% increase in wages recently granted.

Price control during war probably served a valuable function by drastically reducing the production of civilian goods. Little or no attempt was made to impose price control on war necessary goods and they were produced in great volume. Today we do not need war goods but we do need civilian goods. Price control is continuing to throttle their production.

Full production is the only way to prevent disastrous inflation. That full production will come only when there is reasonable price incentive. Your organization has not asked for an abrupt end of the controls over price, but we have insisted that a definite schedule for removal be incorporated in any legislation extending O.P.A. This end must come within a matter of months — not years!

The Illinois Agricultural Association RECORD is published monthly except August by the Illinois Agricultural Association at 1501 W. Washington Road, Mendota, Ill. Editorial Offices, 608 So. Dearborn St., Chicago, Ill. Entered as second class matter at post office, Mendota, Ill., Sept. 11, 1936. Acceptance for mailing at special rate of postage provided in Section 412, Act of Feb. 28, 1925, authorized Oct. 27, 1935. Address all communications for publication to Editorial Offices, Illinois Agricultural Association RECORD, 608 So. Dearborn St., Chicago. The individual membership fee of the Illinois Agricultural Association is five dollars a year. The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 608 So. Dearborn St., Chicago, Ill.

THE GIRL JIM LEFT BEHIND HIM

IM was a renter, and just a young man when he died, too.

Yet, he left a $20,000 estate.

No, Jim didn't strike oil on his rented farm. But when opportunity knocked, a few years ago, in the form of his Country Life representative, Jim listened.

With the stroke of a pen, and a moderate annual premium, Jim created for his family an estate equal in value to a large farm.

If your position is like Jim's was — no land, and just a small cash reserve — then your Country Life man has an important story to tell you.

THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD

To advance the purpose for which the Farm Bureau was organized, namely, to promote, protect and represent the business, economic, social and educational interests of the farmers of Illinois and the Nation, and to develop agriculture.

THE STATE FARM BUREAU PUBLICATION

Price Control vs Inflation

By PRESIDENT CHARLES B. SHUMAN

THIS is a story recently told to me, which I think has particular significance: "Our party line phone jangled insistently one morning recently and quite by chance I found it convenient to listen in while one of my neighbors arranged with the elevator manager for the sale of the remainder of his corn crop. It was a curious transaction. The price was not even mentioned — both parties knew that the O.P.A. ceiling price at that time was $1.10. As my neighbor put it, he wanted to know how much 'wampum' he would get if he delivered the corn to this particular elevator. He mentioned other trades that he knew about wherein the seller of corn had received delivery of a new tractor, a new car, fence posts, feed or other scarce items, all at legitimate ceiling prices. After considerable haggling, terms were reached whereby my neighbor was to receive four pairs of nylon hose for his wife and two tons of feed, all at ceiling prices."

All over America this same type of barter is taking place in all types of scare goods. Our system of exchange through the method of pricing is rapidly disintegrating. For centuries we have found that the use of money was superior to barter of goods as a method of exchange. Through these same centuries, civilized man has also found that a free pricing system was necessary to regulate production and consumption of goods and to keep these two forces in balance. Today under the guise of inflation control we witness the chaos that results from discarding this time-proven natural system of regulation in favor of a rigid man-controlled price structure.

Ordinarily prices tell us when a commodity is plentiful and we use it freely. Other times prices tell us there is a scarcity and we use less of the commodity. Today we use too much feed or eat too much meat because price falsely says, "Go ahead, there is plenty."

Does price control check inflation? Most of us, remembering the experience of World War I, think of inflation in terms of soaring prices. Today we know that legal prices can be arbitrarily held down and at the same time we can have inflation through lowering of quality, tie-in sales, barter, black markets and other devices.

How do wage increases affect inflation? We are now witnessing a unique but impossible attempt to hold prices down and at the same time raise wages. Most of us know that the principal item in the cost of producing all commodities is labor. Therefore, it is clearly impossible to hold the line on prices after the politically expedient 18% increase in wages recently granted.

Price control during war probably served a valuable function by drastically reducing the production of civilian goods. Little or no attempt was made to impose price control on war necessary goods and they were produced in great volume. Today we do not need war goods but we do need civilian goods. Price control is continuing to throttle their production.

Full production is the only way to prevent disastrous inflation. That full production will come only when there is reasonable price incentive. Your organization has not asked for an abrupt end of the controls over price, but we have insisted that a definite schedule for removal be incorporated in any legislation extending O.P.A. This end must come within a matter of months — not years!

A NEW HOME *for IAA*

MODERN 12-STORY OFFICE BUILDING PURCHASED

TO HOUSE EXPANDING SERVICES OF IAA AND ASSOCIATED COMPANIES

TO 124,000 ILLINOIS FARMERS

A CHICAGO office building has been purchased for cash by the Illinois Agricultural Association for a new home.

Known as the American Bankers Building, the 12-story structure stands at the corner of East Ohio Street and Wabash Avenue, a few blocks north of the Loop across the Chicago river.

The purchase was approved by the IAA board of directors and the voting delegates representing the Farm Bureau members. Delegates approved the purchase by a unanimous vote at a special meeting in Springfield, March 22.

The building is now fully occupied and is subject to leases contracted by the former owners. The IAA, therefore, is not expected to move into the building for possibly two years.

IAA leaders have for several years discussed the advisability of the organization occupying a building of its own, but because rentals for the present quarters at 608 South Dearborn Street were quite reasonable, very little was done about it.

The picture has changed, however. As the war progressed, Chicago office rents, unrestricted by OPA price ceilings, skyrocketed and are continuing to do so.

After some months of consideration and study, officials of the IAA reported that the American Bankers Building was most reasonable in price and most suitable to needs of the IAA and Associated Companies. The structure was built in 1929-30.

The new home has 82,000 square feet of rentable floor space. It has about 12 average-size offices on each of the 11 floors above the ground floor which is occupied by eight shops, including a restaurant.

Except for brick on the alley side, the building exterior is of Indiana limestone with a granite base.

The building is of fire-proof construction, and is serviced by four high-speed elevators with enclosed fire-proof shafts. Situated on a corner lot, it is well-lighted and has a light court at the rear, above the first three floors.

The move to acquire new office quarters also had been accentuated during the past few years by the steady growth of the IAA and Associated Companies. In 1921, the IAA leased 5050 square feet of office space in the Transportation Building, its present quarters.

Twenty years later, office and storage space rented by the IAA and Associated Companies had increased ten fold. Today, the IAA and Associated Companies occupy 56,190 square feet of office space and 7,665 square feet of storage space, or more than 1½ acres. Employees in 1920 numbered 54. Today, approximately 425 persons are employed in the Chicago offices of the IAA and Associated Companies.

The new location lies 12 blocks north of the Transportation Building in a business district one block off Michigan Avenue.

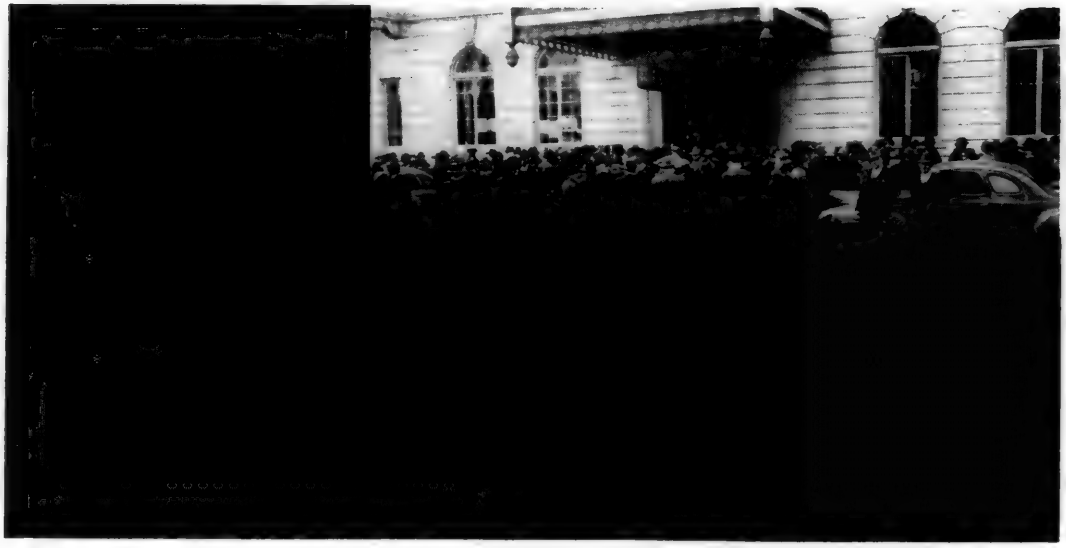
The heart of the Loop can be reached in three minutes by subway from the nearby Grand Avenue subway station.

The IAA and associated companies occupy space on the 3rd, 4th, 6th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th and 23rd floors of the Transportation Building.

Illinois Farm Supply Company occupies most of the 15th floor except for the Illinois Grain Corporation office. Country Mutual Casualty Company is spreading out into the 14th floor from the 13th floor, half of which it occupies.

The 12th floor is held by the Illinois Agricultural Association, except for individual offices of Illinois Agricultural Auditing Association, Prairie Farms Creameries, Illinois Farm Bureau Serum Company, and Illinois Wool Marketing Company.

Country Life Insurance Company takes all of the 11th floor and one-third of the 10th floor is taken over by the Country Mutual Fire Company. Prairie Farms Creameries laboratory is on the 8th floor. The rest of the space is used for storage.



ILLINOIS Farm Bureau leaders are in favor of the immediate removal of consumer food subsidies. This was demonstrated at the annual spring leaders' conference held in Springfield in March. Some 1000 leaders gave hearty applause to the position of the Farm Bureau on subsidies as outlined by IAA President Charles B. Shuman.

President Shuman reported that the American Farm Bureau Federation board of directors has declared that if the OPA does not agree to terminate food subsidies, the Farm Bureau will vigorously oppose any legislation which would extend the power of OPA beyond July 1.

The AFBF is not asking that all food price ceilings be eliminated, but only that the ceilings on subsidized foods be increased sufficiently to eliminate the necessity of subsidies.

Support Reasonable Control

"The time to remove consumer food subsidies is now," President Shuman declared. "Labor has demanded and is receiving substantially increased wages. Industry, as a result of these increases, has demanded and is receiving substantial increases in the price of the goods it produces.

"Stabilization Director Bowles in opposing the removal of consumer food subsidies, stated that their removal would result in an 8 per cent increase in food costs. There will be no better time for the consuming public to absorb this 8 per cent increase than now when all other groups are themselves receiving increased compensation.

"Farmers will vigorously oppose every effort to continue these food subsidies until some later time when supply and demand conditions are such that the subsidy removal would result in decreasing farm prices.

"The IAA and the AFBF have constantly supported reasonable price control when applied to all commodities and to industrial labor.

"The IAA will continue to support reasonable price control when fairly administered on commodities which are in extremely scarce supply relative to demand.

Watch Local Levies

"We do insist that price control be removed as rapidly as supply and demand conditions come into reasonable balance. We will actively oppose the extension of price control unless such provisions are incorporated in pending legislation and unless a definite plan for subsidy removal is adopted."

Two of the statewide issues emphasized by IAA Secretary Paul Mathias were the 100 per cent assessment law, and the Gateway Amendment.

In regard to the 100 per cent assessment law passed in 1945, local leaders were advised to watch their local levies. With the exception of the levy for relief purposes, there are no legal limits upon the tax levies which may be made in the town meeting. More than three-quarters of all farm property taxes are levied by and for the township and school districts in which the property is located. The greater part of each property tax bill, is therefore, under the control of the people in the community.

The IAA department of research and taxation has furnished each County Farm Bureau with tax facts for use in studying their local levies.

Attention of leaders also was called to the Gateway Amendment to the Illinois state constitution to be voted upon at the general elections this fall.

Under the present state law, to secure an amendment to the constitution it must have a favorable vote of a majority of all those voting in the general election. If the Gateway Amendment is voted by the people in 1946, it would be possible to secure future amendments if two-thirds of those voting on an amendment vote "yes." Such a future amendment, of course, would have to be submitted to the electorate by two-thirds favorable vote of each house of the General Assembly.

Need for Local Action

The method of determining the vote on the Gateway Amendment this fall will be under the old method — that is it will require a "yes" vote by a majority of all those voting in the election.

During the last session of the General Assembly, the IAA sponsored the "party circle" bills so that the Gateway Amendment would have a fairer chance of passage. These bills were adopted by the General Assembly but were vetoed by Governor Green.

Adoption of the Gateway Amendment will give to the people of Illinois the

★

By CRESTON FOSTER

President Shuman | Otto Steffey | Paul Mathias | Homer Curtiss

opportunity and privilege in the future of amending basic articles of the constitution to meet current needs.

President Charles B. Shuman of the IAA re-emphasized the need for local action on these matters and urged leaders to bring them to the attention of members.

County Farm Bureaus were advised to have their legislative committees launch a campaign to acquaint the membership with the facts of this essential legislation and the need for passage of the Gateway Amendment.

Fertilizer Bills Explained

Homer Curtiss, chairman of the IAA marketing committee, reported on the response from County Farm Bureaus on the proposed plan for coordinating cooperative livestock marketing facilities.

Of the total of 76 counties reporting on the plan: 49 were for the revised plan tentatively recommended by the IAA; 17 were for the plan of the special statewide committee; 4 favored the Producer Agencies' plan; 3 were against any plan; 2 were uncertain, and 1 reported that there needed to be more study.

Otto Steffey, chairman of the organization-information committee of the IAA board, explained interpretations on membership classifications.

IAA Field Secretary George Metzger reported on the progress of the IAA's grain merchandising program and the organization of the board of the Illinois Grain Terminals Company. He also outlined the main provisions of the national fertilizer bills which are now pending in Congress.

Former IAA President Sam Thompson rises to voice his approval of IAA policies during annual spring Farm Bureau leaders meeting in Springfield.

IAA department heads and fieldmen are addressed by Organization Director O. D. Brissenden (back to camera) during annual fieldmen's conference in Springfield. Field Secretary George Metzger (at table) presides over the conference.

IAA REGISTERS OPPOSITION TO FEES ON ROAD FUNDS

OPPOSITION to a state law which permits county treasurers to retain two per cent of the state monies appropriated for farm to highway roads has been voiced by the Illinois Agricultural Association.

IAA officials have requested Gov. Dwight Green to include in the call for a possible special session of the state legislature a proposal to amend the law relating to the fees of county treasurers in order to exclude these funds.

The attorney general recently has given an opinion holding that county treasurers' offices are entitled to two per cent of the $15,000,000 appropriated for farm to highway roads.

The ruling stated that county treasurers' offices are entitled to one per cent for receiving the funds and one per cent for paying them out. On the $15,000,000 appropriation, this would amount to $300,000. The two per cent would be used to help defray expenses of operation of county treasurers' offices.

The IAA is of the opinion that the county treasurer will perform but very little service in the handling of these funds and that the law might very well be amended to exclude these funds from monies upon which the county treasurer is entitled to fees. IAA officials point out that county treasurers do not now receive fees on gasoline tax or relief funds handled for the counties.

By good pasture management, improvement of permanent pastures and the use of legumes for grazing, many dairymen have developed a program that furnishes an abundance of green succulent forage from early spring until late fall.

Annual Spring Leaders Meeting is Held in Springfield

The sidewalk overflows into the street as farm leaders pour out of the Elks building in Springfield following annual spring Farm Bureau leaders meeting during which IAA officials explained latest IAA policies and trends.

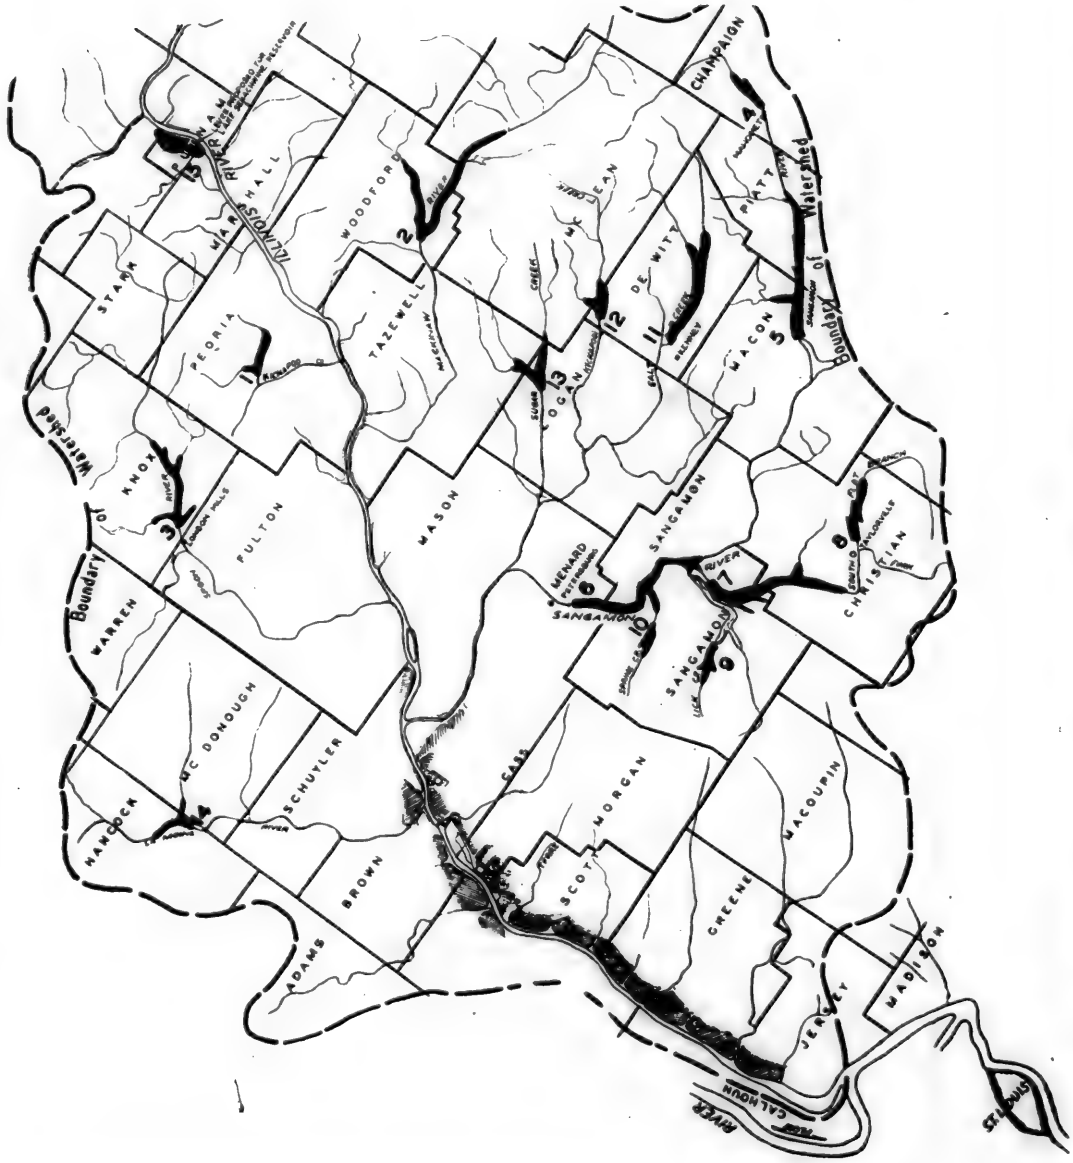
Farmers Study Federal



Flood Control Proposal

Illinois River Basin Flood Plan Requires Purchase of 142,700 Acres of Land; Total Estimated Cost of Project: $112,000,000

OF INTEREST to a number of Illinois farmers is the proposed flood control plan for the Illinois River basin announced recently by the War Department.

The plan developed by the U. S. Army Engineers proposes the construction of 15 reservoirs, the improvement of 406 miles of channels tributary to the Illinois River and the construction and improvement of 315.7 miles of levees and flood walls.

The plan has been submitted to the Board of Engineers for Rivers and Harbors.

Only action taken by the board of directors of the Illinois Agricultural Association up to April 5 was as follows:

1. Requested an extension of 30 days for the filing of statments or suggestions with the Board of Engineers for Rivers and Harbors. This extension has been granted, and the deadline for filing suggestions is April 30 with the Board of Engineers in Washington.

2. Requested that oral hearings on the proposed improvement and plan be held in the area involved. Notice has since been received that a public hearing has been called for April 30 at 10 a.m. at the Board of Engineers for Rivers and Harbors No. 2, New York Avenue, N. W. Washington, D. C.

Legislation by Congress

3. That the proposed plan be discussed at the Springfield meeting of Illinois Farm Bureau leaders March 22. Such discussion was held.

The public relations committee of the IAA board has been advised that the procedure for such projects is as follows:

1. Investigations and surveys are made by Army engineers and a report is prepared.

2. Interested persons and groups are given an opportunity to express their views and make suggestions concerning the report and proposed plans.

3. The Board of Engineers for Rivers and Harbors receives the report and the suggestions and makes recommendations to the chief engineer.

4. The chief engineer reviews the report and transmits it to Congress. He also transmits a copy of the report to the Governor of the state involved, for any suggestions from the state.

5. The Congress passes enabling legislation including any necessary appropriations.

6. After Congress has passed the legislation and made the appropriations, the work is undertaken.

According to this outline, the proposed Illinois River basin project is in the second stage of the procedure.

Cost Over $112,000,000

According to the report of the plan it provides for the acquiring of some 142,700 acres of land in 16 counties of Illinois by the federal government for use as water storage areas along the Illinois River and its tributaries. Excess water would be impounded during flood periods and drained out slowly as water levels lowered.

The government would buy the land for the basins, which would be flooded during certain periods. During the longer periods of low water levels, the land would be leased to farmers for cultivation.

According to the IAA public relations committee, the estimated cost of purchasing the land for the reservoirs and construction would be in excess of $112,000,000, and that the aggregate average annual benefits from reduction in flood losses is estimated at only $2,377,270. These estimates are based upon 1940, and land acquisition costs and construction costs would probably be much higher today.

With a federal debt in excess of 275 billion dollars, and continued federal deficits, the IAA has advised that the project should be given careful scrutiny.

The map on the opposite page shows the sites of the 15 reservoirs proposed. It does not show the construction proposed for other counties. This is only a map showing where land is to be acquired for the reservoirs.

Here is a list of the counties and acreages to be required for reservoirs: Woodford, 11,200 acres; Peoria, 3,400; Tazewell, 1,600; McLean, 5,900; Knox, 22,100; Hancock, 7,300; McDonough, 1,400; Logan, 2,500; DeWitt, 10,850; Piatt, 5,100; Champaign, 6,100; Macon, 5,100; Menard, 4,300; Christian, 21,100; Sangamon, 34,350; Shelby, 400.

Opposition is Voiced

At the Springfield leaders' meeting only three persons offered discussion on the proposed project from the floor.

John H. Taylor, Cass county, who said he represented farmers along the lower half of the Sangamon, read a statement favoring the flood control plan. The statement pointed out the large annual losses from floods suffered by farmers and townspeople in his area, and said that they had been interested in a flood control project for many years. He said that the project was a matter to be settled locally, but that it also was a national problem.

Evan Taylor, president of the Sangamon County Farm Bureau, voiced opposition to the project asserting that it would dispossess many people, would disrupt farm to market channels and school districts. He also questioned the expenditures of such a large amount of money by the government in consideration of the benefits to be gained and in view of the huge federal debt. He also raised the question as to whether the federal government had the right to take such lands as contemplated in the plan.

Bert Downey, Piatt county, suggested that proper operation of soil conservation districts over the state could reduce flood damage. He suggested good conservation practices rather than the proposed flood control project.

A representative from Knox county declared that the farmers in his area were opposed to the government project and said he subscribed to the statement of the Sangamon county representative.

WHAT IS A

UNIT DISTRICT

SCHOOL?

? ? ? ? ? ? ? ? ? ? ? ? ? ? ? ? ?

IN DAYS like these when school reorganization is a popular subject of discussion, there is often heard such terms as "attendance units," "units for administrative and financial purposes," "the dual system," "unit district", etc. To the average person who has had little reason to use these terms, such expressions are likely to be confusing.

These terms are generally used when people ask questions like "What kind of school district should we have?" and "How big should our district be?". A brief explanation of terms may help.

An attendance unit is the group of pupils who attend one school.

An administrative unit refers to the school board and what it runs and directs. The hired representative of the board may be a one room teacher or a superintendent or principal with a number of teachers under him. An administrative unit may be a one-room school or it may be large enough to include several school attendance units. In other words, it is not necessary to have a school board over each school attendance unit, but there may be several attendance units under one board.

Financial Unit

A financial unit refers to the territory or area over which a school tax is spread. The size of the financial unit would always be the same as the administrative unit. But there may be several attendance units within a financial unit.

A financial unit in Delaware is the state, practically, since the state furnishes over 90% of the money for public education. In 11 states the county is the financial unit. Some people in Illinois think that the county could operate properly as a financial unit in this state. Most people consider the community as the desirable financial unit.

In the dual system, the grade school and high school organizations are two separate legal bodies. The high school is the second layer overlying a first layer of one or more grade schools. In the dual system the high school and grade school have separate boards, separate principals, separate office records, different tax rates, attendance centers, etc.

The unit district is one in which all grades, one through twelve, are under one school board, one administration and one tax rate. A unit district generally supports one high school but a number of grade schools. The unit district is a common type of school organization in this and other states. They came into existence very naturally. Grade school districts in towns and communities merely assumed the responsibility of providing instruction in grades 9 to 12. A good many unit districts were organized.

The unit district was handicapped, however, by a tax limitation of $1.50 per $100 assessed valuation (without referendum) for educational purposes. Since a grade school or high school as an individual district each could levy one dollar without referendum, the unit district was tempted to break up into two districts. By levying separately as grade and high school districts they could levy a total of $2 instead of $1.50 as a unit district.

A good many unit districts did break up, and so today we have only about 100 such districts left in Illinois.

Fortunately, the General Assembly in 1945 removed that limitation and the unit district can levy up to two dollars without referendum instead of $1.50, (on the basis in force prior to the 100% assessment program) thus placing unit districts on a par with districts under the dual system where grade and high school are separate.

Few Rural Unit Districts

Much of Illinois' open country never was included in a unit district. Rather the unit district was confined mainly to concentrated areas. In view of the wide popularity of the unit district with all major groups interested in education, it is well to consider its extension under the County School Survey Program to areas largely rural.

At present it is generally known that there are certain legal difficulties involved in setting up new districts. However, the General Assembly in 1947 will undoubtedly be asked to pass legislation which will eliminate existing handicaps to establishing such a district. This legislation, if adopted, will be in time to be of use to the county committees in making their final proposals.

Any unit district should include at least a minimum of 150 high school students. The grade school attendance units should enroll at least 15 pupils per teacher and preferably 20 to 25 pupils to secure a more efficient and economical pupil-teacher ratio.

The accompanying sketch will illustrate what is meant by a unit district. In this picture you will notice that there is one high school and six grade schools in approximately a ten mile by ten mile area. This is not meant to place a limit on the size of the unit district. Looking at the distances involved in the sketch, there is a possibility that all the pupils might be transported to one centrally located grade school.

Attendance Unit Size

The main limitations on the logical size of an attendance unit are distances from pupils' homes to the school and condition of the roads. Numbers, size and routing of the buses are other factors which determine the length of time pupils spend on the bus. However, since grade school pupils should not remain on the bus as long as high school pupils, it might reasonably be expected to have two to five elementary school attendance units in a unit district with only one high school attendance unit.

In an area that formerly contained 25 two-mile-square grade school districts and perhaps four small high schools, the sketch now shows one tax and one taxing body, one school board of perhaps seven members representing the entire area, one school superintendent over all the school attendance units, a high school principal and a number of grade school principals all subject to the authority of the superintendent and the school board.

Sketch Shows Other Ideas

The high school is located in the village in this sketch, but it may as well be located near the geographical center of the district in open country if local people have difficulty agreeing on a school site. There is no weighty reason why a high school should be located in a town unless that town is the natural center of the community.

Four of the grade schools are located in villages because those villages were neighborhood centers. Three of these villages had served as high school centers before the establishment of the larger high school.

The buildings abandoned by the small high schools furnished needed space for a larger elementary enrollment growing out of the reorganization. The grade school in the south-

east corner is located in a well-defined neighborhood but in open country.

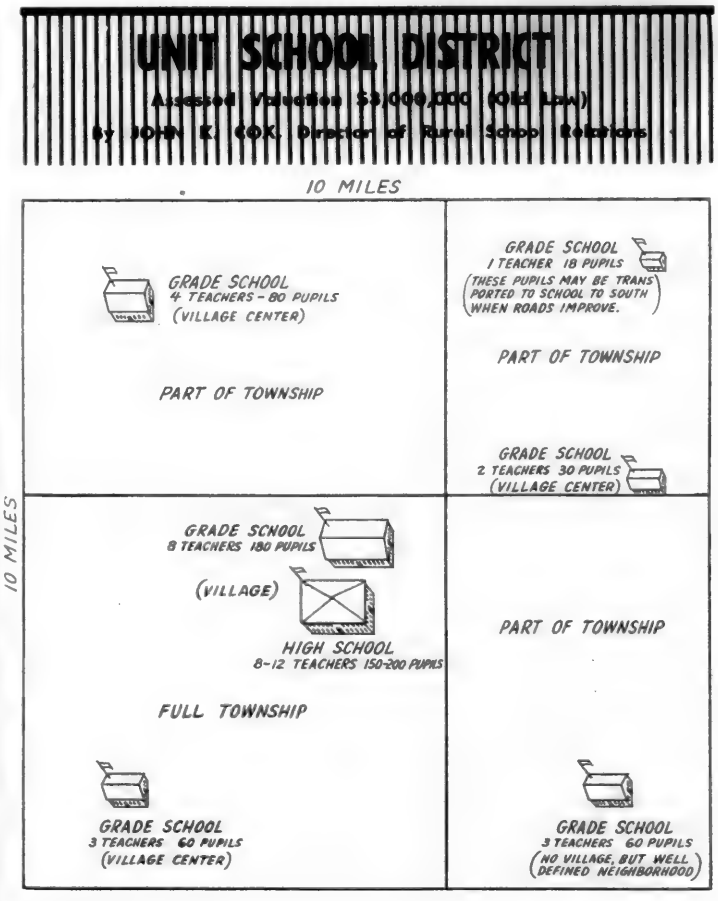
The one-room school in the northeast corner of the district is situated in an area with bad roads. The larger district, however, would be in position through its greater influence to get better roads for that area. Eventually, that attendance unit could be merged with one or more other grade school attendance units in the district.

Advantages of Unit District

Some of the advantages of the unit district in areas largely rural are readily apparent but most of the benefits grow out of the cooperative relationship possible in the larger district. Several main advantages are:

1. The district can be operated to a greater advantage for all concerned.
2. More and capable supervision within the school.
3. It can spread the tax load more evenly over the district.
4. A simplicity of record keeping.
5. Greater economy might result from:
   a. A decreased expense for elections and legal services.
   b. Equipment owned by the larger district might be shifted to the various attendance units, such as motion picture machines, a larger library, maps, certain musical instruments, etc.
   c. Special teachers, such as those of music, public speaking, physical education, art, handicrafts and even school nurses hired by the unit district could serve any or all of the attendance units on regular schedules.
6. Another economy but of sufficient importance to receive special attention is the saving on transportation under the unit district system. Costs per pupil for transportation in Illinois are more than double those in Ohio, Indiana, and many other states.

   This is because many school buses in Illinois run over the roads but don't haul enough pupils per bus. Ohio, Indiana, and most of the other states haul both grade and high school students together. Where a bus has been stopping to pick up two high school pupils it could pick up four or five grade school pupils as well. In other words, with some study of the problem, it would be possible to provide transportation service for both grade and high school students at very little more cost per bus unit that it costs now to haul only high school students.
7. The unit district system makes it easier for pupils to progress from grade school to high school.
8. The unit district provides an opportunity to coordinate the entire school program, not only the course of study but the sports and other activity programs as well.



Cites Disadvantages

Several disadvantages to the unit district have been expressed. They are mainly as follows:

1. It is difficult to establish the unit district under present laws: New legislation in 1947 is expected to simplify that process.
2. The superintendents of new unit districts are likely to be chosen from the ranks of high school administrators who will emphasize the high school at the expense of the grade school. However, the school boards of new unit districts will represent the interests of from 2 to 2½ times as many elementary pupils as high school pupils. It is possible that an able administrator with his overall view of educational standards, teacher abilities, etc. could give the grade schools a great deal more service than many are now getting. There would be a scarcity of good elementary school administrators if we reorganized on the dual system basis. Higher salaries and more recognition of the elementary field will gradually result in increasing the numbers of able school administrators with more elementary school experience.
3. The unit district with one pupil transportation system would tend to keep grade school pupils at school for a long day.

It may be that a few lessons can be learned from other states which make a practice of hauling both grade and high school students. However, the grade school children would not have to be on the buses very long because their attendance centers are near at hand. Also additional but smaller buses, together with local adjustments that can be made, would perhaps go a long way toward eliminating other objections.

Mourn Loss of Dean of Illinois Farm Advisers

FARM adviser ranks in Illinois and the nation suffered a great loss in March with the death of Alden E. Snyder who had served continuously for 28 years as adviser in Montgomery county. He died in the early morning of March 15 from a heart attack.

Mr. Snyder was the dean of the state farm advisers, being the oldest in the point of service. He was Montgomery county's first and only farm adviser, and would have celebrated his 28th anniversary in his position on April 1.

Mr. Snyder's outstanding record of service also was recognized nationally in 1940 when the National Association of County Agricultural Agents honored him with the Distinguished Service Citation for his work in developing agricultural interests in his county.

Mr. Snyder's pleasant personality, his familiar greeting, "It's a FINE morning," and his cigar — all of which became traditions in the county — will be greatly missed in the days ahead.

Mr. Snyder was employed by the Montgomery County Farm Bureau when it was organized. As the Hillsboro Journal story of his death said, "He came to Montgomery county with no knowledge whatever of what should or could be done to serve the small group of farmers who had organized the Farm Bureau despite criticism and ridicule of those who could not see the advantages to be gained by the advice and leadership of an agricultural agent through a group of farmers.

"It was such a great step in advancement that those who 'wanted to be let alone' to do as they pleased with their land without any dictating from a 'white-collared boy,' put forth every resistance possible. . . .

"He was a disciple of hard work. He never hesitated to go to the farm of any one asking his aid to do some special work. . . For years he spent all of his daylight hours attending to errands all over the county and more than half of the night at meetings and conferences where his presence was needed. . . He never shirked a duty or 'let down' a friend. . . Farmers have lost a real friend and farming a firm advocate. . ."

Mr. Snyder was born Nov. 29, 1883, in Limestone township, Kankakee county. He received his bachelor of science degree from the U. of I. College of Agriculture in 1912 and after a summer of travel in Europe he began farming at Kankakee. On Oct. 22, 1913, he married Miss Florence C. Baxter of Nauvoo.

It was on April 1, 1918, that the Snyders moved to Hillsboro and he took over the duties of Montgomery county farm adviser. He was active in county fair work, the Farmers' Institute, and all projects of value to farmers such as rural electrification, better farm roads, grain marketing, etc.

Alden E. Snyder

Mr. Snyder leaves his wife, two daughters, two sons, two brothers, and two sisters. Mr. Snyder was a member of St. Paul's Evangelical Lutheran Church, the Masons, Hillsboro Rotary Club, Litchfield Elks Club, and Epsilon Sigma Phi and Gamma Sigma Delta fraternities.

Funeral services were held at the Hillsboro Lutheran Church, and burial was made at Kankakee cemetery.

NEW ASSISTANT IN ST. LOUIS GRAIN OFFICE

Eugene F. Hugo, recently discharged from the Army after more than four years of service, is new assistant in the St. Louis office of Illinois Grain Corporation. Illinois Grain is an associated company of Illinois Agricultural Association.

Eugene F. Hugo

During army service Hugo worked two and one-half years as special agent, Counter Intelligence Office, Washington, D. C.

Cecil Musser Named Manager of New IAA Co-op Locker Service

CECIL MUSSER, 44, Illinois Agricultural Association livestock fieldman for the past six years, has been named manager of the Illinois Cooperative Locker Service, IAA subsidiary comprising 40 member companies with 80 cold storage locker plants.

Cecil Musser

He will supervise the organization's engineering service, purchase supplies for member plants and promote greater efficiency and coordination.

One of the proposals Musser may be called to work upon is the request of some locker plant managers for centralized buying of frozen foods for distribution to member companies.

He will also find wide variations in the cost of locker operations per food locker unit. This problem is expected to take much of his time when he attempts to bring the least efficient units into line with the most efficient.

Musser is expected to study the state organization closely for possible courses of action then work out his program for the coming year and submit it to the state board of directors for their approval.

Musser was born in Effingham county and moved to Logan county with his parents as a boy where he was reared. He graduated from Lincoln high school and business college then attended Lincoln college and the University of Illinois.

He worked for the Logan-Mason County Service Company and later became Logan county organization director. Before joining the IAA staff six years ago, he was general manager of retail sales for a Chicago coal company with 11 mines. He has been serving as fieldman in District One, the extreme northern section of the state.

Musser is married and has been living at Kirkland in DeKalb county. He is the father of three children, Jane, 19, Joyce, 16, and Joseph, 2.

Business amounting to approximately a half million dollars during the past year was reported at the 52nd annual meeting in March of stockholders of the Farmers' Cooperative Association of Varna.

Feed grain liberally to the dairy cow during the first three or four months of the lactation period.

Curtiss Heads Grain Terminals Co.

Board of directors of Illinois Grain Terminals Company, IAA associate, assembles in Springfield for first meeting. Left to right: C. J. Diehl, Monroe county; Andrew Larsen, Mason; Homer Curtiss, Jo Daviess, president; Charles Schmitt, Logan, vice president; Milton Warren, Piatt, secretary; James Holderman, Grundy; Marion Herzog, McDonough; Wesley Attig, Lee. Arthur Burwash, Champaign, was absent.

HOMER CURTISS of Jo Daviess county has been elected president of the board of directors of Illinois Grain Terminals Company, the grain merchandising cooperative recently organized by the Illinois Agricultural Association.

Other members elected to the board are: Charles Schmitt, Logan county, vice president; Milton Warren, Piatt county, secretary; Arthur Burwash, Champaign county; Marion Herzog, McDonough county; Andrew Larsen, Mason county; James Holderman, Grundy county, Wesley Attig, Lee county, and Christian J. Diehl, Monroe county.

Illinois Grain Terminals Company will handle grain from the county elevator to the terminal market to the final buyer on a cooperative basis.

Backbone of the business of the new company in the beginning will come from river operations that are being organized by County Farm Bureaus on or near the Illinois and Mississippi rivers.

Three such companies already have been organized. They are: Prairie Grain Company which will serve producers from Seneca to Peoria in the following counties: La Salle, Lee, Marshall-Putnam, Henry, Stark, Peoria, Woodford and Bureau.

Havana River Grain Company which will serve producers in Fulton, Schuyler, McDonough, Mason, Menard, Cass and Logan counties, and Western Illinois Grain Company serving Hancock, McDonough, Warren, and Henderson counties.

The home garden program and preservation of a large share of the home food needs are more important than ever in view of the famine conditions abroad.

IAA AIDS COUNTIES WITH TAX STUDIES

COUNTY meetings for the purpose of preventing unnecessary increases in property taxes are being held by county Farm Bureaus and the Illinois Agricultural Association.

Interest in local tax problems has been whetted by the new 100 per cent property assessment law which went into effect Jan. 1, 1946, and as a result of a tax study made of each county by the IAA Department of Research and Taxation.

The IAA study, made under the direction of L. H. Simerl, research department head, has been completed after several months devoted to the tax situation and outlook in each of Illinois' 102 counties.

Two copies of each county report have been sent to each of the county Farm Bureaus. These reports are being used as a basis for discussion of the tax situation in each county.

The IAA Department of Research and Taxation already has participated in several of the county meetings.

The tax reports prepared by the IAA include information showing where tax money goes, (1) how the tax burden is distributed, (2) description of assessment practices in the county, (3) reasons for the new tax legislation, (4) effects of the new law on assessing procedures, property assessments, taxes and tax rate limits, and (5) a discussion of methods of property tax control.

Director Simerl said the IAA Department of Research and Taxation will be able to meet with a number of county groups interested in property tax problems and tax control during the next few months.

Simerl pointed out that the new tax laws will permit most tax levies to be increased by 25 to 40 per cent in 1946 and more in 1947. The amount of increase permitted varying according to conditions in each county and in each taxing district.

"In the majority of the Illinois counties farm property carries an unjustly large share of the property tax burden," Simerl declared, "because the rural assessors have assessed the property at a higher proportion of its actual value than have assessors assessing urban property.

"In most counties boards of review can," he said, "if they so desire, correct this injustice this year. If they do not do this farm property owners should see to it that the rural assessors make this adjustment when real estate is revalued for tax purposes in 1947 (1946 in Commission governed counties).

"It would seem desirable that county Farm Bureaus plan to give this matter serious attention during the next few months in order to relieve farmers of the unduly heavy tax burden which they have been carrying."

MAYFIELD JOINS IAA RESEARCH DEPT.

Charles S. Mayfield, 29, former superintendent of schools at Ullin in Pulaski county, has been employed as assistant to L. H. Simerl, director of the department of research and taxation of the Illinois Agricultural Association.

C. S. Mayfield

Mayfield was discharged recently from the navy after 22 months of sea duty. He was commissioned an ensign in 1943 and spent most of his time aboard transports in the Pacific.

He was born in Hardin county and was graduated from Harrisburg high school, received his bachelor's degree from Illinois State Teachers College at Carbondale in 1939 and his master's degree from Oberlin college, Oberlin, O., in 1941.

Mayfield studied school administration and did part time work for the IAA state school committee. He became superintendent of schools at Ullin in 1941 and was there until he went into naval service.

The new research assistant is married to the former Geraldine Morgan of Jefferson county and is the father of two children, Geraldine Ellen, 4½, and Charles David, three months.

J. R. FULKERSON RETIRES FROM PRODUCERS BOARD

J. R. Fulkerson of Jersey county has retired from the board of directors of the St. Louis Producers Livestock Commission Association after serving 24 years. He was succeeded by L. J. Todt of Montgomery county.

J. R. Fulkerson

Fulkerson has distinguished himself as one of the outstanding farm leaders in Illinois, particularly in the field of livestock marketing. He has been a member of the St. Louis Producers board of directors since it was organized in 1922 and was president for several terms.

Todt is an outstanding livestock farmer having served on the Illinois Agricultural Association Statewide Committee on Livestock Marketing and the subsidiary working committee of five which made an intensive study of livestock marketing in Illinois.

Rural Youth

By
ELLSWORTH D. LYON

Attendance and interest in the ten district Rural Youth Training Schools were good. A total of 448 Rural Youthers, home and farm advisers, youth assistants and organization directors from 58 counties attended. The courses which included, "Building Better Rural Youth Programs", "Instruction in Leading Recreation", and "Effective Speaking" were well received.

Spring banquets have been big attractions in a number of counties over the state.

Kankakee sponsored a Father and Son banquet with Elmer Searls, University of Illinois, department of agriculture economics extension as speaker. His theme was "Father and Son Farm Partnerships."

Peoria County greeted representatives from nine counties at its Spring banquet attended by 257 Rural Youthers and friends.

Will was host to Cook, Grundy, and Kankakee at its first banquet — Joliet — March 21.

Saline Rural Youthers report through their president, Bob Alvey, that their Spring banquet was "successful and lots of fun."

Christian County installed officers at its Spring banquet before an audience of 100 Rural Youthers.

An attendance of 150 was present at the Spring joint meeting of the Woodford and Tazewell groups, among them being 60 prospective members. Rosemary Hartter led a discussion on "Compulsory Military Training" and Velma Ackerman led a safety quiz. President Ruth Huser of Tazewell says, "Both were well done."

St. Clair heard Dr. Norman Rose, county health officer, at its April meeting. Richland heard Miss Dunbar, county health nurse, on tuberculosis.

McDonough found that a visit through the pottery at Macomb was both fun and educational.

Schuyler held a Jamboree at Virginia March 21. Rural Youthers from neighboring counties were guests.

Welcome Hancock! This group inactive for about a year is starting again with 47 members. First meeting was built around an Irish theme honoring St. Patrick. Colored slides of England and France were shown by an ex-serviceman.

Ogle banqueted at the White Pines State Park. Bob Temple of LaSalle, highest rating top-notcher in the IAA Talkfest and national winner at the AFBF Talk Meet, was one of the speakers, as was Glyndon Stuff, National F.F.A. President.

President Bob Temple of La Salle reports: "Super Victory Banquet, April 27." The play "No Bride for the Groom" was presented three times over the county by this group.

Frank Gingrich, former director of the IAA department of young people's Activities, addressed a group of 75 Kendall county Rural Youthers at their annual banquet in March.

Mason reports a good banquet, a recent three-act play, and an event soon to come, "Farm Landscaping and Buildings," with K. H. Hinchcliffe, Assistant Professor of Agricultural Engineering Extension as the speaker.

Knox reports a good meeting in which "Making the Farmstead a Better Place to Live" was the theme. Professor Gilbert of the U. of I. was the speaker and showed colored slides to illustrate his talk.

A box social held by Rock Island in March resulted in a substantial contribution to the Red Cross.

Wabash sponsored a Parent-Guest Night in March featuring a debate which was led by two ex-service men, on the topic, "Resolved that We Should Have Compulsory Military Training."

DuPage held a box social at the home of Patricia and Catherine Brummel, March 26.

The Prophetstown-Tampico Warriors of Whiteside made a study of the work of the state police at their March meeting. A visit was made to the State Police Station.

The Mt. Morris Club of Ogle held a hobby show March 21. Each person showing a hobby gave a talk on his collection.

Lee and Ogle counties sponsored a Basketball Play Day at Mt. Morris March 16 for both boys' and girls' teams. Counties entering teams were DeKalb, Lee, Will, Henry, Bureau, Whiteside, Stephenson, Carroll, and Ogle. The Bureau boys' team won the boys' division. Whiteside girls won from Ogle girls. Following a potluck dinner at noon a short musical program was held. Square and ballroom dancing made up the evening program and closed a successful day of activity.

Logan broadcasted a discussion on "Farm Ownership Versus Tenancy" over Station WDZ. This group has made plans to hold two meetings each month during the summer.

Top is front view and below is rear view of the new Prairie Farms Creamery building at Henry which is expected to be completed within a short time.

Your Farm Bureau Service Company

Announces a

NEW MOTOR OIL

ILLINI PREMIUM

For your protection, the new Illini Premium Quality Motor Oil will be available only in new drums, refinery sealed.

This new oil has been developed to meet demands of today's tractor, truck and car engines.

ILLINI (*pronounced ILL-EYE'-NYE*) Premium Quality Motor Oil offers five distinct advantages:

1. **Keeps a clean motor clean longer.**
2. **Provides a better piston-seal.**
3. **Non-corrosive to bearing metals.**
4. **Holds resinous varnish formation to a minimum.**
5. **Assures longer life for piston rings and cylinder walls.**

These advantages are a result of technical improvements in motor oil additives and their selective use in high quality base stocks, which were perfected during the war.

Illinois Farm Supply Co. has developed its present line of motor oils through tests in our 37 fuel transport trucks traveling 13,000,000 miles hauling loads of 35 gross tons per trip in all kinds of weather. The life of piston rings in these transport motors has been increased from 40 to 50 thousand miles to 85,000 miles since 1940. Better lubrication has made this possible.

ILLINI Motor Oil will give safe and economical lubrication to modern engines.

Part of the test fleet of transport trucks

The new **ILLINI Motor Oil** is a manifestation of the ideas outlined by the founders of our co-operative twenty years ago. When Illinois farmers launched their first co-operative oil company, they had three fundamental purposes:

1. **To assure themselves of highest quality in lubricating oils and fuels.**
2. **To obtain a better and more understanding service.**
3. **To save money through large volume purchasing.**

These principles haven't changed, but technical knowledge and skill have changed. It is only natural, therefore, when such advances as the selective use of improved motor oil additives are developed, that they should be incorporated into our program of quality and service. This new oil contains the latest improvements and refinements discovered during the war and so necessary for the smooth operation of today's motors.

Act now—get all the facts. Call your salesman who drives the blue and white truck for

Kane County Honors Organization Teams With Victory Dinner

Upper left: Kane County crowns Jeane Swinehamer queen of organization drive during celebration dinner. Others, left to right, are Knut Johnson, oldsters team captain; Maid of Honor Lillian Claude; and Verner Bowgren, youngsters skipper. Upper right: Hampshire township team wins honors after signing up 33 new members. Left to right: (back) Donald Stoxen, Howard Thompson, Frank Widmayer; (front) Alfred Crane, Harry Klock and Farm Bureau President Edgar Allen. Absent from winning team picture is W. Wendell Ralston. Lower left: Seated at speakers' table are left to right: President Allen, Johnson, Miss Claude, Dexter Norton, organization committee chairman, Miss Swinehamer, Bowgren and Harry Claar, IAA Dist. I organization director. Lower right: Don Stoxen, who signed up most members, enjoys prize kisses from queen and maid of honor.

Membership Nears 125,000

MEMBERSHIP in the Illinois Agricultural Association has moved over the 124,000 mark and is inching closer and closer to the 125,000 goal for 1946 set unofficially at the annual IAA meeting in November by Organization Director O. D. Brissenden.

In reporting membership at 115,057 for the IAA year ending Sept. 30, 1945 at the organization-information conference held during the annual meeting, Brissenden expressed hopes for membership of 125,000 by Sept. 30, 1946.

Latest unofficial figures, Brissenden said, indicate that our membership is now more than 124,000. This compares with 110,838 a year ago and 73,066 for the corresponding period five years ago.

A great deal of the credit for the increasing membership can be given to Farm Bureau members, thoroughly sold on Farm Bureau themselves, who have volunteered to explain the advantages of their farm organization to their neighbors.

Membership now averages better than 1,200 for the 99 county Farm Bureaus in the state, Brissenden reported. Four county Farm Bureaus have passed the 3,000 mark. According to latest official figures, Cook county had a membership of 3371; LaSalle, 3331; McLean, 3272; and Champaign, 3183.

Illinois remains well out in first place as the largest state farm organization in the nation. In second place is Iowa Farm Bureau Federation which recently passed the 100,000 membership mark.

CORRECTION

We are repeating a subpoint from the Progress Report on Livestock Marketing which appeared in the March Issue of the IAA RECORD with a short passage omitted. Under point 3, subheading (c).

"The statewide agency would represent all Farm Bureau members in Illinois in nominating and electing directors to the Board of Directors to the respective producer agencies. Nominations should be made at district caucuses. Under this sort of arrangement, the producer agencies on the larger terminal markets would retain their separate corporate identity. However, Illinois livestock farmers would have representation on the Boards of Directors of these agencies in proportion to the volume of livestock originating in Illinois."

The passage beginning "Nominations," and ending with "identity," was omitted in the Progress Report carried in the March RECORD.

Shorts in the News

The annual American Farm Bureau Federation Midwest Training School for Farm Bureau officials and organization staff of 11 Midwestern states will be held June 23-24-25-26 in Kansas City. A program will also be arranged for Farm Bureau women and Rural Youth. All county and state officials interested in the mechanics and methods of farm organization are invited to attend.

San Francisco will be the site of the 28th annual meeting of the American Farm Bureau Federation, the AFBF board of directors decided at their recent quarterly meeting in Chicago.

Gilbert E. Lampe, former teacher of vocational agriculture at Highland, Ill., has been named farm adviser in Scott county. He succeeds George Reid, now Rock Island farm adviser. Lampe is a graduate of the University of Illinois College of Agriculture and has been teaching for the past 11 years. He is married and has no children.

Marshall-Putnam counties have been chosen as one of the demonstration areas for the bookmobile, a rural library service being started by the University of Illinois.

Paul Wilson, farm security supervisor at Carbondale, became Saline county farm adviser April 1. Wilson graduated from the University of Illinois College of Agriculture in 1933 and was employed by the St. Louis board of health following his graduation. He worked for FSA in Pope and Hardin counties before going to Carbondale to do similar work in Jackson and Randolph counties. He succeeds A. C. Kamm, now farm adviser in Piatt county.

W. C. Anderson, recently discharged navy lieutenant after 20 months service, is the new farm adviser in Jackson county. He is a 1932 graduate of the University of Illinois College of Agriculture and has served as farm adviser in Johnson and Franklin-Hamilton counties. He succeeds J. G. McCall, now Perry county farm adviser.

Mrs. W. B. Bunn, wife of Farm Adviser W. B. Bunn of Pike county, died a few days after her husband returned from Farm and Home Week exercises at the University of Illinois where he was elected president of the Illinois Association of Farm Advisers. Funeral services were held at Pittsfield with interment at Olney.

A. L. Oxford, Gallatin county farm adviser since September, 1943, has resigned to enter the feed and fertilizer business. He is a 1942 graduate of the University of Illinois College of Agriculture and taught vocational agriculture at Woodlawn.

Earl D. Peterson, Mercer county farm adviser from 1936 to 1941, has been appointed assistant state supervisor of the extension farm labor program in Illinois. Peterson entered the service in 1941 and was discharged Jan. 14, 1946. He is a graduate in agriculture from Iowa State College.

Cumberland county farmers have indicated a demand for 60 cars of phosphate and 35,000 tons of limestone, according to Farm Adviser Charles Tarble, who points to it as a "very ambitious program for 1946."

Dr. Roger P. Link, associate professor of veterinary physiology at Kansas State College, has been appointed to the faculty of the new College of Veterinary Medicine at the University of Illinois.

He has been made assistant professor and assistant chief of veterinary physiology and pharmacology. Dr. Link attended Iowa State College, Kansas State College, and the University of Chicago. He also has taught at Michigan State College.

One air force vet signs up another as the 2,000th Farm Bureau member in Whiteside county. Left to right: Clair Gsell, county organization director, and Ronald Bradley, the new member.

Hotel Sherman in Chicago again will be headquarters for the annual meeting of the Illinois Agricultural Association starting Monday, Nov. 18, 1946. Approval was made at a recent meeting of the IAA board. Choice was limited again by the serious housing shortage.

Keenly interested in promoting cooperative marketing of milk and cream, Jasper County Farm Bureau has organized a dairy committee to study and correct the difficulties of dairymen in feeding, breeding, pasturing and producing. One member has been appointed from each township in Jasper county and six committee meetings have been scheduled for the year.

Dirk Heezen, Country Life actuary for the past 15 months, has been named assistant manager in charge of the home office and consulting actuary for the three Farm Bureau insurance companies, Country Life, Country Casualty and Country Fire. Heezen came to the IAA from Guardian Life Insurance Company of Madison, Wis., where he was actuary.

Dr. L. B. Howard of McLean county has been appointed chief of the bureau of agricultural and industrial chemistry in Washington. He succeeds Dr. O. E. May, who resigned to go into private industry. Dr. Howard is a graduate of Purdue University and has been associated with the bureau for 14 years. Dr. May was the first director of the Soybean Products Laboratory at Urbana and the first director of the Northern Regional Research Laboratory in Peoria, a large penicillin producer.

John White, assistant farm adviser in Livingston county in 1941, has returned to his former job after four years' service with the army air forces.

Broadcasts by the American Farm Bureau Federation can be heard on the America United program over NBC April 28, May 12 and 26, and June 9. The program is a national forum generally dealing with farm questions during the AFBF appearance on alternate Sundays at 12:15 p.m. The program will be revived July 14 for another AFBF series on alternate Sundays.

W. C. Mummert, DeKalb county farm adviser, reports that sufficient Ranger alfalfa seed has been obtained to plant about six plots throughout the county for demonstrational purposes.

Editor's Note: Entrants in picture contest should address contributions to Picture Editor, Illinois Agricultural Association Record, 608 South Dearborn Street, Chicago 5, Ill. If you wish picture returned send self-addressed stamped envelope. Entries should be clear and should show subject doing something.

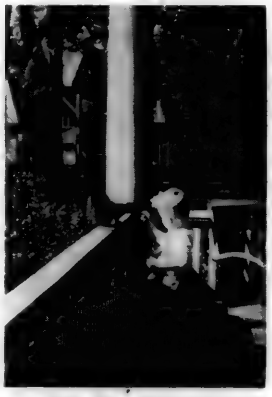
Billy Ellis will take a nap if his dad does too. The Merwyn Ellis family, now living in Elkhorn, Wis., still maintains membership in the Stephenson County Farm Bureau.

Farm Adviser Ray Nicholas, Lake county, snapped this winner of the $5 Picture of the Month award as his daughter (third from left) started game with neighbor girls.

$5 PICTURE OF THE MONTH

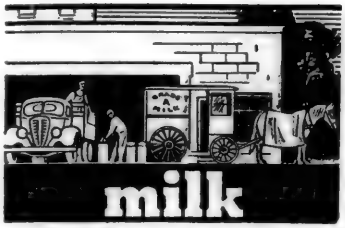
Bernice Marshall of LaSalle county made this captivating study of her niece.

The Edwin Leefers of Macoupin county needn't fear the butter shortage while son, Val, 2, handles the churn.



Bobby Simmons, 4, Peoria county, never tires of feeding his hungry pet squirrel.

Judith and Lawrence Crone of Stephenson county feed Amos and Andy while brother David holds Molly awaiting her turn.



By Wilfred Shaw

The following are the blended prices received by producers supplying the respective Illinois markets. All are January prices for 3.5% milk f.o.b. dealers' platforms (except Chicago) and are for milk meeting the respective city milk ordinances:

Bloomington	$2.48
Canton	2.75
Champaign	2.75
Chicago	3.24
Danville	2.45
Decatur	2.75
DeKalb	2.74
Freeport	2.85
Galesburg	2.65
Harrisburg	2.50
Jacksonville	2.85
Kewanee	2.55
LaSalle-Peru	2.70
Moline	3.12
Peoria	2.89
Pontiac	2.406
Quincy	2.60
Rockford	3.135
Springfield	2.85
St. Louis	3.51
Streator	2.50

The following are the gross blended prices paid to producers for milk in the following named cities throughout the United States, and are quoted on a 3.5% butterfat basis, delivered f.o.b. dealers' platforms (with exceptions noted), as reported by the respective milk cooperatives. These prices are for January unless otherwise noted:

Baltimore	$3.85
Boston	3.92
Chicago (70-mile zone) (Feb.)	3.24
Cleveland	3.51
Denver (Feb.)	3.01
Detroit	3.61
Indianapolis	3.44
Kansas City	3.54
Louisville	3.53
Madison	3.01
Memphis	3.60
New York City	4.14
Pittsburgh	3.61
Seattle (Feb.)	3.34
Sioux City (Feb.)	3.01
St. Louis (Feb.)	3.51
Terre Haute	3.05
Toledo	3.49

The 23 milk marketing cooperatives that are members of Illinois Milk Producers' Association marketed 166,832,287 pounds of milk in February, 1946, compared with 171,707,156 pounds marketed in February, 1945, or a decrease of 2.8%.

According to A. J. Surratt, state agricultural statistician, milk production in Illinois during February was four million pounds less than a year earlier due to a decrease of about 4% in the number of milk cows. The percentage of cows being milked in Illinois herds on March 1 was the lowest for that date since 1931, with the exception of 1944. Milk production per cow, however, topped all previous records in February, according to Surratt.

The agricultural committee of the State of Virginia House of Delegates in March tabled a proposed bill for the compulsory enrichment of white bread, rolls and flour.

In New Jersey hearings recently began upon a similar bill which is being opposed by farm groups.

In Utah an enrichment bill was re-introduced following the governor's veto of such a bill which was passed in the last session of the Utah legislature.

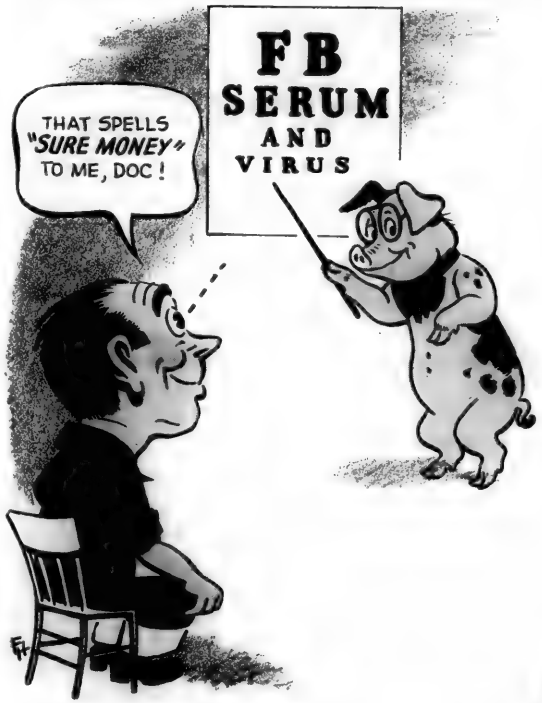
Northern Illinois evaporated milk plants have recently increased their producers' milk price from $2.65 to $2.70 per cwt.

The Mid-West Dairymen's Company, the cooperative milk marketing organization of 400 dairymen supplying the Rockford market, held its annual meeting March 26, in the Faust Hotel, Rockford, with 500 members and their wives in attendance.

Hugh Mainland, manager, reported that in the year ending Feb. 28, the organization marketed 50,198,405 pounds of milk at an average price per cwt. for 3.5% milk of $3.122 per cwt., for a total return to producers of $1,566,963. The total amount of milk marketed this past year exceeded the previous year's marketings by 3½ million pounds, or 7.4%.

Prof. R. D. Froker of the Wisconsin College of Agriculture was the principal speaker at the meeting.

Robert C. Miller was employed as manager of the Stephenson County Pure Milk Association effective March 15.



WE HOPE YOU SEE THE POINT!

14,000 FARMERS CAN'T BE WRONG!

WHEN THEY ASSURE MEDICAL EXPENSES IN CASE OF INJURY ON PART OF FARM HELP

Actually 14,580 farmers have liability policies in force to cover their liability in case of injury to one of their hired hands or damage to the property of others due to alleged negligence.

The chart above shows the tremendous growth in the number of these policies from the time the policy was established in 1930 up until the close of 1945.

This type of protection is compulsory with industrial employers . . . it's a state law. While it is not a written law for farm employers, it is just good business. With it, you'll feel safer. This policy is written only for Farm Bureau members.

If you have any need for this kind of insurance, see your local Farm Bureau insurance agent. He will be glad to give you full details and cost.

PMA DAIRYMEN DEMAND REMOVAL OF SUBSIDIES

A RESOLUTION demanding the removal of all subsidies and price ceilings on dairy products was adopted unanimously by delegates to the annual meeting of the Pure Milk Association held in Chicago.

The move came after a stirring denunciation of food subsidies and general policies of the OPA by Manager Arthur H. Lauterbach before the 2,000 members that crowded the Hotel Sherman ballroom.

The Pure Milk Association represents 13,000 member dairy farmers who supply Chicago and suburbs with their daily milk supply.

Other resolutions adopted by the unanimous vote of the delegates at the March 12 meeting were: "Urged the University of Illinois to establish a 12-weeks winter short course in soils, dairy production and marketing, agricultural engineering, farm management and industrial-agricultural relations.

"Urged officials in charge of surplus war property sales to hold them in rural areas where farmers are expected to buy and that articles put up for sale be of practical use on the farm.

"Endorsed federal aid toward school lunch programs inaugurated by states to improve health standards of children in both rural and urban schools.

"Pledged support to the National Cooperative Milk Producers Federation in its efforts to institute more sound pricing arrangements for butter, cheese and other milk products.

"Affirmed support for application of the parity formula in determining prices for farm commodities, but insisted that if that is not possible, the parity formula must be changed to provide fair consideration for livestock and dairy farmers.

Eight directors, including four from Illinois, were reelected to two-year terms on the board of Pure Milk Association. The Illinois men reelected were: Walter Winn, McHenry county; Harvey Norem, DeKalb county; John Case, Cook-DuPage counties, and W. M. Kimmelshue, Kankakee county.

A. H. Lauterbach Dr. Asher Hobson

Others reelected were: Lee Cartier, Whitewater, Wis.; John Voelkering, Burlington, Wis.; Fred Hiigli, Union Mills, Ind.; and Whitney Kline, Culver, Ind.

Members heard reports by PMA officers and talks by Manager Lauterbach, Dr. Asher Hobson of the department of agricultural economics, University of Wisconsin; A. W. Colebank, administrator, federal milk marketing orders 41 and 69; Arnold P. Benson, director of the Illinois state Department of Agriculture, and Milton A. Button, Wisconsin state director of agriculture.

Secretary Charles M. Cosgrove pointed out in his report that members of Pure Milk Association continued their outstanding milk production job in 1945 by delivering 1,608,863,557 pounds of milk, 5.13 per cent more than in 1944.

This production record is 41.09 per cent higher than 1939 production although PMA membership has increased nine per cent since then. President Wilbur J. Swayer of Lake county declared that unless more farm labor becomes available soon, it will be impossible to maintain the milk production record of 1945.

Dr. Hobson warned the members that the "farmer is heading for a serious situation. Because of our heavy production, farm prices will go down. It does not make any difference how much consumer purchasing power you have in the country; if you produce more than the nation — the domestic market — can use, prices of these products will fall to the world level."

Lauterbach said that the prospect of continuing subsidies before elections was good political strategy but that it heightened the danger of "enslaving agriculture to perpetual subsidies."

At Pure Milk Association meeting, Will and DuPage county dairymen meet in hotel lobby. Left to right: Lester Schroeder, C. W. Schroeder, A. C. Gauther, and Leslie Lewis, all of Will county, and Frank T. Klein and William Wurtz, DuPage county.

FUTURE FARMERS TO MEET IN SPRINGFIELD, MAY 3-4

Illinois Association of Future Farmers of America will hold its annual meeting at Lanphier high school in Springfield, May 3-4. It is the first year the FFA has not met at the University of Illinois. Meetings will be resumed in Champaign-Urbana when housing facilities are adequate.

Corn, just like chickens, animals, and people, must have good food to be healthy. If your soil does not contain the right kind of food, you will probably not be able to raise healthy corn. This condition is called soil deficiency and can be remedied by the mechanical application of plant food.

Our State University has made specific recommendations regarding the application of plant foods and your farm adviser can help you determine what and how much is needed in your case.

PHOSPHATE

Phosphate deficient soils require varying amounts of phosphate fertilizers in order to produce high yields of crops. The amounts needed depend upon the degree of deficiency as determined by the results obtained from the soil tests.

According to the recommendations of the University of Illinois, a soil testing LOW in phosphorus requires:

1. 400 to 500 lbs. of 20% superphosphate per acre for the common Illinois rotations. This is sufficient to supply crop requirements for 4 years.

— or —

2. 1000-1500 pounds of 32% rock phosphate. This application is sufficient for 8 to 10 years.

Rock phosphate is usually applied by means of a regular phosphate spreader ahead of the clover seeding, although it can be applied during most months of the year.

Superphosphate can be applied by drilling with small grain, by hill dropping with corn, or by broadcasting.

POTASH

Tests made in the county Farm Bureau soil testing laboratories show that many soils require potash if maximum crop production is to be achieved. Potash is immediately available for use by crops.

Muriate of potash can be either broadcast or drilled through a fertilizer attachment on the grain drill ahead of small grain and clover. It can also be applied after the oats and clover are up; it could be put on the clover after the oats and wheat are cut.

Muriate of potash can be hill dropped for corn and drilled alongside soybean seed.

Precautions to Observe

1. Safe application limits per acre are:
- (a) Not over 65 pounds hill dropped for corn.
- (b) Not over 80 pounds drilled with small grains.
- (c) Not over 100 pounds drilled alongside but not in contact with soybean seed.
- (d) Not over 300 pounds broadcast and disked for all crops.

2. Do not spread muriate of potash on growing crops when the leaves are wet. There is danger of burning the leaves.

3. Clean all equipment after use to avoid damage from potash.

Consult Your Farm Adviser — See Your Blue Seal Plant Food Distributor

BLUE SEAL

The Farm Bureau Service Company plant food distribution service is less than two years old. In these years the need for plant food materials has been greater than our ability to supply the demand. In the current years we have contracts with suppliers that, when fulfilled, will reach a grand total of 120,000 tons. This compares to 36,350 tons in 1945. Despite this tremendous increase in tonnage, there will still be some patrons who will be unable to secure sufficient plant foods for their needs. The patience and understanding of our members is greatly appreciated. We hope that the day is not far off when our supply will be adequate for all.

ANNOUNCE WOOL MARKETING PROGRAM

Illinois Wool Growers Association the IAA wool marketing cooperative, has completed an agreement with Indiana Wool Growers Association whereby the Illinois cooperative will sell its wool in Indianapolis instead of in Boston as has been done for a number of years.

The new agreement is expected to facilitate earlier price settlements because of the nearness of the Indianapolis market.

In the past, growers brought their wool to the county pool maintained by the association, received an advance and then awaited judgment of the Boston market on its value before a final settlement could be made.

Under the new arrangement, farmers will continue to deliver their wool to the county pool but will not receive the customary advance until it has been graded at Indianapolis. Final settlement will be made after appraisal by the Commodity Credit Corporation in Indianapolis.

The Illinois Wool Growers Association board of directors feels that the new arrangement will be welcomed by both grower and county pool because the grower will get the advantage of a speedier appraisal at a nearby market and the pool will be relieved of the responsibility of grading.

Wool growers were also advised by the board that the Commodity Credit Corporation has extended the wool buying program until Nov. 1, 1946. Prices will be approximately the same as they were in 1945.

In the 11 years that the National Poultry Improvement Plan has been operating, the average annual egg production per hen in the U. S. has increased by more than two dozen.

Windbreaks properly planned and planted save on feed and fuel bills.

The unloading of four cars of rock phosphate at Ottawa illustrates the increasing use of this essential soil builder. All were sampled and tested by IAA soil improvement department.

AFTER YOUR PROFITS!

Flies are responsible for the loss of much of what might have been your profits. They don't take the cold cash, of course, but they sap the strength of your cows, thus reducing milk production.

The losses through disease and fly-produced parasites amounts to a tidy sum each year.

FIGHT FLIES *with* BLUE SEAL FLY SPRAY

The new Blue Seal Fly Spray possesses powerful knock-down and repellant properties and kills on contact

It also possesses effective "delayed action" killing properties due to the presence of DDT

Extensive Farm tests have proved the effectiveness of this spray.

The war against Flies is not over!

NEWS and VIEWS

600 Women Attend Pure Milk Association Luncheon in Chicago

FARM women in the Chicago area have pretty definite opinions on questions affecting their families according to their answers to a recent questionnaire.

The questions were submitted to 600 women attending a luncheon during the Pure Milk Association meeting at the Hotel Sherman in Chicago, March 12.

Greatest division of opinion was on the question as to whether farmers should be covered by the federal social security act. Social security for farmers was opposed by 45 per cent of the women and favored by 40 per cent.

They were most emphatic on the question: "Do you think that most people understand the importance of dairy farming to the prosperity of the whole nation?" Only 5 per cent thought so; 95 per cent said "no."

The women disagreed sharply with the recent pronouncement of the OPA that recent wage increases in industry would not increase the cost of living. Only 15 per cent agreed with the OPA; 85 per cent said the wage increases would increase the cost of living.

Fifty per cent of the women thought there was a real opportunity for returning veterans on the farm. Of the other half at the luncheon, 25 per cent disagreed and 25 per cent were undecided and didn't vote.

Wives of dairymen showed pride in their position in the nation's economic picture by a strong "yes" vote on the question, "Would you advise your son to become a dairy farmer?" Seventy-five per cent said they would and 20 per cent said they would not.

Other questions on the sheet included:

"Are the school facilities in your community adequate?" Yes, 35 per cent. No, 50 per cent.

"What is the most serious problem on your farm today?" Machinery shortage, 55 per cent. Labor shortage, 45 per cent. Feed shortage, 20 per cent.

Pure Milk Association women applaud a speaker during annual meeting luncheon at Hotel Sherman in Chicago, March 12. Six hundred women were present.

"Do you believe women should hold office in cooperatives?" Yes, 55 per cent. No, 35 per cent.

"Do you believe the average bride is sufficiently trained as a homemaker?" Yes, 30 per cent. No, 70 per cent.

"Do you favor using government funds to furnish hot school lunches?" Yes, 65 per cent. No, 20 per cent.

"Do you believe milk production records are worth the work involved?" Yes, 75 per cent. No, 10 per cent.

"Do you favor compulsory military training for boys reaching age of 18?" Yes, 35 per cent. No, 65 per cent.

"Do you favor compulsory or voluntary planned prepaid health insurance?" Compulsory, 10 per cent. Voluntary, 70 per cent.

"Do you think consumers who understand subsidies want government to continue to pay part of their grocery bill?" Yes, 10 per cent. No, 65 per cent.

"Do you want PMA to continue its efforts to get price ceilings increased enough so that dairy subsidies can be ended?" Yes, 90 per cent. No, none.

"Do you believe it possible to get farm women more interested in cooperatives and in knowing how government legislation affects farmers?" Yes, 70 per cent. No, 5 per cent.

Four members were honored at the annual Grundy county Home Bureau meeting recently for perfect attendance since the county was organized in 1939. They were: Mrs. Ethel Hansen, Mrs. Leda Reeves, Mrs. Olga Peterson and Mrs. Mary Kuhn.

Two More County Farm Bureaus Plan For 4-H Club Homes

Two more county Farm Bureaus are reported making preparations to establish permanent exhibition grounds and headquarters for their county 4-H clubs.

Livingston County Farm Bureau has purchased 21 acres of timberland two miles northwest of Pontiac and has opened a campaign to raise $15,000 for the development of the park.

McHenry county plans to make a 4-H Club home on the old fair grounds east of Woodstock and already has accepted the offer of the county board of supervisors leasing the eight acres to the club for 99 years at an annual rental of $1.

Farm Adviser W. H. Tammeus said the McHenry club intended to build a show ring and barns for agricultural clubs and an exhibit hall and auditorium. Buildings and grounds will be rented to community organizations to help defray the expense of maintenance.

Livingston county plans to beautify the 4-H Club park and intends to use the grounds for judging contests, picnics, sport events and agricultural shows.

Two new Home Bureau units have been organized in Peoria county bringing the total to 20.

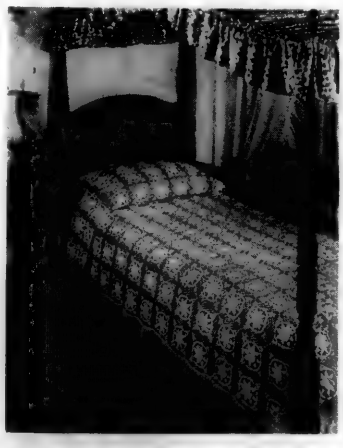
Rural Life Will be Discussed at Michigan Meeting on June 11-13

RURAL life in a changing world will be discussed by delegates to a conference of the American Country Life Association to be held June 11-13 at Michigan State College, Lansing, Mich., according to an announcement by Dr. D. E. Lindstrom, professor of rural sociology at the University of Illinois and president of the association.

Topics covering four phases of rural living have been selected as the basis for the three-day conference. They are: number of people in rural life, religious and moral foundations of rural life, public relations programs for agriculture, and rural community and international relations. Subtopics will be considered under each of these principal items.

CROCHETED BEDSPREAD IN SOUTHERN TRADITION



Rich in the tradition of the old South is this crocheted bedspread with water lily design, giving it a fragile, heirloom beauty. Directions for making it are available free of charge. Write to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago 5, Ill., enclosing self-addressed stamped envelope.

My Favorite Recipe

Mrs. Olive E. Pillsbury of Menard county says the following isn't exactly her favorite recipe but as a one-dish meal it is hard to beat.

ONE DISH MEAL

1½ lbs. hamburger
4 large chopped onions
2 cups tomatoes
2 cups water
1 cup kidney beans
1 cup rice
salt and pepper

Fry onions in bacon fat, add hamburger and fry until brown, add tomatoes, water and beans. Add the rice (washed) last. Season and stir thoroughly, put in baking dish, cover and bake for one half hour in moderate oven, uncover and bake for another half hour. Add chili powder or pepper to taste. If reheating add more tomato juice.

Yorkshire Pie

A meal of leftovers. Arrange leftover pork or beef and potatoes or other leftover vegetables with onions and seasoning, in a baking dish. Save enough gravy for basting. Prepare the following batter.

1 egg
1 cup sweet milk
1⅓ cups flour
5 tbsp. lard
½ tsp. salt
2 tsp. baking powder

Mix quickly and pour over meat. Bake to a golden brown. Serve with a lettuce salad and light dessert.

Mrs. Frank Strotheide

Sugarless Applesauce Cake

½ cup shortening
1 cup dark syrup or molasses
1 egg
2¼ cups flour (measured after sifting once)
1 teaspoon soda
1 teaspoon cinnamon
½ teaspoon cloves
1 teaspoon salt
1 cup unsweetened applesauce
½ cup raisins
½ cup chopped nuts if liked

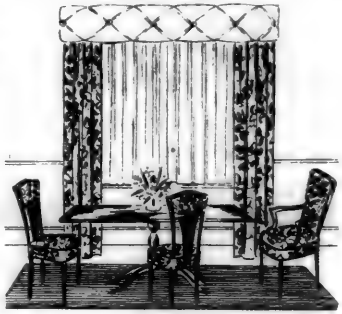
Cream shortening, add syrup gradually, egg, and beat well. Add sifted dry ingredients alternately with the sauce, raisins, and nuts last. Mix well, bake in moderate oven 350 F.

Mrs. Gus Bruckner

What is your favorite recipe?

Do you have some special treat you think other homemakers should know about? If so, write it out and send it to Women's Editor, Illinois Agricultural Association Record, 608 South Dearborn Street, Chicago 5, Ill.

GAY SLIPCOVERS BRIGHTEN THE DINING ROOM

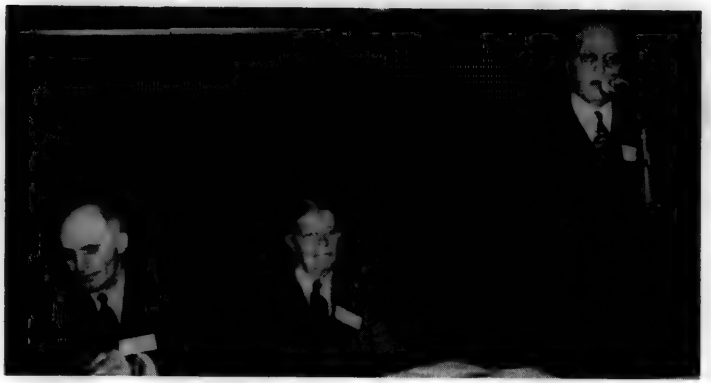


Take away the drabness of the dining room with these snappy slipcovers and matching drapes. Instructions on how to make curtains, drapes, cornice and slipcovers are available free. Send self-addressed stamped envelope to WOMEN'S EDITOR, ILLINOIS AGRICULTURAL ASSOCIATION RECORD, 608 South Dearborn Street, Chicago 5, Ill.

Women in several unorganized counties in Illinois are either organizing or on the verge of organizing county Home Bureaus, according to latest reports. Logan county women are in the process of organizing, Marion county will be organized this month while Pope-Hardin and Gallatin counties have scheduled information meetings. To date, 83 counties have active Home Bureau organizations with a membership of 30,507 as of Jan. 1, 1946.

Back in the United States after serving with the Red Cross in England, France and Belgium, Miss Donovan Hester has resumed her work as home adviser in Cass county. Miss Hester was home adviser in Menard-Cass counties from 1939 to 1943 when she joined the Red Cross. She is a graduate of Purdue University.

Miss Evelyn Sharp, Eureka, has been employed as home adviser in Henderson county. After graduating from the University of Illinois in 1943 she joined the Waves and had been stationed in California. She was discharged in December.



Manager D. L. Swanson (right) of Chicago Producers Commission Association makes annual report at meeting in Chicago. Others are Secretary-Treasurer Henry Wieland (left), Beloit, Wis., and President H. H. Parke of DeKalb county.

Chicago Producers Officials Condemn Government's Marketing Controls

A PLAN for redistricting the territory represented by the board of directors was approved by delegates to the annual meeting of the Chicago Producers Commission Association in Chicago, March 7.

P. O. Wilson

The change increased the number of directors in Illinois from five to six and reduced the number west of the Mississippi river from three to two. All states east of the Mississippi except Illinois are now classed as District 9.

Because no annual meeting was held last year, six directors were elected instead of the usual three. Three were elected for three years and three for two years.

Those elected from Illinois were: W. Frank Reid, Rockford, Winnebago County District 2, reelected for three years; La Verne Johnson, Millington, Kendall County District 5, three-year term; William Temple, LaSalle County, President of the Illinois Wool Marketing Association, Serena, District 3, two-year term; and E. R. Gehring, Galesburg, Knox County District 4, reelected for two years.

Others elected were: Seth Little, Lowell, Ind., District 9, three-year term, and J. A. Entz, Waterloo, Ia., reelected for two-year term.

The three other directors who make up the nine-man board and whose terms expire in March 1947 are H. H. Parke, Genoa, DeKalb County, District 1; Theodore Funk, Shirley, McLean County, District 6; and C. W. Martin, Jefferson, Ia., District 8.

In his report to producers at the annual meeting, President Parke reported that during the year 1945 the organization handled 15,560 carloads of livestock; 9,182 cars of cattle and calves, 4,792 cars of hogs, and 1,586 cars of sheep. This represented 12.69 per cent of the total receipts on the Chicago market as against 13.92 per cent in 1944.

The total value of livestock sold was $49,733,943.32 and the net loss in operations for the year amounted to $59,978.79.

"This loss," Parke said, "was occasioned by the drastic reduction in total receipts on the market, largely in hogs; by the large increase in the country buying of hogs, accentuated by ill-advised OPA price regulations. Also by extensive black markets which attracted many hogs away from the market."

With volume and bargaining power, Parke said he expected that many of our present problems would disappear, and he looked to more intensive work in the field to build up the prestige and service of the Chicago Producers.

In his report on the association's operations for 1945, Manager Dave Swanson explained the year's losses as caused by market restrictions which lowered volume while operation costs rose with the higher cost of living. Manager Swanson asked for more support from the members, saying: "You members have the power to make or break your cooperative. With support it can succeed; without sufficient support it may fail."

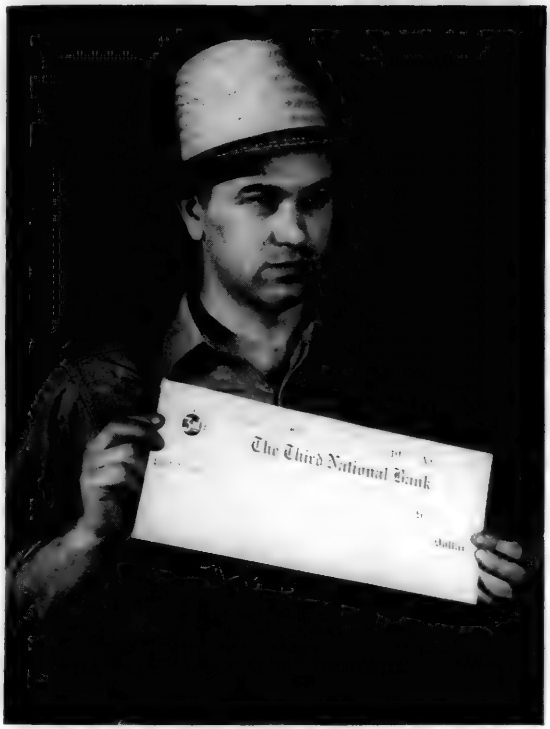
Swanson expected improvement in present conditions with restrictions easing and the return of experienced men from the services. He stressed the importance of livestock producers maintaining their bargaining position on the market. This, he said, can be done by supporting cooperative marketing to the fullest extent.

Discussing the national livestock marketing situation at the afternoon session, P. O. Wilson, secretary-manager of the National Live Stock Producers Association, said that if he could describe it in one statement, it would be that it is deplorable.

Wilson condemned the government's control policies and pointed out that although we are saddled with a tremendous national debt and that although the people have more money and there is more meat available than ever before, subsidies continue to plague and peril the national economy.

He also declared that it "is time for us to say to Mr. Bowles and to the Congress of the United States that we have reached a place where we should put an end to both subsidies and price ceilings and let the consumer pay his grocery bill at a level of prices which will encourage needed production."

Above is one of the luncheon groups at Chicago Producers annual meeting.



THIS IS A PRANK OF NATURE

The favorite story of an Illinois farmer is about a wind storm so strong that it blew the writing and signature right off the face of a $4,000.00 check . . . an uncashed check payable to *him*. Sounds like a tall tale, but it isn't. A bad wind storm actually cost him that much.

When you see a farmstead which was insufficiently protected by wind insurance, now leveled by a tornado, you know that here is a man whose cash reserve may be wiped out entirely.

It's a wise farmer who insures himself against these "pranks of nature." Ask your Farm Bureau insurance representative how little it costs to be adequately insured against damage from wind.

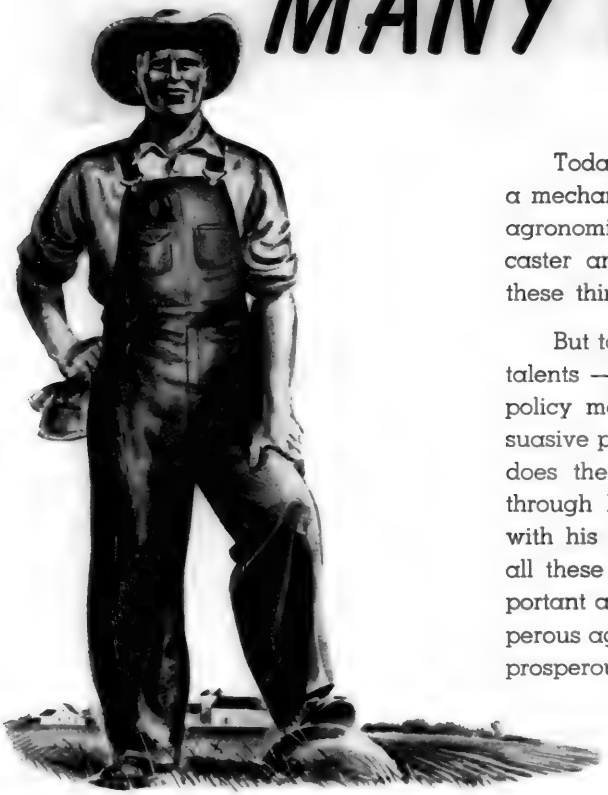
MAN OF MANY TALENTS



Today's farmer, someone has said, must be a mechanic, veterinarian, tax expert, economist, agronomist, carpenter, geneticist, weather forecaster and philosopher. Today's farmer **is** all these things.

But today's progressive farmer has still other talents — he is a keen student of legislation, a policy maker, a public relations expert, a persuasive public speaker. No, not as an individual does the farmer possess all these skills. But through his Farm Bureau — by united action with his neighbors — the Illinois farmer brings all these other talents to bear on this most important assignment: Maintaining a strong, prosperous agriculture as the foundation for a strong, prosperous, well-fed nation.

MAN OF MANY TALENTS

Today's farmer, someone has said, must be a mechanic veterinarian, tax expert, economist agronomist carpenter, geneticist weather forecaster and philosopher. Today's farmer **is** all these things.

But today's progressive farmer has still other talents. He is a keen student of legislation, a policy maker, a public relations expert, a persuasive public speaker. No, not as an individual does the farmer possess all these skills. But through his Farm Bureau — by united action with his neighbors — the Illinois farmer brings all these other talents to bear on this most important instrument. Maintaining a strong, prosperous agriculture as the foundation for a strong, prosperous, well-fed nation.

"Thank you, Dad"

This would have been a proud day for Sam Wilson . . . . had he lived.

These are his children . . . . the grownup children of the widow of a farmer who saw a special need for life insurance.

Sam knew it would take years to build a strong cash reserve, saving year by year. He was doing that. But he did something else, too.

Sam took out a Country Life Insurance policy, and with the stroke of his pen created an estate equal in value to a good sized farm.

The future of Sam's children looks bright, because Sam refused to take chances with their future.

FOOD AND POLITICS

By President Charles B. Shuman

A HIGH governmental official recently made the statement in referring to the world food crisis that "wheat has no political implications". All farmers would like to believe this ideal but bitter experience convinces us that food and world politics are inseparable. Today, as always, food is undoubtedly being used in the ages old game of world politics.

There never was a period in recorded history when some people of the world were not undernourished and even starving. Millions of people are born, exist and die prematurely without ever having taken a single adequately nourishing meal into their bodies. Even in America with the highest standard of living on earth, undernourishment is the chief single cause of most of our health problems. The farmers of America are today undoubtedly the best paid and most efficient food producers in the world. Operating under almost intolerable handicaps of labor and machinery shortages and discouraged by a multitude of ill-advised governmental orders and regulations, they are nevertheless bending all efforts toward another great crop for this year of extreme need. Farmers are again making this all-out effort largely because they want to do everything possible to relieve the starving people of other lands. Farmers will do their share and more to feed the children of Europe and Asia.

However, certain facts must be faced. If the total food production of American farms beyond our own minimum national needs were distributed equally among the hungered people of the world it would not save millions from starvation or even materially improve their diet. We were not at any time a large surplus producer of food. In fact, if the total world food production were equally divided among the word population it would not be enough to provide an adequate diet for all.

We need to look for the causes of the world's hunger. Everyone is agreed that the present desperate situation is a direct and to be expected result of the war. Every major war in history has had the same result. However, students of world politics tell us that the struggle for adequate diet is often the basic cause of wars. The world fights for food, then starves because it fought. How can we break this vicious circle before civilization destroys itself? The United Nations Food and Agriculture Organization has made a notable start toward arriving at some fundamentals. They first recognized that with modern methods of transportation and communication, no area of the world can long isolate itself. These delegates from most of the nations of the world including both the underfed as well as more favored countries agree that the way to a permanent solution of the problem is not by taking away from those who have but rather in raising the standards of those who have not.

Education, first to create an impelling desire for better standards of living and second to give them the "know how" to attain those standards, is the only sound answer yet advanced. Military and economic struggles have not increased liberty nor abolished suffering and starvation. Perhaps it is time to try the Christian principles of love and peace to raise moral and mental levels.

ILLINOIS
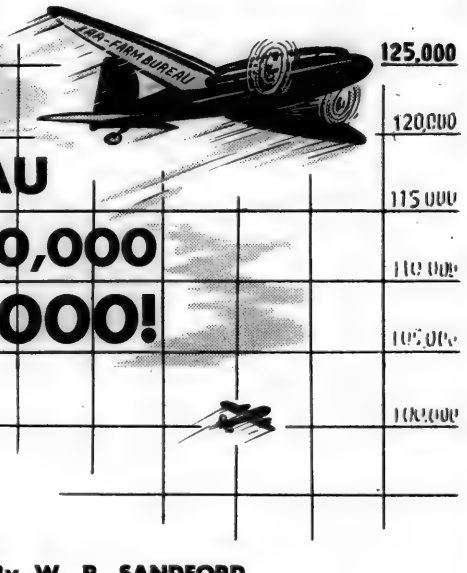
FIRST FARM BUREAU TO REACH 100,000 and 125,000!



By W. P. SANDFORD
IAA Director of Sales Service

ILLINOIS, the first state to reach the charmed figure of 100,000 in Farm Bureau membership, became the first state to reach 125,000, it was revealed when membership figures as of March 31, 1946, were compiled early in April. In fact, the state passed the 125,000 milestone with nearly another thousand to spare. Official figures put the grand total at 125,954 as of March 31.

That the fiscal year which ends Sept. 30 will see even higher totals, in spite of the fact that the summer months are not so active a period in membership work, is the current expectation. "Short-range goals" set by a majority of the counties at the recent Membership Maintenance meetings in which 78 county groups participated, back up this prediction.

It had been predicted that the year 1945-1946 would be another banner one in Farm Bureau growth, as it started with a total membership Sept. 30, 1945, of 115,651. By Jan. 1, 1946, the old long-range goals totalling 118,444, were surpassed, as the count on Dec. 31, 1945, was 118,775. A net gain of over six thousand between then and March 31 of this year brought the total past the 125,000 mark.

Farm Bureau membership has been constantly on the upgrade for a period of seven years. Here are the totals as of Sept. 30 of each of these years, and the current figure:

1939	68,470
1940	70,463
1941	74,448
1942	85,808
1943	94,333
(100,000 goal attained Nov. 18, 1943)	
1944	105,057
1945	115,651
1946 (Mar. 31)	125,954

Thus Farm Bureau membership in this state has come to represent, not merely a majority, but well over two-thirds of the 169,000 farm families in Illinois.

This fact carries with it not only the realization that Farm Bureau is the free choice of Illinois farm people to represent them in their legislative, educational and cooperative interests, but also a sense of the sound, consistent growth which has been made over the years. It also indicates that in the remaining farm families in the state there are many who need only to have Farm Bureau and its programs called to their attention.

This is a good time to discuss Farm Bureau with your non-member neighbor, and to extend him a cordial invitation to join his fellow-farmers in their great organization.

Southern Illinois, where J. C. Moore is assistant director of organization, leads the state in percentage gain in membership with a figure of 9.1 percent; closely following is eastern Illinois, under Harry B. Claar, with 9 percent gain; and western Illinois, under L. B. Hornbeck is not far behind, with an 8.7 percent gain.

LaSalle county currently has the largest total membership in the state, as the figures on the outline map opposite this article show. The figures typed in each county are the total memberships as of March 31, 1946.

Experience of volunteer workers during the winter and spring months of this year has been that if a non-member is visited by one of his neighbors, and told of the 125,000 membership, and of what members think of their organization, he is very likely to "come along." The fact that so great a majority of real farmers do belong weighs heavily with the average non-member. *Two-thirds of Illinois farmers can't be wrong.*

With great problems of production, reconversion, price, soil conservation, parity, rural living standards, and the like now at stake, to say nothing of purchasing supplies and marketing farm

products, it can truthfully be said that farmers need a strong organization for the postwar period. In such times, the individual instinctively turns to something larger than himself, and finds that through working with his neighbors in county, state and nation, he can accomplish many things that for "the man alone" are impossible.

All Counties Gain

The increase in membership that has resulted from these conditions has shown itself in every section of Illinois, and in counties large and small. LaSalle county, Earl J. Hays, organization director, has signed the largest number of new members, 474. Whiteside, with Claire L. Gsell as organization director, is second with 425. Other counties in the "top ten" in this respect are Bureau, 359; Champaign, 341; Iroquois, 337; Henry, 334; McLean, 322; Cook, 292; Livingston, 258; Jefferson, 244 and Kane, 244.

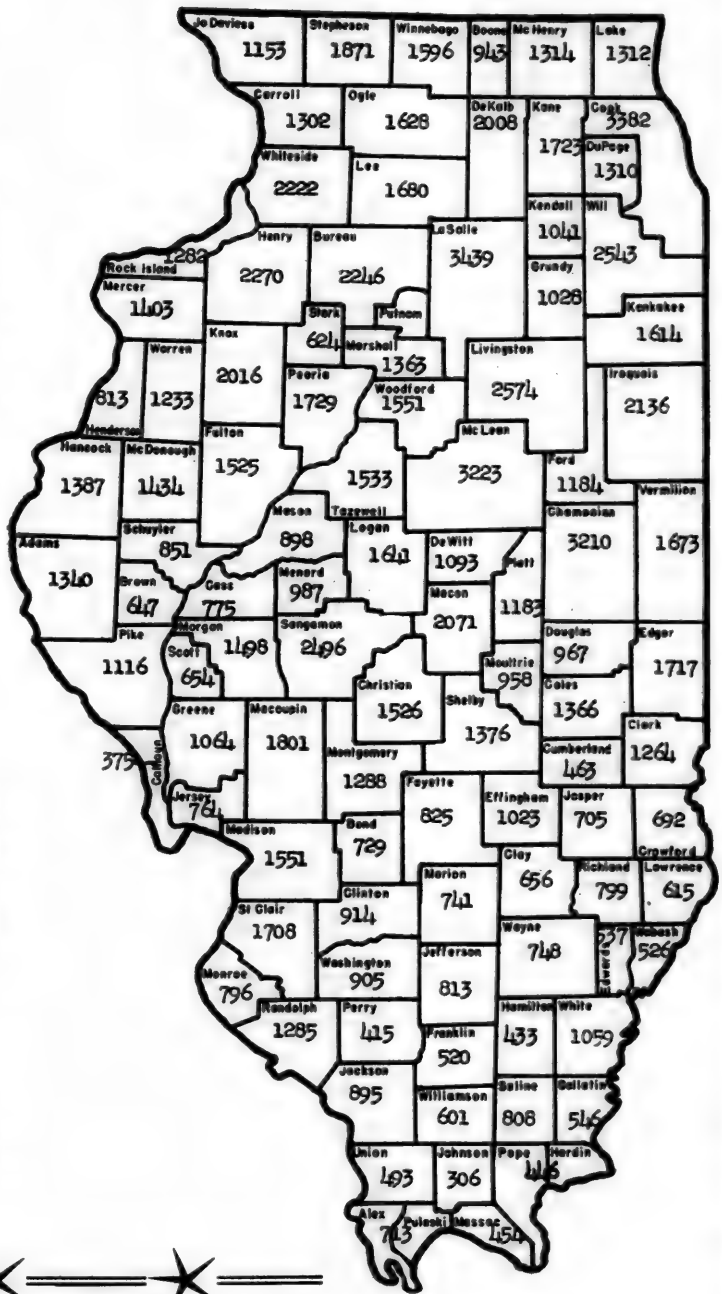
Menard leads in percentage of quota signed up to March 31, with 146 signed against a quota of 41 new members, or 356 percent. L. C. Greenwald is organization director. Jefferson is second in percentage terms, with 305 percent of quota. Ruis H. Garrison is organization director. Other high-percentage counties are Whiteside, 291 percent; LaSalle, 272 percent; Kendall, 269 percent; Bureau, 253 percent; Marion, 251 percent; Jersey, 241 percent; Henry, 223 percent, and Kane 218 percent.

Look At Net Gains

Another interesting way of analyzing membership gains is in terms of net gain since Sept. 30, 1945. Numerically, Whiteside with 395 and LaSalle with 294 lead in this respect, with Bureau, Champaign, Iroquois, Livingston, Henry, Jefferson, Kane, Will and Woodford following in that order. (Will-Woodford tied with 201).

Jefferson county takes first place when net gain is measured in terms of percentage of total membership. It shows an increase over Sept. 30, 1945, of 38 percent. Franklin is second with 25.3 percent. Carl K. Cox is organization director. Whiteside, Richland, Hamilton, Fayette, Wayne, White, Marion and Lawrence are the other members of the "top ten" in percentage gain in membership for this period.

IAA-Farm Bureau Membership As Of March 31, 1946



ADJUST FOOD PRICE CONTROLS

SAYS IAA BOARD

THROUGHOUT the war years farmers produced unprecedented quantities of food. Since the war's end they have kept production at near record levels. Farmers, knowing the urgency of the need for food, both at home and abroad, want to continue this high level of production. However, farmers know they can not long continue maximum production under the rigidities and restrictions imposed by the OPA.

Farmers have supported all honest attempts to control inflation. They have insisted upon a balanced budget and that price control measures be applied and maintained uniformly and equitably over industry, labor and agriculture. This has not been done.

While prices of farm products have been kept under rigid ceilings, farm operating costs have advanced sharply. The farm labor supply has been reduced and farm wage rates greatly increased by the government-sponsored high wage and short hours policy in industry.

Strikes, increased labor costs and unreasonable OPA price ceilings have combined to restrict the output of farm equipment and other essential industrial products. High wages, huge consumer food subsidies and low food price ceilings have encouraged excessive use and outright waste of vital food products. Farmers now insist that definite action be taken to end this intolerable situation.

Therefore, the Board of Directors of the Illinois Agricultural Association, recognizing the importance of this situation, not only to agriculture, but also to the entire nation, respectfully urges and insists that the Congress of the United States incorporate into any legislation extending price control beyond June 30, 1946, the following essential provisions:

First, consumer food subsidies must be eliminated rapidly and according to a definite schedule terminating not later than Dec. 31, 1946.

Second, as consumer food subsidies are removed, retail price ceilings must be adjusted to offset the subsidy removal.

Third, all OPA controls must be eliminated according to a definite schedule as rapidly as production or supplies reach specified normal levels. All controls, except possibly those on rents and a very few important scarce items, should be eliminated by March 30, 1947.

Fourth, the price control agency must recognize increased costs of production and be required to reflect such increased costs by immediate adjustments in price ceilings.

Government Planners Do It Again!

" . . . THIS week, the U. S. miller, baker and plain citizen finally knew that famine abroad would mean sacrifices at home. But the U. S. farmer again got what he wanted out of world shortages: a higher price."

That's the way one national magazine reported the government's announcement of the 30-cent per bushel bonus offered farmers for delivering corn and wheat to the account of the Commodity Credit Corporation.

But that wasn't the way many farmers over the state considered the "bonus" section of the famine relief program. With most of the stocks of corn held by other than producers, the farmers certainly hadn't asked for the "bonus." In fact, the government had been encouraging farmers to market their corn with the promise that the price wouldn't be increased.

Those farmers who had responded to the government's plea and marketed their grain before the "bonus" was announced, felt that they had been fooled and they didn't like it.

At a feed conference held in Washington in March, IAA officers were invited by Secretary of Agriculture Anderson to indicate what farmers thought about materially increasing the price of corn.

IAA President Charles B. Shuman on March 29 reported to Secretary Anderson that he believed it would be unwise to increase the price of corn at that time, explaining that most of the stocks were held by other than producers.

President Shuman suggested rather that the price of corn should be permitted to increase substantially at some time shortly prior to the beginning of the new harvest. Such an increase, he said, should be on a graduated basis through the marketing season so that there could be some encouragement for normal movements to market.

The IAA president further stated that he believed that feed grains were not being hoarded and were moving out of storage at about the usual rate, considering the small amount still held by farmers.

However, on April 19, the Department of Agriculture outlined the following program:

The government offered farmers a bonus of 30 cents a bushel on wheat delivered under the certificate plan to the government by May 25.

The government offered to buy 50 million bushels of corn from farmers at a bonus of 30 cents a bushel over current ceiling prices.

Four other points in the program applied to millers and processors.

The reaction to this announcement in the country was sharp and violent. Producers were in agreement with the humanitarian objective of the program, that of aiding starving people, but they were highly critical of the government in breaking its price pledge.

Producers had repeatedly been informed through the press and other informational channels that the government would not increase the price on the 1945 corn crop.

In the state AAA newsletter of Dec. 21, 1945, at the time corn rates on the 1945 crop were announced, there appeared a statement which said in part, ". . . if at a later date the Department of Agriculture institutes a corn buying program all purchases will be made at not more than established ceilings." The state AAA news letter of Feb. 1, 1946, repeated this statement in urging farmers to market "wet corn."

Producers also recalled another broken pledge of the government which occurred two years ago during the corn freeze order. At that time, they reported, both OPA and USDA had announced that no one would get a higher price. Then the corn shortage caused the Commodity Credit Corporation to announce a special 5 cents per bushel payment for shelling the corn. This special payment was considered by many to be the same as a price boost.

These are scenes in baseball, hog calling and archery photographed at the last sports festival in 1941.

SPORTS FESTIVAL IS BACK

THE Illinois Farm Sports Festival, one of the most popular events on Farm Bureau calendars in past years, is scheduled for revival in August, according to plans now underway.

Date for the big event has been tentatively set as Aug. 29-30 at the University of Illinois at Urbana.

As the RECORD goes to press, an administrative committee for the Festival is being formed. Representatives named to date by the sponsoring organizations are: Emile Redieger, Lexington, Illinois Home Bureau Federation; Harold Safford, Prairie Farmer magazine and Radio Station WLS; Irene F. Brandt, Galesburg, Illinois, Home Advisers Association; Otto Steffey, Stronghurst, IAA board member, George E. Metzger, IAA field secretary, and Paul Mathias, IAA secretary, as IAA representatives. Representatives from the U. of I. College of Agriculture and Farm Advisers Association are E. H. Regnier and J. H. Brock, Will county, respectively.

Roy Johnson, former DeKalb county farm adviser, recently returned from Army service and a new member of the IAA staff, has already been assigned to devote considerable time to the Festival.

First recommendation to revive the Sports Festival, which hasn't been held since 1941, came at a committee meeting held in the IAA offices April 15. Attending the committee meeting were representatives from the sponsoring groups.

Prof. J. C. Spitler, representing the U. of I. College of Agriculture, said that Douglas Mills, head of the athletic department of the U. of I., had reported that athletic facilities would be available for the Festival. Professor Spitler said, however, eating facilities might be something of a problem. As far as housing was concerned, he said that 2000 attended Farm and Home Week, and rooms were available for all those who needed them, and that he thought that the College of Agriculture could find accommodations for Sports Festival participants.

Roy Johnson, former DeKalb county farm adviser who has served five years in the U. S. Army, began work May 1 on the staff of the Illinois Agricultural Association.

Roy Johnson

Johnson will work on special projects for the IAA and his first assignment will be the Illinois Farm Sports Festival tentatively scheduled for Aug. 29-30 on the University of Illinois campus.

Johnson enlisted in the Army as a private March 1, 1941 and left service with the rank of major. He was commissioned a second lieutenant after completing Officers' Candidate School Aug. 4, 1942, and served at George Field, Lawrenceville, for 22 months in charge of special services. The IAA, County Farm Bureaus and Associated Companies contributed to a fund which equipped day rooms and furnished needed recreational equipment at George Field while Johnson was stationed there.

In July, 1944, Johnson was sent overseas and spent more than 16 months in the China-Burma-India theater. He returned to this country in February, 1946 and began his terminal leave in March.

A native of Ogle county where his father, the late Fred Johnson, was a pioneer Farm Bureau member, Johnson attended Franklin Grove High School and Mt. Morris College. He later attended the U. of I. College of Agriculture and was graduated in 1930.

Johnson taught vocational agriculture and coached baseball, basketball and track teams at Mahomet High School, Champaign county, for 6½ years starting in 1930. He was very active in promoting 4-H clubs and FFA activities and enjoyed considerable success with his athletic teams. His basketball team reached the state tournament finals in 1933.

On Jan. 1, 1937, Johnson was named farm adviser in DeKalb county and continued in that position until he entered service in 1941.

Johnson is 39 years old and is married. His wife is the former Pearl Conrad of Bicknell, Ind.

Teacher and students discuss the importance of limestone to soil fertility during visit to quarry on outskirts of Casey.

What A SCHOOL CAN DO FOR A *Community*

By JOHN K. COX

IAA Director of Rural School Relations

"VOCATIONAL Agriculture in the Casey Township High School has been one of the most constructive influences contributing to the improvement and general prosperity of this community," says Dave McReaken, cashier of the First National Bank of Casey, in Clark county.

McReaken, a resident of Casey for the past 10 years added, "The fine relationship and mutual understanding between rural and urban people in this community is mainly a result of the work done through the Vocational Agriculture Department of the Casey High School under its able instructor, Walter A. Newlin."

The Casey Township High School district, according to W. M. Runyon, the principal, comprises approximately 200 square miles. When Newlin went there 26 years ago, the district was considerably smaller. It has more than doubled its original size, largely as a result of the service given to farmers through the vocational agricultural department.

Land around Casey, a gray silt loam, overlying a tight clay sub-soil once was productive and economically self-sufficient. Due to natural causes and questionable use of the land, it became unproductive, sub-marginal or barren and in some cases abandoned. After 1900, corn had to be hauled into the Casey Community. According to Newlin, after 1904, most farming operations ceased and most grain elevators closed as a result largely of the increasing infertility of the soil but also as a result of a developing interest in oil in that area.

Grain Yields Rise

Today, half of the corn is trucked out. Land that only eight years ago sold for $30 an acre, last year produced 36 bushels of wheat, 35 to 40 bushels of beans and 90 bushels of corn per acre.

A grain elevator in operation only the last few years took in 10,000 bushels of beans per day part of last season. No elevator would have been needed had there not been a soil fertility program in operation.

When oil production began to taper off and prices of oil fell after World War I, farmers were compelled to turn their attention again to farming. But with corn yields averaging only 15 to 25 bushels to the acre, wheat production almost discontinued and pasture land in poor condition, the outlook was not bright.

The Clark County Farm Bureau, said Newlin, was the first agency to promote an organized effort to improve agriculture there. Informational meetings were held. The College of Agriculture of the University of Illinois cooperated.

Through the efforts of the Farm Bureau and the Vocational Agriculture Department of the high school a limestone producing concern in Greencastle, Ind., shipped 450 tons of limestone during 1922 and 1923 to the 40 boys in the agriculture department at the high school. The limestone was free excepting the freight. Soil tests were made.

Test Plots Laid Out

Test plots were laid out in 10 or 12 neighborhoods around the Casey community. Untreated strips were left in each plot. All plots were seeded to sweet clover including the untreated strips. "Abundant clover," said Newlin, "was produced on treated plots but none on the strips where limestone

Elevator procedure is studied here by Casey students. Structure would be superfluous if surrounding farmers hadn't followed soil building practices.

Delmar Atley's livestock project, a sow and litter, is inspected by Mr. Newlin during a visit to the Atley farm near Casey. Atley plans to exhibit his litter.

Value of soil practices championed by Farm Bureau and Casey high school ag department is illustrated in this sweet clover field. Note man holding hat aloft.

Nolan Applegate comes 18 miles to Casey principally to study vocational agriculture. He is shown with seed he is studying. He and his father have a Guernsey herd.

This building houses the vocational agriculture department at Casey high school. With the twin main building, the grounds are attractively landscaped.

Ever emphasizing the drawbacks of soil deficiencies, Instructor Newlin shows students Lee Cutright (left) and Dean Shute with a soil test.

had not been applied."

No book farmer is Walter Newlin. Soon after his arrival in Casey, he bought a sub-marginal farm and showed his neighbors how it could be made to pay by modern soil building practices.

Surprising Thing Happened

The Casey Rotary club together with the farmers sponsored the opening of a limestone quarry in 1927 near Casey. The attitude of the Rotary club in this case can be largely explained by the fact that the vocational agriculture instructor has been a regular member of the Rotary club for the last 21 years.

A new quarry near Casey was opened in 1938, but both quarries have difficulty supplying the present demand. However, it has been necessary to apply potash, and phosphorus and other chemicals to the soil to supplement the limestone.

A number of fields around Casey had excellent growths of red clover. "This land would have been raising only tickle grass and dog hair," said Newlin when questioned as to what might have been expected of such land before the soil fertility program.

The vocational agriculture department also had a hand in pasture improvement. It sponsored evening schools for farmers. Staff members of the College of Agriculture led the conferences. In the seven meetings during the early winter of 1935, farmers showed much interest. The average attendance per session was 140 farmers. Also, the vocational agriculture department assisted farmers with the inoculation of legumes, a practice new to many farmers at that time.

Livestock Projects

In the animal husbandry class the boys learn to care for and feed hogs, calves, and sheep. They learn to show them in the various livestock shows, knowing that in the show ring the calf or pig will reflect the persistent care he has had. They know that there is a practical reason why their animal wins or loses and that to duplicate or improve their record next time they will have to produce the goods.

The value of such a program to the pupils themselves is amply revealed in the interest that the agriculture pupils show in their work, together with the impressive number of former students who are now successful farmers, or are serving as farm advisers and in other responsible positions of farm leadership.

Students Clean Seed

Another service very popular with farmers was performed in a building on the school grounds. There the vocational agriculture boys would clean seed free of charge to the fathers of the boys taking agriculture. A slight charge would be made to other farmers. But at the time this seed cleaning was started, that service, according to Newlin, could not be obtained elsewhere.

Eugene Schiver, one of the high school vocational agriculture students, had seven acres of Lincoln beans that made 26 bushels to the acre last year. He plans to sell them at $3 per bushel for seed. These beans plus some hogs on the farm at home constitute Eugene's vocational agriculture projects required under the Smith-Hughes program. He said, "I like vocational agriculture best," when asked which high school subject he preferred, and added, "I intend to

(*Continued on page 22*)

In school farm repair shop ag students learn techniques which will save them time and money in later years.

In school seed house students clean Eugene Schiver's beans which he plans to sell for $3 a bushel.

IAA OPPOSES TAKING LAND IN FLOOD PLAN

OPPOSITION to provisions of the federal flood control plan for the Illinois River basin, calling for the acquisition of farm lands for reservoirs, has been voiced by Illinois Agricultural Association board of directors.

The IAA board expressed opposition pending the adoption of an official position by the membership at the annual meeting in November.

Objections and recommendations of the IAA to the project were filed with the Board of Engineers for Rivers and Harbors during a public hearing April 30 in Washington. A recommendation urged further study of the flood control plan.

A second hearing in late May was scheduled to be held in Springfield for those unable to attend the Washington hearing.

IAA States Position

Pending action of the membership at the annual meeting, the Board of Engineers for Rivers and Harbors was informed that the IAA board of directors opposes the project, insofar as the acquisition of land for reservoirs is concerned, and

(1) Until information is available as to the estimated costs and benefits on the basis of present-day costs and values. (The division engineer's report is based on 1940 costs and values);

(2) Until the possibilities of flood control through an adequate soil conservation program and the cost of such a soil conservation program have been studied and determined;

(3) Until the comparative value of the upstream land to be acquired for the reservoirs as compared with the value of the river-bottom and over-flow lands which would be protected by the project has been determined; and

(4) Until it appears that the finances of the U. S. government are such as to warrant the undertaking of such a project.

A meeting was called April 15 in Springfield by the IAA Public Relations Committee for the purpose of determining sentiment in the areas to be affected by the flood control plan. Representatives of 16 county Farm Bureaus attended the meeting.

Public Relations committee report of this meeting said: Sentiment was divided. A majority, and particularly representatives from those counties where reservoirs are proposed and where a substantial acreage of farm land will be acquired, were opposed to the project.

Representatives from those counties that will receive substantial benefits from the plan were inclined to favor it.

It appeared to be the general feeling at the Springfield meeting that adequate consideration had not been given to the possibilities of flood control through sound soil conservation practices which would increase water retention and control or prevent soil erosion.

The project involves the contemplated purchase of 142,700 acres of land by the federal government at an estimated cost of $11,921,000. The estimated total cost of land, the 15 reservoirs and improvement of channels and levees is $90,924,250.

But 1946 prices for labor, materials and land are generally understood to have risen 50 to 65 per cent over 1940, the IAA statement pointed out.

The expenditure of such sums would, therefore, seem questionable in view of the fact that estimated annual reduction in flood losses would total less than $3,000,000 and in view of the fact that the federal government is now carrying a debt of approximately $275,000,000,000.

Suggest Alternatives

The statement said further: "if much of this work is ever to be done, it should be postponed and done at a time when land values and construction costs are more nearly normal and the expenditures should be within the limitations of a balanced budget."

The IAA statement mentioned possible alternative methods of flood amelioration in the Illinois River basin, i.e., control of Lake Michigan waters being diverted into the Illinois River during flood stages, soil conservation practices to retain water and the opening of levees into natural flood plains during periods of flood.

The IAA asked that a study be made of the possibilities and cost of a flood control plan aimed at widening the river channel and floodway widths and moving back the levees.

"It might be more advisable," says the IAA statement, "to acquire this overflow area or substantial portions of it and to restore the natural flood plain and the valley storage which formerly existed rather than to attempt to hold the water in upland reservoirs."

RICHARDSON REPORTS INSURANCE COST RISE

THE rising trend in costs of insuring automobiles against collision and property damage was pointed out by A. E. Richardson, manager of Country Mutual Casualty Company, before a recent meeting of the board of directors of the Illinois Agricultural Association.

Collision damage refers to loss sustained by the insured and property damage refers to loss sustained by the other person involved in the accident.

Accidents Increase

These two lines of coverage, Richardson said, are costing a great deal more than they have in the past. The main reason for this trend, he said, is that labor and material costs have almost doubled since 1941. In addition, accidents are becoming more frequent since tires and gasoline have become more plentiful.

The board of directors authorized Richardson, acting with the IAA management board, to make a careful study of the cost trend and report back to a later meeting of the board with recommendations as to how long the company should continue to operate without increasing the rates on these two lines of coverage and what rates would be required to meet present losses.

It was pointed out in the discussion that the rates on other lines of insurance such as personal injury, fire and theft were holding their own very well. Those present were of the opinion that an increase in rates for collision and property damage was inevitable.

Foresters estimate that the U.S. will need 21½ billion cubic feet of forest products annually, or about five billion more than during the war.

Hay forms the basis of the barn ration fed to more than one million Illinois dairy cows during six or seven months of the year.

Attending Country Mutual Fire Company's school for adjustors in Chicago April 11 are, left to right: V. W. Konklin, Madison, Wis.; Vern E. Holland, assistant manager, Country Fire; Albert Hummermeier, Freeport; Theodore Schaller, Evansville, Wis.; W. A. Benser, Shelbyville; Forrest Fellers, Tower Hill; John Wenke, Peoria; Fred M. Brock, DeKalb; Garth Hinkley, DuQuoin, and George Dirreen, Chicago office.

Offer New Crop Hail Policy

DETAILS on the new insurance policy being written on growing vegetable crops were discussed at a meeting of crop hail adjusters of the Country Mutual Fire Company held April 11 in the Stevens Hotel, Chicago.

The new policy is being written to give greater service to Farm Bureau members throughout the state. The new hail insurance policy is being limited to certain cannery crops and onions.

The insurance company has been writing hail insurance on sweet corn for several years and is now increasing the coverage to include cannery crops of peas, tomatoes, lima beans, cabbage for processing, and onions grown for the dry commercial onions and for sets. The amount of coverage that can be carried on any of these crops is largely based on average yields in the State of Illinois and the cost involved in growing the crops. The insurance is designed mostly to reimburse the grower for the expense and work required in growing the crop and not to guarantee all profits for the grower who suffers damage from hail.

The new insurance policy should meet with the approval of the growers of cannery crops because it will protect them on crops which require a high cost to plant and grow to maturity. In settling claims for losses, the adjusters will attempt to determine the actual percentage of loss to the crop whenever hail damage occurs. Consideration will be given to those injuries which will lower the grade of the vegetable as well as injuries which will actually destroy the crop.

It was considered advisable to include onions and onion sets in the new program because the grower has an unusually high investment when planting and growing the onions, especially the onion sets. Since a very large percentage of the onions are grown in a rather small area close to Chicago, it is necessary to limit the acreage that can be insured in each township and section.

Extra hail adjustors are needed by the Country Mutual Fire Company during the coming summer months, according to Vern Holland, assistant manager.

School men, whether teachers or administrators, who have farm backgrounds may be interested in this work, Holland said. No previous experience in adjusting losses is necessary as training on the job will be furnished by an experienced adjustor. Travel expenses will be paid in addition to per diem wages.

The work will be only in Illinois which will allow prospective adjustors some time at home each weekend. Such adjustment work will be available each summer.

Those interested may write the Country Mutual Fire Company, 608 South Dearborn Street, Chicago 5, Ill.

SOUTHERN ILLINOIS GRAIN COMPANY IS ORGANIZED

TO PROVIDE a much needed market for wheat and soybeans in a seven-county Southern Illinois area, a Farm Bureau elevator cooperative has been organized at Benton in Franklin county.

The new grain marketing cooperative will be known as the Southern Illinois Grain Company and will be closely allied with the Illinois Farm Supply Company which owns the facilities at Benton.

When the Illinois Farm Supply Company bought an idle flour mill at Benton about a year ago to convert it into a feed manufacturing plant, the property included elevator facilities that had not been used in more than a decade.

Since the discontinuance of the flour mill, the nearest marketing point for grain was, in some instances, as much as 60 miles away. Farm Bureau members in the area thereupon requested that the elevator facilities be made available for grain marketing.

Time did not permit setting up a permanent organization last year before wheat harvest, so a temporary arrangement was worked out with the Franklin County Service Company resulting in the marketing of 84,000 bushels of wheat.

Farm Bureau presidents and chairmen of county Farm Bureau grain marketing committees from the seven counties — Franklin, Williamson, Saline, Jackson, Jefferson, Perry and Hamilton — met at Benton on April 25 with IAA representatives George Iftner, grain marketing director, and J. J. Lanter, Illinois Farm Supply feed division director, to discuss the project and proceed with its organization.

Member of Illinois Grain

Incorporating directors include three operating farmer members from the board of the Illinois Farm Supply Company and two from the grain producing area. The members from the area are Pete Perona, Franklin county, and A. E. Drennan, Jefferson county.

Farm Supply members will be named later and at a meeting of the board to be held shortly, officers of the board will be elected and management employed. The new company will be a member of Illinois Grain Corporation, which will handle its grain on the terminal markets.

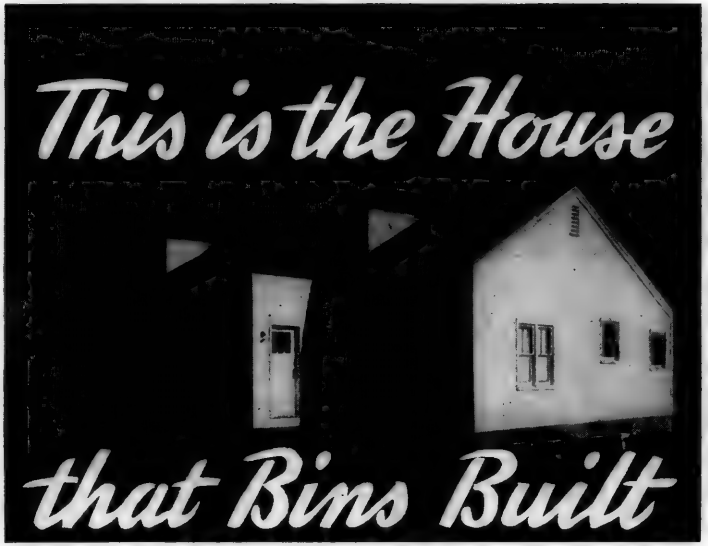
Renovation of the mill is nearing completion and modern equipment is being installed in the elevator. The elevator will be ready in time for the wheat harvest. It is expected to handle between 75,000 and 100,000 bushels of wheat and a sizable volume of soybeans.

The entire project, including mill and elevator, will involve about a $100,000 investment to the Illinois Farm Supply Company.

"When farm incomes are substantially above normal for a succession of years, owing to high prices for agricultural products, the price of land rises. In extended periods of low farm incomes, the price of land declines." Illinois Circular 592, "Postwar Farm Jobs."

There are more than 2,300 community forests in the United States.

Agriculture in Illinois is in the four-billion-dollar bracket.



By JIM THOMSON

Ass't Editor, IAA Record

"THIS is the house that bins built," was the way a newspaper writer described the home of Farm Adviser Thurman Wright of White county in a story which recently appeared in the press throughout the country.

The house is constructed of six dismantled soybean bins. But that only tells part of the story.

The ingenuity and hard work which Farm Adviser Wright put into the job to give his family this beautiful home on the outskirts of Carmi was omitted in the newspaper account.

For no jerry-built shack is the Wright home, even though it may leave such an impression in over-emphasizing the part soybean bins played in making the house possible. With the few acres of land on which it is situated, a buyer has suggested a price of $15,000.

Not too enthusiastic about selling, Farm Adviser Wright needs the spacious six-room house for his lively, growing family of three boys and a girl. Besides, Mrs. Wright and the children have made it plain to Dad that this is the home they have been waiting for.

Buys Soybean Bins

Like millions of other American families dreaming and scheming of the day they could start building, Mr. and Mrs. Wright bought a few acres northwest of the city. And in spite of the obstacles in the way of building, the Wrights, nevertheless, decided to do something about it.

Learning that a group of soybean bins, 14 feet wide and 24 feet long no longer needed by the Commodity Credit Corporation for soybean storage, were to be auctioned off last fall, Wright investigated and decided he might be able to use the bins to build his house.

Thinking over the possibilities of the bins, Wright decided to get the opinion of University of Illinois housing men before going ahead.

Quite conveniently, several University housing men were scheduled to meet soon in Mount Vernon. Holding the meeting for the purpose of teaching farm advisers how they could best help farmers with their remodeling, they urged Wright to proceed with his plans to build with soybean bins.

Others in the Carmi area apparently had the same idea because when Wright went to bid on the bins, he discovered the prices were higher than he expected to pay.

Bins Cost $1,140

Undaunted, he bid on bins in three different communities — Golconda, Omaha, and Shawneetown — and had six delivered in Carmi at a total cost of $1,140.

After preparing the basement and foundation, Wright laid out two of the 14-foot flooring sections from the bins making the width of the house 28 feet. By joining the bin siding panels together, the house assumed a length of 52 feet.

Partitions between the rooms, which include three bedrooms, a livingroom, diningroom, kitchen and bath, were made from wood separated from the bin siding. Plans for the house were drawn by Wright in his spare time in collaboration with University of Illinois housing men. Following his plans, Wright, a pretty good draftsman, supervised the placing of the floor and roof supports besides helping with the actual construction.

Install Labor-Saving Aids

The Wrights kept a sharp eye out for labor saving aids during construction and took advantage of the chance to build a number of recesses in the walls for telephone, ornaments, books, door chimes, radio and kitchen clock.

The well-known rush for school in the morning is to be avoided somewhat

White County Farm Adviser Thurman Wright works in the unfinished kitchen of his new home. Kitchen is scientifically designed for convenience and ease. Eldest son, Thurman, Jr., talks with Dad. Sons James (left) and John sit in unfinished breakfast nook.

Sons John and James (foreground) wash up in the two-sink bathroom handily designed for the family of four children.

in the Wright household by a bathroom containing two wash sinks complete with mirrors so the four children won't get in each other's way.

Discarded clothing is dropped through a hole in the floor of an interconnecting closet and falls into an enclosed compartment near the laundry to await wash day.

Sticking to the science of kitchen layout as proved by the University of Illinois home economics department, Mrs. Wright has one of the most convenient and up-to-date kitchens in the state.

Food bins and compartments for pans, dishes, and cutlery are laid out within easy reach with stove, sink, and refrigerator set out on a plan designed to cut down unnecessary walking.

Down in the basement is room for a future play room, an extra bedroom, a storage room for canned goods, a laundry and space for storage of miscellaneous articles. The stoker feeder extends into the coal bin so that it is generally buried by coal thus eliminating the coal shoveling chore for Farm Adviser Wright.

Wright will be a handy man to have around when the construction of the county's new Farm Bureau building gets under way.

Besides, a building boom is expected soon in the county and you can bet farmers getting ready to build or remodel will know where to look for solutions to some of their problems.

From experience, their farm adviser knows a great many of the answers.

This is what the bins looked like before Farm Adviser Thurman Wright of White county got a notion to take them apart and set them up to house a family instead of soybeans.

SCHNEKLOTH NAMED TO ILLINOIS MILK PRODUCERS BOARD OF DIRECTORS

L. A. Schnekloth, president of the Quality Milk Association, Davenport, Iowa, has been named to the board of directors of the Illinois Milk Producers Association.

He succeeds A. E. Meyer, president of the IMPA, who has been named manager of the Quality Milk Association.

Schnekloth has served on the board of the Quality Milk Association since 1936. He is the past president of the Scott County Farm Bureau, Iowa, past president of the Scott County Farmers Institute of Iowa, and past master of the West View Grange, Iowa. He has an active interest in dairying and corn production, and has won several 100-bushel state yield awards on corn. He has won a State Master Corn Grower medal, farms 120 acres and milks 15 Holsteins.

Meyer, who also was a member of the board of directors of Prairie Farms Creameries, has been succeeded on the Creamery board by Carl Geiger of Rock Island county. Geiger has been on the board of directors of the Moline creamery and the Quality Milk Association, and has been an active leader in Farm Bureau work.

SHAW ELECTED TO HEAD MIDWEST CONFERENCE

Wilfred Shaw, director of milk marketing for the Illinois Agricultural Association, and secretary-treasurer for the Illinois Milk Producers Association, has been named president of the Midwest Dairy Conference.

The Conference was made a permanent organization at the sessions held in April at Purdue University.

Purpose of the Midwest Conference is to serve as a clearing house for problems common to the midwest milk area. Membership in the Conference includes representatives from fluid milk marketing cooperatives, state colleges of agriculture and state and federal milk control agencies in the midwestern states.

Other officers of the Conference are: Howard Simmons, general manager, Michigan Milk Producers Association, Detroit, vice-president; Dr. C. G. McBride, Ohio State University, secretary, and R. J. Stallwood, manager, Evansville Milk Producers Association, treasurer.

Heavy alternate grazing gave best results in a three-year pasture test at the Dixon Springs Experiment Station, Pope county, Illinois. The field which was grazed heavily and then rested on alternate months produced the largest animal gains per acre.

H. K. Danforth, Henry county farm adviser, has resigned to become business manager of Henry County Farm Bureau. Danforth has been at Henry county for the past 22 years. He started as assistant farm adviser and a few years later became farm adviser. The new job was created by the Farm Bureau board of directors because of increased membership and increased demands for services.

Kenneth L. Flake, Fulton county assistant farm adviser and county organization director, has been named Henry county farm adviser succeeding H. K. Danforth, who resigned to become Henry County Farm Bureau business manager. Flake graduated from the University of Illinois College of Agriculture in 1936 and taught vocational agriculture at Arenzville and Virginia before going to Fulton county. Flake will start his new job about June 1. He is not married.

The Illinois state fair, abandoned for the past five years, will be resumed Aug. 9 to 18 at the state fair grounds in Springfield. Work has been started on the preparation of the grounds which were used by the air forces during the war.

Harold Neal, Peoria county assistant farm adviser for the past three years, resigned April 15 to become a special Farm Bureau insurance agent in Vermilion county. He is from Jefferson county and graduated from the University of Illinois in 1943. He is married and has a small son.

Alvin Warren, one of the first directors of the DeKalb County Farm Bureau, Illinois' first county Farm Bureau, died at his home April 8. Besides farming, Mr. Warren taught school and served as a state representative from the 35th district.

Added to the growing list of county Farm Bureaus planning community centers or showplaces for 4-H clubs and Rural Youth is Pulaski-Alexander. Committees are at work to raise $15,000 to erect a building for youth activities under the direction of Farm Adviser Leslie B. Broom. The new structure will serve as a war memorial.

Two La Salle county farmers have asked Farm Adviser Fred Painter for information on seeding landing strips for their planes.

Shorts in the News

Headquarters for the Midwest Farm Bureau Training School to be held Sunday, June 23 to Wednesday noon, June 26 will be at the 22-story Hotel Continental in Kansas City. Dale Carnegie, author of the book "How to Win Friends and Influence People" will deliver two lectures at the school for Farm Bureau officers on "The Psychology of Dealing With People," and "Enthusiasm."

Marjorie Fulghum of Lee county trains to become a qualified tester for a dairy herd improvement association at the University of Illinois. She is now associated with her sister Harriett, a tester in Lee county. Looking on is J. G. Cash, extension dairy specialist.

"OUR FAULTS"

Farmers have five main faults according to a national poll conducted recently among city people. They are:

1. Too narrow and provincial.
2. Always complaining. They beef about how hard they work.
3. Poor managers. They ruin the soil. They won't learn new methods.
4. Stubborn. You can't tell a farmer anything, they say.
5. They get too much money for what they raise.

Do you agree? Let's hear what you think. Address Illinois Agricultural Association Record, 608 South Dearborn Street, Chicago 5, Illinois.

Earl D. Peterson, Mercer county farm adviser, from 1936 to 1941, will succeed the late Alden Snyder as Montgomery county farm adviser. He expects to be on the job at Hillsboro by July 1. Peterson was recently appointed assistant state supervisor of the state extension farm labor program after five years army service. Following his graduation from Iowa State College in 1931 he served a few years as county agent at Louisa county, Iowa.

In some Illinois localities sorghums and kafirs will make better silage than corn because they will grow better under conditions of less rainfall, according to K. A. Kendall of the dairy husbandry department of the University of Illinois College of Agriculture.

In experiments by the college, Kendall said, silage made from soybeans and sorghum, and also from soybeans and Sudan grass, has given good results.

Roy K. Wise, Schuyler county farm adviser, keeps in close touch with his county farm friends by talking to them regularly through a column in the county Farm Bureau page under the heading "Hello Neighbor!"

G. Tupper Swaim, Kankakee county farm adviser, plans to take employment with a commercial firm following his vacation which begins June 1.

Grant McGill of Stark county has been employed as assistant farm adviser in Lee county. He is a 1943 graduate of the University of Illinois College of Agriculture and was recently discharged from the armed forces. He is married and the father of a two-year-old son.

Coles county farmers are in favor of organizing a rural fire protection district, reports Farm Adviser W. S. Myers. The district would own and control the equipment which would be manned by Charleston firemen.

Enough landowner signatures have been obtained in Effingham county to satisfy requirements for establishing a soil conservation district, according to Farm Adviser Clinton Cutright.

Orin W. Hertz has returned to his job as farm adviser in Washington county after 4½ years service in the army.

Top award this month goes to the Noard brothers of Henry county for this picture of Bob Noard and dog Jack enjoying a friendly game of cards. Other picture of Jack shows him trying to pump up a tire as he tries to be helpful around the farm.
